THE BOYS' CHRISTIAN HOME MISSION.—Was founded by Rev. Albert Norton in 1899 during a time when a serious famine swept the land. The Headquarters of the Mission is Dhond.

At present the Mission staff consists of seven missionaries and 48 Indian workers. There are two elementary schools, one at Dhond, Poona District, and one at Oral, U. P. There is also a girls' School at Oral. The total strength of the schools is over 300. At Dhond there are two orphanages, one for boys and one for girls, and a small attempt is being made to start agricultural work, using improved methods.

The mission consists of two main stations, one at Dhond, Poona District, and another at Oral, United Provinces, with two out-stations in the U. P., one in Jalaun and the other in Kalpi.

The function of the mission is, chiefly, the care of orphan boys and girls and evangelistic work in neglected villages

Director.—Rev. John E. Norton.

Ladies' Societies.

ZENANA BIBLE AND MEDICAL MISSION—This is an inter-denominational society, with headquarters, 33, Surrey Street, London, working among women and girls in 5 stations in the Bombay Presidency, 7 in United Provinces, and 4 in the Punjab. There are 57 European Missionary ladies on the staff and 50 Assistant Missionaries, 202 Indian teachers and nurses and 31 Bible women. During 1938 there were 5,818 in-patients in the three hospitals supported by the Society (Nasik, Lucknow and Patna). There were 24,033 out-patients, 108,958 attendances at the Dispensaries. In their 21 Schools were 2,033 pupils and there is a University Department at Lahore. The evangelistic side of the work is largely done by house to house visitations and teaching the women in Zenanas, 1,181 women were regularly taught. Total expenditure in India £35,075

Hon. Treasurer Rev Roland A Smith, M A

Hon. Finance Secretary Rev E S Carr, M A

President—The Lady Kinnaird

Secretaries—Rev. H. S. Gregory, M A, and Miss N. Lampart

WOMEN'S CHRISTIAN MEDICAL COLLEGE with which is incorporated **THE PUNJAB MEDICAL SCHOOL FOR WOMEN**. In 1894 the North India School of Medicine for Christian Women was opened in Ludhiana in order to give a Medical Education under Christian influence to Indian women. Doctor Edith Brown, D B E., M A., M D., M O O G., etc., was its Founder and Principal. The School is inter-denominational, and trains students for various Missionary Societies.

The Memorial Hospital in connection with the College has 279 beds and 54 cots.

In 423 years 423 medical students qualified as Doctors, besides 178 Dispensers, about 250 Nurses and over 1,000 Midwives and Nurse Dais. Nurses and Compounders also do midwifery and are included in this last figure.

There are in training at present 13 M B B S students, 113 Licentiates, 50 Nurses, 9 dispensers, 4 Mother craft pupils and 70 Nurse Dais and Midwives, making a total of 259 women being trained, besides Indigenous Dais receiving instruction at the Health Centres run in connection with the Hospital. There are 3 City Centres, and 1 Village Dispensary.

During the year 1941 there were 6,052 In-Patients, and 67,508 Out-Patients.

The Radium and Deep X-Ray Therapy departments are meeting a great need, and show good progress, and the fight against Tuberculosis is increasing in intensity. Tuberculosis Clinics are held, and city visiting is done on a comprehensive scale, while patients are admitted to a Garden Sanatorium outside the Hospital.

THE MISSIONARY SETTLEMENT FOR UNIVERSITY WOMEN was founded in Bombay in 1896. Its work is religious, social and educational. The Settlement supplies a hostel for University students of all nationalities and a few Indian professional women. Classes for educated girls are provided and teaching is also given in pupils' homes. The Settlement staff take part

in many of the organised activities for women's work in the city. The Social Training Centre for women is now an integral part of the work of the Settlement. The course, lasting a year, includes both theoretical and practical work.

Warden—O. M. Kane, B Sc (London), Reynolds Road, Byculla, Bombay

Warden—E. A. Underwood, B Sc, University settlement, Sardar Modhar Road, Poona

THE RAMABAI MUKTI MISSION (affiliated with the Christian and Missionary Alliance Mission in 1925), the well-known work of the late Pandita Ramabai, shelters about 700 deserted wives, widows and orphans, educating and fitting them to earn their living. The Mission is worked on Indian lines and carried on by Indian and European workers. Evangelistic work is carried on in the surrounding villages of Kedgaon, Poona District.

Miss Julia Woodward, *Secretary and Treasurer*

Inter-denominational Missions.

"THE CENTRAL ASIAN MISSION" Founded 1902. Head Office, 47, Victoria Street, London S W 1, Field Secretary, Bandipur, Kashmir. Stations at Mardan, Bandipur, Shigar, Khapalu, Kargil and Zangskar. Protestant, Evangelical, inter-denominational 14 European workers.

THE FRIENDS' SERVICE COUNCIL—The Friends' Service Council works in five stations of the Hoshangabad District and in two stations in Central India.

The Church, which is composed of 6 Monthly Meetings united in the Mid-India Yearly Meeting, is largely organised on the lines of the Society of Friends in England.

There are 15 missionaries, 14 on the field and 1 on furlough, also 3 retired missionaries living in the district.

The principal activities are a general hospital with dispensary and nurses' training department, a Primary School and an Anglo-Vernacular Middle school at Itarsi; a Boarding school for girls with Primary and Anglo-Vernacular Middle Departments at Sohagpur, a Home for older girls in Sohagpur where toys are made for sale, a Boys' Hostel at Hoshangabad for boys attending Primary, Middle and High schools there. The Council's work also covers two villages in the Seoni Tahsil of the Hoshangabad district in one of which, Makoriya, there is a dispensary and a Primary School.

A Settlement is maintained near Hoshangabad, where village problems are studied, and work of an educational and social nature is carried on. Wardens, Ranjit and Doris Chetsingh.

There is also a Weavers' Co-operative Society at Kherna, Itarsi, where cloth is made on hand-looms.

The Council has 185 members and 1,400 adherents. Mission Secretary Geoffrey W. Maw, Itarsi, C P.; Church Secretary Dhan Singh, Sohagpur, C P.

THE AMERICAN FRIENDS' MISSION—With missionaries working in Bundelkhand, Hospital for Women and Children at Chhatarpur, Boy's school at Harpalpur, Orphanage.

Missions.

evangelistic, industrial and school work at Nowgong.

Superintendent: Rev Everett L. Cattell, Chhatarpur, C.I.

THE OLD CHURCH HEBREW MISSION was established in 1858, in Calcutta, and is the only Hebrew Christian Agency in India. **Hon. Secretary** Rev G. F. Westcott, B.Sc., M.A., 11, Mission Row, Calcutta. **Missionary** Rev A. S. Shamash, B.A.

Lutheran Societies.

THE INDIA MISSION OF THE UNITED LUTHERAN CHURCH IN AMERICA—founded 1812 commonly known as the United Lutheran Church Mission Works in co-ordination with the Andhra Evangelical Lutheran Church organized in 1927. The Mission and Church together carry on work in the East Godavari, West Godavari, Guntur, Nellore and Kurnool Districts of Madras Presidency. Foreign staff on the field December 1910, 72; Indian Staff of all grades, 3,314; Schools, 850; Pupils, 51,002. The Mission conducts a first grade College (The Andhra Christian College, Guntur), three High Schools for Boys, two High Schools for Girls, one Normal Training School for Masters and one for Mistresses, a Theological College, three theological Schools, an Agricultural School, a Industrial Schools, twenty-four Village elementary and Middle Schools, 819 Village schools, seven Hospitals, a School for the Blind, a tuberculosis Sanatorium and a Printing Press. **THE ANDHRA EVANGELICAL LUTHERAN CHURCH** has a baptised membership of 195,656, 1,961 congregations, 101 pastors, 659 evangelists and catechists.

President of the U. L. C. Mission—Rev L. A. Gotwald, D.D., Tanuku, West Godavari Dist.

President of the Andhra Evangelical Lutheran Church—Rev. J. Russell Fink, D.D., Rentachintala.

Financial and Legal Agent—Rev I. Cannaday, D.D., Joint Treasurer, Guntur.

THE EVANGELICAL NATIONAL MISSIONARY SOCIETY OF STOCKHOLM, SWEDEN—A Church of Sweden Society, founded in 1856, occupies the Districts of Sangor, Betul and Chhindwara in the Central Provinces.

There are about 3,000 Church members constituted into an indigenous Church called the Evangelical Lutheran Church of the Central Provinces. The European and Indian staff numbers 37 and 162 respectively. There is a training school for Indian workers and 25 Primary and Anglo-Vernacular Schools with 1,723 children in attendance, 37 Sunday Schools with 599 Christian and 995 non-Christian attending, 7 Dispensaries with 54,964 patients during 1940. 3 Workshops, One Women's Industrial School, One Widows' Home with 72 women, 3 Orphanages, one Boys' Boarding School, and one Girls' Boarding School with 148 boys and 219 girls and 3 farms where modern village uplift is attempted.

Secretary—Rev. R. Asplund, Chhindwara, C. P.

THE BASIL EVANGELICAL MISSION (Incorporated in Switzerland), with its headquarters in Mangalore, South Kanara, was founded in 1844 and is at present carrying on the work in South Kanara, South Malabar, Malabar and Coorg. It has at the beginning of 1912, 28 chief stations and 41 out stations with a total missionary staff of 14 European and about 800 Indian workers. The membership of the churches is 24,000. Educational work embraces 100 schools, among which a Theological Seminary, a second grade college and 7 high schools. The total number of scholars is 18,000. Medical work is done at Belgeri Gadde, Southern Malabar Country, where a hospital for men and women and at Edipal, South Kanara, where a hospital for women and children is maintained. The Mission maintains a large Publishing Department with the Mission a large Printing Department with a Book Shop and a Printing Press with about 150 workers, at Mangalore, South Kanara, which is doing work in English and in a number of Indian languages.

President and Secretary—Rev A. Streckelsen, Calicut, Malabar.

THE FEDERATION OF EVANGELICAL LUTHERAN CHURCHES IN INDIA was established in 1926 as an outward expression of the spiritual unity of the Lutheran Churches in India. It consists of 9 constituent churches and 3 co-operating Missions in India with a total membership of over 450,000. The work of the Federation is carried on by the Triennial Conference of the Federation, by its Executive Council, by a number of standing and special Committees and by its office-bearers.

The names of Officers for the triennium 1912-14 are as follows:

President—The Rev C. W. Oberdorfer, Gudur (Nellore Dt.)
Vice President—The Rev Immanuel Raman, Sangor, C. P.
Treasurer—The Rev Dr J. Cannaday, Guntur.
Secretary—I. D. Asirvadam, Krupalaya, Timbaram.

The Federation has set up a War Emergency Committee and from contributions received chiefly from America and partly from India, are caring for the distressed Missions and Churches connected with the Federation. The budget of disbursements for 1912 amounts to Rs 261,805, out of which Rs 11,500 is expected to be raised in India.

THE CHURCH OF SWEDEN MISSION was founded in 1874. It operates in the Trichinopoly, Coimbatore, Madura and Ramnad Districts in conjunction with the Leipzig Evangelical Lutheran Mission (L. E. L. M.). It co-operates with the Tamil Evangelical Lutheran Church. The C. S. M. maintains a general and eye hospital at Tirupattur, an eye hospital at Coimbatore, High Schools for boys at Madura and Pudukotah, a High School for girls at Tanjore and various Primary Schools. European staff 43; School Teaching staff 154; Schools 22; Pupils boys 2555 and girls 1120.

President—Rev B. Fr. Tullander, B.A., B.D., Arasavadi, Madura.

LEIPZIG EVANGELICAL LUTHERAN MISSION—The Lutheran Mission work in India was commenced in 1706 by German Missionaries under the Danish Tranquebar Mission. It was taken up by the L E L M (founded in 1836) in 1841. The L E L M re-entered into the work after the great war in 1927. It is located in the Madras, Chingleput, South Arcot and Tanjore Districts. The Mission co-operates with the Church of Sweden Mission and the Tamil Evangelical Lutheran Church. The L E L M maintains two High Schools for boys at Madras and Shiyali (Tanjore Dt.), a number of Elementary Schools for boys and girls in different places, and various other institutions.

Owing to the war, the whole Mission work has been temporarily placed under the Mission-Council of the Church of Sweden Mission.

TAMIL EVANGELICAL LUTHERAN CHURCH—Organised Churches 51, Ordained Indian Ministers 36, other Indian workers 108, Baptised membership 28,965, Schools 189, Teaching staff 644, Pupils 12,325 boys and 4,393 girls.

President—Rt. Rev J Sandegren, M A, D D, L N O, Bishop of Tranquebar, Trichinopoly.

MISSOURI EVANGELICAL LUTHERAN INDIA MISSION (M E L I M) Located in British India, Mysore, Travancore and Ceylon (1895).

In British India, in North Arcot (Ambur, Vaniyambadi, Pernambut), Salem (Kishnagiri, Bargur), Tinnevelly (Valluor, Vadakangulam), Tanjore, Trichinopoly, Madura, Ramnad Districts.

In Mysore (Kolar Gold Fields).

In Travancore (Nagercoil, Trivandrum, Parasala, Balaramapuram, Aryanad, Nilamel, Alleppey and Shertallay).

In Ceylon (Colombo).

There are 46 American Missionaries, of which 5 are on furlough, 2 are teachers in charge of school and home for children of missionaries (Kodaikanal), 1 male Doctor, 2 Zenana workers (female), 1 nurse (female).

There are 3 High Schools, 2 Teachers' Training Institutions, 2 Catechist Training Institutions, 1 Theological Seminary, and 1 Hospital with 20 beds.

Statistics, November 1, 1941: Christians 14,870, Indian Pastors 10, Evangelists 13, Catechists 190, M E L I M Teachers 205, Other Teachers 30, Indian Doctors 2, Indian Nurses 7, Bible Women 16, Boarding Homes 10.

General Secretary—The Rev. Robert M Zorn, S T M, Nagercoil, Travancore, India.

THE DANISH MISSIONARY SOCIETY, established 1864 in South Arcot, working there and in North Arcot, on the Shervaroi Hills, in Madras and in Orissa, has a total staff of 371 Indian and 35 European Workers, Communicants 3,974, Christian Community 8,486, one High School, one Secondary school, three Boarding Schools, three Industrial Schools, one hostel, 75 Elementary Schools, and two Hospitals, total scholars 4,957.

President—The Rev P Lange, Tiruvannamalai.

Treasurer—The Rev K Heiberg, 38, Broadway, G T, Madras.

The Santal Mission of the Northern Churches (formerly known as the Indian Home Mission to the Santals)—Founded in 1867, works in the Santal Parganas, Birbhum, Murshidabad, Malda, Rajshahi, Dinajpur and Goalpara. Work is principally among the Santals but also among Bengalis and the Mech people (Boro). Mission staff numbers 57 of whom 2 medical missionaries, Indian pastors 46, other Indian workers 500, Christian community in organised congregations 26,000, 6 boarding schools with 900 pupils, 180 elementary schools with 3,000 pupils, 1 industrial school with 60 pupils, 1 printing press, 1 orphanage with 30 orphans, 2 hospitals, 4 dispensaries, 2 leper colonies with 400 lepers, 1 tea garden. **Secretary**—Rev J. Gausdal, Dumka, Santal Parganas.

Methodist Church.

The Free Methodist Mission of North America—Established at Yeotmal, 1893, operates in Berar with a staff of 18 Missionaries and 40 Indian workers. Organised churches 7, 1 Theological School, 1 Anglo-Vernacular Middle School, 5 Elementary Schools, 1 Hospital and 3 centres for clinical and village health work.

Secretary—Miss E E Ward, Yeotmal, Berar.

THE SALVATION ARMY

The work of the Salvation Army in India and Ceylon was commenced in 1882 by the late Commissioner Booth-Tucker, and was for many years under his control, with Headquarters in India. For some time now, the areas occupied have been divided for administrative purposes into 6 Territories, each under a Territorial Commander, and one smaller Command.

Northern Territory, with Headquarters at Lahore.

Western Territory, with Headquarters at Bombay.

Madras and Telugu Territory, with Headquarters at Madras.

Southern Territory, with Headquarters at Trivandrum, in Travancore State.

Ceylon Territory, with Headquarters at Colombo.

Eastern Territory, with Headquarters at Calcutta.

Burma Command, with Headquarters at Rangoon.

The Commanders are directly responsible to the International Headquarters in London.

Northern Territory—The area in this Territory is the Salvation Army work in the Punjab, Delhi and United Provinces. The Territory is controlled from Lahore.

Evangelistic work, especially among the "depressed classes," is extensively carried on, both in the Punjab and the U. P.

A number of Settlements for the reformation of "Criminal Tribes" are under the control of the Salvation Army in the United Provinces (where this important reformatory work was commenced). A special Settlement has also been opened in the Andamans during the last few years.

A land colony 2,000 acres in extent is in existence in the Multan District, where a population of 1,800 has been settled. The land will ultimately become the property of the holders.

Medical work is carried on in two Hospitals, one of which is in the Punjab and the other in the United Provinces; and also in one dispensary.

Other institutions include, Day and Boarding Schools, Agricultural Colonies, Soldiers, and Villains Hostel, Delhi.

Village centres at which the S. A.

Works	2,109
Officers and Employees	618
Social Institutions	5

Territorial Headquarters—Ferozepur Road, Lahore, Punjab.

Territorial Commander—Lieut.-Commissioner W. D. Pennick.

Western Territory—The Western Territory comprises Bombay, Gujarat, Panch Mahals and the Maharashtra.

Territorial Headquarters—The Salvation Army, Morland Road, Byculla, Bombay.

Territorial Commander—Lt.-Commissioner H. B. Colledge (Prakram Singh)

Corps, 304; Outposts 530; Societies 308, Social Institutions 16.

Besides the distinctly evangelistic operations there are established 2 large General Hospitals—"Emery Memorial," Anand, "Evangeline Booth", Ahmednagar, several Dispensaries, 216 Day Schools; 4 Boarding Schools, Industrial and Rescue Home for Women, Released Prisoners' Home, the management of the King George V Memorial Infirmary, and Lady Dhunbai Home for the Destitute; Weaving Schools, Factory for the making of Weaving and Warping Machines, and a Land Colony.

Madras and Telugu Territory—This Territory comprises the city of Madras and the Nellore, Guntur, Kistna and West Godavari Districts of the Northern Circars of the Madras Presidency.

There are the following agencies at work, where evangelical, educational and social work is systematically done—384 Corps and Outposts, 130 village primary Schools, 1 Criminal Tribes Settlement, 2 institutions for the training of Officers, 1 Leper Colony at Bapatla with 280 inmates; 1 Hospital for women and children at Nidrobrullu, Guntur District, a women's Industrial Home in Madras, a Boarding School for girls at Nellore, and another for boys at

Bapatla of the Salvation Army; a well-conducted and successful Waste Paper Department attached to the Social Service Centre, and a Red Shield Club for servicemen.

Territorial Headquarters—The Salvation Army, 2, Rithardon Road, Vepery, Madras G. P. O. Box 206.

Chief Secretary in-Charge—Lt.-Colonel Edward Walker.

General Secretary—Major Victor Thompson. **Southern India Territory**—The Territorial Headquarters is Trivandrum, Travancore State.

The work of The Army had its beginning among the Tamil speaking people of the southern part of the State nearly fifty years ago. The work developed and extended northward through the whole State of Travancore into Cochin, and during the past twenty-five years eastward into the British administered districts of the southern part of the Madras Presidency.

More than 500 corps and over 1,000 officers labour amongst the village populations. The Army has a membership in South India of some 75,000. Hundreds of Salvation Army Halls have been erected in which gather Sunday after Sunday congregations of Christian men and women, converts from among those who have been the most depressed people in the country, now of the third, second and first generations.

This territory is divided for administrative purposes into sixteen divisions, six among the Tamil-speaking people and ten amongst those who speak Malayalam.

Medical work, also the work of our Leper Hospitals take care of a vast amount of human suffering. The Catherine Booth Hospital at Nagercoil, which has grown out of a very small beginning, is now a fully equipped, modern institution of many departments, dealing with all manner of medical and surgical cases. The Hospital is equipped with X-Ray, radium, iron lung and splendid nursing facilities. Branches from this institution carry the service of the Hospital to some of the most remote regions, dealing, among other things, with malaria which has ravaged and undermined the health of a whole population in certain areas in South Travancore.

166,766 In-patients were treated during the past year in the Catherine Booth Hospital and its several Branches and 1194 major operations and 3507 minor operations were performed. Two Leper colonies are run one on behalf of the Cochin Government and the other the Evangeline Booth Leper Hospital in North Travancore, have combined 780 patients. These two institutions carry on the work ranking with the highest traditions of Christian service.

Workers in the Territory consist of 1243 Officers, 245 employees. There are 500 Officerled Corps and 87 Societies, 184 primary day schools.

Territorial Headquarters—S. A. Kuravankonam, Trivandrum, Travancore State.

Territorial Commander—Commissioner Chas F. A. Mackenzie.

Chief Secretary—Lieut.-Colonel A. J. Hedén.

Laws and the Administration of Justice.

The indigenous law of India is personal and divisible with reference to the two great classes of the population, Hindu and Mahomedan. Both systems claim divine origin and are inextricably interwoven with religion, and each exists in combination with a law based on custom. At first the tendency of the English was to make their law public and territorial, and on the establishment of the Supreme Court at Calcutta in 1773 and the advent of English lawyers as judges, they proceeded to apply it to Europeans and Indians alike. This error was rectified by the Declaratory Act of 1780, by which Parliament declared that as against a Hindu the Hindu law and usage, and as against a Mahomedan the laws and customs of Islam should be applied. The rules of the Shastras and the Koran have been in some cases altered and relaxed. Instances can be found in the Bengal Sati Regulation Act of 1829, the Indian Slavery Act, 1843; the Caste Disabilities Removal Act of 1850; the Hindu Widows' Remarriage Act, 1856, and other Acts and Codes. To quote the Imperial Gazetteer, "A certain number of the older English statutes and the English common law are to a limited extent still in force in the Presidency Towns as applicable to Europeans, while much of the old Hindu and Mahomedan law is everywhere personal to their native fellow subjects; but apart from these, and from the customary law, which is as far as possible recognised by the Courts, the law of British India is the creation of statutory enactments made for it either at Westminster or by the authorities in India to whom the necessary law-giving functions have from time to time been delegated.

Codification.

Before the transfer of India to the Crown the law was in a state of great confusion. Sir Henry Cunningham described it as "hopelessly unwieldy, entangled and confusing." The first steps toward general codification were taken in 1833, when a Commission was appointed, of which Lord Macaulay was the moving spirit, to prepare a penal code. Twenty-two years elapsed before it became law, during which period it underwent revision from his successors in the Law Membership, and especially by Sir Barnes Peacock, the last Chief Justice of the Supreme Court of Calcutta. The Penal Code, which became law in 1860, was followed in 1861 by a Code of Criminal Procedure. Substantially the whole criminal law of British India is contained in these two Codes. One of the most eminent lawyers who ever came to India, Sir James Stephen, said "The Indian penal code may be described as the criminal law of England freed from all technicalities and superfluities, systematically arranged and modified in some few particulars (they are surprisingly few) to suit the circumstances of British India. It is practically impossible to misunderstand the code." The Indian Penal Code has from time to time been amended. The rules of Civil Procedure have been embodied in the Code of Civil Procedure. The Code of Civil Procedure was remodelled in 1908 and the Code of Criminal Procedure

in 1898. These Codes as amended from time to time are now in force. The years between 1870 and 1885 saw a great deal of legislative activity in British India, and important branches of the law, like Evidence, Contract, Transfer of Property, Trusts, Negotiable Instruments, etc., were codified in the form of Acts of the Indian Legislature applicable to the whole of British India. These, amended from time to time and supplemented by rules derived from English decisions, constitute the bulk of the law administered in British India.

Statute Law Revision.

In October, 1921, a committee was appointed under the presidency of the Hon Mr A. P. Muddiman, ICS, to deal with the question of statute law revision. The functions of the Committee were to prepare for the consideration of Government such measures of consolidation and clarification, as may be necessary to secure the highest attainable standard of formal perfection in the statute law of India. In several branches of the law consolidation has long been overdue, and it was suggested that the preparation of a Bill consolidating the existing law relating to merchant shipping, with such amendments therein as are necessitated or rendered desirable by the enactment of the English statutes since 1894 on the same subject should form the first duty undertaken by the Committee. Under the conditions resulting from the establishment of the reformed Constitution, increasing importance will attach hereafter to the periodical examination and revision of the Statute Book and the Government of India hope that the Committee will take its place as a permanent feature of the legislative machinery of the country.

European British Subjects.

Whilst the substantive criminal law is the same for all classes, certain distinctions of procedure have always been maintained in regard to criminal charges against European British subjects. Until 1872 European British subjects could only be tried or punished by one of the High Courts. It was then enacted that European British subjects should be liable to be tried for any offences by magistrates of the highest class, who were also justices of the peace, and by judges of the Sessions Courts; but it was necessary in both cases that the magistrate or judge should himself be a European British subject. In 1883 the Government of India announced that they had decided "to settle the question of jurisdiction over European subjects in such a way as to remove from the code at once and completely every judicial disqualification which is based merely on race distinctions." This decision, embodied in the Ilbert Bill, aroused a storm of indignation which is still remembered. The controversy ended in a compromise which is thus summarised by Sir John Strachey ("India"). "The controversy ended with the virtual, though not avowed, abandonment of the measure proposed by the Government. Act III of 1884, by which the law previously in force was amended; cannot be said to have diminished the privileges of European British subjects charged

with offences, and it left their position as exceptional as before. The general disqualification of native judges and magistrates remains; but if a native of India be appointed to the post of district magistrate or sessions judge, his powers in regard to jurisdiction over European British subjects are the same as those of an Englishman holding the same office. This provision however is subject to the condition that every European British subject brought for trial before the district magistrate or sessions judge has the right, however trivial be the charge, to claim to be tried by a jury of which not less than half the number shall be Europeans or Americans.... Whilst this change was made in the powers of district magistrates, the law in regard to other magistrates remained unaltered."

After a discussion on this subject in the Legislative Assembly in September 1921, the following motion was adopted:—"That in order to remove all racial distinctions between Indians and Europeans in the matter of their trial and punishment for offences, a committee be appointed to consider what amendments should be made in the provisions of the Code of Criminal Procedure, 1898, which differentiate between Indians and European British subjects and American and Europeans who are not British subjects in criminal trials and proceedings and to report on the best methods of giving effect to their proposals." As a result of the recommendations of the Racial Distinctions Committee the law on the subject was further modified, and by the Criminal Law Amendment Act XII of 1923 in place of the old Chapter XXXIII (sections 443-463) the new Chapter XXXIII (sections 443-419) with certain supplementary provisions were substituted. This has in some measure reduced the difference between the trials of Europeans and of Indians under the Code. Since 1836 no distinction of race has been recognised in the civil courts throughout India.

The Federal Court

A Federal Court is, according to the Joint Parliamentary Committee's Report, a necessary element of any Federal Constitution. It is at once the guardian and interpreter of the Constitution, and arbiter of the disputes between the Federal Units. The Government of India Act 1935 accordingly provides (sections 200-218) that there shall be a Federal Court consisting of a Chief Justice of India and such number of other judges as His Majesty may deem necessary, but the number of puisne judges shall not exceed six, unless and until an address is submitted by the Federal Legislature for an increase. Every judge of the Federal Court is to be appointed by His Majesty by warrant under the Royal Sign Manual. He shall hold office until he attains the age of 65 years, but is liable to be removed from office on the ground of misbehaviour or of bodily or mental infirmity, provided that the Judicial Committee of the Privy Council on a reference reports that the judge ought on any such ground to be removed. The Federal Court shall be a Court of Record, and shall sit at Delhi or such other place or places as the Chief Justice may with the approval of the Governor-General from time to time appoint.

The Federal Court has exclusive original jurisdiction in any dispute between any two or more of the following parties, that is to say, the Federation, any of the Provinces, or any of the Federated States, if and in so far as the dispute involves any question (of law or of fact) on which the existence or extent of a legal right depends. Certain restrictions are placed upon the Court's jurisdiction over disputes to which a State is a party. In the exercise of its original jurisdiction the Court can pronounce only a declaratory judgment. The Court is invested with appellate jurisdiction over any judgment decreed or final order of a High Court in British India, if the High Court certifies that the case involves a substantial question of law as to the interpretation of the Government of India Act, or any Order in Council made thereunder. No direct appeal in such a case lies to His Majesty in Council either with or without special leave. The Federal Legislature is empowered to enlarge the appellate jurisdiction of the Federal Court so as to extend to certain civil cases involving large stakes. An appeal also lies to the Federal Court from a High Court in a Federated State on the ground that a question of law has been wrongly decided concerning the interpretation of the Act, or of an Order in Council made thereunder, or the extent of the executive or legislative authority vested in the Federation by virtue of the Instrument of Accession of the State or arising under Agreement made under Part VI of the Act in relation to the administration in the State of a law of the Federal Legislature.

An appeal may be brought to His Majesty in Council from a decision of the Federal Court in its original jurisdiction in any dispute which concerns the interpretation of the Act, or of an Order in Council made thereunder, or the extent of the executive or legislative authority vested in the Federation by virtue of an Instrument of Accession, or under an agreement made under Part VI of the Act. An appeal may also be brought to the Privy Council where special leave is granted either by the Federal Court or the Privy Council. All authorities, civil and judicial, throughout the Federation are enjoined to act in aid of the Federal Court. All proceedings in the Federal Court shall be in the English language, and judgment must be pronounced in open court in accordance with the opinion of the majority of the judges.

The Federal Court was established and commenced to function from 1st October 1937. The Court in the first instance consists of a Chief Justice and two puisne judges. The Chief Justice receives a salary of Rs. 7,000, and each of the puisne judges Rs. 5,500 per month.

Sir Maurice Gwyer, K.C., was appointed to be the first Chief Justice of India, and Sir Shah Mahomed Sulaiman and Mr. M. R. Jayakar to be judges of the Federal Court.

The functions of the Federal Court are not to be affected in any way by the assumption of emergency powers by the Governor-General under section 45 of the Act in case of failure of the Constitutional machinery.

High Courts.

High Courts of Judicature were constituted by the Indian High Courts Act of 1861 for Bengal, Bombay and Madras, and later for the United Provinces and the Punjab superseding

the old supreme and Sudder Courts. More recently High Courts have been constituted for Patna and Rangoon as well. The Judges are appointed by the Crown; they hold office during the pleasure of the Sovereign, at least one-third of their number are barristers, one-third are recruited from the judicial branch of the Indian Civil Service, the remaining places being available for persons who have held certain Judicial Offices in India or lawyers qualified in India. This fixed proportion of Barrister and Civilian judges has now been abolished by Government of India Act 1935. Trial by jury is the rule in original criminal cases before the High Courts, but juries are never employed in civil suits in India.

For other parts of India High Courts have been formed under other names. The chief difference being that they derive their authority from the Government of India, not from Parliament. In Sindh, N. W. F. Province and the Central Provinces and Berar the principal legal tribunal is known as the Court of the Judicial Commissioner. Quite recently the Secretary of State for India has approved the proposal for the establishment of a High Court in the Central Provinces and Berar and Sindh, and a High Court has since January 1936 been established at Nagpur.

The High Courts are the Courts of appeal from the superior courts in the districts, criminal and civil, and their decisions are final except in cases in which an appeal lies to His Majesty in Council and is heard by the Judicial Committee of the Privy Council in England. The High Courts exercise supervision over all the subordinate courts. Returns are regularly sent to them at short intervals and the High Courts are able, by examining the returns, by sending for proceedings, and by calling for explanations, as well as from the cases that come before them in appeal, to keep themselves to some extent acquainted with the manner in which the courts generally are discharging their duties.

Lower Courts.

The Code of Criminal Procedure provides for the constitution of inferior criminal courts styled courts of session and courts of magistrates. Every province, outside the Presidency towns, is divided into sessions divisions consisting of one or more districts, and every sessions division has a court of session and a sessions judge, with assistants if need be. These stationary sessions courts take the place of the English Assizes, and are competent to try all accused persons duly committed, and to inflict any punishment authorised by law, but sentences of death are subject to confirmation by the highest court of criminal appeal in the province. Magistrates' courts are of three classes with descending powers. Provision is made and largely utilised in the towns, for the appointment of honorary magistrates, in the Presidency towns Presidency magistrates deal with magisterial cases and benches of Justices of the Peace or honorary magistrates dispose of the less important cases.

Trials before courts of session are either with assessors or juries. Assessors assist, but

do not bind the judge by their opinions, on juries the opinion of the majority prevails if accepted by the presiding Judge. The Indian law allows considerable latitude of appeal. But there is no Court of Criminal Appeal, and as the Judicial Committee of the Privy Council has repeatedly disclaimed all Jurisdiction as a Court of Criminal Appeal, there is no adequate machinery for appeal or revision available to persons convicted of serious and even capital offences and sentenced by the High Courts in their original or appellate Criminal Jurisdictions. The prerogative of mercy is exercised by the Governor-General-in-Council and the Local Government concerned without prejudice to the superior power of the Crown.

The constitution and jurisdiction of the inferior civil courts varies. Broadly speaking one district and sessions judge is appointed for each district as District Judge he presides in its principal civil court of original jurisdiction, his functions as Sessions Judge have been described. For these posts members of the Indian Civil Service are mainly selected though some appointments are made from the Provincial Service. Next come the Subordinate Judges and Munsiffs, the extent of whose original jurisdiction varies in different parts of India. The civil courts, below the grade of District Judge, are almost invariably presided over by Indians. There are in addition a number of Courts of Small Causes, with jurisdiction to try money suits up to Rs 500. In the Presidency towns, where the Chartered High Courts have original jurisdiction, Small Cause Courts dispose of money suits up to Rs 2,000. As Insolvency Courts the chartered High Courts of Calcutta, Bombay and Madras have jurisdiction in the Presidency towns. In the mofussil similar powers were conferred on the District Courts by the Insolvency Act of 1906.

Coroners are appointed only for the Presidency Towns of Calcutta and Bombay. Elsewhere their duties are discharged by the ordinary staff of magistrates and police officers unaided by jurors.

Legal Practitioners

Legal practitioners in India are divided into Barristers-at-Law, Advocates of the High Court, Vakils and Attorneys (Solicitors) of High Courts and Pleaders, Mukhtars and revenue agents. Barristers and Advocates are admitted by each High Court to practise in it and its subordinate courts; and they alone are admitted to practise on the original side of some of the chartered High Courts. Vakils are persons duly qualified who are admitted to practise on the appellate side of the chartered High Courts and in the Courts subordinate to the High Courts. Attorneys are required to qualify before admission to practise in much the same way as in England. The rule that a solicitor must instruct counsel prevails only on the original side of the Bombay and Calcutta High Courts. Pleaders practise in the subordinate courts in accordance with rules framed by the High Courts. The Bar Councils Act of 1926 aims at abolishing the various grades of practitioners, and under it each of the High Courts maintains a roll of advocates entitled to practise within its jurisdiction.

Law Officers.

The Government of India has its own law colleague in the Legal Member of Council. All Government measures are drafted in this department. Outside the Council the principal law officer of the Government of India is the Advocate-General of Bengal, who is appointed by the Crown, is the leader of the local Bar, and is always nominated a member of the Provincial Legislative Council. In Calcutta he is assisted by the Standing Counsel and the Government Solicitor. There are Advocates-General appointed by the Crown and Government Solicitors for Bombay and Madras, and in Bombay there is attached to the Secretariat a Legal Remembrancer and an Assistant Legal Remembrancer, drawn from the Judicial Branch of the Indian Civil Service. The Government of Bengal consults the Bengal Advocate-General, the Standing Counsel and the Government Solicitor, and has besides a Legal Remembrancer (a Civil Servant) and a Deputy Legal Remembrancer (a practising barrister), the United Provinces are equipped with a civilian Legal Remembrancer and professional lawyers as Government Advocate and Assistant Government Advocate, the Punjab has a Legal Remembrancer, Government Advocate and a Junior Government Advocate; and Burma a Government Advocate, besides a

Secretary to the Local Legislative Council. Under the Government of India Act 1935 it is proposed to appoint an Advocate-General for each of the more important provinces, and an Advocate-General of the Federal Court is also appointed, and he will be the principal law-officer of the Federal Government.

Sheriffs are attached to the High Courts of Calcutta, Madras and Bombay. They are appointed by Government, selected from non-officials of standing, the detailed work being done by deputy sheriffs, who are officers of Court.

Law Reports.

The Indian Law Reports are now published in seven series—Calcutta, Madras, Bombay, Allahabad, Patna, Lahore and Rangoon under the authority of the Governor-General-in-Council. They contain cases determined by the High Court and by the Judicial Committee on appeal from the particular High Court. These appeals raise questions of very great importance, and the Council of Law Reporting for England and Wales show their appreciation by printing the Indian Appeals in a separate volume, and have also compiled a digest of Indian Appeals covering the period 1871-1893. The other Provinces and States have series of reports issued under the authority either of the Judiciary or the State.

NOTE.—Figures for year prior to 1935 are inclusive of Burma.

* Details not given of 3785 Bombay suits in 1930, 3,301 in 1931, 2,929 in 1932, 2,790 in 1933, 2,650 in 1934, 3,053 in 1935, 3,156 in 1936, 2,738 in 1937 and 2,637 in 1938.

(a) Excludes 2,260 suits of "Superior Courts".

(b) Includes 2 suits not shown in details.

(c) 800 suits not shown in details.

(d) 10 " the records of which have been destroyed by fire.

THE INDIAN POLICE.

Origins.—Cornwallis was the first Indian administrator to take the burden of policing the country off the zemindars and to place it on Government. He ordered the District Judges of Bengal in 1793 to open a Thana (Police Station) for every 400 square miles of their jurisdiction, and to appoint stipendiary Thanadars (Police Station Officers) and subordinates.

In Madras in 1816, Sir Thomas Munro took superintendence of police out of the hands of the sedentary judges and placed it in the hands of the peripatetic Collector, who had the indigenous village police system already under his control. In this way the Revenue Department controlled the police of the districts and still to some extent does so, especially in Bombay Province.

In Khandesh from 1826-36 Outram of Mutiny fame showed how a whole time military commandant could turn incorrigible marauders into excellent police, and Sir George Clerk, Governor of Bombay in 1848, applied the lesson by appointing full-time European Superintendents of Police in many Districts.

Madras had a torture scandal in 1853 which showed that 3 Collectors had no time for real police superintendence, in 1859 the principle of full-time European superintendence was introduced in a Madras Act of that year and the control of the Collector was removed.

The Mutiny led to general police overhaul and retrenchment and the Madras Act was mainly followed in India Act V of 1861, "An Act for the Regulation of Police", which still governs police working everywhere in India except Madras and Bombay, which have its own Police Act (IV of 1890).

Working—Strictly speaking there is no Indian Police. With the exception of the advisory staff of the Intelligence Bureau attached to the Home Department, the Government of India has not a single police officer directly under its control. The police provided for by the 1861 Act is a provincialised police, administered by the Local Government concerned and is not now subject to the general control of the Governor-General. The Police in minor provinces, viz., Coorg, Delhi, Ajmer-Merwara, Andaman and Nicobar Islands, and Panth Piploda, and in other centrally administered areas is administered by the Chief Commissioner or the head of the administration concerned, subject to the general control and direction of the Central Government.

Within the Local Government area the police are enrolled and organised in District forces, at the head of each of which is a District Superintendent of Police with powers of enlistment and dismissal of constabulary, and Police Station Officers may also be dismissed by the D.S.P.

The D.S.P. is subject to dual control. The force he commands is subject to the general control of the District Magistrate for the enforcement of law and the maintenance of order in the District. But the departmental working

and efficiency of the force is governed by a departmental hierarchy of Deputy Inspector-General of Police and Inspector-General of Police. Generally speaking, the D.S.P. has to correspond with his District Magistrate on judicial and magisterial topics, and with his departmental chiefs on internal working of his force.

The C I D—The Curzon Police Commission of 1902-3 modernised police working by providing for the direct enlistment and training of Educated Indians as Police Station Officers, and by creating specialised police agencies under each Local Government for the investigation of specialist and professional crime. These agencies are known as **Criminal Investigation Departments** and work under a Deputy Inspector-General. They collate information about crime, edit the *Crime Gazette*, take over from the District Police crimes with ramifications into several jurisdictions, and they control the working of such scientific police developments as the Finger Print Identification Bureaux. There is also a **Central Intelligence Bureau** under the Home Department of the Government of India which collects information from all provincial Criminal Investigation Departments and works for inter-provincial liaison. It has its branches at various centres throughout British India and at Quetta in Baluchistan. The Head of the Bureau known as the Director, Intelligence Bureau, also acts as Advisor to the Home Department of the Central Government in police matters.

Headquarters and Armed Police—At the chief town of each District the D.S.P. has his office and also his Headquarters Police Lines and parade ground. This is the main centre for accumulation and distribution to the Police Stations and Outposts of the District of clothing, arms, ammunition, and accoutrements. Here are the Stores and the Armoury. Here also constabulary recruits enlisted by the D.S.P. are taught drill, deportment, and duties and are turned out to fill vacancies. The Headquarters Lines also contain the two hundred or so armed police who mount guard on Treasuries in the District, and also provide prisoner and treasure escort. Actually they form a small and mobile local army equipped with muskets (single loading) and bayonets. The most highly trained section of them go through a musketry course and are armed with 410 bore muskets. At most headquarters, but by no means all, there is also a reserve of mounted and armed police.

Thanas and Thanadars—Almost throughout India the popular terms for Police Station and Police Station Officer are "Thana" and "Thanadar". It is at the Police Station that the public are most in touch with the police and the police with the public. Whether it be in a large city or in a mofussil hamlet the Thana is the place where people come with their troubles and their grievances against their neighbours or against a person or persons unknown. In dealing with such callers, the Thanadar, who

like police of all ranks, is supposed to be always on duty, is chiefly guided by the Fourteenth Chapter of the Code of Criminal Procedure, and the Second Schedule at the end of that Code. This schedule shows nearly all penal offences and states whether or not they are "cognisable by the police." The fourteenth Chapter lays down that a cognisable complaint must then and there be recorded, visited, and investigated. A non-cognisable complaint is merely noted in a separate book and the complainant is told to go to court.

Police Prosecutors—The complainant in a cognisable case not only has his complaint recorded but investigated without payment of fee. If the Thanadar succeeds in establishing a *prima facie* case against the accused, the prosecution in court is conducted free of charge by a police prosecutor, who is a police officer. Personal inspection and supervision are the common means for the District Superintendent of Police to know whether his subordinates are doing their work properly.

Out-Posts.—When the Police Commission of 1860 devised the plan of police that still holds the field, they laid down two criteria of the numbers required. One was one policeman per square mile; the other was one per thousand of population. In towns it is well enough to have the available police concentrated at the police station. But in the *mofussil* the Thana is very often fifty miles distant from portions of its jurisdiction. It is in such cases profitable to detach a portion of the police station strength under a head constable to man an outpost where complaints can be received and investigation begun without the injured party having to undertake a long journey to the distant Thana. The secret of good *mofussil* police working in normal times is dispersion. A single policeman, however junior, represents the rule of law and is an agent of Government.

The Chain of Promotion.—A constable may aspire to become a Police Station Officer or higher officer. The directly recruited candidate who comes in through the Police Training School as a Thanadar is, it is understood, a graduate and may quite often rise to be an Inspector or a Deputy Superintendent, or exceptionally a Superintendent. The direct Deputy, an office reserved for Indians, has a good chance of becoming Superintendent, and perhaps Deputy Inspector-General. The direct Assistant Superintendent, whether from England, or from India, is sure of a Superintendentship, and has chances of D.I.G. after 25 years' service. The period of service for all ranks for full pension is thirty years, and if an officer dies in the process of earning full pension his pension dies with him and all his dependents get his provident fund. Members of the Police Force are eligible for the award of the King's Police Medal and the Indian Police Medal for long and meritorious services and for conspicuous acts of gallantry.

Presidency Police.—In the Presidency Towns there is unified police control for the Police Commissioner is responsible for both law and order and for departmental training and efficiency.

The Commissioner of Police of a Presidency Town is not the subordinate of the Provincial Inspector-General of Police and he deals direct with Government, just as the Presidency Magistrates deal directly with the High Court. The Criminal Procedure Code of India is modified in the Presidency Towns by special police Acts which prescribe police procedure. Justice in criminal cases in Presidency Towns is somewhat rough and ready, not only from this cause, but also because Presidency Magistrates can give upto six months or Rs 200 fine summarily, i.e., without formal record of proceedings, and if only whipping or fine up to Rs. 200 is inflicted there need be not even any statement of reasons for the conviction.

STATISTICS OF POLICE WORK.

The undesirability of attaching undue importance to statistical results as a test of the merits of police work was a point upon which considerable stress was laid by the Indian Police Commission, who referred to the evils likely to result from the prevalence among subordinate officers of an impression that the advancement of an officer would depend upon his being able to show a high ratio of convictions, both to cases and by persons arrested, and a low ratio of crime. The objection applies more particularly to the use of statistics for small areas, but they cannot properly be used as a basis of comparison even for larger areas without taking

into account the differences in the conditions under which the police work, and, it may be added, they can at the best indicate only very imperfectly the degree of success with which the police carry out that important branch of their duties, which consists in the prevention of crime. These considerations have been emphasised in orders of the Government of India. Subject to these observations, the figures below may be given as some indication of the volume of work falling upon the police, and of the wide differences between the conditions and the statistical results in different provinces. They are statistics of cognizable crime.—

JAILS

Jail administration in India is regulated generally by the Prisons Act of 1894, and by rules issued under it by the Government of India and the local governments. The punishments authorised by the Indian Penal Code for convicted offenders include transportation, penal servitude, rigorous imprisonment (which may include short periods of solitary confinement), and simple imprisonment. Accommodation has also to be provided in the jails for civil and under-trial prisoners.

Since the introduction with effect from the 1st April 1937 of the Government of India Act, the administration of "Jails" is a provincial matter, and the power of legislation in respect of prison administration vests in the Provincial Governments, the Central Government exercising only concurrent legislative powers with the Provincial Governments in the matter of the transfer of prisoners and accused persons from one unit to another.

The origin of all jail improvements in India in recent years was the Jail Commission of 1889. The report of the Commission, which consisted of only two members, both officials serving under the Government of India is extremely long, and reviews the whole question of jail organisation and administration in the minutest detail. In most matters the Commission's recommendations have been accepted and adopted by Local Governments, but in various matters, mainly of a minor character their proposals have either been rejected *ab initio* as unsuited to local conditions, abandoned as unworkable after careful experiment or accepted in principle but postponed for the present as impossible.

The most important of all the recommendations of the Commission, the one that might in fact be described as the corner stone of their report, is that there should be in each Presidency three classes of jails: in the first place, large central jails for convicts sentenced to more than one year's imprisonment; secondly, district jails at the headquarters of districts, and, thirdly, subsidiary jails and "lock-ups" for under-trial prisoners and convicts sentenced to short terms of imprisonment. The jail department in each province is under the control of an Inspector-General, he is generally an officer of the Indian Medical Service with jail experience, and the Superintendents of certain jails are usually recruited from the same service. During the war the number of I.M.S. Officers in Jail Department has been reduced to the minimum. The district jail is under the charge of the civil surgeon, and is frequently inspected by the district magistrate. The staff under the Superintendent includes, in large central jails, a Deputy Superintendent to supervise the jail manufactures and in all central and district jails one or more subordinate medical officers. The executive staff consists of jailors and warders, and convict petty officers are employed in all central and district jails, the prospect of promotion to one of these posts being a strong inducement to good behaviour.

The Jails Committee.—The obvious advisability of proceeding along certain general lines

of uniform application led to the appointment of a Jails' Committee, which conducted the first comprehensive survey of Indian prison administration which had been made for thirty years. Stress was laid by the Committee upon the necessity of improving and increasing existing jail accommodation, of recruiting a better class of warders, of providing education for prisoners, and of developing prison industries so as to meet the needs of the consuming Departments of Government. Other important recommendations included the separation of civil from criminal offenders, the adoption of the English system of release on license in the case of adolescents and the creation of children's courts. The Committee found that the reformative side of the Indian system needed particular attention. They recommended the segregation of habituals from ordinary prisoners, the provision of separate accommodation for prisoners under trial, the institution of the star-class system, and the abolition of certain practices which are liable to harden or degrade the prison population.

Employment of Prisoners.—The work on which convicts are employed is mostly carried on within the jail walls, but extra-mural employment on a large scale is sometimes allowed, as, for example, when a large number of convicts were employed in excavating the Jhelum Canal in the Punjab. Within the walls prisoners are employed on jail service and repairs, and in workshops. The main principle laid down with regard to jail manufactures is that the work must be penal and industrial. The industries are on a large scale, multifarious employment being condemned, while care is taken that the jail shall not compete with local traders. As far as possible industries are adapted to the requirements of the consuming public departments, and printing, tent-making, and the manufacture of clothing are among the commonest employments. Schooling is confined to juveniles, the experiment of teaching adults has been tried, but literary instruction is unsuitable for the class of persons who fill an Indian jail.

The conduct of convicts in jail is generally good, and the number of desperate characters among them is small. Failure to perform the allotted task is by far the most common offence. In a large majority of cases the punishment inflicted is one of those classed as "minor." Among the "major" punishments fetters take the first place. Corporal punishment is inflicted in relatively few cases. Punishments were revised as the result of the Commission of 1889. Two notable punishments then abolished were shaving the heads of female prisoners and the stocks. The latter, which was apparently much practised in Bombay, was described by the Commission as inflicting exquisite torture. Punishments are now scheduled and graded into major and minor. The most difficult of all jail problems is the internal maintenance of order among the prisoners, for which purpose paid warders and convict warders are employed. With this is bound up the question of a special class of well-behaved prisoners for employment as convict officers.

Juvenile Prisoners.—As regards "youthful offenders"—i.e., those below the age of 15—the law provides alternatives to imprisonment, and it is strictly enjoined that boys shall not be sent to jail when they can be dealt with otherwise. The alternatives are detention in a reformatory school for a period of from three to seven years, but not beyond the age of 18; discharge after admonition; delivery to the parent or guardian on the latter executing a bond to be responsible for the good behaviour of the culprit, and whipping by way of school discipline. These are but general principles which have been variously given effect to by various Provincial Governments.

The question of the treatment of "young adult" prisoners has in recent years received much attention.

Children's Acts and Borstal Schools Acts for the special treatment of juvenile offenders have been passed by several Provincial Legislatures.

The Madras Children Act, passed in 1920, is the earliest and has been largely followed in the other provinces. It classifies as "children" boys and girls under the age of 14 and as "young persons" those between the ages of 14 and 16. It enacts that a child or young person convicted of any offence, may as an alternative to the usual punishments of fine, whipping or imprisonment be discharged after due admonition, committed to the care of a parent, guardian or relative, or of a person named by the court, or sent to an Industrial School set up or certified under the Act. It further enacts that no offender under the age of 18 may be sentenced to transportation, nor under 14 to imprisonment. Offenders between the ages of 14 and 18 may be sentenced to imprisonment in very special circumstances. Provision is made for the committal to an Industrial School or to the care of a suitable person of neglected, ill-treated or uncontrollable children under the age of 14. The Act empowers the Government of the Province to establish juvenile courts consisting of a stipendiary magistrate and one or two Honorary Magistrates who shall, where possible, be women and directs that, where such courts have not been established, young offenders shall be tried in a different room or at a different time from those at which the ordinary sittings are held.

The Bengal Act provides for the committal to an Industrial School of children under 14 found begging or destitute and of children living in immoral surroundings. It further provides for the punishment of cruelty to children, of causing and abetting the seduction or prostitution of girls under 16, and of accepting articles in pawn from a child.

The Bombay and Central Provinces Acts, which are practically identical, go further and provide for the punishment of persons found drunk in a public place when in charge of a child under 7, or giving intoxicating liquor or drugs to a child under 14, or inciting a child to gamble. They also empower police officers to confiscate tobacco in possession of children.

The Bombay Act has been extended throughout the province with satisfactory results and it will not now be necessary to send any children to prison except in very exceptional cases.

There are several certified schools established under the Bombay Act and there are a number of other institutions which co-operate with different juvenile courts. A Children's Aid Society is in existence which offers active co-operation. The Bombay Children Act has been amended mainly to prohibit the publication of names, addresses or other details of children or young persons involved in offences; to provide for a system of true probation as distinct from supervision; to empower the Chief Inspector of Certified Schools to release youthful offenders on license and to raise the minimum term of detention in the Borstal School from 2 to 3 years.

These provisions of the Bombay Act which relate to youthful offenders, the maintenance and treatment of persons sent to certified schools or committed to the care of relatives or other fit persons and the establishment of Industrial Schools and juvenile courts were applied to the province of Sind in March, 1936.

The operation of the Bengal Act which was passed in 1922 is at present confined to the town, port and suburbs of Calcutta, Howrah and to certain portions of the District of the 24 Parganas. A Central Children Court has been established in Calcutta, which has jurisdiction over the whole area to which the Act has been extended.

The Governments of Madras, Panjab and the Central Provinces have also enacted Probation of Offenders Act which allow of the release of young offenders on parole under specially selected Probation Officers. Similar legislation is under contemplation in Bombay, U. P. and Assam.

The provisions of the Borstal Schools Act are practically the same in the provinces where such Acts have been enacted.

In provinces where there is no Borstal Schools Act juvenile offenders are sent to the reformatory schools established under the Reformatory Schools Act, or confined in juvenile or ordinary jails, but are not allowed to mix with adult prisoners. In the Panjab a Reclamation Department has been established the main function of which is the working of the Panjab Good Conduct Prisoners Probation Release Act, 1926. Officers of the Department visit jails for the selection of prisoners on probation release. The probationers are usually sent to special farms.

Reformatory Schools.—These schools have been administered since 1899 by the Education department, and the authorities are directed to improve the industrial education of the inmates, to help the boys to obtain employment on leaving school, and as far as possible to keep a watch on their careers.

Commission of Enquiry, 1919.—A committee was appointed to investigate the whole system of prison administration in India with special reference to recent legislation and experience in Western countries. Its report published in 1921, was summarised in the Indian Year Book, 1922 (pages 670-671). A number of reforms were advocated but, owing to financial stringency, it has not yet been possible to introduce some of the more important of them.

Fines and Short Sentences.—Those sections of the Indian Penal Code, under which imprisonment must be awarded when a conviction occurs, should be amended so as to give discretion to the court. Sentences of imprisonment for less than twenty-eight days should be prohibited.

The Indeterminate Sentences—The sentence of every long-term prisoner should be brought under revision, as soon as the prisoner has served half the sentence in the case of the non-habitual, and two-thirds of the sentence in the case of the habitual, remission earned being counted in each case. The revision should be carried out by a Revising Board, composed of the Inspector-General of Prisons, the Sessions Judge and a non-official. In all cases, the release of a prisoner on parole should be made subject to conditions, breach of which would render him liable to be remanded to undergo the full original sentence. The duty of seeing that a prisoner fulfils the conditions on which he was released should not be imposed upon the police or upon the village headman, but special officers, to be termed parole officers, should be appointed for the purpose. These parole officers should possess a good standard of education, though not necessarily a university degree, and should both protect and advise the released prisoner and report breaches of the conditions of release.

Transportation and the Andamans—The future of the penal settlement of Port Blair was continually under the consideration of the Government of India from the time of the publication of the Jails Commission report, but it was not till 1926 that a definite decision was reached. It was then decided that henceforth only those convicts should normally be

sent to the Andamans who volunteered to come, that the old restrictions on life in the settlement should be sensibly relaxed, that convicts should be encouraged to settle on the land, that in certain conditions they should be entitled to release, to obtain occupancy rights over the land which they had cultivated, and that the importation of wives and families should be encouraged. The object of these changes was to promote the development of a free colony of persons, who would, after the terms of their sentences had expired, make the Andamans their permanent home. The Islands have lately been occupied by the Japanese.

Criminal Tribes.—The first essential of success in dealing with the criminal tribes is the provision of a reasonable degree of economic comfort for the people. It is therefore of paramount importance to locate settlements where sufficient work at remunerative rates is available. Large numbers of fresh settlers should never be sent to a settlement without first ascertaining whether there is work for them. Commitment to settlements should, as far as possible, be by gangs not by individuals. It is desirable to utilise both Government and private agency for the control of settlements.

Political Offenders—Much controversy rages round the classification and special treatment of what are popularly known as political offenders. Government do not accept that offences are distinguishable as political or non-political but have adopted a system of classification dividing convicts into three classes according to their standard of living in civil life and the character of the offence.

LAWS OF 1941.

1. The Insurance Deposits (Temporary Reduction) Act.—As a result of falling business and lapsing of policies due to war conditions, young proprietary insurance companies whose business is relatively small find it difficult to pay the fixed amounts of periodical instalments of the deposits required under s 7 of the Insurance Act, 1938. This Act reduces for the duration of the war and one year afterwards the instalments of deposits due from such insurers carrying on life insurance business only, subject to the provision of certain safeguards to prevent advantage being taken of the concession to incur increased expenditure or liabilities of an unjustifiable nature.

The Act is not applicable to a Mutual Insurance Company or a Co-operative Life Insurance Society (s 2). Under s 3 an insurer entitled to the benefits of the Act will be deemed to have complied with the provisions of s 7 of the original Act as to payment of deposits, if he has paid or pays in accordance with those provisions not less than half the total amount which would have been required by s 7 as the instalment, had the insurer not availed himself of the provisions of this Act. An insurer who has paid more than half the total amount required by s 7 as the instalment, may at his option have the amount of any such surplus payment appropriated to the payment of the next or any subsequent instalment of deposit required from him. Under s 4 an insurer will be entitled to the benefits of this Act if he carries on life insurance business only and the date on which he first assumed risk on any policy issued by him was earlier than the 3rd day of September, 1939, but not earlier than the 3rd day of September, 1929. S 5 specifies the circumstances under which an insurer will cease to be entitled to the benefits of the Act.

2. The Indian Merchandise Marks (Amendment) Act.—The Indian Merchandise Marks Act, 1889, is directed to the suppression of false marking on goods and does not require a positive statement of their actual origin, except in the case of goods which bear false or misleading indication. With the increase in recent years of imports and a very substantial development of industries in India, it had become necessary to provide for the marking of the country of origin on foreign goods imported into British India, whether from the United Kingdom or elsewhere. This Act provides for the marking of the country of origin in all necessary cases by vesting power with the Central Government to require, by notification, any class of goods to be marked with the country of origin.

Under s 2 "trade mark" means a "registered trade mark" as defined in s 2 of the Trade Marks Act, 1940, or a mark used in relation to goods for the purpose of indicating or so as to indicate a connection in the course of trade between the goods and some person having the right as proprietor to use the mark. S 3 provides for a new element helping to constitute a "false name or initials," namely, the name or initials of a fictitious person or of a person not carrying on business in connection with goods

of the same description. S. 12 of the original Act prohibits the removal of piece goods manufactured in British India from the premises of the factory without having stamped on each piece the length thereof. S 7 of the present Act provides that in addition to the stamping of the length on each piece the name of the manufacturer or of the wholesale purchaser should also be marked on it except when the goods are sold from the factory for export from British India. These marking requirements are also extended to cotton yarn and cotton sewing or darning thread by providing for the compulsory marking on each bundle of yarn or unit of thread the name of the manufacturer or the wholesale purchaser, the weight of yarn and the count of the yarn contained in each bundle and the weight of thread and grist number in each unit of thread. Penalty for non-compliance with the above requirements is forfeiture of the goods and a fine up to Rs. 1,000. Under s 8 the Central Government may, by notification in the official Gazette, require that goods of any specified class, whether Indian or foreign, should have applied to them an indication of the country or place in which they were made or produced and that such notification shall be issued after inquiry by the Central Government either on its initiative or on consideration of an application from the interests concerned. Such a notification shall not apply to foreign goods imported into British India if in respect of those goods the Chief Customs Officer is satisfied at the time of importation that they are intended for exportation whether after transshipment in or transit through British India. Penalty for tampering with, altering or effacing a mark applied in pursuance of a notification under the above section is imprisonment up to 6 months or fine up to Rs. 500. S 10 makes it obligatory on the United Kingdom merchants to mark on their goods the country of origin. The indication of the country of origin is now required to be in the English language.

3. The Petroleum (Amendment) Act.—Under s 23 (1) (c) of the Petroleum Act, 1934, only the holder of a license under the Act is liable for punishment for a breach of a condition of the license held by him. The licenses under the Act are, in actual practice, taken out by the large oil companies who appoint agents and place them in charge of licensed premises. Such agents, however, are not liable to punishment under the Act if they commit a breach of the conditions of the license. The present Act makes such agents liable for punishment for breaches of conditions of licenses which they commit or are privy to, without freeing licensees from liability for breaches to which they are parties.

4. The Berar Laws Act.—The provisions of many Central Acts are applicable to Berar by order made under the Indian (Foreign Jurisdiction) Order in Council, 1902, of each such Act often with certain modifications. Since the commencement of Part III of the Government of India Act, 1935, on April 1, 1937, Berar and the Central Provinces have been deemed to be one Governor's Province, and an Act passed after

that date and expressed to extend to the whole of British India extends *proprio vigore* to Berar. The present Act assimilates the position of Central Acts passed before April 1, 1937, to that of those passed after that date and automatically in force in Berar. This comprehensive enactment extends to and makes operative *proprio vigore* in Berar, Central Acts passed before the commencement of Part III of the Government of India Act, 1935, and nullifies the orders under the Foreign Jurisdiction Order in Council by virtue of which those Acts were operative in Berar.

5 Assam Rifles Act.—The classification of the Assam Rifles Force as an "armed force raised in India by the Crown under entry I in The Federal Legislative List involves central legislation to provide for the enrolment, maintenance and discipline of the force as a Central Force and the abandonment of the present fictional treatment of it as a Force maintained by the Provincial Government. This Act in the main is a re-enactment of the old Provincial Act of 1920 (Assam Act I of 1920), and provides for the regulation of and the maintenance of discipline in the Assam Rifles.

6. The Indian Railways (Amendment) Act.—As the provisions in the Indian Railways Act, 1890, relating to ticketless travellers are found to be insufficiently deterrent, the present Act provides for more appropriate penalties than are at present possible. S 2 places remaining in a carriage without a ticket on the same footing as entry into a carriage without a ticket. Under s 3 the penalty for fraudulently travelling without a proper pass or ticket is imprisonment for a term extending to 3 months or a fine up to Rs 100. S 5 provides for the ejectment of any person from a railway carriage who travels without having a ticket or in a carriage of a higher class than that for which he has purchased a ticket or in a carriage beyond the place authorised by the ticket or who fails or refuses to present for examination or to deliver up his ticket on requisition being made unless he then and there pays the fare and the excess charge.

7 The Indian Finance Act.—This Act continues for a further period of one year the existing rate of salt duty, the present inland postage rates and the present rates of income-tax and super-tax. It increases the rates of duty on matches, mechanical lighters, artificial silk yarn and thread. It also increases the Central surcharge on taxes on income to 33½% and fixes the rate of excess profits tax at 66½%.

Sections 3 and 4 provide for the doubling of the excise duty on matches and on mechanical lighters. S 5 provides for the increase of the alternative specific import duty on artificial silk yarn and thread from 3 annas to 5 annas per lb. S 7 provides for the continuance for a further period of one year of the existing rates of income-tax and super-tax increased by a surcharge for the purposes of the Central Government of 33½%. S 8 provides for the increase in the rate of the excess profits tax from 50% to 66½%.

8 The Protective Duties Continuance Act.—This Act continues for a period of one year the existing protective duties on iron and

steel manufactures, silver thread and wire (including gold thread and wire mainly made of silver) and sugar.

9. The Indian Tariff (Amendment) Act.—This Act extends the existing import duties on wheat and wheat flour for a further period of one year, namely, up to March 31, 1942.

10. The Tyres (Excise Duty) Act.—This Act imposes an excise duty of 10 % *ad valorem* on pneumatic rubber tyres and tubes. "Tyre" is defined in s 2 and means a pneumatic tyre in the manufacture of which rubber is used and includes the inner tube and the outer cover of such a tyre. S 3 imposes the aforesaid duty on all tyres manufactured in British India and issued out on or after April 1, 1941. Under s 4 if this duty is not paid within the specified time, the authority to which such duty is payable may, in lieu thereof, recover any sum not exceeding double the amount of the duty unpaid. S 7 empowers the Central Government to prohibit absolutely or with exceptions the bringing of tyres into British India from the territory of any specified Indian State.

11. The Excess Profits Tax (Amendment) Act.—This Act provides for the consequences of a change in the period of charge and the rate of the Excess Profits Tax. S 3 provides for charge of the tax at the original and the increased rates respectively, for the parts of a chargeable accounting period falling before and after the end of March, 1941. The computation of profits and of increase or decrease of capital is to be made for the whole period and the resultant excess or deficiency is to be apportioned on the time basis between the part ending at and that commencing after the end of March, 1941. In the case of an excess the first part is to be charged at 50% and the latter part at 66½%. S 4 provides for the setting off of deficiencies and gives the assessee a claim to have a deficiency occurring in a period after the end of March, 1941, set off against an excess occurring in a period after the end of March 1941. The section also provides that for this purpose a previous set-off against an excess occurring in a period before the end of March, 1941, may be cancelled.

12 The Delhi Restriction of Uses of Land Act.—At present there is no legal power to control building development along main roads in the Delhi Province outside the Delhi and New-Delhi Municipal areas. This Act enables the control to be exercised over areas adjacent to main roads. It also provides for control by means of licences of the use of land for brick-fields and other similar purposes.

The Act extends to the Province of Delhi (s 1). Under s 3 the Chief Commissioner of Delhi may declare any land adjacent to and within a distance of 440 yards from the centre line of any road to be a controlled area for the purpose of this Act. Any person interested in any land included within the said boundaries may object to the making of the declaration or to the inclusion of his land within the said boundaries. S 4 provides for the deposit at certain offices of plans of controlled areas and setting forth the nature of the restrictions applicable to the lands in such controlled areas. S 5 the erection of any building or making

excavation or living out any means of access to a road in a controlled area except with the previous permission of the Deputy Commissioner of Delhi. The Deputy Commissioner cannot refuse permission to the erection of a building, not being a dwelling house. If such building is required for purposes sub-servient to agriculture or to the erection of a building which was in existence on the date of the declaration. S 8 deals with claims for compensation and S 9 with the compulsory acquisition of land. S 10 lays down rules for the determination of the amount of compensation. S 12 prohibits the use of land within a controlled area for the purpose of charcoal-kiln, potter's kiln or lime kiln and also prohibits the use of land either within or outside a controlled area for purposes of a brick-field or brick kiln except under a licence from the Chief Commissioner. Under S 16 the Act does not apply *inter alia* to the erection of buildings upon land included in the inhabited site of any village as defined in the revenue records, excavations (including wells) made in the ordinary course of agricultural operations and the construction of an unmetalled road intended to give access to land solely for agricultural purposes.

13. The Insurance (Amendment) Act—This Act amends the Insurance Act 1938, in respect of a considerable number of matters in regard to which amendment was necessary in order to remove flaws and administrative difficulties, which have come to light since the passing of the original Act.

The following are some of the principal provisions of this Act. S 3 increases the registration fee for each class of business to Rs. 500 for new insurers. S 4 provides for the annual registration of insurers on payment of a prescribed fee on a sliding scale but not exceeding Rs. 1000 for each class of insurance business. The section also provides for the acceptance of late applications for renewal on receipt from the insurer of the fee payable and a penalty not exceeding the prescribed fee. S 7 makes it clear that the Reserve Bank of India is entitled to charge the normal commission on purchase and sale of securities made on the request of insurers. S 10 provides for the actuarial valuation of those sub-clauses of miscellaneous insurance which are susceptible of such valuation and also for exemption where the business is too small to justify such a requirement. S 11 extends the time for submission of valuation returns by insurers in all cases to 9 months. S 14 provides for a period of limitation of 4 months for an application to Court against an order of the Superintendent of Insurance. S 15 extends the powers of the Superintendent of Insurance to order a revaluation to all valuations of insurers. S 21 provides for the recovery of the expenses of investigations ordered under s 33 of the original Act as arrears of land revenue and gives such expenses priority over all other debts of the insurer. S 28 increases the license fee to Rs. 3 and provides for a penalty not exceeding Re. 1 if renewal of license is applied for late. S 31 provides for further relief to insurers against fraudulent suppression of material facts and provides for adjustment of terms of a policy when an error in age is discovered and enables the age of the insured to be proved at any time

after the issue of a policy. The section also makes it clear that the insurer has the right to call for proof of age at any time if he is so entitled. S 33 makes it clear that a company cannot interfere with the manner prescribed for the election of policy holder director. It renders ineligible for election as policy holders' directors persons who hold policies of life insurance merely on assignment to them and disqualifies as directors persons whose policies have been taken out only in the preceding six months. Provision is also made for suitable exemptions in certain cases which are found in practice to give rise to practical difficulties. S 36 provides for the equitable winding-up of all insurance business on the dividing principle when such business becomes unlawful after July 1, 1942 except in cases where the Superintendent of Insurance sanctions the measures for winding up already taken. S 38 brings the definition of "business on the dividing principle" in respect of provident societies into line with the definition of the same business in respect of insurers. It also provides in the case of provident societies for equitable winding up of insurance business on the dividing principle on the same lines as those laid down in the cases of insurers. S 40 provides for annual renewal of registration of provident societies on the same lines as s 4 does for insurers. S 61 extends the right of a guaranteed surrender value of holders of whole-life policies. Provision is also made for the guaranteed surrender value to be shown on the policy in the prescribed manner. S 67 provides that the public may inspect or obtain copies of documents filed by an insurer with the Superintendent of Insurance on payment of prescribed fees. S 68 provides that the period of limitation will run in the case of a life policy from the date of death of the life insured. In the case of fire and accident insurances the period will run from the date of the occurrence giving rise to the loss.

14. The Code of Criminal Procedure (Amendment) Act—Under the law as it stood before this Act there was no legal means short of extradition for enforcing the presence in British Indian Courts (or in Courts in any part of India outside British India) of accused persons who were for the time being in any part of India outside British India (or in British India). This Act provides for an efficient and expeditious method to secure the presence of an accused person in a Court in British India who for the time being is in a part of India outside British India and is within the local limits of the jurisdiction of a Court established or continued by the authority of the Central Government or the Crown Representative, and *vice versa*. S 2 provides for the sending of summons for service outside British India in duplicate, by post or otherwise to the presiding officer of a Court established or continued by the authority of the Central Government or the Crown Representative. It provides for the sending of a warrant for execution outside British India and the service and execution in British India of processes received from outside British India.

15. The Code of Criminal Procedure (Second Amendment) Act—The amendment made by this Act makes it clear that s 27 of the Indian Evidence Act, 1872, is not affected

by s 162 of the Criminal Procedure Code, 1898 In sub-section (2) of s 162 of the Code of Criminal Procedure, after the figures "1872" the following words and figures are added, namely, "or to affect the provisions of section 27 of that Act"

16 The Factories (Amendment) Act.—This Act empowers the Provincial Governments to enable them to notify once for all the application of the provisions of the original Act to any specified classes of establishments employing 10 or more persons

17. The Aligarh Muslim University (Amendment) Act.—This Act enables the University (1) to admit to its privileges a Degree College for women which it is proposed to organise at Aligarh and (2) to confer degrees on students passing the degree examinations from that College

18 The Madras Port Trust (Amendment) Act.—This Act revises the constitution of the Board of Trustees of the port of Madras Under s 2 the Board will consist of 18 trustees The Chairman will be appointed by the Central Government Of the remaining Trustees, 4 of whom 1 will be chosen to represent labour interests, will be appointed by the Central Government, 1 by the Provincial Government, 4 by members of the Madras Chamber of Commerce, 2 by the members of the Southern India Skin and Hide Merchants' Association, 1 each by members of the Madras Trades' Association and the Andhra Chamber of Commerce and 1 by the Corporation of Madras, The Trustee appointed to represent labour interests will be chosen after consultation with the registered trade unions, if any, composed of persons employed in the Port

19 The Mines Maternity Benefit Act.—This Act provides for prohibition from employment in mines of a woman during the four weeks following the day on which she is delivered of a child and for the payment to her of maternity benefit at 8 annas per day for a period up to 4 weeks of absence before delivery and for 4 weeks after delivery

Under s 62 "child" includes a still-born child S 3 prohibits the employment of and work by a woman in any mine during the four weeks following the day on which she is delivered of a child Under s 4 a woman employed in a mine who is pregnant may after giving notice to the manager of the mine that she expects to be delivered of a child within one month from the date of such notice, absent herself from work up to the day of her delivery A woman who is delivered of a child will be permitted to absent herself from work for a period of 4 weeks from the date of her delivery provided she has within 7 days of her delivery given notice to the manager of the delivery and of the date of delivery Under s 5 a woman continuously employed in a mine for a period of not less than six months preceding the date of her delivery will be entitled to receive from the owner of the mine a payment at the rate of 8 annas a day for every day on which she is absent from work owing to her confinement during the four weeks immediately preceding and including the day of her delivery and for each day of the four weeks following her delivery S 6 authorises the Central Govern-

ment to provide that a woman entitled to maternity benefit, will, if at the time of her delivery she utilised the services of a qualified midwife, receive in addition to the maternity benefit a bonus not exceeding Rs 3 S 9 provides for the disposal of maternity benefit in case of death of the woman entitled to receive it Under S 13 the penalty for contravention of the Act by an owner or manager of a mine is a fine up to Rs 500 Under s 14 no prosecution under this Act will be instituted except with the sanction of the Chief Inspector and no Court inferior to that of a Magistrate of the first class can try an offence under the Act A Court will not take cognizance of an offence under this Act unless complaint thereof has been made within six months of the date on which the offence is alleged to have been committed S 18 makes the Act binding on the Crown

20. The Professions Tax Limitation Act.—This Act came into force on April 1, 1942, Under s 2 any taxes payable in respect of any one person to a Province, or to any one municipality, district board, local board or other local authority in any Province, by way of tax on professions, trades, calling or employments will, from the commencement of this Act cease to be levied to the extent to which such taxes exceed Rs 50 per annum

21. The Federal Court Act.—This Act empowers the Federal Court to make rules for regulating the presentation of appeals lying to that Court and provides for the repeal of those provisions of the Code of Civil Procedure, 1908, which so far regulated that matter S 3 empowers the Federal Court to make rules for regulating the presentation and prosecution of appeals lying to that Court, including rules relating to the furnishing of security for costs, the proceedings, if any, to be had in High Courts in connection with such appeals, and the preparation and transmission to the Federal Court of the record in such appeals

22. The Indian Merchant Shipping (Amendment) Act.—Section 193 (1) of the Indian Merchant Shipping Act, 1923, provides for a space of 16 superficial feet and 96 cubic feet, respectively, for pilgrims carried by pilgrim ships In allotting the space, no separate allotment is made or marked for each pilgrim and the count is taken, in calculating the number of pilgrims, of the entire superficial space in-between decks, including nooks and corners and other spaces which are not capable of any use whatever Besides the space allotted is inadequate The present Act amends the section to remove the inconvenience to the pilgrims due to inadequate space and lack of individual allotment

23 The Indian Income-tax (Amendment) Act.—The following are some of the important amendments made by this Act—

The existing exemptions do not apply to official representatives of the Dominions or Foreign Governments other than Consuls and Trade Commissioners S 3 of this Act confers exemptions on such representatives and their staff on the basis of reciprocity It also confers with effect from the outbreak of the war an exemption on Nepalese and Indian State Forces which have come to British India at the request

of the Central Government. S 5 prevents the validity of the constitution of the Appellate Tribunal being questioned when on the occurrence of a vacancy there is an inequality of the numbers of judicial and accountants members. S 6 makes a radical alteration in the method of computing written down value in the case of assets acquired before the previous year. Under this section only depreciation actually allowed will be deducted. S 7 provides for depreciation on buildings let on hire along with machinery, plant or furniture. S 8 confers an exemption on income arising or accruing in an Indian State. Such income (unless received in or brought into British India or unless assessable under s. 12) will be exempted both from income tax and super tax but it will be taken into account in calculating income tax and super tax. S 10 provides relief from the hardships which would be incurred if income accruing in an Indian State and once taken into account for rate purposes in the year of accrual were again to be taken into account for rate purposes in the year of remittance into British India. The effect of this section is to secure that it shall not be taken into account for rate purposes in the year of remittance so long as it does not exceed in amount the British income of that year, the rate of tax will be the rate applicable to the amount of the income accrued outside British India on the supposition that it represented the total income of the assessee. S 13 provides that losses shall be set off before depreciation. It also provides, by amending the third proviso to s. 24 of the original Act that only the partners who suffered the loss should be allowed to have it set off. S 14 details the concessions allowed by sub-ss. (3) and (4) of s. 25 of the original Act. S 15 restores the Commissioner's powers of revision which were taken away by the Income Tax (Amendment) Act, 1939. It is specifically provided that the Commissioner may not pass any order prejudicial to an assessee. A fee of Rs. 25 is prescribed for an application for revision made by an assessee to the Commissioner under this section. Under s. 24 the collector would have for the purpose of recovering the tax the powers which under the Civil Procedure Code a Civil Court has for the purpose of the recovery of an amount under a decree.

24. The Excess Profits Tax (Second Amendment) Act.—This Act meets the wide spread objections to the discrimination, as regards the treatment of borrowed money as capital, between money borrowed from a person carrying on a *bona fide* banking business and money borrowed from any other person. The Act also strengthens the provisions dealing with devices for avoiding or reducing liability to excess profits tax, provides relief for the premature exhaustion of mineral deposits owing to the war-time requirements and provides for the exemption of businesses and of parts of businesses, the profits of which accrue or arise in an Indian State.

The Act came into force on November 26, 1941 (s. 1). S 3 provides that where the whole of the profits of a business or the profits of a part of a business accrue or arise in an Indian State such business or part of a business will not be subject to excess profits tax. S 4 deals with

chargeable accounting periods commencing before and ending after the end of March 1941, in relation to the change of basis, effected by new rule 5 A of the First Schedule and new rule 2 A of the Second Schedule, in the treatment of borrowed money and the interest thereon. The method adopted is to compute the profits or loss and the standard profits for the whole chargeable accounting period on the old and on the new basis and to take the due proportion of each of the two results. Under s. 5 in computing profits for the purposes of this Act no deduction will be made in respect of any transaction which has artificially reduced or would artificially reduce the profits. If a person has entered into or carried out any such transaction he would be liable to pay in addition to any excess profits tax a penalty not exceeding the tax evaded. Under s. 6 where the Excess Profits Tax Officer is of opinion that the main purpose for which any transaction was effected was the avoidance or reduction of liability to excess profits, he may make such adjustments as regards liability to excess profits tax as he considers appropriate so as to counteract the avoidance or reduction of liability to excess profits tax which would otherwise be effected by the transaction. S 7 provides relief for the premature exhaustion of mineral deposits (in the case of businesses concerned engaged in the winning of oil or other minerals) owing to the war-time requirements by making an allowance for this premature exhaustion in arriving at the profits of any chargeable accounting period. Ss 8(a) and 9 treat as from April 1, 1941, all borrowed money as capital both as regards the standard period if any, and as regards the chargeable accounting period so that the comparison of average capital required by the Act is to include the borrowed money as well as the proprietor's capital so far as this capital is employed in the business, and they provide for the corresponding inclusion in profits of the interest, etc. payable in respect of the borrowed money. Provision is made to secure that in the case of a business to which, for any chargeable accounting period, the minimum standard of Rs. 10,000 a year applies, or, in respect of which an award or a substituted standard of profits has been given under s. 6 (3) by a Board of Revenue or under s. 26 (1) by the Central Board of Revenue the new provisions will not operate to deprive the assessee of the benefit that accrues to him by reason of the minimum standard or of such award. S 8 (b) prevents the disallowance of excess profits by expenditure that has no relation to the requirements of the business, the major part of the cost of which might be met out of reduced taxation. In order that this power of disallowance should not be exercised without the fullest consideration, it is provided that the authority of the Commissioner of Excess Profits Tax is to be a condition precedent to its exercise, and further the assessee is given the right of appeal to the Appellate Tribunal in the case of any disallowance under this provision.

25. The Railways (Local Authorities' Taxation) Act.—This Act regulates the extent to which railway property vested in His Majesty for the purposes of the Central Government, will be liable to taxation imposed by an authority within a Province. Under s. 3 a railway administration will be liable to pay any tax in aid of the funds of any local authority, if the Central

Government, by notification, declares it to be so liable. Under s 4 the Central Government may by notification revoke or vary any notification issued under s 135 (1) of the Indian Railways Act, 1890, and where a notification is so revoked any liability arising out of the notification to pay any tax to any local authority will cease, and where a notification is so varied the liability arising out of the notification will be varied accordingly.

26. The Indian Companies (Amendment) Act.—Owing to delays in the arrivals of Mails from the United Kingdom, cases have occurred in which particulars relating to the allocation in the United Kingdom of shares of companies with share capital have not been received in India within one month from the date of allotment to enable them to be filed with the Registrar of Joint Stock Companies by the time required under sub-section (1) of s 104 of the Indian Companies Act, 1913. S 2 of the present Act confers powers on the Registrar to extend in exceptional cases the period within which the required return of share allotment can be filed. S 3 allows the Provident Fund moneys of employees of companies to be deposited in the Post Office Savings Bank.

27. The Trade Marks (Amendment) Act.—The Trade Marks Act, 1900, does not endow the Deputy Registrar of Trade Marks, Bombay, with all the powers necessary to carry through to its final stages the registration of a textile

trade mark. This Act gives him full powers to do everything necessary right up to and including the stage of complete registration of textile marks. It sets up an independent registry of textile trade marks at Bombay under an officer exercising all the powers of the Registrar in respect of textile trade marks within his own jurisdiction. The jurisdiction is defined by reference to the Province in which the applicant for registration has his principal place of business, and includes all except the eastern portions of British India which remains within the jurisdiction of the Registrar of Calcutta.

Section 4 of this Act provides for a separate registry at Bombay, and a separate Bombay registrar, and vests in the Bombay Registrar the powers necessary to enable him to dispose of all applications for registration made to him. It defines the jurisdiction of the Bombay Registrar and provides that in spite of any subsequent changes in the location of the place of business of an applicant for registration, the Registrar by whom the trade mark was originally registered remains in full control. When the applicant for registration has his principal place of business situated in any one of the following Provinces, namely, Madras, Bombay, the Punjab, the Central Provinces and Berar, the North-West Frontier Province or Sind, the application will lie only to the Bombay Registrar. S 5 provides for the keeping of complete records concerning textile trade marks at both the Calcutta and the Bombay Registries.

India and the League of Nations.

India is a Founder-Member of the League of Nations and enjoys in it equal rights with other Member-States, a position which she mainly owes to the goodwill shown towards her advancement and aspirations by Great Britain and the Self-Governing Dominions of the British Empire. The League of Nations was established under the terms of the Peace Treaty which was signed in Paris in 1919 after the conclusion of the Great War. Great Britain and the Self-Governing Dominions in 1917 passed a resolution which set India upon the road that led to the high international platform on which she stepped.

India was represented at the Imperial War Conference of 1918, at the Imperial Conference held in London in 1921, 1924 and 1926, and at the Imperial Economic Conference held in London in 1930. The report of the Inter-Imperial Relations Committee of the Imperial Conference, which was adopted by the Conference of 1926, stated the position of Great Britain and the Dominions to be "autonomous communities, equal in status, in no way subordinate to one another in any respect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations." India is not yet a Self-Governing Dominion to the extent indicated in this formula. The first stage in the direction of establishing Responsible Government in India was prescribed by the Government of India Act, 1919, but the Governor-General of India does not yet (to quote again from the Inter-Imperial Relations Committee) hold "in all essential respects the same position in relation to the administration of public affairs" in India as is held by His Majesty the King-Emperor in Great Britain. And there are certain other respects in which India's Constitutional position in the Empire is not the same as that of the Self-Governing Dominions. India, for example, is not entitled to accredit a Minister Plenipotentiary to the Heads of Foreign States.

The position enjoyed by India in the Empire governed the position which she entered when, as one of the States of the Empire, she joined in the Paris Peace Negotiations in 1918-19. India's membership of the League of Nations places her in a unique position among all non-self-governing States, Dominions, or Colonies throughout the world. She is an original member of the League by virtue of para 1 of article I of the Covenant by which the League was established and which states that any fully self-governing State, Dominion or Colony not named in the Annexes may become a member of the League. She is the only original member which is not self-governing, and in virtue of the restriction under para 11 of article I, on the admission of members other than original members, she will, so long as the present constitution of the League endures, remain the only member which is not self-governing. As a member of the League, India was for the first

time brought into direct and formal contact with the outside world as a separate entity. She was treated as if she had attained to the same kind of "separate" nationhood as that enjoyed by the Dominions.

India's Attitude.

On questions coming before the League, India has exactly the same rights as any other Member-State. The Secretary of State for India in His Majesty's Government is ultimately responsible for the appointment of Indian delegates and for their instruction, but in practice, he and the Government of India act jointly. In consultation and agreement with one another. Partly as a result of her membership of the League and partly owing to resolution No. IX adopted by the Imperial War Conference in 1917, recommending *inter alia* recognition of the right of the Dominions and of India to an adequate voice in British foreign policy and foreign relations, India has been given the same representation as the Dominions at all international conferences at which the British Empire is represented by a combined Empire Delegation. On many occasions in fact she has taken the lead in forming world opinion towards the achievement of the League's aims. In particular in the International Labour Organisation she has been successful in bringing Empire policy into line with her own on more than one occasion. In many of these conferences, particularly those of the League, Indian delegations have taken an independent line of action, sometimes directly opposed to the attitude of other parts of the British Commonwealth. One interesting case occurred in 1920 at the Genoa Maritime Conference when Indian delegates in the face of opposition from the Empire managed to secure a mandate for special treatment for Indian sailors in British shipping although there was a concerted move from the Empire delegation to get Indian lascars driven off British ships.

India's New Status.

It will be observed that the situation created by India's stepping from the Imperial Conference into the Paris Peace Conference and League of Nations in the manner in which she did was in certain respects highly anomalous and one impossible to harmonize with her constitutional position as defined in the Government of India Act. Nevertheless, as the Secretary of State, in a Memorandum presented to the Indian Statutory Commission by the India Office in 1929 showed, "It has been the deliberate object of the Secretary of State to make India's new status a reality for practical purposes within widest possible limits." It was not legally possible for the Secretary of State to relinquish his constitutional power of control, nor, consistently with responsibility to Parliament, could he delegate it. "But it has been his constant endeavour to restrict its exercise to a minimum, to keep even its

existence as far as possible in the background, and to allow to the Indian Government the greatest possible freedom of action under the influence of their Legislature and of public opinion "

There are available many illustrations of these principles being followed in practice India is given scope to pursue in the League of Nations an independent line of action within very wide limits, even though, as has occurred in some instances, it brings her into conflict with His Majesty's Government In 1925, for example, at the conference on Opium and Drugs India so acted that the British delegation had to obtain fresh instructions from H. M.'s Government which resulted in India settling the question of Indian hemp to her own liking In the event of such conflict within those limits, the Secretary of State acts, if he acts at all, as head of the Government of India rather than as a member of His Majesty's Government He does not use his power to impose on the Indian Delegation an artificial solidarity with British Delegates, but, rather, with the consent of his colleagues of His Majesty's Government, he stands aside and allows representatives of India the same freedom as Dominion Delegates would enjoy in controversy with the Delegates of Great Britain India has participated in all the Assemblies of the League, in the annual session of the International Labour Conference where because of her individual importance she plays a very predominant part, and in numerous Conferences on special subjects held under the auspices of the League as well as in some important non-League, International Conferences, including

the Washington Conference on Naval Armament in 1921, in Genoa Economic Conference in 1922, and the International Naval Conference held in London in 1930 India is also represented for several permanent League bodies, e g, the governing body of the International labour office, the Advisory Committee on Opium and Drugs, the Economic Committee, the Health Committee and the Committee of Intellectual Co-operation Sir Atul Chatterjee from 1921 onwards acted as Deputy Commissioner of the Governing Body of the International Labour Office and this position was preliminary to his being elected Chairman in 1932 H H the Aga Khan was elected President of the League Assembly for the year 1936-37

In the Report of the Indian Delegation in 1933, a recommendation was made for the appointment of a permanent Indian Delegate at Geneva, but Government have not yet seen their way to adopt the suggestion

The Secretariat of the League of Nations has established a Branch Office at New Delhi in pursuance of its policy of promoting more effective liaison with India The Branch Office is a point of contact between Geneva and India, disseminating information to all interested in the League and its activities In addition to all League documents which can be consulted at the Branch Office, it keeps for sale all publications of the League of Nations Established in Bombay in 1932, it was removed to New Delhi as from December 1937 The present address of the Branch Office is 8, Curzon Road, New Delhi Officer in-charge of the Branch Office M V Venkateswaran, M A , J P

Labour in India.

A HISTORICAL SURVEY OF THE GROWTH OF THE LABOUR PROBLEM.

India is and always has been a predominantly agricultural country and over sixty-five per cent. of her working population are dependent on the soil for their principal means of livelihood. Agriculture by itself, however does not always afford, either to the agriculturist or to the agricultural labourer, the wherewithal for keeping body and soul together. It is necessary, therefore, for both the smaller cultivator and the agricultural labourers to migrate frequently to the towns and cities in search of additional work in order to keep the wolf from the door, but, the migration is generally always of a temporary character and the agriculturist's contact with his land is seldom, if ever, permanently broken.

Up to almost the end of the nineteenth century there was no State control over conditions of employment in any industry in India. Employers were free to do what they liked with the result that Indian labour was exploited to the fullest extent possible. Hours of labour were inordinately excessive, rates of wages unduly low and other conditions of employment as bad as they possibly could be. There was no regulation of the age at which children could be employed, there were no periodical or weekly holidays, and there was no legislation to safeguard factory workers from injury through accident caused by entanglement with unencased machinery in motion. With the growth of factory organisation in India and the rapid development of her industries, the minds of certain men notably the late Mr. Sorabjee Shapurjee Bengali, C.I.E., however, began to be awakened to the existence of evils which by the standards of to-day would be considered intolerable, and unceasing efforts at securing some improvement in conditions of work in factories resulted notwithstanding strenuous and universal opposition at the time from all employers, in the passing of the first Indian Factories Act of 1881. This Act gave a limited measure of protection to children, firstly, by prohibiting their employment in factories if they were under seven years of age and also in two separate factories on the same day, secondly, by restricting their hours of employment to nine per day, and thirdly, by requiring that they should be granted four holidays in a month and also rest intervals in accordance with rules to be framed by local governments. The Act contained no restrictions in connection with the employment of adult labour but provision was made for the fencing of such parts of machinery as would be dangerous if left unfenced and for the reporting of accidents. Owing to an almost complete lack of adequate inspection, the 1881 Act became a dead letter in most provinces. Most factories worked from daybreak to sunset, Sundays were usually working days and, if they were holidays, they had to be used for cleaning. There were no proper intervals for rest or meals. Both women and children were worked for excessively long hours. Ventilation in most factories was extremely bad and sanitation left much to be desired.

A Factory Commission was appointed in 1896 and on the basis of its recommendations, a new Factories Act was passed in 1901. The qualification for registration was the employment of 50 workers as against 100 in the 1881 Act and local Governments were empowered to notify concerns employing as few as twenty. The main features of this Act were, (1) a compulsory rest interval of half an hour, (2) a weekly holiday, (3) non-employment of a child under nine and a 7-hour day for children between nine and fourteen, (4) a 11-hour day for women with a 1½ hour interval if they were required to work for the permissible maximum hours and (5) restriction in the employment of women during 8 p.m. and 5 a.m.

Apart from the mass meetings of workmen which were organised in the eighties by humanitarian social reformers for the purpose of memorialising Government for improvement of conditions of work in factories, Indian factory labour was almost up to the beginning of the twentieth century, a silent and unorganised factor in the huge industrial organisation that was rapidly coming into being in India. Trade unionism was non-existent and there was no channel through which the Indian workman could ventilate his grievances and ask for their redress. The strike as a weapon of defence against oppressive conditions was almost unknown and such industrial disputes as did occur soon terminated in favour of the employer owing to the unfettered power which he enjoyed or replacing all men who downed tools with black-leg labour.

The last decade of the nineteenth century saw the advent of two new factors in the field of industrial labour in India which were destined, for the time being at any rate, to worsen conditions in Indian factories. The first was the introduction of electricity for purposes of factory lighting and the second was the widespread epidemic of plague. By 1900, the majority of the cotton textile mills in Bombay City and almost all the jute mills in Bengal were lit by electricity, and by the end of that year the ravages of the great epidemic of plague, which first broke out in Bombay City in 1896 and soon spread all over the country, resulted in the reduction of the labour force in most centres to a third to a half of its normal strength. The immediate effect of these two events was a considerable increase in working hours. Many of the larger textile mills resorted to day and night working and evidence is not wanting that some mills worked their operatives continuously for stretches of fifteen to twenty hours per day. In Bombay City there were actually auctions for labourers at street corners. The weaker of both the cotton and the jute mills, however, began to be alarmed at the competition from the mills which worked day and night and many of the millowners were not unwilling that Government should step in and prohibit night working altogether.

The ravages caused by the plague were, however, not entirely devoid of some good effects. The heavy mortality caused by it had thinned the ranks of agricultural workers, and the inequality between the demand for and the supply of labour naturally led to a marked improvement in agricultural wages. The beginning of the twentieth century hence saw the first awakenings of a sense of class consciousness among industrial workmen. They were less ready to submit to the old conditions; and wherever employers tried to force those conditions upon their workmen they were met by opposition. Early successes led to disputes of a more widespread and concerted character—disputes which resulted in a general all-round improvement in wages.

There was no further advance in factory legislation in India for twenty years after 1891. The period 1891-1911 was one of changing conditions and of investigation. It was also marked by intense industrial activity in the country. There was a rapid expansion in road and railway construction with a collateral activity in building, engineering and mining. The number of factories rose from 656 in 1892 to 2,403 in 1911 and the average daily number of persons employed in these factories increased from 316,816 to 791,944 over the same period. "The result of the scarcity of labour was to increase the interest of the employers in making conditions more attractive. The raising of wages was one step, the provision of houses was another. Inside the factory less was done to make industrial labour attractive. It was an axiom with a number of employers that labour did not object to long hours in the factory, and that the actual hours of work were not considered excessive by those who worked."

Conditions of work in factories in India during the period were inquired into by the Freer Smith Committee which was appointed in 1906 and by the Factory Labour Commission which was appointed by the Home Government in 1907. The Commission endorsed the abuses and the evasions of the 1881 and 1891 Acts in connection with the employment of children and were unanimously of opinion that some limitation in hours of work was essential but the majority were opposed to any direct limitation. As far as women's hours were concerned, they proposed that the statutory maximum should be increased from 11 to 12. It is noteworthy that only one member (Dr Nair) recommended a limitation in the hours of adult male workers to twelve per day and a continuation of the 11-hour day for women with less power to local Governments to grant exemptions. A new Factories' Bill was introduced in the Governor-General's Legislative Council in July 1909. In drafting the Bill, the Government of India followed the proposals made by Dr Nair rather than by the majority of the Commission. This Bill was passed into law in 1911.

The 1911 Act sought to make a beginning in the restriction of the hours of work of adult males by prescribing that men's hours in textile factories should not exceed twelve per day. The provisions of the 1891 Act in connection with women's hours were maintained but with the difference that the rest interval of an hour and a half prescribed for women who were made to work for the full permissible hours

was reduced. This was done in order to limit the spreadover. Children's hours in textile factories were reduced to six per day and more stringent measures were provided for inspection and certification. A compulsory rest interval of half an hour in the middle of the day was provided for all operatives except for those employed in continuous process factories. A number of provisions was made for the health and safety of the operatives and several changes designed to make inspection more effective and to both prevent and punish breaches of the Act were incorporated, but, at the same time, wide powers were given to local Governments to grant exemptions. The 1911 Act was brought into force with effect from the 1st of July 1912.

THE ADVENT OF THE GREAT WAR AND ITS AFTERMATH.

As compared with the tremendous industrial expansion which is being witnessed in India at present as the result of the progress of the Second World War, that witnessed as the result of the outbreak of the War of 1914-18 was mere child's play. It would however be idle to deny that India was in possession of an opportunity which had never been vouchsafed to her before. She was not slow in making use of it. There was a capacity demand for her raw products. Much of her available arable land was put under cultivation and there was an immediate expansion in every sphere of her industrial activity. New factories began to spring up everywhere. There was work for everybody who wanted it and more employers were clamouring for exemptions and relaxations of the existing statutory restrictions in hours of work. Indian Labour still unorganised was however, no longer that dumb and inarticulate part of factory plants which it used to be. If more strenuous work for longer hours was demanded of it, it was equally insistent in demanding higher wages and better conditions of employment in return. As the War progressed prices soared and with every jump in prices there were demands for increases in wages and for the grant of war or dearness allowances—demands which were not always granted without strikes. Employers were however, making phenomenal profits and rather than allow production to suffer the demands made on them by their labour were grudgingly conceded. Excessive hours of work, however, still continued to be the feature in all branches of industry and conditions inside the factories had worsened. Owing to the influx of large bodies of persons into the towns, housing became hopelessly inadequate and rents soared to heights which forced several local Governments to pass legislation to control them.

The successful emergence of the British Empire and its Allies from the War of 1914-18 opened up vistas of untold prosperity in the minds of the people of the victorious countries. Corporations, Companies, and Shareholders were flush with money—thirteen large jute mills in Bengal had paid dividends of 200 per cent and over for the year 1918—and with the gradual closing down of plants which had been engaged in the manufacture of munitions of war everybody was looking for new fields for investment. Big companies for the establishment of transport services, for the construction of new mills and

factories and for the exploitation of mineral resources were floated. Hectic building activity was evident everywhere and this was naturally followed by heavy demands for all types and kinds of labour. The Utopian hopes which most men had built upon were, however, destined to evaporate into thin air sooner than the worst pessimists could have imagined. Two entirely unforeseen factors intervened to blast these hopes. The first was the worldwide epidemic of influenza which broke out in the year following the end of the War and which was responsible for a total death roll of over eight million persons in India alone. The second was that prices, instead of falling, rose more sharply than ever before - due, in a large measure to the unprecedented depreciation in the currencies of most European countries.

Similar to the chance which Indian industrialists had secured at the outbreak of the war was the one which Indian labour secured at the end of it. The great influenza epidemic had left large gaps in the ranks of available labour especially as the age groups between 20 and 40 had suffered most heavily. A situation very similar to that which followed the great plague of the 'nineties was created, but, on this occasion, there were no auctions of mill workers at street corners because as the result of a country wide expansion in transport services labour had become much more mobile. Notwithstanding this, fancy rates of wages were demanded and were, in many cases, paid. Wages, in the more organised industries, however, lagged far behind the rapid rise in prices and real wages were not enough to maintain the pre-war standard of life of the workers. The beginning of the year 1919 therefore saw the outbreak

of industrial strife on a scale previously unknown. Although sporadic strikes had occurred prior to and during the war, strikes on any organised scale upto then were rare and the employers were not giving anything away, unless they were absolutely forced to do so. Prices, however, continued to rise and it was becoming extremely difficult for the workers to meet even their most necessary expenditure on the existing rates of wages.

The post-war boom was short lived. Demobilisation and the closing of munition factories swelled the ranks of the unemployed. Rising prices and inflation hamstrung the reorganisation of industry and stocks of all kinds of manufactured articles began to accumulate. Production had consequently to be eased off and the trail was laid not only for a reduction in hours of work but also for reforms of a world wide and far reaching character which were to be introduced in all countries as the result of the formation of the International Labour Organisation.

THE INFLUENCE OF THE INTERNATIONAL LABOUR ORGANISATION.

The Preamble to Part XIII of the Treaty of Versailles refers to the fact that "the failure of any nation to adopt humane conditions is an obstacle in the way of other nations which desire to improve conditions in their own countries." In order to establish universal

peace based on social justice, the Peace Treaty not only laid down general principles in regard to questions affecting labour which were recognised by the High Contracting Parties to be "of special and urgent importance" but also brought into being the International Labour Organisation which was entrusted with the task of securing, as far as practicable, the observance of these principles. The duties of this organisation which was to be controlled by a Governing Body consisting of members representing Governments, employers and labour from all countries of chief industrial importance, and from other countries by rotation, were to collect all possible information regarding conditions of employment in all countries and to present reports of such enquiries to the International Labour Conference which was to meet periodically. Each subject was to be discussed at first at one and later at two sessions. After a first preliminary discussion, the views of various Member States were to be invited on tentative proposals. The International Labour Office would then re-examine these proposals in the light of the criticisms and opinions received and submit a final Report with a Draft Convention or Recommendation to the next Conference for a final discussion and decision. It was laid down that it would be obligatory on all Member States to introduce legislation in their respective countries to deal with matters covered by a Draft Convention but that it would be optional for a Member State to adopt a Recommendation.

The first session of the International Labour Conference met at Washington on the 29th October 1919. India, as an original member of the League of Nations, was among the 30 countries represented. The Indian delegates were Sir Louis Kershaw and Sir Atul Chatterjee representing the Government of India, Sir Alexander Murray representing Indian employers and Mr. N. M. Joshi representing Indian labour. The Conference was asked to consider proposals relating to a number of subjects including the eight hours day, unemployment, the night work of women and young persons, the employment of children, maternity benefits and industrial diseases. The Washington Conference adopted the Hours Convention, but as far as India was concerned, her delegates were able to impress the Conference that the adoption of an 8-hour day would be too revolutionary a change for the country and would never be accepted by Indian employers. The Conference therefore agreed to grant a special relaxation in the case of India and it was decided that a beginning should be made by the introduction of a 60-hour week in factories subject to the Indian Factories Act.

EVENTS LEADING UP TO THE PASSING OF THE FACTORIES ACT, 1922.

The winter of 1919-20 saw the re-emergence of industrial strife of a greater intensity than that of the year before. The principal cause again was the fact that cash wages were lagging far behind the continued rise in prices and that real wages were again falling. On this occasion, however, the workmen did not limit their demands to increases in wage rates alone and their leaders everywhere demanded both increases in wages and reductions in hours of

work Concerted strikes in the cotton mills of Bombay, Ahmedabad and Cawnpore resulted in the employers conceding a ten-hour day in addition to the granting of higher wages In March 1920, the Millowners' Association of Bombay presented a memorial to the Viceroy asking for a statutory reduction of hours of work in all textile factories in India from twelve to ten The rapid sequence of events in favour of a ten-hour day broke the back of all opposition to reduced hours of work in Indian factories and an easy passage for the necessary legislation was assured

Prior to 1920, there was little co-ordination between the Centre and the Provinces in matters connected with labour, and there were no provincial or All-India enquiries into wages or conditions of employment in industrial establishments Official effort at mediation in industrial disputes was practically unknown and the policy of Government in this matter was to keep the ring clear and to allow the parties to settle all disputes between themselves The participation of India in International Conferences and the increasing interest taken by the Indian public in questions connected with labour made it necessary both for the Government of India and the Governments of the more industrialised provinces not only to consider the question of the representation of labour in the central and provincial legislatures but also to allocate to special departments or offices the administration of labour questions The Government of India established a Labour Bureau in the year 1920 and the Governments of Bengal and Madras created special appointments of Commissioners of Labour in the same year The Labour Bureau of the Government of India published a series of bulletins on certain phases of factory work but before its utility could be established the office was abolished in March 1923 on the recommendation of the Indian Retrenchment Committee The lead in the matter of the creation of a proper and stable department of Government with investigators and an adequate statistical staff to deal with all questions connected with labour was taken by the late Lord Lloyd, then Governor of Bombay, who created a Labour Office for the Bombay Presidency in 1921 Further details in connection with this office and other matters dealing with Government administration of labour subjects will be found in a separate chapter at the end of this section

THE FACTORIES ACT OF 1922.

The law relating to factories was amended and consolidated by the Act of 1922 The main provisions of factory legislation as it now stood were as follows (1) the qualification for registration was the employment of 20 persons—factories employing not less than ten workers could be notified, (2) non-employment of a child under 12, a 6-hour day for children between twelve and fifteen, a half-hour rest interval after four hours work and prohibition of the employment of a child in two factories on the same day, (3) restriction in the hours of work of adults to eleven per day and sixty per week, (4) prohibition of the employment of women between 7 p.m. and 5.30 a.m. except in the fish curing and canning industry, (5) compulsory rest intervals and a weekly holiday, and (6)

measures for controlling excessive artificial humidification and for the health and safety of operatives Exemptions on well defined principles were to be permitted The Amending Acts of 1923, 1926 and 1931 effected minor improvements but the general principles remained unaltered until the Act was again overhauled in 1934

NEW LABOUR LAWS.

Up to the end of the year 1922, the only important law relating to labour in India was that regulating the conditions of employment in factories The influence of the International Labour Organisation was, however, soon felt and industrial strife was, moreover, on the increase Little attempt had so far been made for the peaceful and amicable settlement of trade disputes Such attempts as were made were hampered by the absence of reliable and accurate data regarding wages and conditions of employment The Bombay Labour Office conducted an inquiry into wages in cotton textile mills in the Province of Bombay in 1921 and another inquiry into family budgets of industrial workers in Bombay City in the same year It also set itself to compile a cost of living index for working classes in Bombay City Acting on a private resolution adopted in the Provincial Legislative Council, the Government of Bombay appointed an Industrial Disputes Committee in 1922 under the chairmanship of Sir Stanley Reed, M.P., then Editor-in-Chief of the *Times of India*, "to consider and report on the practicability or otherwise of creating machinery for the prevention and early settlement of trade disputes" This Committee submitted a comprehensive report on the subject of industrial strife and made various recommendations for the prevention of disputes and their settlement when they arose Among its main recommendations was one for the setting up of an Industrial Court The Government of Bombay drew up a Bill on the subject and this was introduced in the local Legislative Council in the winter of 1923-24 This Bill was subsequently withdrawn on the Government of India formulating proposals for Central legislation on the subject, but, it was not until 1920 that the Trade Disputes Act was placed on the Statute Book Much headway had, however, been made in the meanwhile in the framing of new labour laws Among the more important of these were the Workmen's Compensation Act and the Indian Mines Act which were passed in 1923 and the Indian Trade Union's Act which was passed in 1926 It is not necessary for the purposes of this note to detail the historic development of the various labour laws as they stand to-day in the same way as has been done for Factories Legislation The main features of each Labour Act as it stands today will be given in the Chapter on "Labour Laws in India—Administration and Statistics"

EFFECTS OF THE POST WAR DEPRESSION.

A period of acute depression set in in all industries towards the end of the year 1922 The cost of living index compiled by the Bombay Labour Office showed that prices had risen steadily for two years after the end of the war The annual average of the monthly index

numbers for the year 1920 (1911=100) was 153, for 1921 this average fell to 174 and for 1922 to 161. The year 1923 opened with a sharp decline to 150 but for the next five years the index numbers varied between 150 and 161. The enquiry into cotton mill wages showed that the real wages of cotton mill workers in Ahmedabad were thirty-three per cent higher in 1921 than in 1911. The Ahmedabad Mill owners' Association, thereupon made the first organised post-war move in India for whole-scale reductions in wages. A cut of 20 per cent was announced with effect from 1st April 1924. The strike of the Ahmedabad cotton mill workers which followed was by far the largest and the most disastrous that has ever occurred in that city. It involved nearly 15,000 workpeople and resulted in a total time loss of nearly two and a half million man-days. A compromise was eventually arrived at by the terms of which wages were to be reduced by 15 per cent instead of by 20 per cent. Labour received a rude shock and it was felt that the turning of the tide had set in.

Cotton textile millowners in Bombay had met demands for higher wages between 1917 and 1920 partly by the grant of dearness of food allowances and partly by the payment of an annual bonus of one month's pay dependant on profits. In 1921, the Millowners' Association, Bombay, decided that the profits for 1923 would not justify the payment of the bonus. The workers of all mills in the city struck work. The Government of Bombay appointed a Committee of Enquiry under the Chairmanship of Sir Norman Macleod, Chief Justice of the Bombay High Court. The Committee's report was entirely against the workers. The Bonus dispute Strike in Bombay in 1924 was by far worst that had ever occurred in the country till that year and resulted in a time loss of nearly eight million working days.

The depression which set in in 1922 continued for several years. In the year 1925, however, the Government of India came to the rescue of the Cotton textile industry and the workers employed in it by abolishing the excise duty of 3½ per cent, which had been levied on cotton manufactures in India for many years past. In that year, millowners in Bombay announced a cut of 12½ per cent in wages. This announcement was followed by a general strike which lasted for over two months and which resulted in a time loss of nearly eleven million working days. Both sides were adamant but the Millowners had given an undertaking to Government to drop the proposal for a wage cut if the excise duty was abolished. The strike, therefore, ended as soon as the Viceroy's Special Ordinance announcing the suspension of the excise duty was published at the end of November 1925. This strike was a great victory for the workers and showed that, in spite of their illiteracy and inadequate organisation, they were able to take concerted action and to offer a stubborn resistance against any attack on their wages.

As compared with the period which has just been reviewed, the years 1926 and 1927 were one of relative calm and peace in Indian industries. Labour, with a singular unity of purpose, had conducted many hard battles for the maintain-

ance of the standard of life which it had secured but it had paid dearly for the victories it had won owing to the wage it had lost during periods of protracted stoppage of work caused by strikes. The two years 1926 and 1927 were spent in a quiet contemplation of their respective positions both by the employers and the employed and also by Government who had completed a long programme of labour legislation. The time lost through industrial disputes during these two years amounts to just a little over three millions man-days as against a loss of five millions in 1925, 8.7 millions in 1924 and 12.6 millions in 1923.

The year 1924 witnessed the outbreak of industrial strife of an intensity which has been unknown in India at any time before or after that year. Two causes were directly responsible for this. The Indian Tariff Board (Cotton Textile Industry) constituted by the Government of India in 1923, had made a number of recommendations looking at a more efficient conduct and management of cotton textile mills in India. A group of these recommendations concerned the introduction by the mills of "rationalised" methods of work by which to increase the output of workers to run more machines. The second was the formation of The Workers' and Peasants' Party the members of which secured appointments on the executives of many trade unions in the country. The main objective of this group was to foment widespread discontent with the existing structure of society and this they did by preaching revolutionary doctrines of class hatred, the uprooting of capitalism and the overthrow of stable governments. The industrial strike was the chief weapon in their armoury. Following the recommendations of the Tariff Board, Messrs. E. D. Sassoon & Co. Ltd. who own eleven large cotton mills in the City of Bombay, introduced certain measures of rationalisation in their Manchester Mills. This was at once met by a prolonged strike in that mill. Early in the year 1928, a few other groups of mills announced their intention of securing greater efficiency. This was the opportunity which the Communists were waiting for and they took it by the forelock. The strike of cotton textile mill operatives in 1928 in Bombay City was the most disastrous that has yet taken place in India. All the mills in the City were affected and there was complete stoppage of work for over six months. The time loss to the industry amounted to twenty-two and a half million man-days. Both parties put up different sets of demands. The millowners, proposed a cut of 7½ per cent in the wages of weavers and drew up a set of standing orders for the enforcement of discipline. A Joint Strike Committee prepared a list of Seventeen Demands. Various discussions were held but to no avail. Finally, the Joint Strike Committee agreed to call off the strike on Government assuring the parties that they would appoint an impartial Committee to inquire into and report on all the points in dispute. The Report of this Committee (The Bombay Strike Inquiry Committee—Chairman Sir Charles Fawcett) was more favourable to the workers than to the employers and it still continues to be one of the standard works of reference on conditions of employment in cotton textile mills in Bombay City.

Other important strikes during the year 1928 occurred in the Tata Iron and Steel Company's Works at Jamshedpur, on the East Indian and South Indian Railways, in the Fort Gloster Jute Mills and in the textile mills at Sholapur and Cawnpore.

The statistics in connexion with all the industrial disputes in India in this year are as follows: Number of disputes—203, Number of workers involved—506,850, Total time loss—31,647,404 man-days

APPOINTMENT OF A ROYAL COMMISSION ON INDIAN LABOUR.

Seven years' administration of the labour laws enacted during the years 1922-23 had brought several defects to light. Moreover, it was felt that, as compared with similar legislation in other countries, much of the Indian labour legislation was of a very halting character and that it did not go far enough. Labour Leaders who had attended several sessions of the International Labour Conference started intensive agitation in the country for both reform and expansion of existing laws. These demands coupled with the great industrial unrest prevalent in India at the time made a complete survey and investigation by an impartial body inevitable and in the middle of the year 1929 the Government of India announced the appointment, by His Majesty the King Emperor, of a Royal Commission on Indian Labour "to enquire into and report on existing conditions of labour in industrial undertakings and plantations in British India, on the health, efficiency and standard of living of the workers, and on the relations between the employers and the employed, and to make recommendations." The late Rt Hon J H Whitley was appointed Chairman. The other members of the Commission were the Rt Hon Shrinivasa Sastri, P O, Sir Alexander Murray, Kt, CBE, the late Sir Ibrahim Rahimtoola, GBE, KCSI, CIE, Sir Victor Sassoon, Baronet, Sir Andrew Clow, KCSI, KOIE, IOS, Dewan Chaman Lal, MLA, Miss Beryl M Le Poer Power, Deputy Chief Inspector, Trade Boards, England and Messrs N M Joshi, VLA, Kabeeruddin Ahmed, VLA, G D Birla, MLA, and John Cliff, Assistant General Secretary, Transport and Railway Workers' Union, England. The Report of the Whitley Commission which was published in June 1931 is a document of first rate importance dealing with almost every aspect of the labour problem in India and it contains many hundreds of recommendations covering a very wide field of subjects. The Report has been the lodestar of all the various pieces of labour legislation which have been placed on the Indian Statute Book since its publication, and it will continue to be the text-book for social legislation and labour welfare in India for many years to come.

A summary containing the principal recommendations of the Commission, classified according to the subjects with which they deal, was given at pages 474 to 484 of the 1932 edition of this publication. The Government of India published annually from 1932 to 1940 reports on the action taken

by the Central and Provincial Governments on the Commission's recommendations and these reports are on sale at the Government of India Book Depots at Delhi and Calcutta. Most of the Royal Commission's recommendations with regard to the expansion of the scope and the improvement of the existing Acts relating to conditions and hours of work in factories and mines, workmen's compensation and to the control and supervision of the labour which migrates from India to the tea and other plantations in Assam have already been implemented by amending or consolidating Acts. Acts amending the Trade Disputes Act in a minor particular and placing it permanently (the original Act had been passed for a period of five years) on the Statute Book were passed in 1932 and 1934. The Employers' and Workmen's (Disputes) Act which had been passed as early as 1860 for the speedy determination of disputes relating to wages of certain classes of workers employed on the construction of railways, canals and other public works and which had been almost a dead letter was repealed in 1932.

Acts to prevent the pledging of children and to facilitate the acquisition of land for industrial housing were passed in 1933. Legislation on the lines of the British Truck Acts to control the deductions which employers may make from wages in respect of fines and to provide for the early payment of wages was passed early in 1936. Many other recommendations of the Royal Commission were forwarded by the Government of India to the Provincial Governments for examination and opinion, in some cases Bills were actually drawn up. In view, however, of the impending transfer of power to popular Governments in the Provinces and the many practical difficulties that stood in the way of giving legislative effect to the proposals, it was probably considered that the force of public opinion in India as expressed in the legislatures of the various Provinces should be allowed to determine the question as to whether legislation should be enacted or not in particular cases.

SUBVERSIVE LABOUR PROPAGANDA.

We have already referred to the infiltration of extremist elements into the trade union movement in India and to the manner in which the Communists brought many industries in the country to an almost complete standstill during the year 1928. The year 1929 saw the outbreak of extensive rioting and lawlessness in Bombay City which lasted for several weeks. A Committee appointed by Government to inquire into the cause of these riots found that they were due to the inflammatory speeches made by extreme left wing labour leaders. In February all the ring leaders among the ranks of the Communists were arrested and sent to Meerut for trial. This trial lasted for many months and resulted in the conviction of the vast majority of the accused to varying terms of imprisonment. Although the leaders among Indian Communists were out of the way, their henchmen were not. When a dispute arose in the Spring Mill in Bombay over the question of the dismissal of one solitary worker, this was made a *casus belli* for the declaration of another general strike in

the cotton textile industry in Bombay City. This strike which lasted from the 16th April to the 18th September involved 199,212 workers in 62 mills and resulted in a time loss of nearly seven million working days. The Government of Bombay appointed a Court of Inquiry under the new Trade Disputes Act with Mr Justice Pearson as its Chairman. The Court came to the conclusion that all the blame in connection with this strike rested with the Bombay General Kamgar Union.

We have, so far in this brief historical survey of the growth of the labour problem in India, occasionally referred to the activities of certain labour leaders, strike committees and unions. We deliberately refrained from amplifying these casual references because we are dealing with the subject of "Trade Unionism in India" in another Chapter. We may, however, in order to complete the chronicle of the important events of the year 1929 refer briefly here to the split brought about in the Trade Union Congress as the result of the subversive propaganda of the Leftists. Voting in the Annual Sessions of the Congress was on the basis of the membership of the affiliated Unions. As a result of the affiliation of certain communist organizations the Communists had secured a majority vote at the Tenth Session of the Congress held at Nagpur in that year. Resolutions were accordingly passed for the boycott of the Royal Commission on Indian Labour and the International Labour Conference, for the affiliation of the Congress to the League against Imperialism and for the appointment of the Workers' Welfare League, a communist organization in England as agents of the Congress in Great Britain. This led to the seaway of the moderate elements in the Congress who set up a new central trade union organization under the name of The Indian Trades Union Federation.

Another important event which occurred in the world of Indian Labour during the year 1929 was the strike of the employees of the B B & C I Railway's Loco and Carriage Workshop at Dohad. The railway administration had transferred a number of operatives from their big workshops in Bombay to the new workshop which they had built at Dohad and had given them certain allowances on reduced rates of pay. The men demanded a continuation of the old rates plus Dohad allowances and failing a restoration of the cut they struck work. After the strike had proceeded for some weeks, the Government of India appointed a Board of Conciliation under the Trade Disputes Act and this Board upheld the workmen's claims. Mention should also be made of the initiative taken by the Government of Bombay in that year by passing the first piece of provincial labour legislation—The Bombay Maternity Benefits Act.

Statistics of industrial disputes in India have been maintained only since the year 1921. The tremendous dislocation which the subversive propaganda carried on by the communist elements in the trade union movement was responsible for in Indian industries during the two years 1928 and 1929 can best be judged by the fact that the industrial strife of these two years alone was responsible for a total time loss of 43.8 million man-days as against the loss of 40.4

million man-days in the seven years from 1921 to 1927 and the loss of 16.9 million man-days in the seven years from 1930 to 1936. After the struggle of 1928-29 labour was thoroughly beaten and trade unionism, except in Ahmedabad was thoroughly discredited. Except for strikes of a comparatively minor character which were organized by the communists in certain industries which had not been affected in 1928 and 1929 there were no general strikes of any particular magnitude in any centre of industry for the next four years.

No event of any particular significance or importance occurred in the world of Indian Labour during the three years between 1930 and 1933. Both Capital and Labour sent their representatives annually to the International Labour Conference held at Geneva. The Conventions and the Recommendations adopted at these Conferences and the recommendations made by the Royal Commission on Indian Labour were subjected to careful scrutiny and examination by the Central and the Provincial Governments in close consultation with the Associations of the employers and the employed. After the bitter struggles of 1928 and 1929 employers were not only anxious to allow sleeping dogs to lie as far as wages were concerned but many of them in anticipation of the legislation which they knew was coming, endeavoured to improve conditions of employment wherever possible. The cost of living was falling, real wages expressed in terms of purchasing power, were rising. The beginning of the year 1933 however saw the intensification of a depression which had set in a year or so before. With the continued fall in price the purchasing power of the agriculturist had worsened and, as a consequence, stocks of manufactured articles on the hands of the industrialists were accumulating in spite of the introduction of 'rational' methods of work wherever possible. Profit and loss accounts were showing adverse balances. Employers now felt that the only alternatives left to them were to close down, to resort to short time working or to reduce wages. Jute mills had already resorted to short time working and many cotton mills and other factories had been compelled to close down.

CONCERTED ATTACK ON WAGE RATES.

The first beginning at reducing wages in organized industry was made in cotton textile mills in Bombay. The Millowners' Association, Bombay, gave a free hand to its Member Mills in the matter. Many mills closed down for a few months and reopened with offers of reduced rates of wages. There was little night working and there was a considerable volume of unemployment. Workers had no option but to accept employment on the reduced rates. Other mills taking advantage of the situation, effected reductions either in basic rates or in the dearness allowances or imposed percentage cuts on earnings. Not satisfied with one cut some mills imposed another within the short space of a few months. Employers in many other industries all over India also began to reduce wages. There was little or no opposition from Labour but many prominent labour leaders

began to be alarmed at the turn things were taking. Many representations and memorials were submitted to Government but no Provincial Government, except Bombay, took any action in the matter. In March 1934, the Government of Bombay instructed its Labour Office to institute a Departmental Inquiry into the extent to which wages had been reduced during the year 1933-34 in the various centres of the cotton textile industry in the Province and also to ascertain the extent of unemployment prevailing in the industry. Bombay and Sholapur were again the scenes of prolonged strikes in most cotton mills in these centres. The Report of the Departmental Inquiry was published on 21st June 1934 and the strike in the Bombay mills was called off simultaneously. The results of the Inquiry showed that, as compared with the general levels of 1926, wages in 1934 were five per cent higher in Ahmedabad and twenty-one and seventeen per cent lower in Bombay and Sholapur respectively. Notwithstanding the cuts that had been effected, real wages in 1934 were fifty-four, eleven and fifteen per cent higher in Ahmedabad, Bombay and Sholapur respectively as compared with 1926.

The publication of the report of the Departmental Enquiry was followed by the Millowners' Association, Bombay, adopting a simple scheme of standard rates for unorganised occupations on time rates of wages for affiliated mills in Bombay City and they also agreed, in cases where the dearness allowance for weavers had fallen to less than 40 per cent to raise this allowance to that figure after the coming into effect of the 54-hour week on the 1st January 1935.

Towards the end of the year 1933, the Ahmedabad Millowners' Association, attempting to profit as a result of the successful experience of the Bombay Mills in the matter, decided to reduce wages in the cotton mills in Ahmedabad by 25 per cent and an agreement was concluded early in January 1935 on the basis of a uniform cut of 6½ per cent subject to the proviso that the earnings of a two loom weaver should not be reduced below Rs 41-4-0 for 26 working days.

By far the most important result of the report of the Bombay Departmental Enquiry was the passing by the Government of Bombay of a Trade Disputes Conciliation Act in August 1934. This Act made provision (1) for the appointment of a Labour Officer to look after the interests of cotton mill workers in Bombay City, to represent their individual grievances to their employers and to secure redress of such grievances whenever and wherever possible, and (2) for the appointment of the Commissioner of Labour as an ex-officio Chief Conciliator to whom the Labour Officer could bring all cases in which he could not succeed. Although the functions of the Chief Conciliator were to bring about an agreement between two opposing parties, he came to be regarded almost as an industrial judge whose decision was mostly accepted by both the parties to a dispute. This Act was superseded with effect from the 1st August 1939, when the Bombay Industrial Disputes Act, 1938, which we describe lower down, was brought into operation for the cotton textile industry in the Province of Bombay. During the period of nearly four years for which the 1934 Act had been

in operation remarkable results were achieved and there was much less industrial strife in the cotton mill industry in Bombay City than there had been prior to that year.

INSTITUTION BY THE GOVERNMENT OF BOMBAY OF A GENERAL WAGE CENSUS.

The only Province which had so far instituted any inquiries into wages and conditions of employment in industrial establishments in India was Bombay where the Labour Office had conducted three enquiries into the wages and hours of work of cotton mill workers in the Bombay Presidency for selected months in the years 1921, 1923 and 1926. Other wages enquiries of a limited character covered municipal workers, peons in Bombay City and workers in a few selected printing presses in Bombay City. None of the other industries, especially the engineering, had been touched. No other province in India had attempted an enquiry into industrial wages and such information as was available on the subject consisted of a few figures of wage rates in some important occupations in selected units which are contained in some of the annual provincial administration reports on the working of the Indian Factories Act. The Royal Commission on Indian Labour, throughout their Report, had deplored the absence of reliable and accurate data regarding wages for Provinces other than Bombay, they had, moreover, made certain recommendations regarding the fixation of minimum rates of wages in industries where wages were low, but they had suggested that before any legislation on the subject was devised general surveys of wage rates and earnings should be conducted in all Provinces. Both for this and for the reason that no information regarding wages in the Province of Bombay was available for industries other than the cotton textile, the Government of Bombay instructed their Labour Office to make a survey of wages and conditions in factory industries—the first part to cover all perennial factories and the second seasonal factories. This census covered nearly 1,250 factories in over 25 different industries spread over nearly 100 towns and villages in the Province of Bombay. The first of the series of the General Wage Census reports covering the engineering trade was published in December 1935, the second covering the printing industry was published early in March 1936, the third covering all the textile industries (cotton, silk, wool and hosiery) in the Bombay Presidency was published early in May 1937, and the fourth covering the Oils, Paints and Soap, the Match manufacturing and fourteen other miscellaneous industries was published in May 1939. The Report with regard to wages and conditions of employment in the seasonal factories was published in 1936. These reports contain a fund of most valuable information regarding wage rates, earnings and conditions of employment and they should be of the greatest possible value to both employers and the employed, to Government administrations, to economists and to the public generally. Copies of these reports can be had from the Government Book Depot, Bombay or from the High Commissioner for India in London.

LABOUR UNDER PROVINCIAL AUTONOMY.

With the advent of the new reforms under the Government of India Act, 1935, full provincial autonomy was established in all Provinces in India with effect from the 1st April 1937. The Indian National Congress contested most and won the majority of the seats for the Provincial Assemblies in the Provinces of Madras, Bombay, the United Provinces, Bihar, the Central Provinces and Orissa. The Labour Policy of the Indian National Congress, as set out in its election manifesto is "to secure to the industrial workers a decent standard of living, hours of work and conditions of labour in conformity, as far as the economic conditions in the country permit, with international standards, suitable machinery for the settlement of disputes between employers and workmen; protection against the economic consequences of old age, sickness and unemployment, and the right of workers to form unions and to strive for the protection of their interests." The earlier resolution of Congress on fundamental rights, generally states in addition, that "the State shall safeguard the interests of industrial workers" and makes special reference to women workers and children. Congress Ministers, for reasons set out elsewhere in this volume, accepted office in July 1937 but resigned in all Provinces in November 1939 owing to the alleged failure of the British Government in defining clearly the war aims of Great Britain with special reference to India. Whilst the Congress was in power its Labour Policy was amplified by responsible Ministers in various Provinces either by the issue of Press Notices or by statements made in public speeches. For example, in addressing a meeting of the representatives of the workers on the 19th February 1938, the Honourable the Minister for Finance in the Central Provinces declared that "the Congress Policy in regard to labour will be uniform in all Congress Provinces and it will be the aim of the Congress to secure you your rights without any struggle as far as possible." The most comprehensive statement with regard to this policy was contained in a press note issued by the Government of Bombay in August 1937 from which certain of the more important passages were reproduced at pages 521 and 522 of the 1940-41 Edition of this publication.

In Bengal, where a popular Ministry was formed with representatives from the Proja, the Muslim League, the Independent Hindu and the Independent Muslim parties, the policy of the Government with regard to labour was contained in a statement made by the Honourable Minister in charge of the Department of Commerce and Labour to representatives of the Press in September 1937. He stated that some of the important items which the Government of Bengal were considering for the amelioration of labour were the establishment of industrial tribunals, employment exchanges, decasualisation of labour, schemes for health insurance, adequate housing, regulation of employment in shops, conciliation of debts, penalising of illegal gratification and the institution of enquiries into conditions of living by means of collecting family budgets with a view to ascertaining whether it

would be possible to introduce minimum wage fixing machinery and schemes of unemployment insurance.

We have during the course of this historical survey made an endeavour to mark the outstanding milestones in the development of the growing consciousness of their right among the toiling masses of the country. This development has never been so rapid as that which has taken place during the years immediately following the advent of Provincial Autonomy. The Government of Bombay, Bihar, the Central Provinces and Orissa and the United Provinces appointed Committees of Inquiry to examine existing levels of wages and conditions of employment, and to make recommendations. In Bombay and in the U.P. the enquiries were to relate to labour employed in cotton textile mills. In the United Provinces and in Bihar labour in all industries was covered. The Government of Madras, following a proposal of cotton mill workers in Coimbatore, appointed a Court of Inquiry under the Indian Trade Disputes Act. Fortunately for labour all these various enquiries were conducted during a period when the textile industries in India were, after a fairly prolonged period of depression, showing signs of revival owing mainly to the Sino-Japanese war. Prices of raw products had fallen during the latter half of 1937. The margins between costs of production and selling prices had widened to the advantage of industry and it was consequently possible for employers to accept the recommendations made by various Committees and Courts of Inquiry and Boards of Conciliation for increases in wages and the improvement in conditions of work. These acceptances were, however, not made entirely by employers on their own free will. In some cases the Governments concerned issued resolutions and notifications accepting such of the recommendations made by the Committees which they concurred in and recommending their adoption by the employers. It was obvious that non-acceptance of the recommendations made would be followed by legislative coercion if necessary.

During the year 1938 the Government of Bombay put through the Bombay Legislative Assembly after a record debate of nearly 150 hours going over 33 days, their Bombay Industrial Disputes Act. They also issued to the various interests concerned for opinion draft proposals for the conditions to be fulfilled for the recognition by employers of unions of their workers, for the grant of holidays with pay during periods of sickness, and for the regulation of hours of work, rest periods and the grant of holidays in commercial offices, shops, hotels, theatres, cinemas, etc. As far as the last is concerned The Bombay Shops and Establishments Act was passed on the 31st October 1939.

There was a spate of activity for legislative measures for the amelioration of labour conditions in other provinces as well. Both the United Provinces and Bengal enacted legislation during the year 1938 for the payment of maternity benefits and the Sind Legislative Assembly passed an Act in June 1939 to amend

the Bombay Maternity Benefit Act, 1929, in its application to the Province of Sind. In the Central Provinces and Berar Bills were drawn up for (1) the collection of statistics, (2) for amending the Indian Factories Act, 1934, to provide for the registration of all factories and for the payment of registration fees in a manner to be prescribed by Government, and (3) to make provision for relief or benefits to workers in industrial occupations who are rendered unemployed and consequently destitute. The first has been passed into law. The second was enacted in 1939 and brought into force with effect from 1st April 1940. Scales of registration fees depending upon the maximum number of persons employed in any one day in the year have been prescribed. The Governments of Bengal, Punjab and Sind have adopted legislation for the control of hours of work in shops and commercial establishments. The Punjab Trade Employees Act has been enforced in Punjab with effect from 1st March 1941, the Bengal Shops and Establishments Act was brought into effect from the 1st April 1941 and the Sind Act was brought into force from the 20th November 1941. The Government of the United Provinces published, on the 21st October 1939, the draft of a Bill to regulate the hours of employment and certain conditions of employment in shops and commercial establishments. The Government of Assam had drafted a Bill for the freedom of movement of tea garden labourers in that Province but this was subsequently withdrawn. The Government of the United Provinces introduced a Trade Disputes Bill in the Provincial Legislative Assembly but withdrew it later on with a view to the introduction of a fresh Bill on the lines of the Bombay Industrial Disputes Act, 1938. Private members' Bills introduced in the different Provincial Legislative Assemblies during the period immediately under review covered minimum wage fixing machinery and further regulation of conditions in unregulated factories in the Central Provinces and for the compulsory recognition by employers of unions of their workers in Bombay, Madras and in the United Provinces. As far as Madras is concerned, the Minister for Labour was successful as a result of his personal efforts in the matter, to secure recognition by the employers of all unions which had been registered under the Indian Trade Unions Act

The tempo of industrial strife in India which had shown a marked slowing down for seven years after the catastrophic strikes of 1928 and 1929 began to show a rapid quickening after the advent of Provincial Autonomy. Both Labour and its leaders believed that popular Governments in the Provinces would do all they could to improve the standard of life and the conditions of employment of the workers and they thought that the only method by which they could bring their grievances—fancied, real or imaginary—to the notice of the authorities was through the medium of the "strike". During the middle and the late 'Twenties,' the most striking feature of the struggle between Capital and Labour was its protracted intensity. The chief characteristic of this struggle during the three years beginning with that in which Congress Ministries took office was its frequency. This is verified by the fact that the number of disputes which occurred during the three years from

1937 to 1939 amounted to as many as 1,184 as against a total number of 1,039 disputes which occurred during the seven years from 1930 to 1936. The actual numbers of disputes in 1938 and 1939 were 399 and 406 respectively as against 203 in 1928 and 141 in 1929. Although the disputes of the later period were not so intense as those of 1928 and 1929 when 43.8 million man-days were lost to Indian industry, these 1,184 disputes were, however, responsible for the loss of as many as 23.2 million man-days.

The strike is, proverbially, a two-edged weapon. Whereas the strikes of 1937 and 1938 may have brought about a large amount of beneficial concessions to Labour, they were also responsible, in a large measure to the passing by a popular Congress Government of the Bombay Industrial Disputes Act, 1938, by virtue of which all strikes are prohibited in the industries to which the Act is applied unless the formalities laid down by the Act have been observed.

It will have been noticed that we have, in this brief historical survey, laid particular emphasis on the course of industrial strife in India. This has been done deliberately because the problem of industrial relations and its adequate solution is the most outstanding of all the problems which confronts Indian industry today. In this connection it is of interest to observe that a Conference of the Prime Ministers of all the Provinces in India which was held in Poona in August 1939 decided on uniformity in Trade Disputes legislation and on the establishment of Industrial Courts in all the Provinces.

Among the more important events that occurred in the world of Indian Labour during the years 1937 to 1939 must be mentioned the visit paid by Mr. Harold Butler, Director of the International Labour Office, to India, Ceylon, Malaya and the Netherland Indies during the winter of 1937-38. Mr. Butler has recorded the impressions gained as a result of his tours in an exceedingly well written and interesting report entitled "Problems of Industry in the East"—International Labour Office, Geneva, 1938, Studies and Reports, Series B (Economic Conditions) No. 29, which should be read by everybody interested in Labour.

LABOUR COMMITTEES APPOINTED BY CONGRESS GOVERNMENTS.

In a preceding paragraph we made a reference to the Committees of Inquiry appointed by the Governments of Bombay, the United Provinces, Bihar and the Central Provinces to examine the existing levels of wages and conditions of employment in the cotton textile industry (in Bombay and in the Central Provinces) and in all industries (in Bihar and in the U.P.). The events leading up to the appointment of these Committees, their terms of reference and the more important of the recommendations made by them have been given in some detail at pages 531 to 535 of the 1941-42 Edition of this publication and it is not therefore necessary to reproduce the same here. We, however, give below a few salient facts regarding these Committees for purposes of ready reference.

The Bombay Textile Labour Inquiry Committee—This Committee was appointed in October 1937. Chairman—Mr. Jukramdas Doulatram. Members—Messrs. Vallabhbhai Mehta, D. R. Gadgil and S. A. Brelvi; Associate Members—Sir Sorabji Saklatvala and Mr. Sakarlal Balabhai representing employers and Messrs. Khandubhai K. Desai and R. A. Khedgikar representing workers' interests; Secretary—Mr. S. R. Deshpande, M. A., Assistant Commissioner of Labour. The Committee published an Interim Report in February, 1938. This Report mainly recommended an immediate increase of about 12½ per cent in the wages of all cotton mill operatives in the Province of Bombay. Government published the Report with a Resolution stating that the Committee's recommendations were entitled to the weight and authority of an award of a Court of Arbitration and as such should be accepted both by employers and labour. All cotton mills in the Province accordingly gave the recommended increase in wages with effect from February 1938. This increase has come to be regarded as the "Congress Inam". The Committee dispersed for some time after completing its Interim Report. Mr. Doulatram, the Chairman fell ill and Mr. Deshpande, the Secretary, provided on leave. Government, thereupon, appointed the Honourable Mr. Justice H. V. Dhanu, Chairman and Mr. N. A. Mehran, M. A., 1934, Secretary. The reconstituted Committee commenced its work in Bombay in November 1938 and submitted its Final Report to Government in July 1940. This was published in June 1941. It is a document of over 500 pages containing 485 conclusions and recommendations and is priced at Rs. 1-5-0 per copy.

Cawnpore Labour Inquiry Committee—Immediately after the advent of the Reforms, Cawnpore was a storm centre of conflict between Capital and Labour. In July 1937 industrial strife culminated in a complete stoppage of work in almost all cotton textile mills in the City and several units in many other industries were also affected. A settlement of the strife was reached in August by virtue of one of the terms of which the Government of the United Provinces agreed to appoint a Committee to examine and report on the conditions of life and work of labourers employed in factories in Cawnpore. Chairman—Silyut Rajendra Prasad Sahab. Members—Mr. B. Shiva Rao and Professor S. K. Rudra. The Committee's Report covering a wide field of subjects and including a host of recommendations closely following those made by the Bombay Committee was submitted to and published by the Government of the United Provinces in April 1938.

The Central Provinces Textile Labour Inquiry Committee—The Government of the Central Provinces and Berar appointed a Committee under the Chairmanship of Mr. N. J. Roughton,

Financial Commissioner in February 1938, to examine and report on the wages question of the workers in the cotton textile mills in the Province. The terms of reference of this Committee were, however, restricted to an examination of the Interim Report of the Bombay Committee with a view to ascertaining the extent to which the recommendations contained in that Report could be applied to mills in the Province. Members—Messrs. A. C. Sen Gupta, V. R. Mahappa, M. A., and C. C. Desai, M. A., Technical Advisors. Messrs. S. H. Rathwala and R. S. Bhatkar. The Report of this Committee was published in May 1938. Its main recommendation was the restoration, by the employer, of 60 per cent of the wage cut effected in the period 1941 to 1937. This was given effect to immediately by the employers and was accepted by the workers.

The Bihar Labour Inquiry Committee—This Committee was appointed in March 1938 to inquire into the conditions of labour in industry in the Province and to make recommendations for their improvement. Chairman—Mr. Rajendra Prasad, Deputy Chairman—Mr. R. R. Bhatnagar, Member—Professor Abdul Bari and S. K. Saran, Mr. R. K. Mukerjee and Messrs. M. P. Goshai, Jagat Narain Lal, H. P. Chandra and G. C. Hayman. This Committee's Report which runs into nearly 300 pages and contains over 100 recommendations was submitted to Government in June 1940 and was published in August during the same year.

With the exception of the Central Provinces Report, the Reports of the three other Committees dealt with above were submitted to Government after the resignation of the Congress Governments by whom they were appointed. The more important of the recommendations made by these Committees cover a wide field of social legislation which can only be put through by popular Governments and which cannot be made the subject-matter of Governor's Acts. All the Governments concerned have, however, taken administrative action in connection with such of the recommendations as could be given effect to either by the issue of departmental orders or by circulation to the interests concerned. Quite a number of the recommendations made by all these Committees have been taken up for consideration by the Central Government in consultation with Conferences of Labour Ministers with a view to the passing of uniform Central legislation applicable to all Provinces. The questions so far discussed and those on which action has been initiated will be dealt with under the heading of "Conferences of Labour Ministers".

We shall deal with the more important matters which have happened in the world of Indian Labour since the outbreak of the present War in the next chapter.

SECOND WORLD WAR—ITS EFFECTS AND REPERCUSSIONS.

In the previous Chapter we referred to the effects which the World War of 1914-18 had on the growth and development of the labour problem in this country. That War found labour in India articulate, spasmodic and unorganised. The factories Act of 1911 was practically the only piece of labour legislation on the Statute Book. The "strike" as a method of securing the redress of grievances was practically unknown. Few countries in the world could, within the short space of one generation (1919 to 1939), have shown the remarkable advance which has been witnessed in India in the development of her labour legislation, in the bitter and the prolonged struggles that have been fought between her Capital and her labour and in the consolidation of the ranks of her labour force. We have already given the milestones in that development in the previous Chapter. In this Chapter we review the principal events that have occurred in the world of Indian Labour since the outbreak of the Second World War in August 1939.

Immediately prior to the outbreak of the Second World War, the main Indian industries—especially the Textiles—were beginning to feel the effects of an onrushing slump. Stocks on the hands of the manufacturers were accumulating, night shifts were closing down and the Mill-owners' Associations of Bombay and Ahmedabad were engaged in a nation-wide campaign to resort to organised short time working. Industrialists all over India were again considering ways and means of reducing costs of production. The outbreak of War, however, stemmed the tide. There was a big world-wide demand for jute textiles in consequence of the widespread use of sand bags for the protection of public and other buildings against the effects of aerial bombardment. Cotton textiles and especially cotton yarns were finding more expanded markets outside the country. Night shift working was again resorted to in an increasing measure. The engineering and allied trades whose prosperity is closely linked up with that of the textiles began to look up. There was a wide expansion in many other industries consequent on the placing in India, by the Home Government, of large orders for war supplies.

When Japan started rattling the sabre towards the end of 1940 and throughout the year 1941 it became evident that India would not only have to be turned into the arsenal of the East in the same way as the United States of America had become the arsenal of the West but that she would also have to build up an army of considerable size of her own. The figure originally aimed at was an army of one million men. This army had to be clothed, fed and supplied with all the modern equipment of war. A Central Department of Supply was formed with the Government of India and Provincial Branches were established. Huge orders for the supply of cloth and all kinds of other articles were placed with mills and factories. A number of large workshops were commandeered for the

manufacture of shells and ammunition. Ship-building yards and mammoth plants for the assembly of motor vehicles and aeroplanes were established. Night work became almost universal and there was a nation-wide expansion of employment. Here was the chance that Indian Labour had been waiting for and Indian Labour has taken it with both hands. Indian Labour has been giving of its best in the all-out total war effort but it has made up its mind that Capital has got to share its gains with it on equal terms and that it has got to be given a fair deal in war-time conditions. The Central and the Provincial governments have realised this too. It has been necessary for government to establish huge training schemes for training large numbers of men in the skilled trades for purposes of both war production and for assembly work and repair in the theatres of war. Machinery has had to be devised to prevent dislocation of work caused through disputes between masters and men and for their rapid settlement once such disputes have flared up into strikes or lockouts. It has also been necessary to devise means for maintaining the morale of the workers and to keep them at work during periods of emergency—at last in essential services.

DEMANDS FOR DEARNESS ALLOWANCES.

One of the earliest repercussions of the War was the panic it caused in the commodity markets in India. Prices of all food-stuffs and consumable commodities shot up and, as far as Labour was concerned, the authorities were at once faced with two major problems of prime importance: (1) the devising of measures to check profiteering by controlling prices, and (2) the maintenance of the existing levels of real wages by securing to the workers adequate dearness allowances to enable them to keep up the standard of life which they had at the commencement of the War. With regard to prices, the Government of India had taken power under sub-rule (2) of Rule 81 of the Defence of India Rules both to make provision "for controlling the prices at which articles or things of any description whatsoever may be sold" and to delegate these powers to Provincial Governments as well. Almost all Provinces appointed Controllers of Prices at Headquarters and empowered Revenue Officers in charge of Districts to act as local controllers in respect of the areas within their jurisdiction. Advisory Boards or Price Control Committees were set up to help these authorities. A considerable amount of good and effective work was done when these price control schemes were first initiated because the immediate problem then was to prevent the exploitation of the *bona-fide* consumers at the hands of both the profiteers and the hoarders. The great defect of the system, however, was that each local price controlling authority took independent action without any Provincial or Central co-ordination of policy. As time went on therefore, and the laws of demand and

apply began to assert themselves in relation to world markets and the difficulties of securing tonnage for both export and import of consumable commodities, the work of effectively controlling prices began to grow more and more difficult. The original measure of control ranged over a wide field of commodities. The number of articles under control has, however, had to be gradually reduced as different sets of economic forces began to assert themselves in relation to particular commodities. The work of the Controllers of Prices today is mostly confined to a close study of the direct economic factors that are in play with relation to particular articles and to the periodic fixing of limits of fair prices at which certain controllable commodities may be sold. A detailed description of the measures adopted when the Price Control scheme was first launched here may be given at pages 535 to 537 of the 1941-42 Edition of this publication and it is not necessary to traverse the same purely historical background over again here.

The much more difficult problem of the fix or has been the maintenance of the workers' pre-war standard of life. This can be achieved in one or two ways: (1) by securing to the workers the payment of additional allowances in cash sufficient to enable them to meet cash increases in their expenditure caused by every successive rise in prices, or (2) by enabling the workers to purchase their pre-war standards and quantities of commodities (if available at any particular time) at pre-war prices that is to say by opening cheap grain shops. The grant of fixed dearness allowances and the revision of such allowances at infrequent intervals does not achieve this object. We give at pages 537 to 543 of the 1941-42 Edition of this publication complete detailed information with regard to the different rates and scales of dearness allowances fixed by the Central and the Provincial Governments for their own low-paid employees by the Railway Board for the low-paid workers employed by the States Railways by different associations of employees for the workers employed in the industrial establishments of their members by local bodies and quasi-Government concerns like the Municipalities and the Port Trusts by large individual employers like the Tata Iron and Steel Company at Jamshedpur and by a host of other individual employers who had reached varying decisions on the subject of their own accord. Today (June 1942) most employers in India are paying dearness allowances of some kind or other to their workers. It would require a volume of the size of this publication to catalogue the rates paid by each of them individually and, moreover, this is not necessary because, since the last edition of the *Indian Year Book* was published, there has been a rapid extension of the principle for the payment of these allowances on the basis of a sliding scale linked up with the rise or fall in the cost of living indexes compiled by various Provincial Governments for certain large centres of industry in India. Since last year there have also occurred a very large number of disputes not only for the grant of such allowances in establishments where these had not so far been given but also for increases in those which had already been granted. It is equally impossible for us to narrate the incidents connected with each of the scores of major disputes which

have arisen all over India in connection with this matter and the manner of their settlement. We shall therefore confine our remarks on the subject of dearness allowances in this Edition to a brief summary of the different systems in operation and to an examination of the principal sliding scales which have been adopted by certain Associations and large-scale employers.

As far as systems of dearness allowances which are not tied up with fluctuations in the cost of living are concerned they can be divided into three main groups, into three broad groups with a considerable range of variation in each group. The first group would include those systems where different rates of cash allowances are fixed for different wage groups and where the rates fixed are raised from time to time. The most notable example of this method is the Employees' Association of Northern India Mills in all India cotton textile and leather industries into seven wage groups—under Rs. 10 per month, from Rs. 10 and under Rs. 25 and 26 or up to Rs. 75 and up to Rs. 150. Dearness allowances range, from two pence per rupee of earnings for the lowest and come down to six pence in the top for the wage group Rs. 50 to Rs. 75 were granted in January 1940. The highest wage group of Rs. 150 and above was increased by a further two pence in the rate of earnings for the lowest wage group and by an anna and a half for all the remaining wage groups including, this time, the highest. A uniform increase of a further one anna on the same basis was granted to all wage groups in January 1942. For its member mill in the Jute industry the operatives were divided into six wage groups and similar increases were granted.

In the second group would be included those systems where dearness allowances are paid in the form of fixed percentages which may be fixed at the same uniform level for all employees such as that adopted by the Indian Jute Mill Association which sanctioned the grant of a uniform increase of ten per cent over pre-war wages to the employees of all Jute mills in Calcutta with effect from November 1939 with an extra Rs. 1 per month as a special allowance in 1941, or at varying percentages for different wage groups such as those adopted by Cotton Mills in Delhi.

The third group would include systems where uniform rates of dearness allowances in cash—either on the basis of so much per month or so much for each day of attendance—are given to all employees irrespective of their pay but in almost all such cases, an upper wage limit for the securing of these allowances is fixed. In this group would be included all the low-paid employees of Government, workers in the industrial concerns of Government such as ordnance factories and Naval dockyards, (at first) Cotton Mills affiliated to the Millowners' Association, Bombay employees of local bodies and quasi-Government concerns and a host of other employers in many other industries. A large number of examples of all these varying types of dearness allowances was given in the section on this subject in the 1941-42 Edition of this publication.

Dearness allowances fluctuating with changes in the cost of living index made their appearance for the first time in India in the cotton textile industry at Ahmedabad and in the Central Provinces and Berar. In Ahmedabad, the Ahmedabad Millowners' Association and the Textile Labour Association failed to reach any agreement on the subject in spite of the Government of Bombay having tried out several forms of conciliation both through private discussions and through the medium of the Bombay Industrial Disputes Act, 1938. As the result of a last minute intervention by H. E. the Governor of Bombay, an agreement was at length reached between the parties to refer the matter to the arbitration of the Industrial Court. The Industrial Court awarded a cash dearness allowance of Rs 3-8-0 for a difference of every 11 points between the official cost of living index figure for Ahmedabad for August, 1939, and the month two months prior to the one for which the allowance is to be paid. For those months for which the difference was higher or lower than 11 points the allowance would be worked out proportionately. Thus, if the difference was 7 points, the allowance would be 7/11 of Rs 3-8-0, if it was 18 points it would be 18/11 of Rs 3-8-0 and so on. This award was intended to compensate cotton mill workers in Ahmedabad to the extent of 68·67 per cent of the actual rise in the cost of living at any particular date. A part of the balance was to be made up by the provision of a number of cost price grain shops. These were started but great difficulties were experienced in connection with their running and the scheme was eventually abandoned with the consent of the Industrial Court. In view of the continued improvement in the condition of the cotton textile industry in India the two Associations reached a further agreement on the 12th August, 1941 by virtue of which almost the whole of the hitherto uncompensated portion of the rise in the cost of living was to be made up to the workers by an addition of 45 per cent of the dearness allowance payable for any particular month to the allowance for that month. This addition was to take effect from 1st July 1941. This agreement was ratified by the Industrial Court in an award dated 15th September 1941. In the cotton mills in the Central Provinces and Berar, dearness allowances are paid on the basis of the recommendations made in the matter by the Mahalanobis and the Jajaratnam Committees both of which recommended the grant of a uniform allowance of one pie per day of attendance to all workers for every rise of one point in the three-monthly moving average of the cost of living index for Nagpur.

As far as cotton mills affiliated to the Millowners' Association, Bombay, are concerned, the Association had sanctioned the payment of a dearness allowance at the rate of two annas per day of attendance to all workers in cotton textile mills in Bombay City whose earnings did not amount to more than Rs 150 per month with effect from 1st December 1939 in accordance with the recommendations of the Board of Conciliation presided over by Sir Sayba Rangnekar. Dearness allowances at this rate were to be paid as long as the cost of living index compiled by the Labour Office of the Government

of Bombay for working classes in Bombay City fluctuated between 105 and 123. At the moment this recommendation was made it was reckoned that an allowance at this rate would compensate the workers to the extent of 76·9 per cent of the actual rise in the cost of living at that date. In June 1941, the cost of living index for Bombay stood at 122 and there was a marked tendency for prices to rise. The Government of Bombay, therefore, took up with the Association, the question of the revision of the rate of dearness allowances hitherto paid by the member mills of the Millowners' Association, Bombay and, as a result of these discussions, the Association fixed a sliding scale of allowances varying with the fluctuations in the cost of living index between 121 and 143. The allowance when the index stood at 121 was to be Rs 4/8 for 26 working days rising by successive stages of 4 annas and 3 annas for each rise of one point in the index to Rs 9 for 26 working days when the index stood at 143. It was reckoned that this scale of allowances makes up for the same percentage of the rise in the cost of living of the workers at any particular stage of the sliding scale as that provided for by the Rangnekar Board. As far as the balance is concerned the Association feels that it is open for the workers to make this up by effecting their purchases of food-stuffs and other commodities from the large number of cheap grain shops which it has opened all over Bombay. In June 1942, the cost of living index for Bombay stood at 152. As we go to Press we understand that the Association has compiled a similar extension of the existing sliding scale by making provision for similar increases in the cost of living of the workers up to the stage when the index stands at 163 at which figure the dearness allowance will be Rs 13/12 for 26 working days.

At the time when the sliding scale of dearness allowance of the Millowners' Association, Bombay was introduced (August 1941) the Government of Bombay issued a Press Note explaining the principles on which dearness allowances were paid and were about to be paid to cotton mill workers in Bombay. It was stated in that Press Note that employers in other industries in Bombay had been paying these allowances, more or less, on the same scale as that recommended by the Rangnekar Board. The Government of Bombay expressed a fervent hope that employers in all other industries in Bombay would fall into line with the Millowners' Association, Bombay, and pay dearness allowances to their workers accordingly. Some employers did so immediately but whenever disputes arose on the subject of dearness allowances, the Labour Office of the Government of Bombay stepped in and this office has made every endeavour to persuade employers in all industries to adopt the Millowners' sliding scale of allowances. It is believed that this sliding scale is, with few exceptions, in general use in Bombay City.

The managements of the cotton textile mills in East and West Khandesh persistently refused to pay any dearness allowance to their employees until the middle of the year 1941 in spite of the fact that the question was often taken into conciliation under the Bombay Industrial Disputes Act. Anticipating a concerted demand

for such allowances at that time the owner gave notices of cuts in wages. The Government of Bombay at once stepped in and by virtue of the powers they had taken under that Act for reference of certain disputes to the compulsory arbitration of the Industrial Court they referred both the disputes to the Industrial Court for arbitration. The Court gave an award disallowing any cut in wages and awarded dearness allowances on a sliding scale varying with the changes in the cost of living index for India to the operatives of all the mills in the area with retrospective effect for 20 months. The award of the Industrial Court in this matter was reproduced at pages 143 to 153 of the October 1941 issue of the *Labour Gazette* published by the Government of Bombay.

In April 1940 the Silk and Art Silk Mills Association made a recommendation to its members to pay dearness allowance at the rate of 21 pias per head for each day of attendance to their workers with retrospective effect from February 1940. In September 1941 the Association adopted the following sliding scale fluctuating with the changes in the cost of living index for Bombay: 124 to 128 2 annas 3 pias per day, 129 to 133 2 annas 9 pias per day and rising thereafter by 3 pias per day for every rise of two points in the index up to 4 annas per day when the index stands at 142 or 143.

Many large engineering workshops in Bombay City including the Mazagon Dock of Messrs Mackenzie & Co. Messrs. Richardson and Cruddis Messrs. Alcock Ashdown & Co. Ltd. Messrs. Bhagat and Sons and others have laid down a sliding scale of dearness allowances based on a one per cent increase over existing basic rates of pay for every rise of two points in the cost of living index for Bombay. The Indian Engineering Association has recommended to all its members in Bengal and Bihar that dearness allowances should be granted on a sliding scale up to an amount which taking into account such special concessions as provident fund contributions by employers attendance bonuses, etc. shall not exceed 25 per cent of the basic wages earned in the case of the maximum payments under the sliding scale, in respect of wages upto and including Rs. 20 per month and shall diminish proportionately at higher wage levels.

The Bombay Electric Supply and Tramway Co., Ltd. did not accept the recommendation of dearness allowances made by the Madan Mohan Court of Inquiry in 1940 and the Company granted an allowance of Rs. 3 per month to each employee whose monthly earnings amounted to Rs. 100 and under and one anna six pias per day to daily rated employees. In July 1941 the Company established a sliding scale of allowances by virtue of which all monthly and daily rated workers earning Rs. 100 per month and under received Rs. 3 1/2 per month when the Bombay cost of living index stood at 121. This allowance rose by stages of two annas and three annas per month for every rise of one point in the index up to Rs. 5 1/4 per month when the index stands at 135. The grant of adequate dearness allowances to the workers was one of the demands on which the bus drivers and conductors and the tramway employees of the Company went on strike towards the end of May 1942. The

Government of Bombay appointed the Honourable Sir Robert Prosser, Officiating Chief Justice of the High Court, Bombay, as an Adjudicator in this dispute under the powers given to them by Rule 1A of the Defence of India Rules.

As far as Railway employees are concerned, the Railway Board in accordance with the recommendations made in the matter by the Pau Court of Inquiry and in consultation with the All India Railwaymen's Federation fixed varying rates of dearness allowances for different groups of employees according to zones of employment. Before recommending these allowances have been placed at page 541 of the 1941-42 Edition of this publication. As a result of further discussions with the Federation the Railway Board issued a notification in November 1941, by virtue of which the following rates of dearness allowances are to be paid to railway employees with effect from 1st November, 1941: (1) In Bombay and Calcutta areas (including suburbs) - Rs. 4 1/2 per month to those whose earnings amount to Rs. 70 per month and under. (2) In towns with over 100,000 inhabitants (1941 Census) - Rs. 3 1/2 per month to those earning Rs. 60 per month and under and (3) In all other areas - Rs. 3 per month to those earning Rs. 5 per month and under. In each of the above cases workers whose full time monthly earnings amount to more than Rs. 70, Rs. 100 and Rs. 125 but less than Rs. 74 1/2, Rs. 75 1/2 and Rs. 126 respectively including the dearness allowances allowed are to receive allowance that will bring up their earnings to these figures.

The Indian Mining Association sanctioned dearness allowances of 10 per cent to workers in coal mines in Bihar in 1940 and this was raised to 12 1/2 per cent from 1st January 1942 for workers in coal mines in Bengal. The Association sanctioned a 10 per cent allowance subject to a maximum of Rs. 3 per month with effect from 1st January 1942.

The employees of the Tata Iron and Steel Co., Ltd. at Jamshedpur, secured the following rates of dearness allowances with effect from 1st August 1940 through the mediation of a Board of Conciliation (Sir Mahomed Khaja Noor) appointed by the Government of Bihar. To those earning Rs. 70 per month and below, Rs. 2 1/2 per month, over Rs. 50 and up to Rs. 75, Rs. 3 per month, over Rs. 75 and up to Rs. 100, Rs. 3 1/2 per month; and over Rs. 100 and up to Rs. 125, Rs. 4 per month. The Company increased the allowances given above for the four different wage groups to Rs. 4, Rs. 4 1/2, Rs. 5 1/2 and Rs. 6 respectively with effect from 1st October, 1941. In addition to the increased dearness allowance the Company have sanctioned from 1st April 1942 an Emergency Bonus of 10 per cent of the wages or salary of all employees at Jamshedpur drawing up to Rs. 500 per month whilst they are on active duty with a minimum of Rs. 5 per month to employees who may not be in receipt of any special allowances for A R P duty.

We regret that owing to want of space we cannot give any more information on this subject but if any of our readers should desire further information we shall be glad to furnish it (if available) on request.

DEMAND FOR PARTICIPATION IN WAR PROFITS.

During the period of the General Strike in cotton textile mills in the City of Bombay in 1940, the Government of Bombay had enquired of the Millowners Association, Bombay, whether it was willing to give an undertaking to Government that the Millowners would be prepared to give a war bonus to their workers if increased profits were made by the industry as a result of war conditions, as soon as the extent of these profits had been determined. The Government of Bombay were aware of the increasing desire of textile workers to be given an adequate share in the improved trading conditions of the industry resulting from the war and they, therefore, took up the matter again with the Millowners Association, Bombay, towards the end of the year 1941. As a result of these discussions the Association decided that its Cotton Mill Members in the City and Island of Bombay should grant to their workers a cash bonus equivalent to 12½ per cent of, or two annas in the rupee on, their actual earnings (exclusive of dearness allowances) for the period 1st January to 31st December, 1941. The Government of Bombay issued a Press Note on the subject on 3rd December 1941. In accordance with the decision reached a large majority of cotton mill workers in Bombay received a bonus equivalent to about six weeks' pay in January, 1942.

In August, 1941 the Textile Labour Association, Ahmedabad, put up a demand to the Ahmedabad Millowners' Association for an increase of 25 per cent in wages. After prolonged and protracted negotiations and discussions, the two parties agreed to refer the matter to the Industrial Court on the basis of an agreed settlement, according to which the Association agreed to grant for the whole of the year 1941 a bonus ranging from Rs 2/4 to Rs 10/8 per head for each month in 1941 to different categories of workers. In effect, cotton textile workers in the City of Ahmedabad received a bonus equivalent to that secured by their confreres in Bombay. The award of the Industrial Court in this matter has been reproduced at pages 374 to 378 of the December, 1941 issue of the *Labour Gazette*.

Since the beginning of the year 1942, hundreds of disputes have arisen all over India in connexion with demands made by industrial workers for the payment of a war bonus similar to that paid to cotton mill workers in Bombay and Ahmedabad. Labour Departments of the Provincial Government, have been inundated with requests for mediation in the matter. Anticipating trouble many employers announced their intention to pay such a bonus before demands for them were put up to them by their workers. A number of others agreed to do so immediately on intervention in the matter by Government Conciliators. In a large number of other cases where the employees were at first adamant on not conceding this demand, the workers, insistent on equal treatment in the matter resorted to direct action. In the vast majority of the cases where strikes occurred on this issue the employers were compelled to climb down and to pay the bonus asked for. In some cases where

demands for a war bonus were linked up with several other demands, the disputes were referred by the Provincial Governments concerned to adjudication under Rule 81A of the Defence of India Rules. No exact information is available with regard to the number of concerns which have paid war bonuses but it may be safely asserted that most of the leading firms or organisations in India have paid or sanctioned the payment, by their members, of a bonus equivalent to one month's pay to their workers.

CREATION OF NATIONAL SERVICE LABOUR TRIBUNALS.

With the object of taking power to require industrial undertakings, including mines, in India to release technical personnel for employment in factories under the Crown or declared to be engaged on work of national importance, the Governor-General promulgated the National Service (Technical Personnel) Ordinance, 1940, on the 28th June 1940. This Ordinance was amended by two further Amending Ordinances issued in September 1940 and in January, 1942. The term 'technical personnel' includes persons employed in the capacities enumerated in the Schedule attached to the Ordinance. These are divided into three groups (1) Managerial Staff, (2) Supervisory Staff and (3) Skilled and Semi-skilled trades. The first includes Works Managers, aircraft pilots, and all kinds of Engineers, the second, foremen, inspectors, chaimen and *maistries* whilst the third group includes almost all occupations in the engineering, electrical, wood and chemical trades, photo-litho operators, process photographers, lithographers and litho-printers, rope workers, riggers and slingers, motormen and petrol mechanics, and bricklayers and brick moulders. All 'technical personnel' over the age of 18 and under the age of 50 are, under heavy penalties for default, liable, when called upon to do so, to undertake employment in the National Service.

The Central Government has power to declare any factory which is engaged in the production of munitions or other war supplies or in work which is likely to assist the efficient prosecution of the war to be a factory engaged on work of national importance and on the declaration of a factory as such it becomes a "notified factory".

The Ordinance gives powers to the Central Government to constitute for such areas and in such places as it thinks fit National Service Labour Tribunals to exercise such functions as have been assigned to them by the Ordinance. Each Tribunal is to consist of a Chairman and not less than two other members all of whom must be servants of the Crown, it has the right to associate with itself in its deliberations such other persons as it thinks fit. Every 'notified factory' has the right to apply to a Tribunal or to the Central Government for technical personnel. The main function of a Tribunal is, therefore, to find the necessary personnel for such notified factory. With this object in view, National Service Labour Tribunals have been given power to ascertain particulars of the technical personnel employed in all industrial undertakings, the suitability of such personnel for employment in national service and the

Labour in India.

capacity of the undertaking to release such personnel or any part thereof for such employment. In order to enable the Tribunals to discharge these functions they have been given all the powers of Civil Courts for enforcing the attendance of witnesses, production of documents, recording of evidence on oath etc. and also wide powers of inspection and the carrying out of trade tests. The Tribunals can call upon the management of any industrial undertaking other than a notified factory to release such technical personnel as it may specify direct persons listed as technical personnel who are unemployed or are not already employed in a notified factory to undertake employment in the national service direct such persons to submit themselves to tests of their technical skill and they can lay down the terms of service of such persons subject to such conditions as may be prescribed. Once a notified factory applies to a Tribunal or to the Central Government for technical personnel it is obliged to apply for technical employment such personnel as may be sent to it under such terms and conditions as the Tribunal or the Central Government may direct. Appeals against the decisions of a Tribunal lie with the Central Government.

No person employed in any industrial establishment who is classified under one of the categories included in the Schedule annexed to the Ordinance can have his employment in that establishment terminated without the permission in writing of the Tribunal. Correspondingly, he has previously obtained the permission in writing of the Tribunal. Correspondingly, no employer in any industrial undertaking can discharge, dismiss or release any person so classified unless he has given 15 days notice of such intention to the Tribunal.

Whereas a Tribunal can control the employment of technical personnel by industrial undertakings in such manner as it thinks fit the Government of India alone has the power to transfer technical personnel from one notified factory to another. Similarly, no technical personnel employed in a training establishment or in a technical post under the Crown can be discharged from or leave his employment unless the head of the establishment concerned has previously obtained the permission in writing of the Central Government. All employers in non-notified factories are compelled to return state men who may be returned to their original posts on the same terms as obtained when their services were first requisitioned but these may be modified or compensation given on and after appeal to a Tribunal.

Penalties of imprisonment up to six months and a fine up to Rs. 1000 are provided for infringements of the Ordinance.

The names of the Chairmen of the nine National Service Labour Tribunals which have been so far constituted in the various Provinces in India are as follows—

- 1 Bengal W A S Lewis ICS, Dewar House, 13, Hare Street, Calcutta
- 2 Bombay D S Bakhle, ICS, Hasan Chambers, Parsee Bazar Street, Bombay

- 3 Madras V Ramasubramanian, ICS, Office of the Labour Commissioner, Madras
- 4 United Provinces (also for Delhi and Ajmer Merwara) J L Pedley, CII, MC, ICS, Office of the Labour Commissioner, Cawnpore
- 5 Punjab (also for the North West Frontier Province) J Slaters, OBE, II (Retd.), Office of the Punjab and N.W.F. Province Joint Public Service Commission
- 6 Sind (also for Baluchistan) M A Sayyid, M.C., I.P., Sind Secretariat, Karachi.
- Central Provinces and Berar C C Desai, ICS, C P and Berar Civil Secretariat Building, Nagpur
- Bihar and Orissa S. N. Mazumdar, ICS, Office of the Labour Commissioner, Bihar, Patna
- Assam J S Talukdar ICS, Office of the Controller of Immigrant Labour, Shillong

Two conferences of Chairmen of National Service Labour Tribunals have been held at New Delhi, one in January and the other in November 1941 with a view to pool experiences and decide on the methods likely to lead to greater efficiency and utility of the Tribunals. It would be of interest to mention that after the second of these two conferences the appointments of the Chairmen of the Bengal, the Bombay and the Madras Tribunals have been converted into full time jobs.

TECHNICAL TRAINING SCHEME.

About the end of the year 1910, the Government of India instituted a Technical Training Scheme designed to provide for the intensive training of a large number of skilled tradesmen to be employed for the technical branches of the Defence Services and for ordnance and munitions factories. When the scheme was first initiated the number of persons to be trained was fixed at 15,000. This was increased to 43,000. The scheme covers not only special technical institutions which have been expressly opened for this purpose but also a large number of existing factories and workshops. The total number of training centres in India as at 31st March 1942 was 314 of which 61 were in Madras, 60 in Bengal, 56 in the Province of Bombay and 43 in sixteen Indian States. The actual number of trainees at all these centres at that date was 20,113 out of a possible capacity of 28,309 seats.

The qualifications required of candidates are that they must be between the ages of 17 and 40 they must conform to certain standards of height and physical fitness and, as a general rule, they must be literate. The extent of the knowledge of English required varies according to the trades for which they desire to be trained. The maximum duration of training is one year but trainees are passed out as soon as they are able to pass the tests laid down by Government.

Candidates for technical training are ordinarily selected by the National Service Labour Tribunals, to whom application has to be made. Selected candidates receive T A from home to the centres to which they are posted and also from the centres to places of employment if they are 'placed' on the conclusion of the training. Placement is not guaranteed, every selected candidate has to enter into an undertaking to accept any employment that may be offered to him under the Crown either in India or overseas, and the parent or guardian of such person has to enter into an agreement with Government to refund all expenses incurred on his training in the event of his failing to carry out the undertaking.

Not only is training in all centres given free of charge but during their training all candidates receive stipends of Rs 27 per month if they are matriculates and Rs 22 per month if they are not, plus free medical treatment. All trainees are entitled to the benefits provided under the Workmen's Compensation Acts. On selection, a trainee is first posted to a Civil Centre. After a period of two months he is enrolled and transferred to a "Civ-mil" (Civil-Military) centre where he remains until he passes certain trade tests. He is then drafted into one of the services on a minimum salary which varies from Rs 25.6 per month for boiler attendants to Rs 46 per month for electricians, fitters, machinists etc. All drafted men are entitled to free board and lodging, clothing and medical attendance. Men sent overseas are entitled to an expatriation allowance of Rs 7 per month and *batta* of Rs 3/8 per month if authorised. Promotions depend on efficiency.

The immense possibilities which the Technical Training Scheme holds for Indian youth and the industrialisation of the country after the War have not yet been realised in India. Skilled workers are at any time an asset of great value to a nation and it is generally admitted that one of the most serious setbacks to the development of Indian industries in the past has been the absence of trained workers. With the outbreak of War and the vital importance which mechanisation quickly assumed, the number of skilled workers which a nation or a group of nations can produce has become the key to victory or defeat. Skilled workers are required not only for the production of tanks, guns and munitions but also for their maintenance and repair in the field. It is to meet this need and also to build up an army of skilled workers which after the war will enable India to compete on equal terms with other highly industrialised countries that the Technical Training Scheme of the Government of India has been devised.

THE BEVIN TRAINING SCHEME.

In November 1940, Mr Ernest Bevin, the British Minister of Labour, made a statement in the House of Commons regarding a scheme which he proposed to put into effect for training Indian workers in factories and workshops in England. The object of the scheme was to accelerate munitions production in India and, at the same time to inculcate in the men an appreciation of British methods of industrial co-operation between employers and workers and the value of sound trade union principles.

Details of the proposed scheme were published by the Government of India in December 1940.

Candidates for the scheme are chosen (a) from the working classes, preferably from among men of the Engineering trades, e.g., fitters, turners, millers and grinders drawing wages of Rs 40 to Rs 60 per month. Candidates must have had experience of factory work and have given promise of intelligence and adaptability. They may be married or single but they should be young and not below the age of 18, healthy, intelligent, able to read, write and do simple calculations and possess manual dexterity and some knowledge of English. Preference is to be given to persons who are likely to be adaptable to conditions in England and especially to those who are prepared to mix and are least likely to raise difficulties over food which is on the English style and not on a caste or communal basis. The selection of candidates is made by the National Service Labour Tribunals in consultation with the Regional Inspectors of Technical Training and large industrial employers including Railway Administrations. All selected candidates must produce certificates of recent vaccination and pass strict medical tests particularly to show that they are free from any kind of tubercular trouble.

The courses of training cover engineering occupations mainly, e.g., fitting and machine operating and last for a period of six months which might be extended in particular cases. For the first three months the trainees work at special training centres where they receive elementary training and instruction in English and get time to become acclimatized. They are then placed in groups with selected employers in factories where they receive training side by side with British workmen. For the first month after the arrival of a batch of candidates in England, they are accommodated in a hostel run on English lines under a carefully selected manager after which they are lodged with selected British families.

All selected candidates receive travelling allowances (inter class fares plus Re 1 per day for subsistence allowance) to port of embarkation and from port of disembarkation on return, free return passage and food on the journey to and from the United Kingdom, a subsistence allowance of Rs 20 per month for the whole period of journey from home to England and back to home, the necessary warm outfit in India plus an allowance in the United Kingdom for the purchase of suitable clothing. The allowances in England are (a) during preliminary training—free boarding and lodging in a special hostel plus pocket money at the rates of eight and six shillings per week according as the candidate is over or under 20 years of age. (b) during subsequent training wages at 50 shillings a week without board and lodging. In addition to the above, a separation allowance of Rs 35 per month is paid in India to the family of a married man.

On their return to India, the services of the trainees are at the disposal of the National Service Labour Tribunals originally concerned with their selection and these Tribunals decide how best their services can be utilised but no guarantee of employment is given.

By the end of May, 1942 four batches of 50 candidates each and one batch of 51 had been selected and sent to the United Kingdom. Among the 251 candidates so far selected, 44 were from Madras, 13 from Bombay, 41 from Bengal, 36 each from the United Provinces and from Bihar and Orissa, 23 from the Punjab and the North West Frontier Province, 16 from the Central Provinces and Berar, nine from Sind and six from Assam. It is of interest to mention that Their Majesties the King and the Queen paid two visits to Letchworth the British Government Training Centre at which the Bevin Boys are trained and that Their Majesty spoke to all the Indian trainees who were there at the time. By the time we went to Press two batches of 50 Bevin Boys each had returned to India. On return, the trainees are tested by a special Board of Examiners appointed by the Government of India and if found suitable are posted as Supervisors in Ordnance factories or as Instructors at the Technical Training Centres on salaries which are about double or more than what they were getting before they left India.

MAINTENANCE OF ESSENTIAL SERVICES.

As a consequence of the entry of Japan into the War, the danger had arisen of persons in India abandoning their employment or leaving certain areas. If this fear went to materialise it would be impossible to maintain certain services essential for the public safety, the maintenance of public order, the efficient prosecution of the war or the maintenance of supplies or services necessary for the life of the community. In order to avoid such a danger the Governor General, in exercise of the powers conferred on him by Section 72 of the Government of India Act, 1935 promulgated an Ordinance called the Essential Services (Maintenance) Ordinance, 1941. This Ordinance applies to all employment under the Crown and to any employment or class of employment which the Central or a Provincial Government declares to be an employment for the purposes of the Ordinance. When once any employment in any particular area has been 'declared', no person

engaged in that employment is permitted to depart outside of that area. Any person in an employment which has been "declared" who disobeys any lawful order given to him in the course of such employment, or without reasonable excuse abandons such employment or absents himself from work, or departs from any area specified in the declaration without the consent of the authority making that order, and any employer of a person engaged in an employment which has been "declared" who, without reasonable cause, discontinues the employment of such person or by closing an establishment in which such person is engaged, causes the discontinuance of his employment is guilty of an offence under the Ordinance. Penalties for infringement are imprisonment up to one year with additional liability to a fine. Courts can only take cognizance of offences under this Ordinance upon receipt of complaints made in writing by a person authorised in this behalf by the Central or a Provincial Government. Both the Central Government and the Provincial Governments with the previous sanction of the Central Government have the power to make rules regulating or empowering a specified authority to regulate the wages and other conditions of employment of persons in an employment which has been "declared" by this Ordinance. When any direction regulating wages or conditions of service have been given by an authority empowered by such rules to give them any person failing to comply therewith is guilty of an offence under the Ordinance.

Both the Central Government and the various Provincial Governments in India have issued notifications under the above Ordinance "declaring" many essential services such as Railways, oil and fuel installations, port trusts and dockyards, municipalities, gas and electricity producing plants, telephone systems, certain banks, *et cetera*, as employments to which this Ordinance has been made applicable.

PROMULGATION OF RULE 81A OF DEFENCE OF INDIA RULES.

We deal with this below under the heading of Industrial Disputes Legislation in the following chapter.

LABOUR LEGISLATION—ITS ADMINISTRATION AND STATISTICS.

The central co-ordinating authority in India for questions connected with labour legislation is the Department of Labour of the Government of India with a member of the Viceroy's Executive Council holding the portfolio. Questions connected with the labour employed in docks and the mercantile marine are dealt with by the Department of Commerce. All railway workshops and running sheds employing twenty or more persons are factories subject to the Indian Factories Act, the central executive authority for which is the Department of Labour, but, apart from the control which this Department and the Provincial Governments exercise over railway workshops and running sheds, all classes of

railway labour are under the control of the Railway Board which is itself under the control of the Department of Communications. Under the Devolution Rules made under the Government of India Act, 1919, 'Regulation of Mines' and 'Inter-Provincial Migration' were central subjects whereas industrial matters included under the head 'factories' and 'welfare of labour' fell within the scope of the provincial legislatures. Although the Government of India has passed central legislation in connection with most questions affecting the welfare of labour—in order to secure uniformity of treatment in all provinces—the administration of the various Acts connected with factories, workmen's com-

pensation, trade unions, payment of wages, the pledging of child labour, etc., falls on the Provincial Governments who have to bear the entire cost of administration as it is not permissible under the constitution, for the Central Government to incur any expenditure from Central revenues on the administration of provincial subjects. This constitutional position was perhaps, to some extent, responsible for the opposition shown by some of the Provincial Governments to labour measures on which their views were invited by the Government of India during recent years. The Governor-General in Council exercises control over the administration of the Acts passed by the Central Legislature in two ways: in the first place he is vested by Statute with the general power of superintendence, direction and control, and, secondly these Acts in most cases reserve certain power to him to make the powers conferred on Provincial Governments subject to his control. The general principle observed by the Government of India, however, has been to grant to the provinces as free a hand as possible in the administration of the various all-India Acts. The central Government in the Department of Labour, however, maintains control in connection with the Indian Mines Act.

The Royal Commission on Indian Labour recommended that the possibility of making labour legislation both a federal and a provincial subject should receive adequate consideration, and that, if federal legislation were not practicable, efforts should be directed to securing that, as early as possible, the whole of India should participate in making progress in labour matters. For Indian States in which there was appreciable industrial development, the Commission thought that the Industrial Council which they recommended should be set up would offer a suitable channel for co-operation. The whole question was discussed threadbare at the various Round Table Conferences which were held in London in connexion with the new reforms, and Mr N. M. Joshi who represented the interests of Indian Labour at these conferences pressed that as far as possible labour legislation should be a federal subject. Owing largely to Mr Joshi's efforts, the Joint Parliamentary Committee decided for concurrent legislation. The Government of India Act, 1935, lays down that the following subjects may be legislated for concurrently both by the Federal Legislature and by the Provincial Legislatures—

- (1) Factories, regulation of the working of mines, but not including mineral development.
- (2) Welfare of labour; provident funds, employers' liability and workmen's compensation.
- (3) Trade Unions, industrial and labour disputes.

Since the institution of the Annual Conference of Labour Ministers, the First Session of which was held at New Delhi in January, 1940, the trend has been for Central rather than Provincial Labour Legislation—with this difference, that whereas all the Central Acts passed prior to 1941 automatically applied to the whole of British India, some of the recent labour legislation has been permissive that is to say, it is open to any particular Province to extend such legislation to its territory or not as it pleases.

In this Chapter we shall give the principal features of all the Central Labour Acts as also of all the more important Provincial Labour Acts, but, where more than one Province has similar legislation, we shall describe the parent Act and indicate important differences, if any, between that and the similar subsequent Acts. We shall also give the more important statistics in connexion with the administration of these Acts wherever such statistics have been published. We shall conclude this Chapter with a section on the recent demand for uniform labour laws for India and the action taken in connection therewith by the institution of the Conference of Labour Ministers.

THE FACTORIES ACT, 1934.

In the Chapter on the historical survey of the growth of the labour problem in India we have traced the development of factories' legislation in the country since 1881 when the first Factories Act was passed and we gave the main features of that Act and the 1891 and the 1911 Acts as amended by the Amending Acts of 1922, 1923, 1926 and 1931. Factory law in India was completely overhauled in 1934 as the result of the acceptance by Government of most of the recommendations made for its improvement by the Royal Commission on Indian Labour. A new consolidating and amending Act was passed by the Central Legislature in 1934 and "The Factories Act, 1934" was brought into operation with effect from 1st January 1935. This Act has been amended on three occasions in 1936, 1940 and 1941. The main provisions of the law relating to factories as it stands today are as follows.

(a) *Classification of Factories*—A distinction is drawn between 'seasonal' and 'perennial' factories. A factory which is exclusively engaged in cotton ginning, cotton or jute pressing, the decortication of ground-nuts, or the manufacture of coffee, indigo, lac, rubber, sugar (including gur) or tea is to be a seasonal factory, provided that a Provincial Government may, by notification in the official gazette, declare any such factory in which manufacturing processes are ordinarily carried on for more than 180 working days in the year, not to be a seasonal factory for the purposes of the Act. The Provincial Government may also, by notification, declare any seasonal factory in which manufacturing processes are ordinarily carried on for not more than 180 working days in the year and which cannot be carried on except during particular seasons or at times dependent on the irregular action of natural forces, to be a seasonal factory for the purposes of this Act.

(b) *Age and Sex Groups*—Factory operatives are divided into four age and sex groups: (1) adult males, (2) adult females, (3) children of both sexes, i.e. persons over 12 and under 15 years of age, and (4) 'adolescents' defined as persons of both sexes who are over the age of 15 years and under the age of 17 years but who have not been certified as fit for employment as adults. Such adolescents as have not been so certified are to be deemed to be children.

(c) *Hours of Work*—The maximum limits of eleven hours per day and sixty hours per week.

laid down by the 1922 Act for both adult males and females are permitted only in the case of seasonal factories. The maximum hours permitted for perennial factories have been reduced to ten per day and 51 per week subject to the proviso that persons employed on work necessitating continuous production for technical reasons and persons whose work is required for the manufacture or supply of articles of prime necessity which must be made or supplied every day may be employed for not more than 11 hours in any one week. The maximum hours of work permitted for both uncertified adolescents and children have been limited to five per day both in seasonal and in perennial factories.

(b) *Spread over*—The spread over is the limitation of the period over which work is done during which the daily limit of hours may be exceeded. In the case of perennial factories this provision was not applicable. The spread over for the first time is introduced. The spread over in the case of adults is limited to thirteen consecutive hours and in the case of children to seven and a half continuous hours, but the continuous period of eleven hours in every twenty-four hours in the case of adults and of sixteen and a half hours in the case of children must include the hours between 7 p.m. and 6 a.m. for both women and children. The power to grant exemptions in the case of women where technical reasons require that work should be done at night, e.g., in the fish curing industry, continues to be allowed.

(c) *Artificial Cooling and Humidification*—Power has been given to Provincial Governments to authorise Factory Inspectors to call upon managers of factories to carry out specific measures for increasing the cooling power of the air if they are of opinion that it is at times insufficient to secure operatives against danger to health or serious discomfort provided, however, that the cooling power can be appreciably increased without involving an amount of expense which would be unreasonable under the circumstances.

(f) *Welfare*—Provision is made for four matters in connection with workers' welfare: (1) for the maintenance of a suitable and sufficient supply of water for washing for the use of persons employed in processes involving contact with obnoxious or poisonous substances, (2) for adequate shelter for rest in factories employing more than 150 persons, (3) for the reservation of suitable rooms for the use of children of women employed in factories employing more than fifty women and (4) for the maintenance of adequate first aid appliances.

(g) *Rest Intervals and Holidays*—The provisions of the 1911 and the 1922 Acts with regard to rest intervals and the weekly holiday were maintained subject only to verbal modifications of a minor character.

(h) *Overtime*—The old Acts contained no limitations with regard to the overtime hours which could be worked by 'exempted' workers. The new Act places a limitation of hours on the amount of overtime that can be worked by virtue of any exemptions granted

under the Act. With regard to overtime rates of pay, the Act lays down that a time and a half should be paid in all cases where a worker in a seasonal factory is required to work for more than 60 hours in any one week or where a worker in a factory other than a seasonal factory is required to work for more than ten hours in any one day. But where a worker in a factory other than a seasonal factory is required to work for more than fifty-four hours in any one week, he is to be entitled, in respect of the overtime worked less any overtime in respect of which he is entitled to extra pay under the preceding sentence, to pay at the rate of one and a quarter times his ordinary rate of pay. When a worker in any factory works on the weekly rest day, he is to be entitled in respect of the overtime worked to pay at the rate of one and a half times the ordinary rate of pay.

(i) *Certificates of Fitness for Children*—The Provincial Governments have been given powers to make rules prescribing the degree of fitness to be attained by children and it has been provided that whenever such a standard has been laid down, no child failing to attain it is to be certified for employment in a factory.

(j) *Safety of Factory Structures*—Factory Inspectors have been given powers to call upon managers to carry out such tests as may be necessary to determine the strength or quality of any specified parts of the structure of factories if they are of opinion that, on account of any defect or inadequacy in the construction of any factory, the factory or any part thereof is dangerous to human life or safety. Provincial Governments are further empowered to make rules for the furnishing, by factories, of certificates of safety.

(k) *Exemptions*—A frequent cause of complaint against the older Factory Acts was that they gave local Governments very wide powers to exempt certain classes of workmen from all or any of the restrictive provisions of the Act. The new Act limits these powers and prescribes further that no exemptions are to be granted in respect of the provisions for spreadover, prohibition of night work and the limitations of weekly hours for women and persons under the age of sixteen years.

By virtue of the Factories (Amendment) Act, 1940 the provisions of the 1934 Act relating to health safety regulation of child labour and registration may be applied to power factories employing from 10 to 19 workers and in which children are employed. It is felt that this amendment will lead to the complete non-employment of children in small factories because rather than be compelled to register under the Act the owners concerned would prefer not to employ children at all.

There has been an increasing tendency in most Provinces in India during recent years to take advantage of Section 5 of the Factories Act, 1934, by notifying all factories employing ten or more persons as "factories" for the purposes of the Act. In this connection it is of interest to record that Dr K. N. Katju, Ex-Minister for Industries in the United Provinces conducted a detailed inquiry into alleged sweated labour in small

factories for a period of over two years. He found that in over 300 factories employing 4,000 workers labour was sweated, there were no fixed hours of work and health and sanitary conditions were deplorable. The Government of the United Provinces thereupon took immediate action by declaring all such factories as employed 10 or more persons as factories for the purposes of the Act. The Second Conference of Labour Ministers held in January 1941 decided to amend the Factories Act by making registration of all factories employing 10 or more persons compulsory.

C. P. Unregulated Factories Act, 1937.

The Legislative Council of the Central Provinces and Berar passed an Unregulated Factories Act early in 1937. This Act seeks to regulate the labour of women and children and to make provision for the welfare of labour in factories to which the Factories Act, 1934, does not apply. "Unregulated Factory" has been defined as "any place wherein fifty or more workers are employed or were employed on any one day of the preceding twelve months and to which the Factories Act, 1934, does not apply and wherein the following industries are carried on — (i) bidi making, (ii) shellac manufacture, and (iii) leather tanning". A "child" has been defined as a person who has not completed his fourteenth year. The provisions with regard to health and safety, notices and registers, penalties and procedure closely follow the similar provisions

in the Factories Act. Children's hours are restricted to seven in any one day and no child can be employed in any unregulated factory except between 8 a.m. and noon, and 1 p.m. and 5 p.m. The double employment of children is prohibited and a child who has worked in any unregulated factory on any one day is prevented from working overtime or taking work home. The hours of work of adult males are limited to ten per day and provision has been made for the grant of a holiday after every period of six consecutive days. Women's hours are restricted to nine per day and they are prohibited from working in any unregulated factory before sunrise or after sunset.

Factory Statistics.

The statistics of the numbers of factories and of factory workers are given in the annual reports on the administration of the Factories Act published by all the Provincial Governments. The Government of India publishes a summary of the Provincial Reports every year. In addition to those factories which are registered under the Factories Act, the statistics with regard to which alone are covered by the annual Provincial administration reports, there are thousands of other small factories in India which are not subject to any control and for which no statistics are available. In the following table we give figures showing the growth in the number of factories and in factory population in India during the last forty five-years.

Factory Statistics, 1894-1940.

Year	Number of working Factories	Average daily number employed			
		Men	Women	Children.	Total
1894 ..	815	275,806	53,127	20,877	349,810
1898	1,098	334,594	60,603	27,532	422,729
1902 .	1,533	424,375	85,882	31,377	541,634
1906	1,855	546,693	102,796	41,223	690,712
1910	2,359	624,945	115,540	52,026	792,511
1914 .	2,936	746,773	144,157	60,043	950,973
1918	3,436	897,469	161,343	64,110	1,122,922
1922 ..	5,144	1,086,457	206,887	67,628	1,361,002
1926	7,251	1,208,628	249,669	60,094	1,518,391
1930 .	8,148	1,235,425	254,905	37,972	1,528,302
1934	8,658	1,248,009	220,860	18,362	1,487,231
1935 ..	8,881	1,360,131	235,344	15,457	1,610,932
1936	9,323	1,400,210	239,875	12,062	1,652,147
1937* .	8,930	1,427,103	237,933	10,833	1,675,869
1938*	9,743	1,481,914	245,099	10,742	1,737,765
1939*	10,466	1,498,218	243,516	9,403	1,751,137
1940*†	10,900	1,588,000	247,000	9,400	1,844,400

* The figures from 1937 onwards are exclusive of Burma

† The figures for 1940 are approximate and are based on the Provincial Administration Reports

The annual provincial administration reports since the year 1936 give separate sets of figures for adolescents and for children. "Adolescents" was a new age-group introduced in factory legislation for the first time by the Factories Act of 1934. In order to preserve continuity, however, we have included the figures for adolescents in those for men and for women.

THE INDIAN MINES ACT, 1923.

The conditions of employment of labour in Indian mines are governed by the Indian Mines Act, 1923, as amended by the Amending Acts of 1928 and 1935. The act of 1923 which came into force from the 1st July 1924 replaced the earlier enactment of 1901. The Act of 1901 contained provisions designed to secure safety in mines and it provided for the maintenance of an inspecting staff but it contained no provisions regulating the employment of labour. This defect was first remedied by the 1923 Act, section 23 of which prescribed maximum limits of 54 hours per week for underground and 60 hours per week for aboveground workers. No limits were prescribed for daily hours. A daily limit of 12 hours was imposed for the first time by the Amending Act of 1928 which was brought into effect from 1st April 1930. As a result of the recommendations made in the matter by the Royal Commission on Indian Labour and the adoption of the Draft Convention on Hours of Work in Coal Mines by the Fifteenth Session of the International Labour Conference in 1924, the Government of India passed The Indian Mines (Amendment) Act, 1935 which was brought into effect from 1st October 1935. The main provisions of the law regarding hours and conditions of work in Indian Mines as it now stands, are as follows:—

(a) No person is to be employed in a mine for more than six days in any one week.

(b) No person employed aboveground in a mine is to be permitted to work for more than 54 hours in any one week or for more than ten hours in any one day, and the periods of work of any such person are to be so arranged that along with any intervals of rest they shall not on any one day spread over more than eleven hours.

(c) The periods of work of a person employed below ground in a mine are to be reckoned from the time he leaves the surface to the time he returns to the surface and are

not in any one day to spread over more than nine hours. No person is to be allowed to remain below ground except during his periods of work and where work below ground is carried on by a system of relays the periods of work of all persons employed in the same relay are to be the same and are to be reckoned from the time the first person of the relay leaves the surface to the time the last person of the relay returns to the surface.

(d) The employment in any mine of children under fifteen years of age is prohibited.

(e) Accidents which cause bodily injury resulting in the enforced absence from work for more than seven days are to be recorded in the prescribed manner.

The Government of India promulgated regulations under section 29(j) of the Indian Mines Act, 1923, on the 7th March 1929 prohibiting the employment of any woman underground in the coal mines in Bengal, Bihar and Orissa and the Central Provinces and the salt mines in the Punjab with effect from the 1st July 1929 and in all other mines with effect from the 1st July 1930. In order to prevent undue hardship a principle of gradualness in the number of women to be reduced every year was laid down. Women are not prohibited from accepting employment in open workings and on the surface of mines.

Mining Statistics.

The collection of full statistics with regard to the numbers of mines and of the persons employed therein dates from 1924. The statistics are contained in the Annual Reports of The Chief Inspector of Mines in India. The published report for the year 1940 is an abridged edition which contains no figure for numbers employed. The following table contains the statistics for 16 years from 1923 to 1939.

Year	Total number of mines which came under the Act.	Number of persons employed.		
		Underground and open workings	Above ground	Total
1924	1,804	167,770	90,498	258,277
1925	2,011	168,554	84,303	253,857
1926	1,897	189,371	70,742	260,113
1927	1,902	198,341	72,949	269,290
1928	1,948	197,398	70,273	267,671
1929	1,782	199,908	69,783	269,701
1930	1,669	191,915	69,752	261,667
1931	1,471	170,638	60,144	230,782
1932	1,281	151,924	52,734	204,658
1933	1,424	153,942	52,665	206,607
1934	1,675	170,820	58,561	229,381
1935	1,813	189,268	64,707	253,970
1936	1,973	199,917	69,676	269,593
1937	1,925	195,554	72,804	267,858
1938	1,958	223,984	82,276	306,260
1939	1,864	223,486	81,858	305,344

THE PAYMENT OF WAGES ACT.

Perhaps the most advanced and difficult piece of social legislation attempted in India is the Payment of Wages Act which was passed by the Central Legislature early in 1936 and amended in minor particulars by an Amending Act in 1937. A detailed note on the history of this piece of legislation will be found at pages 503 and 504 of the 1938-39 Edition of this publication. The more important provisions of this Act which were brought into operation with effect from the 20th May 1937 are as follows —

(a) *Scope of Application* — The Act in the first instance applies to factories and railways but Provincial Governments are empowered to extend it to tramway or motor omnibus services, docks, wharves or jetties, inland steamer vessels, mines, quarries or oil-fields, plantations, and any other class of workshops or establishments in which articles are produced, adapted or manufactured with a view to their use, transport or sale.

(b) *Wages* — 'Wages' for purposes of the Act means all remuneration, capable of being expressed in terms of money, which would, if the terms of the contract of employment, express or implied, were fulfilled, be payable, whether conditionally upon the regular attendance, good work or conduct or other behaviour of the person employed, or otherwise, to a person employed in respect of his employment or of work done in such employment, and includes any bonus or other additional remuneration of the nature aforesaid which would be so payable and any sum payable to such person by reason of the termination of his employment but does not include travelling allowances, employees' contributions to provident funds, gratuities payable on discharge, or the value of any housing accommodation or services rendered to the worker by his employer.

Many industrial establishments, especially cotton textile mills in India, grant good attendance and efficiency bonuses in addition to wages. These bonuses operate as fines in cases where the standards for earning them are not attained. The Government of India, while framing the Act, included such bonuses within the ambit of "wages" but the definition of this term as far as bonuses are concerned has been widely interpreted. The Government of Bombay held that existing good attendance and efficiency bonuses wherever they obtained must be paid without conditions and notified all factories accordingly. As a test case, the Arvind Mills in Ahmedabad were prosecuted in the City Magistrate's Court for non-payment of these bonuses in cases where the conditions for earning them were not fulfilled. The Magistrate held that bonuses were wages and directed that the deductions made should be refunded to the workers. The matter was taken into appeal in the Court of the Assistant Judge, Ahmedabad, where the decision of the Magistrate was upheld. The Mills thereupon filed a further appeal in the High Court, Bombay, which reversed the Ahmedabad judgments and held that all bonuses must be earned. The Government of India intend introducing a Bill in the Central Legislative Assembly to amend this Act with a view to clarifying the position of 'bonuses'.

(c) *Wage Periods* — No wage period is to exceed one month and all wages are to be paid in coin and or currency notes.

(d) *Time of Payment* — The wages of all persons employed in concerns employing less than one thousand persons are to be paid before the expiry of the seventh day after the last day of the wage period in respect of which the wages are payable and in establishments employing more than one thousand persons before the expiry of the tenth day. Where employment is terminated by the employer, all due wages are required to be paid before the expiry of the second working day following that on which the employment is terminated.

(e) *Permissible Deductions* — Deductions from wages are permitted only in respect of fines, absence from duty, damage to or loss of goods expressly entrusted to an employed person for custody, housing accommodation supplied by an employer, for recovery of advances or for adjustment of over-payments of wages, for income-tax, for contributions to or repayment of advances from provident funds, for schemes of postal insurance, for dues to co-operative societies and on orders made by courts of law. Deductions are also permitted in respect of such amenities and services supplied by the employer as the Governor-General in Council or a Provincial Government may by general or special order, authorise. The Central Government promulgated a Payment of Wages Amendment Ordinance in 1940 amending the Act to enable deductions being made from wages with written authorisation of the employed person for investment in any War Savings Scheme approved by a Provincial Government. The Act does not permit an employer to make deductions from wages in respect of the value of material damaged in the process of manufacture and to hand over the same to the employee concerned. Such a system was widely prevalent in certain centres of the textile industry in India and particularly in Ahmedabad where it was estimated that a total sum of nearly fifteen lakhs of rupees was deducted annually from the wages of about 25,000 weavers in respect of weaving fines and the value of damaged cloth handed over to them.

(f) *Fines* — No fines are to be imposed on children, i.e., persons below the age of fifteen years. No fines can be imposed save in respect of such acts or omissions as have been exhibited in notices which have received the approval of the Provincial Government or of an authority which a Provincial Government may prescribe in the matter and unless the person who is fined has been given an opportunity of showing cause against the fine. The total amount of fines which may be imposed on any person during any wage period is not to exceed half an anna in the rupee of wages for that wage period and no fine can be recovered in instalments or after the expiry of 60 days from the day on which it was imposed. All fines are to be recorded in prescribed registers and all realisations from fines are to be expended on objects beneficial to the workers. Provincial Governments have been empowered to make rules in connection with most of these matters.

In December 1937, the North Western Railway reduced the monthly rate of pay of an engine driver by Rs. 7 for unsatisfactory work.

The employee filed an application against the Railway in the Small Causes Court at Karachi for illegal deductions. The application was dismissed and the case was taken in appeal to the Chief Court of Sind. Mr. Justice Weston held that a reduction in an employee's wages by way of punishment was in contravention of the Payment of Wages Act and ordered a refund to the applicant of the amounts deducted from his wages.

(g) *Deductions for Absence from Duty*.—Deductions from wages for periods of absence from duty should be *pro rata* and should not bear a larger proportion than the period of absence bears to the period of duty (i.e., if the wage is Rs. 27 for 27 working days the deductions for 7 days absence must not be more than Rs. 7). provided that "subject to any rules made in this behalf by the Provincial Government if ten or more employed persons acting in concert absent themselves without due notice (that is to say without giving the notice which they are required to give either expressly by their contracts of employment or impliedly by the terms of their service) and without reasonable cause such deduction from any such person may include such amount not exceeding his wages for eight days as may by any such contract or terms be due to the employer in lieu of due notice." By the amending Act of 1937 an explanation was added to the Section dealing with this matter which provides that "an employed person shall be deemed to be absent from the place where he is required to work if although present in such place, he refuses to carry out his work."

(h) *Deductions for Recovery of Advances*.—Recovery of an advance of money given before employment began is to be made from the first payment of wages in respect of a complete wage period, but no recovery is to be made on advances given for travelling expenses, and recovery of advances of wages not already earned are to be subject to rules to be made by Provincial Governments.

(i) *Contracting-Out*.—No contracting out is permitted.

(j) *Procedure*. Provincial Governments are empowered to appoint Commissioners for Workmen's Compensation or any other persons with judicial experience as the authority to hear and decide all claims arising out of deductions from or non-payment of wages. Penalties have been laid down for malicious or vexatious claims. Appeals to courts of small causes are permitted and an elaborate procedure has been laid down with regard to trials for offences under the Act. Since the passing of the Act it has been found that the procedure laid down in Section 15 of the Act in connection with claims arising out of deductions from wages is a very dilatory one. The action is a civil one and it takes a long time before the case is brought to a decision. In many cases where applications are filed for non-payment of wages the employer is let off if he has paid wages to the workers concerned after the filing of the complaint and the Courts ignore the fact that even in such cases delay in making payments had occurred.

(k) *Administration*.—Inspectors of factories are made responsible for the administration of the Act as far as factories are concerned and

powers are reserved to the Governor General in Council and to Provincial Governments to appoint such other persons as they think fit to be inspectors for the purposes of this Act for railways.

WORKMEN'S COMPENSATION ACT, 1923.

A brief account of the manner in which workmen could recover damages from their employers in respect of accidents before the passing of the Workmen's Compensation Act of 1923 has been given at page 543 of the 1911-12 Edition of this publication. In its main principles, the Indian Act which was brought into operation with effect from 1st July 1923, follows the British model but its precision and rigidity and the special machinery set up for its administration are some of the features which distinguish it from the British Act. In its scope—type and classes of workers covered—the original Act of 1923 fell far short of the British Act but it was necessary for the Government of India to adopt a policy of gradualness in the matter so as to secure the support of vested interests to the original measure. The original limitations of scope were to a large extent removed by amending Acts passed in 1926, 1929, 1931 and 1933 and the Act as it stands to day covers nearly eight million industrial workers in the country. Under the Act, payment of compensation has been made obligatory on all employers whose employees come within its scope, even in cases where there has been no negligence and injured workmen or the dependants of those killed can obtain compensation in all cases where personal injury has been caused by accident arising out of and in the course of employment and where the accident is not directly attributable to the workman having been at the time of the accident under the influence of drink or drugs or to wilful disobedience of rules or orders or wilful disregard of safety devices. Besides bodily injuries the contracting of certain occupational diseases such as anthrax and lead and phosphorus poisoning were deemed and treated for the purposes of compensation as injuries caused by accident; provided however, that the worker concerned was in the service of the same employer for more than six months. Mercury poisoning was added to the list of original occupational diseases in 1926 in order to bring the Indian law into conformity with a Draft Convention adopted by the International Labour Conference in 1925. This list was further expanded in 1933 and again in 1938 by the addition of (1) poisoning by benzene and its homologues or the sequelae or such poisoning; (2) chrome ulceration or its sequelae, (3) compressed air illness (Caisson Disease) or its sequelae, (4) arsenical poisoning or its sequelae, (5) pathological manifestation due to (a) radium and other radio-active substances, and (b) X-Rays, and (6) Primary epitheliomatous cancer of the skin. The main provisions of the Workmen's Compensation Act as it stands today are as follows.

Classes of Workmen Covered by the Act.—These have been specified in the definition of the term "workman" contained in section 2(1) (a) and in Schedule II. In all cases person

employed in an administrative or clerical capacity and those whose monthly earnings exceed Rs 300 (except Railway Servants) are excluded. Speaking broadly, the Act covers railways, factories, mines, seamen, docks, persons employed in the construction, repair or demolition of buildings designed to be or which are of more than one storey or of twenty feet in height or of dams and embankments, roads, bridges or tunnels, or wharves, quays, sea walls or other marine work the setting up, repairing maintaining or taking down any telegraph or telephone line or overhead electric lines or cables, aerial ropeways, canals, pipe lines or sewers, the fire brigade, railway mail service, persons employed in outdoor work in the postal and telegraphic services, operations for winning natural petroleum or natural gas, blasting operations and excavations, ferry boat services, cinchona, coffee, rubber or tea plantations, electricity or gas generating stations, light-houses, cinematograph picture producing and exhibiting, divers, elephant and wild animal trainers and keepers and salaried motor drivers and cleaners. Recently persons employed in warehouses in markets employing ten or more persons have also been brought within the scope of the Act. Persons employed through sub-contractors by a person fulfilling a contract with a railway are also covered. As far as seamen are concerned, those employed on ships registered in India are covered. But if accidents take place within the three mile limit of the territorial waters the Act applies even to those employed on ships not registered in India. But with a view to facilitate the settlement of claims in respect of seamen on ships not registered in India and to avoid litigation, provision has been made in the Lascar's Agreement for the settlement of claims for compensation on the lines of the Indian Act and in default of agreement the Commissioner of the Port where the agreements are signed has been accepted as the final authority to whom these matters should be referred for decision. Not only workmen employed within the precincts of a factory or a mine but also men engaged in any kind of work incidental to or connected with a factory or any mining operation are entitled to the benefits of the Act. As far as factories are concerned, those using mechanical power and employing more than ten persons or those not using mechanical power and employing more than fifty persons are covered. The Provincial Governments are empowered to bring within the scope of the Act other classes of workmen whose occupations are considered to be of a hazardous nature. In pursuance of that power the Government of Bombay have extended the scope of the Act to persons employed on motors or other mechanically propelled vehicles engaged in loading, unloading, handling or transport of goods and to all employees of Municipalities and District Local Boards engaged in occupations ordinarily requiring outdoor work.

Amounts of Compensation Payable—The amount of compensation payable depends, in the case of death on the average monthly wages of the deceased workman and in the case of an injured workman both on the average monthly wages and the extent of disablement. The term 'wages' includes overtime pay and

the value of any concessions or benefits in the form of food, clothing, free quarters, etc. After the monthly wages of a worker are calculated the amount of compensation due is decided by a reference to Schedule IV which gives in a tabular form the amounts of compensation for death, permanent total and temporary disablement in respect of each of seventeen wage classes. The amounts of compensation payable in the case of an injured workman whose monthly wages are not more than Rs 10 are Rs 500 for death, Rs 700 for permanent total and half the monthly wages for temporary disablement. For a workman whose monthly wages are between Rs 50 and Rs 60, the corresponding figures are Rs 1,800, Rs 2,520 and Rs 15 respectively. The maxima for persons earning over Rs 200 per month are Rs 4,000, Rs 5,600 and Rs. 30 per month respectively. In the case of minors the amounts of compensation for death and for permanent total disablement are at a uniform rate of Rs 200 and Rs 1,200 respectively, and half the monthly wage for temporary disablement. No compensation is payable in respect of a 'waiting period' of seven days following that on which the injury was caused.

(NOTE *Permanent total disablement* means such disablement which permanently incapacitates a workman for all work which he was capable of performing at the time of his accident. Any combination of injuries totalling 100 per cent loss in earning capacity is regarded as permanent total disablement even if the combination of injuries does not arise in one accident.)

Who are Dependants—These are defined in two categories: firstly, those who are in practically all cases actually dependants, and secondly, those who may or may not be in that position. The first includes a wife, a minor legitimate son, unmarried legitimate daughter and a widowed mother. The second includes a husband, a parent other than a widowed mother, a minor illegitimate son, an unmarried illegitimate daughter, a minor legitimate or illegitimate daughter if married or widowed, a minor brother, an unmarried or widowed sister, a widowed daughter-in-law, a minor child of a deceased son and a paternal grandparent.

General—The interests of dependants in cases of fatal accidents have been safeguarded by ensuring that (1) all cases of fatal accidents should be brought to the notice of the Commissioner, (2) in all cases where an employer admits liability the amount of compensation payable is to be promptly deposited with the Commissioner, and (3) in cases where the employer disclaims liability and there are good grounds for believing compensation to be payable, the dependants get the information necessary to enable them to judge if they should make a claim or not.

A contractor has been given the right to be indemnified by his sub-contractor if he has had to pay compensation either to a principal or to a workman.

An employer is permitted to make to any dependant advances on account of compensation not exceeding an aggregate of one hundred rupees and so much of such aggregate as do

not exceed the compensation payable to that dependant is to be deducted by the Commissioner from such compensation and repaid to the employer. Further, the Commissioner may deduct a sum up to Rs. 25 from the amount of compensation for the funeral expenses of a deceased workman and pay the same to the person by whom such expenses were incurred.

Administration—The Act is administered entirely on a provincial basis by Commissioners to be appointed by Provincial Governments. The Provinces of Bengal and Madras have one Commissioner each for the whole province. The Province of Bombay has one Commissioner for the more important industrial areas and for the other areas sub-judges have been appointed as ex-officio Commissioners for Workmen's Compensation. In the other provinces, the District Magistrate or the District and Sessions Judge or the Senior or Sub-Judge is the Commissioner within his jurisdiction.

Under the common law of England, in civil suits for damages for injuries sustained by workmen it is open to the employer to plead (1) the doctrine of common employment, by which the employer is not normally liable to pay damages to a workman for an injury resulting from the default of another workman, (2) the doctrine of assumed risk, by which an employee is presumed to have accepted a risk if it is such that he ought to have known it to be part of the risks of his occupation. The Royal Commission on labour regarded both these doctrines as inequitable and recommended by a majority that a measure should be enacted abrogating these defences. Provincial governments were consulted in 1932 and were almost unanimously in favour of legislation for the purpose. In the meantime judicial decisions in British India while generally agreeing as to the inequity of the doctrines were such as to leave it open to employers in most Provinces to have recourse to them. The Government of India passed the Employers' Liability Act 1935 through the Central Legislature declaring that these defences shall not be raised in suits for damages in British India in respect of injuries sustained by workmen.

During the year 1939, two amendments were made in the Workmen's Compensation Act, one in Section 5 and the other in Section 15. The first clarifies the meaning of the expression "monthly wages" which has now been defined to mean the amount of wages deemed to be payable for a month's service irrespective of whether the wages are payable by the month or by whatever other period or at piece rates. The amendment thus resolves any doubt as to whether a workman employed on wages payable otherwise than by the month or on a monthly basis is or is not a workman within the meaning of the Act. The Personal Injuries (Emergency Provisions 2 and 3 Geo 6, C 82) Act, 1939, provides for certain payments to be made in respect of personal injuries to seamen. The Workmen's Compensation Act had, therefore, to be amended in order to avoid double payment, both under this Act and under the Personal Injuries Act. The second amendment referred to above provides that failure to give notice or make a claim or commence proceedings within the time limit required by the Act shall not be

a bar to the maintenance of the proceedings provided that the Commissioner is satisfied that an application was made in the reasonable belief that the injury was such that a payment could be made under the said Act and that the Provincial Government certifies that the application was rejected.

The Government of India in the Department of Commerce, in concurrence with His Majesty's Government, formulated a *Lancars War Risk Compensation Scheme* in August 1940 in respect of death or disablement directly attributable to war injuries sustained by *Lancars* employed on ships registered in the United Kingdom. The scheme provides for widows' pensions, children's allowances and generous disablement allowance. For example, for total disablement due to War injuries a *Lancar* earning Rs. 10 per month will be paid an allowance of Rs. 5,000 in full settlement of all claims. The widow of a *Lancar* earning from Rs. 30 to Rs. 39 per month will receive a life pension at the rate of Rs. 10 per month.

It often happens in cases before Commissioners for Workmen's Compensation, that there is a dispute between the parties on medical questions. In such cases the usual practice is to call in private medical practitioners to give verbal evidence on the points in dispute. This not only increases the cost of the proceedings but tends to delay settlements. With a view to preventing this unsatisfactory, dilatory and expensive procedure the Government of Bengal in August 1941, put through the Provincial Legislature The Workmen's Compensation (Bengal Amendment) Act for the appointment of medical referees to whom any medical questions in dispute between employers and workers may be referred by the Commissioner for Workmen's Compensation and whose report would be binding on both the parties. This Act also provides for the creation of a permanent panel of qualified medical practitioners who may be appointed as medical referees. Since the passing of the Bengal Act the Government of India have circulated proposals to the Provincial Governments for the adoption of similar Central legislation on the subject.

Workmen's Compensation Statistics.

All Provincial Governments in India publish Annual Administration Reports on the working of the Workmen's Compensation Act. The Government of India summarises these Reports and publishes an annual survey under the title "Statistics of Workmen's Compensation". The Government of India summaries for the years 1939, 1940 and 1941 had not been published when we went to Press for this issue. A table giving the figures for the number of fatal and non-fatal cases in respect of which compensation was paid from the year 1924 when the Workmen's Compensation Act was brought into effect up to the end of the year 1938 together with the figures for the total amount of compensation paid in each year has been given at page 585 of the 1941-42 Edition of this publication. In the absence of similar figures for the years 1939 to 1941, we do not consider it necessary to reproduce that table here. We may add, however, that during the period of fourteen and a

half years from July 1924 to the end of 1938 the total amount of compensation paid amounted to over a crore and a half of rupees in over 280 000 cases

Effects on Industry.

A compulsory system of workmen's compensation enhances the cost of production but not to any appreciable extent. In the case of coal mines, the increase in cost has been estimated to be not more than annas four per ton of coal (*Vide* para 39 of the Report of the Indian Coal Committee, 1925). However, the owners of many of the smaller coal mines were compelled to close down their mines but this was due mainly to the severe depression with which the industry was then faced. In the Punjab, the proprietors of the coal mines in the Jhelum District were reported to be not satisfied with the privileges enjoyed by the miners under the Act as some of them had to pay as compensation on a single accident more than they could earn during a month. An unexpected increase in the number of serious and fatal accidents may undoubtedly make a big hole in the profits of a concern but the remedy for this lies in accident insurance. There can, however, be no denying the fact that the introduction of workmen's compensation has helped considerably to improve the standard of safety in the country. Facilities for accident insurance are now being provided by a number of leading insurance companies in the country and the most important of these are the Claims Bureaux in Calcutta and Madras. The Calcutta Claims Bureau which represents many of the leading insurance companies operating in India deals with a large number of claims and offers valuable co-operation to the authorities in settling compensation claims. This Bureau continued to render its valuable co-operation in the prompt settlement of claims. In Bombay, insurance companies are now concerned with half the number of cases that came up before the Commissioner. Insurance companies as a rule contest only cases involving questions of law or principle and are of benefit to all concerned. In these provinces insurance is widely resorted to by the employers especially in the textile industry. The Millowners' Mutual Insurance Association, Ltd., Bombay, is an organisation of employers one of whose objects is the mutual insurance of members against liability to pay compensation or damages to workmen employed by them or their dependants for injuries or accidents, fatal or otherwise, arising out of or in the course of employment.

MATERNITY BENEFITS LEGISLATION.

A Bill introduced by Mr N M Joshi in the Central Legislative Assembly in 1924 to provide for the payment of maternity benefits to women employed in certain industries was thrown out. The Government of Bombay, however, took up the question a few years later and the Bombay Maternity Benefits Act was passed in 1929. This was substantially amended by an Amending Act passed in 1935. A similar Act was passed in the Central Provinces in 1931. These were the first Acts of their kind in India. Since then, Maternity Benefit Acts have also been passed in the Provinces of Madras, Bengal, Sind, Assam, and the United Provinces and in Ajmer Merwara and Delhi. In the year 1941, the Bengal Legislature passed a second Maternity Benefit Act for women employed in tea plantations under the title of The Bengal Maternity Benefit (Tea Estates) Act, 1941. Except for the last Act, all the other Maternity Benefit Acts are applicable to women employed in factories. The subject of extending the benefits of such legislation to women employed in Mines was discussed at the Second Conference of Labour Ministers held in January 1941 and as the result of those discussions the Central Legislature passed The Mines Maternity Benefit Act, 1941, in the same year.

The main principles in all Maternity Benefit Legislation are the same. provision for the payment of a cash benefit to women for specified periods before and after childbirth, a compulsory period of rest after delivery and also before delivery if notice is given, but, in the latter case, the period for which an employer has to pay cash benefit is strictly limited. All Acts specify a qualifying period for the earning of the benefit this varies from six months to a year. Women are prohibited, under penalty, from accepting employment under another employer during periods for which they are in receipt of cash benefit from the employer with whom this liability rests. In the Central Act for women employed in Mines and in the U P Act additional bonuses of Rs 3 and Rs 5 respectively are provided for if the services of a qualified midwife are availed of, but, if such assistance is provided for by or in an institution of an employer, this bonus is not to be paid. The following statement shows the main features of all the Maternity benefit legislation which is in force at present in India.

Act,	Qualifying Period (Months)	Maximum Period for Maternity Benefits (Weeks)	Rate of Maternity Benefits (Per day)
1 Central (for Mines)	Six	Light	Light annas
2 Bombay	Nine	Light	Light annas or average daily wage whichever is less
3 Sind	Nine	Eight	Do
4 Central Provinces and Berar	Nine	Eight	Do
5 Ajmer Merwara	Twelve	Six	Do
6 Madras	Nine	Seven	Light annas
7 Delhi	Nine	Eight	Do
8 United Provinces	Six	Eight	As in Bombay and Sind
9 Bengal	Nine	Light	Do
10 Assam	Nine	Eight	Do

Annual Factory Administration Reports state that the application of maternity benefit legislation to factories has been having a restrictive influence on the employment of women. This has been particularly noticeable in cotton textile mills in Ahmedabad.

THE INDIAN TRADE UNIONS ACT, 1926.

The origin of the passing of a Trade Unions Act in India was the historic Buckingham Mill case of 1920 in which the Madras High Court granted an interim injunction against the Staff Committee of the Madras Labour Union forbidding them to induce certain workers to break their contracts of employment by refusing to return to work. Trade Union leaders found that they were liable to prosecution and imprisonment for *bona fide* union activities and it was felt that some legislation for the protection of trade unions was necessary. In March 1923 Mr N. M. Joshi then General Secretary of the All India Trade Union Congress successfully moved a resolution in the Central Legislative Assembly recommending that Government should introduce legislation for the registration and protection of trade unions. Opposition from employers to the adoption of such a measure was, however, so great that it was not until 1926 that the Indian Trade Unions Act was passed. This Act was brought into operation with effect from 1st June 1927. Except for a slight modification which was made in 1928 in Section 11 regarding appeals, the present law on the subject remains the same as when the Act was first passed.

Apart from the necessary provisions for administration and penalties, the Indian Trade Unions Act, 1926, makes provision for three groups of matters: (1) conditions governing the registration of trade unions; (2) the obligations to which a trade union is subject after registration; and (3) the rights and privileges accorded to registered unions. 'Trade Union' has been defined in such a way as to cover both combinations of workers and of employers but not of workers and employers. Persons under the age of 15 are debarred from membership of any registered union.

Registration—Any seven or more members of a union can apply for registration but no union can be registered unless (1) its rules provide for certain statutory matters which have been laid down in Section 6, and (2) its executive is constituted in accordance with the requirements of Section 22 which lays down that at least fifty per cent of the executive must consist of members actually engaged in the unit or group of units which the union proposes to cover. The Government of Sind published a Bill in the Sind Government Gazette dated 7th March 1942 intended to amend the Indian Trade Unions Act in such a way as to require that two-thirds of the members of the executive of a Union must be workers and also to prevent one individual person from being an Officer of more than one Union.

The registration of a union may be cancelled or withdrawn at any time by the Registrar on the application of the union itself, or if the Registrar is satisfied that the certificate has been obtained by fraud or mistake, or that the union has ceased

to exist or has wilfully and after notice contravened any provision of the Act, or if it has allowed any rule which is inconsistent with the Act to continue in force or has rescinded any rule which is required by the Act. Any union aggrieved by the refusal of a Registrar to register it or by the cancellation of its registration may prefer an appeal to a judge appointed by the Provincial Government for the purpose, and, in the event of the dismissal of such an appeal, the aggrieved party has the right of a further appeal to the High Court.

Obligations Imposed on Registered Trade Unions—The general funds of registered trade unions cannot be spent on objects other than those specified in Section 15 of the Act nor on political objects, but the Act makes provision for the creation of a separate political fund, subscription to which may be collected from each member as voluntarily desire to contribute to it. All registered unions are required to submit annually to the Registrar duly audited statements of accounts in pre-arranged forms together with changes in officers and the executive and a copy of the rules corrected up to date. Notices of all changes in the rules or of the registered name or the registered address of the office of the union, of amalgamations with other unions or of dissolution must be submitted to the Registrar in prescribed forms within prescribed periods of the transference. Failure to carry out these obligations may result either in the cancellation of a union's registration or by the imposition of a fine. The Act further requires that the rules of every registered union should make adequate provision for the inspection of books of accounts and lists of members by the officers and members of the union.

Rights and Privileges of Registered Trade Unions—The Act confers on registered unions the right to corporate existence and of perpetual succession with power to acquire and hold both movable and immovable property and to enter into contracts. A registered trade union is immune from prosecution for criminal conspiracy in respect of an agreement, unless it is one to commit an offence, made between its members for the furtherance of a trade dispute or for restraint of trade and from any legal difficulties arising therefrom. It also enjoys immunity from civil suits in certain cases.

The administration of the Indian Trade Unions Act is entirely on a provincial basis and each Provincial Government is required to appoint a Registrar of Trade Unions. A union is to be registered in the province in which its head office is situated and if this is transferred to another province, the registration has to be transferred to that province.

Registered unions are empowered under the Indian Trade Unions Act to carry on any form of insurance activity without being under any obligation to secure professional advice as to the actuarial soundness of such business. By virtue of Section 118 of The Insurance Act, 1938, insurance business carried on by a trade union is not subject to the provisions of that Act. The result therefore has been that certain unions are undertaking unsound schemes of insurance now banned by the Act especially that form of it which is carried on on the basis

of the dividing principle. With a view to protect the interests of members of trade unions who are and might be the victims of impostures, the Government of India, in September 1940, issued a circular letter to all Provincial Governments inviting opinions as to the application of The Insurance Act, with such modifications as might be necessary, to insurance business carried on by Trade Unions.

One of the most vexed questions in connexion with trade unions in India is that of their recognition by the employers. We are dealing with this question more fully in the Chapter on Trade Unionism in India. Many Bills aimed at compelling employers to recognise unions of their workers have been introduced by private members in Provincial Legislatures but these failed to carry the support of the Governments concerned. The subject has been discussed at the Labour Ministers Conference and on the decisions reached at the Second Session held in 1941, the Government of India have now drafted a Bill intended to add a new Chapter dealing with the Recognition of Trade Unions and Rights and Liabilities of Recognised Trade Unions to the Indian Trade Unions Act. This Bill was forwarded to Provincial Governments for opinion on 18th March 1942 and replies have been asked for so as to reach the Government of India by the 18th July 1942. Copies of the circular letter of the Government of India on the subject may be obtained on application to any of the Commissioners of Labour at Provincial Headquarters towns or cities.

Statistics of Registrations.

Trade unions were at first slow to seek registration under the Act. There had been no

prosecutions under the 1913 amendment of the Indian Penal Code for criminal conspiracy in the case of strikes conducted by unions since the Buckingham Mill case of 1920 and with the enjoyment of this immunity in practice, most of the existing unions thought that registration involved obligations *re* maintenance of proper books and accounts, audit and the submission of notices and statements of annual accounts and restrictions *re* the framing of rules in accordance with the requirements of the Act and on expenditure which could be incurred which were too disproportionate in comparison with the rights and privileges which registration conferred. The impetus to registration however came from the employers who in many cases insisted on registration prior to recognition—in many cases even registration did not secure recognition. In a number of cases registrations were short-lived because they had to be cancelled owing to failure to submit annual returns or for non-compliance with the other requirements of the Act. It is of interest to observe that the Textile Labour Association, Ahmedabad, which is the biggest and best organised trade union in India refrained, on purely political grounds, from registering until the end of 1935 and it only did so then owing to the probable decision of the Delimitation Committee to make registered textile unions in Ahmedabad a basic constituency for the return from that centre of labour representatives to the Bombay Legislative Assembly which would come into being as the result of the new Government of India Act of 1935. The following table shows the numbers of registered unions on all the provincial registers in British India at the end of each financial year together with the membership and income of those which furnished returns. The figures exclude cancellations of registration.

Registered Trade Unions in British India

Year	Number of registered trade unions	Unions furnishing returns		
		Number	Membership	Income
				Rs (In lakhs)
1927-28	29	28	160,619	1 64
1928-29	75	65	181,077	3 17
1929-30	104	90	242,355	4 23
1930-31	119	106	219,115	4 07
1931-32	131	121	235,693	4 78
1932-33	170	147	237,369	5 57
1933-34	191	160	208,071	5 03
1934-35	213	183	284,018	5 29
1935-36	241	205	268,326	5 29
1936-37	271	228	261,047	4 86
1937-38	420	343	390,112	6 93
1938-39	562	394	399,159	8 90
1939-40	666	450	511,138	11 22

The number of women members of trade unions in India is very small indeed. In 1927-28 it was 1,168, in 1933-34 it was 2,999 and in 1939-40, 18,612 or only 3.6 per cent of the total membership in all registered unions. Of the 666 unions on the register as at 31st March 1940 188 were in Bengal, 72 in the Province of Bombay 111 in the Province of Madras and 65 in the Punjab. Of the total Membership of 511,138, 179,381 were employed on railways 136,931 in textiles and 52,742 were seamen. The figures in the above table are taken from published

reports but it is learnt that the total number of registered unions in India as at the end of 1941 was 750 with a membership of approximately 650,000.

INDUSTRIAL DISPUTES LEGISLATION.

Industrial Disputes Legislation in India today is comprised of a Central Act known as the Trade Disputes Act, 1929, Rule 81A of the Defence of India Rules and the Essential Services (Main

tenance) Ordinance, 1911, in so far as it governs the question of workers being required to be at duty in the concerns to which it has been applied and the power which it gives to the Central and Provincial Governments to make rules with regard to the appointment of an authority to fix wages and conditions of employment in such concerns. These apply to the whole of British India. The Province of Bombay has the Bombay Industrial Disputes Act, 1924 in addition.

Trade Disputes Act, 1929.

This Act was first passed for a period of five years. By an Amending Act passed in 1931 it was placed permanently on the Statute Book. The Act was further amended in 1938 in order to provide for the appointment of conciliators. The main provisions of this Act as it stands today are as follows:

Appointment of Courts of Inquiry and Boards of Conciliation. The Governor General in Council in the case of railways or concerns under the control of the Government of India and the Provincial Government in the case of all other concerns or groups of concerns have power to refer any matters appearing to be connected with or relevant to any trade dispute which exists or is apprehended between an employer and his workmen to a Court of Inquiry for report or to refer the whole dispute to a Board of Conciliation for promoting a settlement thereof. Where no reference is made by either party or where a reference is made to Government by only one party, the appointment or otherwise of a Court or a Board is entirely at the discretion of Government, but where both the parties to a dispute apply either conjointly or separately for the reference of the dispute to a Court or a Board it is obligatory on Government to proceed to appoint a Court or a Board, as the case may be, provided that Government are satisfied that the persons applying represent the majority of each party. The objects of Courts of Inquiry which may be composed of an independent chairman and other independent persons or only one independent person would be to investigate and report on such questions connected with the dispute as might be referred to them. The settlement of the dispute would depend on the force of public opinion on the Court's findings. The objects of Boards of Conciliation which may consist of one independent person or one independent chairman and two or four other members comprised of equal numbers of persons representing the interests of both the parties to a dispute and to be nominated by the parties concerned would be to secure a settlement of the dispute. Provisions are contained in the Act to enable both Courts and Boards to enforce the attendance of witnesses and the production of documents. Neither party is under any obligation to accept the findings of a Court or the advice of a Board, but in practice both parties

keep made a penal offence for persons employed in such concerns to go on strike without giving fourteen days' notice in writing to their employer of their intention to do so. Penalties are also provided for persons abetting such an offence.

Appointment of Conciliators.—The Central Government in respect of industries, businesses or undertakings carried on by them or under their authority or by a railway company and the Provincial Government in respect of the undertakings within their Provinces, have been empowered to appoint Conciliation Officers "charged with the duty of mediating in or promoting the settlement of trade disputes." Conciliation officers have the power to call for documents from and to enter the premises of employers.

Provisions relating to Illegal Strikes and Lock-outs. Any strike or lock-out which has any object other than or in addition to the furtherance of a trade dispute within the trade or industry in which the strikers or employers locking out are engaged or which is so timed or calculated to inflict severe and general hardship upon the community and thereby to compel any Government in British India, the Federal Railway Authority or the Crown Representative to take or abstain from taking any particular course of action is illegal. Persons furthering illegal strikes or lock-outs are liable to punishment while those refusing to take part in them are protected from trade union disabilities to which they might otherwise be subjected.

Rule 81A of the Defence of India Rules.

This was promulgated by the Government of India in January 1942 and was amended in the month of May of the same year. The object of Rule 81A of the Defence of India Rules is the avoidance of strikes and lock-outs. It empowers the Central Government to make by special or general order provision for (a) prohibiting subject to the provisions of the order, a strike or lock-out in connection with any trade dispute, (b) requiring employers to observe for such period as may be specified in the order such terms and conditions of employment as may be determined in accordance with the orders, (c) referring any trade dispute for conciliation or adjudication in the manner provided in the order and (d) enforcing for such period as may be specified in the order the decisions of the authority to which a trade dispute has been referred for adjudication, provided that no order made under (b) shall require an employer to observe terms and conditions of employment less favourable to the workmen than those existing in the undertaking at any time within three months preceding the date of the orders.

By virtue of the above Rule the Government of India issued a General Order on 6th March 1942 preventing any person in any undertaking (defined as any undertaking by way of trade or business) from going on strike in connection with any trade dispute without having given to his employer, within one month before striking, not less than fourteen days' previous notice in writing of his intention to do so. This order also lays down that where any trade dispute has been referred to a Court of Inquiry or a Board of Conciliation under the Trade Disputes

Special Provisions for Public Utility Services.—“Public Utility Service” has been defined to include any postal, telegraph or telephone services, any undertaking which supplies power, light or water to the public, any system of public conservancy or sanitation and any railway service or water transport services which have been declared as such by Government. It has

Act, 1920 or for conciliation or adjudication under an order made under Rule 81A, no person employed in any undertaking concerned in the dispute shall go on strike until the expiry of two months after the conclusion of the proceedings upon such reference. The Central Government, by virtue of two notifications dated 12th March and 20th May 1942, have directed that the powers conferred on it by Rule 81A of the Defence of India Rules would also be exercisable by the Provincial Governments subject to certain qualifications.

It is of interest to observe that the Government of Bombay, by virtue of the powers vested in them by the above orders, referred three major disputes in Bombay City—*i.e.*, those in the Mazagon Dock, in General Motors (India), Ltd., and in the Bombay Electric Supply and Tramways Company, Limited—to adjudication by the Honourable Mr. Justice Chagla, a Puisne Judge of the Bombay High Court in the first two cases and by the Honourable Sir Robert Broomfield, Officiating Chief Justice of the High Court, Bombay, in the last case.

Essential Services (Maintenance) Ordinance, 1941.

This Ordinance has been dealt with in the Chapter on "Second World War—Its Effects and Repercussions". Its main object is to prevent workers in certain essential services which have been 'declared' by Government to be such from leaving their employment. Under this Ordinance, however, a worker who disobeys any lawful order given to him in the course of his employment, is liable to be punished. An order not to strike work would be a lawful order. Section 6 of this Ordinance further empowers the Central Government or, with the previous sanction of the Central Government, a Provincial Government to make rules "regulating or empowering a specified authority to regulate the wages and other conditions of service of persons or of any class of persons engaged in any employment or class of employment" in any concern which has been "declared" as an essential service under this Ordinance.

Bombay Industrial Disputes Act, 1938.

This Act is perhaps the most advanced and outstanding piece of Labour Legislation ever attempted in India. Put in a nutshell, the object of the Act is to make all strikes and lock-outs illegal until such time as the procedure provided for in the Act for conciliation and arbitration is exhausted. All industrial matters relating to wages, conditions of employment, privileges, rights or duties of employers or employees, or the mode, terms and conditions of employment or non-employment are divided into two schedules. All matters which regulate the relations between employers and employees such as rules of conduct or standing orders for operatives are listed under Schedule I. Matters connected with wages, hours of work, conditions of employment, etc., with regard to changes in which employers are required to give notice to the representatives of their employees are listed under Schedule II. Government have power to modify these schedules (Section 72).

Standing Orders. Every employer in an industry to which the Act is made applicable is

required to submit, within a period of two months from the date of the application of the Act to that industry, a draft of the Standing Orders which he proposes to adopt for governing the relations between him and his employees. The Commissioner of Labour is to "settle" these Standing Orders after consulting all the interests concerned in the industry. Any person aggrieved by any of the Standing Orders so "settled" has the right of appeal to the Industrial Court (Sections 26 & 27).

Changes. No employer is to be permitted to make any change in any of the Standing Orders settled by the Commissioner of Labour or by the Industrial Court on appeal or in respect of any industrial matter included under Schedule II unless notice of such intended change is given to the representative of employees. Any employee who desires a change in any industrial matter is also required to give notice of such intended change to his employer. Copies of all such notices are required to be forwarded to the Commissioner of Labour, the Chief Conciliator, the Registrar, the Labour Officer and to any other person as may be prescribed (Section 28).

Representatives of Employees.—The Act contemplates the creation of three distinct types of unions. In the first place no union which has not been registered under the Indian Trade Unions Act, 1926, has any place in the scheme of things under this Act. Unions may be either *occupational unions* or *industrial unions*. Any union which has a membership of five per cent. of the total number employed in any occupation or industry in any local area and which has been recognised by the employers concerned or any union which has not been so recognised but which has a membership of twenty-five per cent. of the total number employed may apply for registration for the purposes of the Act (Sections 7 & 8). Any registered union which has a membership of twenty-five per cent. of the total number employed in the occupation or industry concerned may apply to the Registrar for declaration as a *representative union* (Section 12). Unions which have a membership of five per cent. or more but less than twenty-five per cent. and which have not been recognised by the employers concerned may apply to the Registrar for being declared as *qualified unions* (Section 11). The three types of unions, therefore, are (1) Registered Unions; (2) Representative Unions, and (3) Qualified Unions. "Representative of Employees" means (i) where the majority of employees directly affected by a change are members of a registered union, such registered union, or (ii) where some of the employees directly affected by the change belong to a representative union, that representative union, or (iii) in other cases such representatives not being more than five as may be elected in the manner prescribed by employees directly affected by the change from among themselves, or (iv) in cases where representatives are not elected under (ii) and in all other cases not falling under any of these clauses, the Labour Officer (Section 3(29)). The Rules made under the Act make provision for the determination of the union which is a representative of employees, and, failing unions, for the election of the workers' own representatives.

Preliminary Procedure.—On the receipt of a notice of change, the employer and the representative of the employees concerned are to discuss the proposed change. A period of fifteen days has been allowed for these discussions. If an agreement is reached between the parties, the memorandum of such agreement is to be sent to the Registrar for registration (Section 30). In cases where the Labour Officer is one of the parties, the Labour Officer is required to put the terms of the proposed agreement before a meeting of the employees concerned and he is empowered to enter into an agreement only if the majority of such employees concur (Section 32).

When dispute deemed to commence.—If the preliminary proceedings fail to produce an agreement, the party giving the notice is required, if he still desires that the proposed change should be effected, to send a full statement of the case to the Conciliator, the Chief Conciliator and the Registrar (Section 31). On receipt of the statement of the case, the Conciliator is required to enter the industrial dispute in a register (Section 35).

Conciliation.—The Act makes provision for the appointment of Conciliators and Special Conciliators. The Commissioner of Labour is to be the ex-officio Chief Conciliator for the purposes of the Act (Section 21). Provision has also been made for the appointment of Boards of Conciliation consisting of independent chairmen and members representing employers and employees to be selected by Government from panels formed for the purpose (Section 23). On making an entry of an industrial dispute, the Conciliator concerned has to try and bring about a settlement of the dispute (section 36) but power is reserved to the Chief Conciliator to intervene at any stage in any conciliation proceedings held by another Conciliator (Section 37). The Chief Conciliator or the Conciliator has to send a report of the whole case to Government on the conclusion of the conciliation proceedings, and in all cases where settlements are reached copies of such settlements are to be forwarded to the Registrar (Section 38). During the pendency of any proceedings before the Conciliator the Government may and if both the parties agree either prior to the commencement of such proceedings or after the failure of the Conciliator to bring about a settlement shall, refer the dispute to a Board of Conciliation (Section 30). Government is empowered to lay down time limits for different stages of conciliation proceedings (Section 41) and the Act gives various powers to Conciliators and to Boards for summoning of witnesses, production of documents, etc. (Section 40).

Industrial Court.—The Act makes provision for the appointment of an Industrial Court for determining industrial disputes and for dealing with other matters under the provisions of the Act. The Court is to consist of two or more members to be selected from persons who are, have been or are eligible, for being appointed as Judges of a High Court (Section 24). The Industrial Court, *inter alia*, is to decide all matters referred to it under Chapter II of the Act connected with the registration of unions and it has also to decide appeals from decisions of the Commissioner of Labour in connection with the Standing orders (Section 53).

Arbitration.—Any employer and a registered union may by a written agreement (called a submission) agree to submit any present or future industrial dispute or any classes of such disputes to arbitration of any person whether such arbitrator is named in the agreement or not to the Industrial Court. All submissions are to be registered with the Registrar (Section 43). In the absence of an agreement to the contrary, submissions are irrevocable but are terminable by giving six months' notice (Section 44). The conciliation proceedings provided for under the Act are barred in cases where the representative of employees is a registered union which is a party to a submission. (Section 46.) The Act contains various provisions with regard to the duties of the Industrial Court, procedure before the Court, execution of orders as to costs and the parties on whom orders or awards of the Industrial Court will be binding.

Compulsory Arbitration in Certain Disputes.—Under the original Act, industrial disputes could be referred to the arbitration either of the Industrial Court or of any other person only when an employer entered into an agreement with a Union registered under this Act to do so. In cases of industries where there are no registered unions or even where there is a registered union but the parties cannot agree to refer a dispute to arbitration, arbitration in an industrial dispute is not possible. In order to make arbitration compulsory in certain cases, the Governor of Bombay promulgated The Bombay Industrial Disputes (Amendment) Act 1911 on the 29th May 1911, by virtue of which power is given to the Provincial Government to refer any dispute to the arbitration of the Industrial Court if it is satisfied that the continuance of any dispute is likely to cause serious or prolonged hardship to a large section of the community, or seriously affect an industry and the prospects and scope for employment in it, or cause a serious outbreak of disorder or a breach of the public peace. The Amending Act has been applied to all the industries in the Province of Bombay to which the main Act had been applied.

Illegal strikes and lock-outs.—A strike or a lock out will be illegal if it is declared, commenced or continued (a) in cases where it relates to any industrial matter mentioned in Schedule I before the Standing Orders relating to such matter and submitted to the Commissioner of Labour are settled by him or by the Industrial Court, as the case may be, or before the expiry of six months from the date on which such Standing Orders come into operation, (b) without giving notice in accordance with the provisions of Section 28; (c) only for the reason that the employer has not carried out the provisions of any Standing Order or has made an illegal change, (d) in cases where notice of change has been given and where no agreement in regard to such change is arrived at before the statement of the case is received by the Registrar, (e) in cases where conciliation proceedings in regard to the industrial dispute to which the strike relates have commenced, before the completion of such proceedings, (f) in cases where a submission is registered until such submission is lawfully revoked; or in contravention of the terms of a registered agreement, settlement or award. In cases where conciliation proceedings

In regard to any industrial dispute have been completed, a strike or lock-out relating to such dispute will be illegal if it is commenced at any time after the expiry of two months after the completion of such proceedings (Sections 62 & 63) The determination of the question of whether any strike or lock-out is illegal rests with the Industrial Court

Illegal Changes —No employer can make any change in any industrial matter in regard to which a standing order has been settled under Section 26 or which is mentioned in Schedule II before a notice in respect of such change has been given and the procedure laid down under the Act has been gone through No employer can also make any change in contravention of the terms of a registered agreement, a settlement or an award Any change made in contravention of these provisions is illegal Applications for the declaration of any changes as illegal are to be made to the Industrial Court (Section 73)

Penalties —Various penalties are provided for breaches of the Act (Sections 65 & 66) and for instigating or inciting others to take part in an illegal strike or lock-out (Section 67) Penalties are also provided for the making of illegal changes (Section 69), for disclosing confidential information (Section 68), for obstructing persons from carrying out duties imposed by the Act (Section 70), and for victimisation of employees for trade union activities or for participating in any of the proceedings under the Act (Section 64).

Miscellaneous —Important provisions of a miscellaneous character relate to the binding character of and the periods for which agreements are to remain in force (Sections 76 and 77), jurisdiction of Courts (Section 79), etc In cases in which a representative union is a party to any agreement, settlement, submission or award, the Provincial Government is empowered, after consulting the Industrial Court if it deems it necessary to do so, to extend the agreement, etc, to all employees in the industry concerned [Section 76 (2)]

Officers and Areas —In addition to the Conciliators and the Industrial Court, the Act makes provision for the appointment of a Registrar of Unions for the whole Province (Section 4) and for the appointment of Labour Officers (Section 22) The powers and duties of the Labour Officer are defined in Section 25 "Local area" means any area notified as such by the Local Government

Application of the Act —The Government of Bombay decided to apply the Act, in the first instance, to the Cotton Textile Industry in the whole of the Province of Bombay It was applied to this Industry in three stages (1) Those parts of the Act relating to the settlement of the Standing Orders and the appointment of the various administrative officers were brought into operation with effect from 1st June 1939, (2) The sections relating to conciliation and arbitration were applied from 1st August 1939, and (3) The provisions relating to illegal strikes and lock-outs and the penalties connected therewith were brought into operation from 20th August 1939 The term "cotton textile industry" was so defined as to include all factories notified under section 2 (g) of the Indian Factories Act, 1934, which are engaged in cotton spinning, cotton

weaving with or without an admixture of silk, rayon or artificial silk, cotton knitting and hosiery, and all cotton dyeing, bleaching and printing departments, and mechanics' shops attached to such concerns Every town and village in the Province of Bombay which has one or more cotton textile units according to the definition given has been declared as a "Local Area" The whole of the Act was applied to the Silk Textile Industry in the local area of Bombay City with effect from 1st October 1929 and to the Woollen Textile Industry in the local areas of Bombay and Thana with effect from 15th January 1940

Statistics of Industrial Disputes.

Statistics of industrial disputes in India have been collected only since 1921 The following table sets out the number of disputes in each year since 1921 the number of persons affected by these disputes and the total time lost in man-days

Year.	Number of disputes	Number of workpeople involved	Number of working days lost
1921 .	396	600,351	6,984,426
1922 ..	278	435,434	3,972,727
1923 ..	213	301,044	5,051,704
1924 .	133	312,462	8,730,918
1925 .	134	270,423	12,578,129
1926 .	128	186,811	1,097,478
1927 .	129	131,655	2,019,970
1928 .	203	506,851	31,647,404
1929 .	141	532,016	12,165,601
1930 .	148	196,301	2,261,731
1931 .	166	203,008	2,408,123
1932 .	118	128,099	1,922,437
1933 .	146	164,038	2,168,961
1934 .	159	220,808	4,775,559
1935 .	145	114,217	973,475
1936 .	157	169,029	2,358,062
1937 .	379	647,801	8,982,257
1938 .	399	401,075	9,198,708
1939 ..	406	409,180	4,992,795
1940 .	322	452,539	7,577,281

In the issues of this publication for the years 1940-41 and 1941-42 we gave brief summaries of all the important trade disputes which had occurred in India in each of these two years Want of space prevents us from doing the same this year but we may state that the *Labour Gazette* published monthly by the Labour Office of the Government of Bombay gives full details in connexion with all industrial disputes in the country

EMPLOYMENT OF CHILDREN'S ACT, 1938

The Government of India passed an Act in the Central Legislature in 1938 for the prevention of the employment of children who have not completed their fifteenth year in any occupation connected with the transport of passengers, goods or mails by railway or in any occupation involving the handling of goods within the limits of any port to which for the time being any of the provisions of the Indian Ports Act, 1908 are applicable By an Amending Act passed in 1939 the employment of any child who has not completed his twelfth year is prohibited in any workshop connected with bidi making, carpet

Statistics of Immigration into Assam.

Statistics and information with regard to the number of emigrants, conditions of life, health and work and wages of labourers working on tea

plantations in Assam are contained in the Annual Administration Reports on the working of the Assam Labour Board until 1933 and on the working of the Tea Districts Emigrant Labour Act after 1934

A good state of affairs is shown to exist in Indian tea plantations in Assam according to the Annual Report on the working of the Tea District Emigrants Labour Act for the year 1940. The Province of Bombay continued to be an uncontrolled emigration area but notwithstanding this, 659 souls were recruited from this area during the year ending 30th September 1940. The total number of souls recruited during the year amounted to 23,758 as against 28,871 during 1939. By far the greater majority of these 18,740 came from the two Provinces of Bihar and Orissa, and of these, 10,235 souls were recruited at Ranchi and 2,646 at Sambalpur. Recruiting costs for the year were, on an average, Rs 72-1-5 per adult and Rs 58-9-7 per soul.

The total population of adult labourers working and not working on tea estates in Assam was 605,555 at the end of 1940 and of children 571,950 making a total population of 1,177,505 as against 1,170,608 in the previous year. The average monthly earnings of men, women and children settled on the gardens amounted to Rs 7-14-1, Rs 6-3-8 and Rs 4-7-9 respectively in the Assam Valley and to Rs 6-4-7, Rs 4-7-3 and Rs 3-1-8 respectively in the Surma Valley. In addition to cash wages, all estate labourers have the usual concessions of free housing, free fuel, free medical treatment, maternity benefits and the right of free grazing for their cattle. In addition to maternity benefit, some gardens also pay a special bonus of Rs 3 to Rs 5 for each child born. Rice is supplied at concession rates in some gardens. The birth rate was 34.74 against 20.94 deaths per mille as compared with 35.10 and 21.74 respectively in the previous year.

The tea garden population consists mostly of Hindus, Christians and Animists. The number of Muslims is insignificant. Proper facilities are given to the labourers for the observance of their respective rites and religious festivals in all gardens. Facilities for playing football, hockey and other outdoor games are also afforded by several gardens. During the year 1940 the Boy Scouts movement made satisfactory progress in the Assam Gardens.

SHOPS LEGISLATION IN INDIA.

The first Province in India to enact legislation for the regulation of hours of work and conditions of employment in shops and commercial establishments was Bombay where the Legislative Assembly passed the Bombay Shops and Establishments Act on the 30th October 1939. Three other Provinces in India—Bengal, the Punjab and Sind—enacted similar laws during the year 1940. The Bombay Act was brought into effect from 15th November 1940. The Punjab Trade Employees Act came into force with effect from 1st March 1941. The Bengal Shops and Establishment Act from 1st April 1941 and the Sind Act from 20th November 1941. The question of framing Central legislation for the grant of a weekly holiday to shop workers in those Provinces which have no legislation on this subject was discussed at the Second Session of the Labour Ministers' Conference

and the Conference decided that such legislation was necessary. The Government of India drew up a Bill on the subject and this was passed by the Central Legislature with the title of the Weekly Holidays Act, 1942, early in that year. The option for the application of this Act in any Province which has no Shops' Legislation rests with the Government of that Province.

We shall first proceed to describe The Bombay Shops and Establishments Act in some detail and we shall then give a brief outline of the manner in which the Bengal, the Punjab and the Sind Acts differ from the Bombay prototype. The Bombay Act deals with three main types of establishments: shops, commercial establishments, and restaurants, eating houses, theatres and other places of amusement or entertainment.

Application of the Bombay Act—This Act covers commercial establishments, shops, theatres or any other places of public amusement or entertainment, restaurants or eating houses, Government Offices and Offices of Local Authorities, clubs and residential hotels, bazaars or fairs for the sale of work for charitable or other purposes from which no profit is derived, hospitals, nursing homes and dispensaries, stalls and refreshment rooms at wharves and docks, chemists' and druggists' shops as are approved by the Provincial Government by a general or special order, and persons exclusively employed in the collection, delivery or conveyance of goods are excluded from the operation of the Act. The Act does not apply to persons occupying positions of management or employed in a confidential capacity, persons whose work is inherently intermittent such as that of travellers, canvassers, watchmen and caretakers, and persons exclusively engaged in preparatory or complementary work, such as cleaning or forwarding clerks or messengers.

Shops—Section 7 of the Act prescribes the maximum hours of work of persons employed in shops at 9½ per day. This is half an hour longer than the ordinary factory day. Every person employed in a shop is to be given at least one day in a week as a holiday with pay and no person can be employed for more than five continuous hours unless he has had an interval of rest for at least half an hour. The Act makes it compulsory that every shop shall be closed not later than 9 p.m., provided, however, that any customer who was being served or was waiting to be served at 9 p.m. at any shop may be served in such shop during the quarter of an hour immediately following such hour. Power has been given to the Provincial Government to grant exemptions in the case of certain types of shops, such as chemists and druggists' shops, etc. In order, however, that compulsory closure may not affect adversely the interests of shop-keepers, it is necessary to prevent street trading after the shop closing hour, and provision has therefore been made to prevent any person from carrying on the sale of any goods after 9 p.m. in or adjacent to a street or public place. This does not, however, apply to the sale of newspapers. The maximum spread-over has been fixed at 12 hours a day, but in order to cover the cases of shops which deal in perishable goods and whose busiest periods are early in the morning and late at night provision is made for the extension of the spread.

hours, provided such shops close for not less than three hours between the opening and the closing time.

Commercial Establishments.—As far as these are concerned, there are days in a week or a month or a quarter, when longer hours are worked than usual, and the same applies to the various exchanges where settlement days often give rise to abnormal working hours. It was therefore, considered that it would not be advisable to fix the daily limit of hours in the case of such establishments and the Act, therefore, provides that the total number of hours that can be worked in any one month should be restricted to 208. Taking 26 as the number of working days in any one month, this works out at an average of 8 hours per day. No overtime is permitted in the case of shops but in commercial establishments overtime to the extent of 120 hours per year is permitted so as to enable banks and other large establishments to deal with the pressure of work involved in the preparation of balance sheets, stock taking, etc. The provision for holidays is on the same basis as in shops, but the periods of work and intervals of rest of persons employed in commercial establishments are so arranged that they shall not together be spread over more than 12 hours in a day. The Provincial Government is, however, empowered to grant exemptions from this requirement for not more than six days in every calendar year for each person who may be required to work on account of stock taking, making of accounts, settlements or on other prescribed occasions.

Restaurants and Places of Amusement. For these establishments, a ten hour day has been prescribed with a spread over of 11 hours. These establishments have necessarily to keep open for long hours, but the intensity of the trade done varies and the spread over of 11 hours gives the employers an opportunity of regulating the hours of work of their employees in accordance with the requirements of the trade. No closing is prescribed for these places because they are already subject to regulation by the police or excise departments.

Miscellaneous Provisions.—No special provision has been made in the Act for the hours of work of women employees, and as the Act stands, there is nothing to prevent the employment of women in the types of establishments to be covered by it at night. But, no child who has not completed his twelfth year is allowed to work at all in the establishments covered by the Act. The hours of work in the case of young persons between the ages of thirteen and seventeen years are restricted to 12 per week and to 8 per day and no young person is permitted to work in any establishment covered by the Act between the hours of seven in the evening and six in the morning. All overtime work is to be paid for at the rate of a time and a quarter. Enforcement of the Act is in the hands of the local authorities subject to such supervision of the Provincial Government as may be prescribed. Employers who contravene any of the provisions of the Act are liable, on conviction, to a fine which may extend to Rs 25 for the first offence and upto Rs 250 for every subsequent offence. The Act in the first instance has been made applicable to the City of Bombay, the

Mumadabad Municipal Borough and Cantonment, the Poona City and Suburban Municipal Borough and Cantonment, and the Sholapur and Hubli Municipal Boroughs.

Main Differences between the four Shops Acts in India. The Sind Act is applicable to almost the same class of establishments as are covered by the Bombay Act. The Bengal Act, however, specifically exempts a much larger number of establishments including the following: The Reserve Bank of India, all public utility works, shops dealing in perishable commodities like meat, vegetable, flowers, etc., shops dealing in articles required for obscural ceremonies, shops dealing in tobacco, gun, news papers, etc., and such personal commercial establishments and the clerical establishments of such personal factories as may be exempted by Government. The Punjab Act has a much wider and a more universal application than any of the three other Acts, but, shops dealing in perishable, medicines and newspapers, all places of public entertainment, hospitals and dispensaries, clubs and residential hotels, barber and hair dressers, stalls at railway stations, and carters, porters, travellers, carriers and domestic servants are exempted only from the operation of the sections dealing with opening and closing hours and the 'close day'.

Whereas the Bombay and the Sind Acts prescribe 9 p.m. as the closing hour for shops, the Bengal Act prescribes 8 p.m., while in the Punjab this varies with the seasons of the year—not later than 10 p.m. in the summer and 9 p.m. in the winter. The Punjab is the only Province which provides for opening hours—7 a.m. in summer and 8 a.m. in winter and the Punjab Act, therefore, makes no provision for limiting the spread over as the other Acts do. As far as hours of work are concerned, the Bombay Act places a daily limit in respect of shops and places of amusement and a monthly limit in respect of commercial establishments. In contradistinction to this, the Sind Act prescribes a maximum of 54 hours per week for persons employed in commercial establishments, the Bengal Act 50 hours a week for shops and the Punjab Act 54 hours a week for shops and commercial establishments. The Bengal Act does not place any limitations on hours of work—daily, weekly or monthly—in commercial establishments but places a maximum limit of ten hours per day for work in shops and in places of amusement. The Punjab Act prescribes a uniform ten hour day as the maximum that may be worked in any establishment covered by it.

The Punjab Act endeavours to restrict joint employment by providing that the hours worked by an individual employee with two or more employers should all be taken into account for purposes of recording. Whereas payment for overtime beyond the permissible daily hours is to be made at a time and a quarter in Bombay, Bengal and Sind, the Punjab Act requires overtime in excess of daily hours to be paid for at double rates.

While the Bombay, Punjab and Sind Acts provide that all the employees covered by these Acts should get one holiday every week; the Bengal Act goes much further and prescribes

that all employees should get one and a half holidays in each week. The Bengal and the Punjab Acts, moreover, prescribe that every shop shall also be closed for at least one and a half days and one day respectively in each week.

As far as employment of children is concerned the Bombay and the Sind Acts provide that no child below the age of twelve years shall be employed in any establishment covered by the Act. The Bengal Act has no provisions with regard to the non-employment of children whereas the Punjab Act prescribes a minimum age limit of fourteen years except in the case of apprentices who are permitted to be employed at 12 years of age.

Whereas the Bombay and the Sind Acts make no provision for the prompt payment of wages, the Bengal Act prescribes that all wages must be paid within ten days of the end of the period for which they are due and the Punjab Act prescribes a fortnight for this purpose.

The Bombay Act makes no provision for leave with pay, all the three other Acts do: Sind—15 days' leave with pay during every year of service to lapse if not availed of within two months at the end of the year, Bengal—14 days' privilege leave with full pay after every twelve months continuous employment with right to accumulate up to 28 days and, in addition, casual leave on half pay for ten days in every year, and Punjab—14 days for a year's or 7 days for six months' continuous employment.

Two provisions which are to be found in the Punjab Act but not in the Bombay, Bengal and Sind Acts deserve special mention: (1) no employer may fine any employee to an extent greater than three pias in the rupee of his monthly wages, and (2) One month's notice or one month's pay in lieu of notice to be given by both the employer and the employee for termination of service.

The Central Weekly Holidays Act is a very simple measure as compared with the four Provincial prototypes which we have dealt with above. As its title implies it is merely confined to making provision for the grant of a weekly holiday in certain classes of establishments. Every shop must remain entirely closed on one day of the week. All persons employed otherwise than in a confidential capacity or in a position of management in any shop, restaurant or theatre must be allowed a holiday of one whole day in each week. Provincial Governments are empowered, if they so desire, to close shops for an additional half-day in the week or to permit employees in theatres and restaurants to enjoy an additional half-day holiday in every week. No deduction or abatement is to be made from wages in respect of any holiday that may be granted under this Act. No provision is made in the Central Act for employees in banks and offices. The Act contains the usual provisions for inspection, penalties, rule-making power and enforcement.

The Sind and the Bombay Act have placed the duty of enforcement of these acts on the Local Authorities, whereas the Bengal and the Punjab Acts leave enforcement with the Provincial Governments. It has been estimated

that the Bombay Act applies to sixty to seventy thousand concerns in Bombay City alone. The Bombay Municipality has appointed one Chief Inspector (G. R. PRADHAN, Ph.D.) and ten Inspectors for the inspection work in the Municipal limits of the City.

THE INDUSTRIAL STATISTICS ACT 1942.

The collection of statistics regarding wages, conditions of employment and other matters relating to industry in India had hitherto been effected through the goodwill and voluntary effort of the industrial units concerned. This method was not considered satisfactory. As a matter of fact the Government of Bombay had introduced a Bill for the Collection of Statistics in the local Legislative Council as early as in 1924 but that Bill was dropped owing to the strong opposition put up by employers' interests against the adoption of such a measure. Practically every Commission and Committee appointed in connexion with matters relating directly or indirectly to industry in India has stressed the necessity for the passing of a Statistics Act. The subject was discussed at the Eleventh Session of the Industries Conference held in 1930 and again at the Second Conference of Labour Ministers held in 1941 and it was decided that such a measure should be adopted. The Government of India introduced a Bill on the subject in the Central Legislative Assembly on the 27th February 1942 and this was passed into law at the same Session with the title of The Industrial Statistics Act, 1942.

This Act is permissive, that is to say, the decision to apply it to any particular Province rests with the Government of that Province. The Act permits the collection of statistics with regard to any of the following matters: (1) prices of commodities, (2) attendance, (3) living conditions including housing, water supply and sanitation, (4) indebtedness, (5) rents, (6) Wages and earnings, (7) provident and other funds provided for labour, (8) benefits and amenities provided for labour, (9) hours of work, (10) employment and unemployment, and (11) industrial and labour disputes. Penalties are provided for persons refusing to supply information or failing to furnish the required returns. Provincial Governments are empowered to appoint an officer to be the Statistics Authority for the purposes of the collection of any statistics under the Act and that Authority, when once appointed, has the power to call upon employers to furnish the information required. Penalties are also provided for in the Act for improper disclosure of information or returns by persons engaged in the collection of the information or the tabulation of the data.

DEMAND FOR UNIFORM LABOUR LAWS IN INDIA.

In the first Chapter of this Section we referred to the widespread schemes for new labour legislation initiated by many Provincial Governments in India. It might have been expected that a certain measure of uniformity both with regard to the scope of the contemplated labour laws and the pace at which they were to be enacted would be observed at least in those Provinces where Congress Governments were in

power. But, whereas the Congress Government in Bombay had placed two important enactments such as the Bombay Industrial Disputes Act, 1938, and the Bombay Shops and Establishments Act, 1949, on the Statute Book, no similar legislation had been passed in such other important Industrial Provinces where Congress Ministries had been functioning as Madras, the United Provinces, Bihar, and Central Provinces and Berar. The Imperial Government, Second Conference of Labour Ministers have been published as Bulletin No's 70 and 72 of the Bulletin of Indian Industries and Labour and copies are obtainable from The Manager of Government Publications, New Delhi. Brief summaries of these two Conferences and also of the Joint Conference of Industrialists and of the Meetings between the Labour Member and the representatives of Employers and Labour have been given at pages 511 to 516 of the 1941-42 Edition of this publication.

Third Conference of Labour Ministers.

The Third Session of the Conference of Labour Ministers was held at New Delhi on the 30th and 31st January 1942 and was attended by representatives with advisers of all the Provincial Governments and of six Indian States, viz. Baroda, Gwalior, Hyderabad, Indore, Mysore and Travancore. The Third Session was presided over by Sir Iqbal Khan Noon, a Labour Member of the Viceroy's Executive Council. Sir Iqbal Khan Noon emphasised that there was no time in the history of India when a speedy settlement of labour problems was more urgent than today. If our war production was to go forward unhampered we must, he said, avoid strikes and lock-outs at all costs and we must handle all problems of labour and industrial development with sympathy and fore-sight. It was for the consideration of the Conference, Sir Iqbal Khan Noon said whether for the future it would be healthier to develop the practice of having joint meetings of employers, workmen and Government representatives. He felt that there were many advantages in bringing all the interests concerned face to face in tripartite conferences as had been the case at Geneva under the auspices of the League of Nations. He stated that he proposed to take up consideration of the question whether the next annual conference should be a joint one of all these three interests. The Agenda of the Third Conference covered the following items: (1) Special machinery for expeditious disposal of labour disputes in war time, (2) Adjustments of wages to changes in the cost of living, (3) Consideration of the best manner of improving cost of living indexes, (4) Sickness Insurance, (5) Regulation of Night Shift Work, (6) Establishments of an All India Industrial Council for the Textile Industry, (7) Holidays with Pay, (8) Industrial Fatigue, (9) Establishment of Provident Funds for Industrial Workers, (10) Question of keeping labour at work during air-raid conditions, and (11) and (12) Examination of certain defects in the Workmen's Compensation and Payment of Wages Acts. The Report of the proceedings of this Conference had not been published by the time we went to Press for this issue.

Tripartite Conference for Industrial Peace.

As we go to Press we understand that the Government of India, with a view to secure greater collaboration between employers, labour and the State, have convened a Plenary Conference of all these interests to meet in New Delhi on 7th August 1942, in order to set up a Standing Advisory Committee for the purpose of advising Government on various labour matters. Employers felt that it would be highly desirable that there should be a measure of unanimity in the opinions expressed by the various employers' associations. With this object in view a Joint Conference of Industrialists was convened at Bombay in September 1940 under the auspices of the Employers' Federation of India and the All-India Organization of Industrial Employers. This was followed by separate Conferences between the Labour Member, Government of India, and the representatives of the two Federations of Employers' Associations and the All-India Trade Union Congress at Calcutta early in the year 1941. The Second Session of the Labour Ministers Conference was held at New Delhi on the 27th and 28th January 1941. The Reports of the Proceedings at the First and

problems. As pointed out in the preceding paragraph, the Labour Member of the Government of India in opening the Third Conference of Labour Ministers stated that he would consider whether the next Conference should be held on a tripartite basis. In view of the rapidly changing war situation, the necessity for more frequent collaboration between Governments, employers and workers has, in the opinion of the Government of India, become greater and they feel that there is an urgent need for some collaborative organisation at the Centre which could be called together fairly easily and whose advice would be available to the Government of India on subjects having India-wide importance. The Plenary Conference is to be composed of three representatives of the Central Government, one representative from each Province with one adviser each, one representative from each of the larger States and of the Chamber of Princes with one adviser each, four representatives each of the All-India Trade Union Congress and the Indian Federation of Labour with one adviser for each of the delegations, one representative from any other trade union representing, in the

opinion of the Central Government, more than 50,000 workers and not affiliated to either the Trade Union Congress or the Federation and four representatives each of the Employers' Federation of India and the All-India Organisation of Industrial Employers with one adviser for each of the delegations. The Conference is to be held under the chairmanship of the Labour Member of the Government of India.

In the opinion of the Central Government, it will be clearly impossible that the Conference which must necessarily be a large one, can be called together often enough to be able to serve by itself the object aimed at. The Government of India, therefore, think that if the Conference were brought into being as a plenary one to meet once or twice a year it would be suitable for it to nominate a Standing Advisory Committee on Labour matters with powers to co-opt additional members. It is proposed that this Standing Committee should be composed of the Labour Member as the ex-officio Chairman, two representatives of all the Provinces, two representatives of the States and four representatives each of the employers and of the employees.

WAGES, HOURS OF WORK AND CONDITIONS OF EMPLOYMENT

Although some associations of employers such as the Indian Jute Mills Association and the Millowners' Association, Bombay, have made efforts during the last few years to secure a certain measure of standardization in conditions in the concerns controlled by their members, conditions of work and employment in Indian industry vary widely not only between industry and industry and centre and centre but also between unit and unit in the same industry and in the same centre. At the best, therefore, it can only be possible to give broad generalisations for the more important industries and indications as to where further information can be found. As far as conditions in factories are concerned, the various provincial annual factory administration reports and the summaries compiled by the Government of India on the basis of these reports give valuable information on hours of work, etc. Information on conditions in Indian mines is contained in the annual all-India mines administration reports. The last word on almost all phases of conditions of work and employment is, however, contained in the series of four admirable reports published by the Government of Bombay in connection with the General Wage Census conducted by the Bombay Labour Office in all the perennial factories of the Province of Bombay in 1934. These four reports cover (1) the engineering, (2) the printing, (3) the textile (cotton, silk, wool and hosiery) and (4) all the remaining perennial factory industries. It is true that these reports are of a somewhat limited character in so far as territory is concerned, but owing to the existence of innumerable variations, the reports are fairly indicative of conditions in the whole of India.

WAGE RATES AND EARNINGS

Certain important facts govern all discussions on wages and wage rates in India. There is no wage fixing machinery in the country and, with

a few exceptions, there are no trade agreements or union rates. One important exception is the cotton textile industry in Ahmedabad where the Textile Labour Association and the Ahmedabad Millowners' Association have been able to reach agreements with regard to the rates to be paid to spinners, doers and weavers. This and a list of the minimum rates of wages to be paid in time-rated unorganised occupations in cotton mills in Bombay (city) drawn up by the Millowners' Association Bombay, in 1934 and in the drawing up of which Labour had no say, are the only attempts which have been made so far at standardisation of wages in the country. Except in the case of a very few firms like General Motors (India), Ltd, time rates of wages are not hourly rates, as in the West, but are daily or monthly rates or, where wages are paid weekly or fortnightly, daily and weekly or fortnightly rates. The skilled engineering trades like fitting, machinery, etc., are often divided into several grades and sub-grades. Each individual administration or unit has its own arbitrary method of grading but railway workshops and Government Ordnance factories lay down standards for each grade and for the trade tests the passing of which alone entitles an individual workman to promotion. Personal competence and efficiency and bargaining power are the main factors which determine the wage an individual should get in the vast majority of concerns where no grades have been fixed. Where monthly rates of wages are paid, the "month" has a widely varying meaning. It may be the calendar month, or the number of working days in the month, or a month of 26 or 27 working days, or the Hindu month, or a "book" month—a month of so many complete weeks, or a month of so many hours, as in the case of the G. I. P. Railway where monthly rates are for a month of 208 hours. Before the Payment of Wages Act was passed employers resorted to various devices to deprive a worker of his dues by attaching various conditions which

would entitle him to secure the hypothetical pay for a Sunday or closed day, e.g. premium on the Saturday or Monday or both. Section 9 of that Act provides that the amount of deduction made from a monthly rate for absence from duty shall in no case bear to the wages payable a larger proportion than that which the period of absence bears to the number of working days in the wage period.

Practically no industrial unit in India today pays a consolidated rate. During the World War of 1914-18 and for a few years later dearness or war or grain allowance were given in addition to a "basic" wage. "Basic" did not mean some fixed or prearranged amount universally paid at any particular moment, it applied to the amount of wage an individual received at the time when the allowance was given to him. A new comer to industry would not necessarily get the same "basic" wage and allowance given to his predecessor. He might get the same but he would generally get a lower "basic" wage and the allowance or a consolidated rate. The dearness allowances granted to industrial workers in India during the last war were never completely taken away. Every attempt made by employers to do away with them or to reduce them was stoutly resisted and this resistance oftener than not resulted in prolonged stoppages of work. The few years preceding the commencement of the present war were characterised by insistent demands by labour for the consolidation of these allowances with "basic" rates of pay. With the advent of the Second World War in September 1939, however, dearness allowances have again been reintroduced in almost all industries in India as a separate item.

It would be of interest to observe that certain industrial concerns in India have adopted the Halsey Weir or Bedaux point systems of wage payment. The International Bedaux Company of New York and Amsterdam which is the largest organization of industrial consultants in the world extended its activities to India in 1936. Comprising a staff of highly trained engineers, the Company provides an expert consultant service for all industrial problems of organization, costing and labour and equipment rationalization. The Company has carried out a large number of studies in the jute, cotton textile, engineering, oil chemical and cement industries. Government have also engaged the services of the Bedaux Company as advisers in the manufacture of armaments and other munitions of war. The Indian branch of the Company is known as The Eastern Bedaux Company and its address is Construction House, Ballard Estate, Bombay.

Rates of Wages.

In view of what has been stated above it must be obvious that the rates of wages paid in Indian industries must vary widely. They do not only as between industry and industry but also as between centre and centre, and unit and unit in the same centre in any one industry. The only reliable and satisfactory data in connection with wage rates and earnings of industrial workers in India are those contained in the reports of enquiries conducted by the

Labour Office of the Government of Bombay for the Province of Bombay. The Government of India made an attempt to institute a general wage census in India in 1921 but the necessity for retrenchment at the time led to the abandonment of the project and to day little or no definite information regarding rates of wages is available for any province outside the Province of Bombay. Such information as there is relates to agricultural labour and is contained in a series of reports of quinquennial censuses conducted in certain provinces into agricultural wages and in the reports of Courts of Inquiry appointed under the Indian Trade Disputes Act or in the reports of Provincial Committees appointed by certain Provincial Governments to enquire into wages and conditions of employment of workers in the cotton textile industry. Some of the annual factory administration reports published by the Provincial Governments in India contain remarks about prevalent wage rates but these relate only to certain units and they can by no means be considered as being the dominant rates at any one time for any particular industry or area. The annual Mines' administration reports also contain figures for daily earnings for certain main occupations in representative mines in the Provinces in which mines are situated but these are also open to the same objection. The lack of accurate and reliable statistics of wages in India has been adversely commented upon and regretted by almost every Commission and Committee appointed in the country since the beginning of the century and notably by the Royal Commission on Indian Labour whose work was considerably hampered as a result of the paucity of satisfactory information on the subject.

The blame for the lack of information about wages in India cannot lie entirely at the doors of the Central and Provincial Governments. The collection of satisfactory wage statistics is always an exceedingly difficult matter and more particularly so in India where conditions vary so markedly and widely. Moreover, as will be seen from the observations which follow under the heading of "Pay Periods" there are wide variations in the periods and methods of wage payment. The situation is further complicated by the fact that the nomenclature adopted for designating occupations also varies widely between district and district and concern and concern in the same district owing to the use of a host of vernacular and arbitrary terms and of nicknames. Even in concerns which use standard English occupational terms, the position is rendered more difficult owing to the existence of the gradings which have been referred to above. The necessary preliminaries to the conduct of any satisfactory enquiry into wages in India, therefore, must be (1) the establishment of a uniformity of method, (2) the standardisation of occupational terms, and (3) the thorough education and instruction of the clerical staffs of the units to be covered in the proper use of the standardised designations and in the accurate filling up of the required returns. The existence of wide variations in rates and conditions, moreover, makes it advisable to cover as many as possible if not all the units in the industry under survey in order that results which are not

biased one way or the other may be secured in view of what has been stated it is obvious that no Government in India can undertake a comprehensive enquiry into industrial wages unless it has at its disposal an adequate and thoroughly trained and experienced staff for the purpose. The only Provincial Government in India which has such a staff is the Government of Bombay.

Since its establishment in 1921, the Labour Office of the Government of Bombay has conducted five enquiries in the years 1921, 1923, 1926, 1933 and 1937 into the wages of cotton textile mill workers in the Province of Bombay, an enquiry into agricultural wages covering a period of twenty-three years from 1900 to 1922, an enquiry into the wages of peons in Government and commercial offices in 1922, enquiries into the wages of all municipal employees in the Province in 1924, of clerical employees in Railway and Commercial offices in Bombay City in 1925, of printing press workers in Bombay City in 1929, of workers employed in the building trade in Bombay City in 1935, and of all employees in the retail trade in various important towns in the Province in the same year. In 1934 the Labour Office conducted a general wage census covering all workers in all working perennial factories in the Province including cotton mill operatives. The second part of this

census covering seasonal factories was conducted in the winter of 1935-36. The results of the special enquiry which that Office conducted into wages in cotton textile Mills in 1937 expressly for the Bombay Textile Labour Inquiry Committee have been published in the Committee's Report. The results of all the other enquiries have been published either in special reports or in articles in the *Labour Gazette*.

Information regarding wage rates can only be of value if accurate data are available to show the frequency distribution of the numbers of workers getting the same rate in different occupations in different industries in different centres. Except for a few occupations in the engineering industry in Bombay City for which such information has been compiled in the first of the General Wage Census Reports, this work has not been attempted anywhere in India. Furthermore it is impossible to give any rates of wages which will be found to be generally applicable to any particular industry in any particular centre. The compiler of this note, however, has had a wide experience of wages in India and the following figures quoted by him give an approximate idea of the predominant rates of wages including dearness allowances for fairly efficient workers in certain of the more important occupations in all sections of Indian industry as at the beginning of June 1942 —

Occupations	Most usual period of payment	Rates in		
		Cities.	Towns.	Mofussil
		Rs.	Rs.	Rs.

Earnings.

Whilst full and accurate information with regard to wage rates may be of great value for purposes of wage fixation, still the of earnings alone are of value for the proper assessment and appreciation of the well being of the masses, provided however that the term "earnings" has one uniform meaning in its computation and application. In practice, the computation of the term varies widely for it is commonly applied to one of three different values: (1) gross earnings, (2) net earnings; or (3) the amount which a workman receives in his pay envelope. In correct statistical parlance it is none of these three. Let us explain "Gross earnings" for any particular pay period are the total dues of a wage earner from his basic rates—time or piece—plus all the allowances, bonuses and perquisites—or the value of such where they are not in cash—to which he may be entitled by virtue of his contract of employment and includes wages given for any periods of leave with pay which may be granted during such pay period. The allowances may either be in the form of dearness allowances in cash or grain allowances or allowances for overtime work. Bonuses may be for good attendance and/or for efficiency. Perquisites may be in the form of free housing, travelling allowances, free medical attendance, free railway passes, the right to purchase from cheap grain and cloth shops, etc. "Net earnings" are gross earnings less deductions for fines. "The amount in the pay envelope" is net earnings less any further deductions which may be made by an employer for house rent, medical attendance, subscriptions to provident funds, income-tax, refunds of advances, payments for purchases from co-operative stores or cheap grain or cloth shops, repayments of loans from provident fund accounts or from co-operative credit societies, subscriptions to sports clubs or institutes, etc. The amount in the pay envelope can never be reckoned as earnings because every worker is expected to pay for his income-tax, house rent and purchases and to liquidate his other liabilities and debts from his income. In all cases where fining is widely prevalent gross earnings can also not be reckoned as income because these may be habitually liable to deductions for fines. "Net earnings" would most correctly approximate to earnings for statistical purposes. Sufficient has been stated to show how difficult the computation of "earnings" can be. Different statisticians and different bodies hold different views as to its correct computation and that is the reason why the term "earnings" is so widely interpreted. The most frequent and general usage of the term for statistical purposes is to take gross earnings in cash less fines and without evaluating such perquisites as free housing, free medical attendance and free railway passes in the case of railway workers, and to include travelling allowances where these are paid for conveyance between place of work and home but not when they are paid for transport to some other temporary sphere of work. This is the basis on which figures for "earnings" were collected by the Bombay Labour Office for the purposes of the General Wage Census, and, subject to minor modifications, for its other enquiries into wages. It is of the utmost importance that in the conduct of every enquiry

into wages, all the persons who are entrusted with the work of filling up the required returns should have a clear and thorough conception as to what should or should not be included in "earnings."

Two sets of figures may be compiled for "earnings": (1) average daily earnings ascertained by dividing the total earnings for a group of workers in any occupation by the total of the number of days actually worked by all the individuals in the group, and (2) average monthly earnings ascertained by dividing the total earnings of the group for a period of one month by the number of persons in the group. In cases where statistics have been collected for wage periods of less than a month, monthly averages can be reckoned by ascertaining the weighted average of the number of days worked by all the units concerned in the month in which the shorter period is contained and by multiplying the figure for average daily earnings by the weighted average less the figure for average absence as shown by the figures for average percentage attendance for the group. Average percentage attendance is the percentage ratio of the total number of days actually worked by all the individuals in a group to the possible working days in the pay period for the group.

Part I of the General Wage Census covering all principal factories in the Province of Bombay covered nearly a thousand occupations in nearly twenty industries. For the purposes of the census the Province of Bombay was divided into ten territorial areas and the reports contain the averages of daily and monthly earnings for all monthly paid workers in all the occupations concerned in each of these ten areas. It is obviously not possible for us to reproduce the figures here. At pages 770 to 852 of the 1941-42 Edition of this publication we gave the following seven tables: (1) the averages or monthly earnings for six of the most important occupations which are to be found in all factories, but particularly in engineering workshops; (2) the general averages for men in all engineering and "common" occupations in all factories; (3) the average monthly earnings in six of the most important printing occupations; (4) the general averages for "process" operatives in all printing presses which are factories for the purposes of the Indian Factories Act in the Bombay Presidency; (5) the average daily earnings in the more numerically important occupations in the cotton textile industry for 1934 with the increases recommended by the Bombay Textile Labour Inquiry Committee in their Interim Report which was published in February 1938 and which were accepted by all Cotton Textile Mills in the Province and also the amounts granted as dearness allowances in centres where such increases were granted; (6) the average daily earnings in the same occupations in July 1937 in cotton textile mills as published in the Committee's final Report with the recommended increases and the dearness allowances again added to the published figures; and (7) the general averages of daily earnings for all male and women operatives for the whole of the Province of Bombay for all factory industries in Bombay excluding the Textile, the Engineering and the Printing Industries. The figures in brackets in the first, the third, the fifth, the sixth and the seventh tables showed the

numbers of workers covered by the averages to which they related. The figures given in those tables no longer hold good today in view of the widely varying and rapidly fluctuating rates of dearness allowances which are being paid in different units of industry and in different centres. There has been no wages enquiry conducted in India since 1937 and we therefore refrain from giving any figures relating to earnings.

PAY PERIODS.

There is a complete absence of uniformity as regards the periods for which payments of wages are made in the various branches of industry in India. In scarcely any industry is there a single period of payment. Different systems are found in establishments belonging to the same industry and in the same district, and within the same establishment different classes of workers are often paid for different pay periods. If generalisations may be attempted, the jute industry in Bengal, coal mines, tea plantations, seasonal factories, oil mills, rice and flour mills and certain classes and groups of workers in Government establishments such as the Security Printing Press at Nasik pay wages for periods of a week. Payments on a fortnightly basis range between payments for *haptas* or wage periods of fourteen and sixteen days for weavers and spinners respectively in the cotton mills in Ahmedabad to bimonthly payments for periods from the 1st to the 15th and from the 16th to the end of the month in textile mills in Broach and various other centres in India. The month is the accepted wage period for the railways (including railway workshops), cotton textile mills in Bombay, Sholapur and several other centres, engineering workshops, dockyards, printing presses and for the persons employed in the mechanical and maintenance departments of almost all concerns which pay wages to process operatives weekly or fortnightly. Wages are calculated on both the monthly and the fortnightly bases in sugar mills and tanneries. In the Tata Iron and Steel Works at Tatanagar where nearly 50,000 workers are employed wages are paid weekly to men on daily rates and monthly to those on monthly rates. The most general system of payment in the case of casual labour is that of daily payment. Supervisory and clerical staffs in all industrial establishments are paid on a monthly basis.

The question of shortening the wage period universally in India by law to a week or a fortnight has been considered by the Government of India, in consultation with the provincial Governments and interested persons and bodies, on three different occasions within the last nineteen years. Attempts were also made to amend the Payment of Wages Act in such a way as to achieve this object. The proposals, however, fell through owing mainly to the opposition of the monthly paid workmen who appeared to prefer the system of monthly to fortnightly or weekly payments. Their argument was that if rents and bills were to be settled monthly they would be in difficulties if they had frittered away their weekly earnings.

HOURS OF WORK.

The existing restrictions in hours of work in factories and mines subject to the Indian Factories and Mines Acts have been described

in the sections dealing with those Acts. Speaking broadly, hours in perennial factories are limited to 10 per day and 54 per week and in seasonal factories to 11 per day and 60 per week. The weekly hours of work in Indian mines vary widely and range from 38 to 51 hours per week. The cotton textile industry in almost all centres normally works a uniform 9 hour day except in a few concerns which work a 9½ or 10 hour day from Mondays to Fridays and a 5½ hours or 4 hour day on Saturdays. A recent development in the cotton textile industry is to work shifts on the basis of what is known as *The Relay System*. By this system a unit does not stop work during the noon recess and continues working throughout a whole shift, different batches of workers being given rest intervals by turns and the remainder being asked to do double substitute work for the time being. Messrs E. D. Sassoon & Co., Ltd., in certain of their cotton Mills in Bombay City, have been working three shifts of seven hours each for the last six or seven years, but conditions in these Mills are highly rationalised that is to say, more machines are allotted to each worker, spindles being asked to mind two sides and weavers six looms as against the normal of one side and two looms. As far as the Jute Mill industry is concerned, the Indian Jute Mills Association entered into an agreement intended to protect and defend the trade of the Indian Jute Mills which came into force on the 15th March 1939 for a period of five years in the first instance. The hours of work are to be ordinarily limited to forty-five per week. If 75 per cent of the signatories vote for reduction, the hours of work may be reduced to a minimum limit of 40 hours per week and if 51 per cent of the signatories vote for an increase the hours may be raised to a maximum limit of 54 which may be exceeded only under extraordinary circumstances such as a cycle of prosperity or war. Under such conditions mills with 270 looms are entitled to work up to 72 hours per week. If one unit in a "group of mills," i.e., under the same management, does not work the full complement of hours allowable, it may transfer the unutilised number of hours of work to the other unit under the same management. Since that agreement was entered into hours of work in Jute Mills in Bengal have varied from 45 hours per week with or without complete closure for one week out of every four to 60 hours per week according to the demand for jute manufactures and availability of shipping space. During the period immediately prior to 18th May 1942 jute mills were working a 60 hour week but from that date the Indian Jute Mills Association decided to reduce hours of work to 54 per week and also to seal ten per cent of the looms against production at the same time.

All the dock-yards, many of the larger engineering and almost all the railway workshops work a 48 hour week but the daily hours vary according to the number of hours worked on a short Saturday. The hours in many of the mechanic shops of textile mills and in the larger non-engineering factories are usually half an hour to an hour less than those for process workers and approximate more closely to those in large engineering plants. Factories engaged in the production of metalware, however, work the full number of hours permissible under the Factories

abuses which have come to be associated with it—many of the larger and more progressive concerns have appointed Labour Officers who are directly responsible for all new recruitment. The old method is, however, still largely prevalent in the majority of the industrial concerns in the country.

There are various forms in which a recruiting agent is remunerated. He may be a salaried employee with a commission for every recruit he brings in, or he may receive a lump sum payment for each recruit or a gang of recruits, or he may be paid a recurring sum for each man he places in employment as long as that man continues in employment. Whatever be the method by which an employer remunerates the recruiting agent, it is fairly well known that the agent keeps a continuous hold and grip on the recruit he places in employment and extracts from him recurring sums of money whilst he continues in that employment under pain of his losing his job.

The evils in connection with recruitment were most marked in the case of casual or substitute labour. The Millowners Association, Bombay, have tackled the problem by establishing what is known as the "Badli Control System." The daily number of absentees in a cotton mill in Bombay are averaged and an additional percentage is added. Each mill issues *badli* or substitute cards to this number of workers. Daily casual vacancies are filled only from such card holders and whenever there is a permanent vacancy it is filled from these card holders. The evil influence of the jobber is thus eliminated. The system has been highly commended by the Textile Labour Inquiry Committee and the Government of Bombay have recommended its adoption by all other mills in the other centres of the cotton textile industry of the Province.

MEASURES FOR ENFORCING DISCIPLINE.

The measures adopted by industrial employers in India for enforcing discipline have engaged the earnest attention of both the Central and the Provincial Governments in this country for the last fifteen years. Early in 1926, the Government of India instituted a country wide inquiry into the extent of the deductions made by employers from the wages of their workpeople in respect of fines and other matters. The subject was partly examined by the Bombay Strike Enquiry Committee (Fawcett Committee) in 1928-29 and again more fully by the Royal Commission on Indian Labour in 1929-30 and both these bodies made a series of most important recommendations in the matter. The Payment of Wages Act was passed in 1936, in order to implement these recommendations.

The two matters with regard to the discipline of their workmen which Indian industrial employers complain of most are the large extent of labour turnover and the high degree of absenteeism. That both high labour turnover and high absenteeism are to be found in several Indian industries cannot be denied, but, few, if any, employers have taken the trouble to examine the root causes for them.

The investigations conducted by the Labour Office of the Government of Bombay go to show that both labour turnover and absenteeism are highest in concerns and industries in which wages are lowest and where conditions of employment are least attractive and that they are lowest in concerns and industries in which wages are comparatively high and where other conditions of employment are attractive. For example, the Bombay Labour Office compiles monthly figures of percentage absenteeism in cotton textile mills in Bombay, Ahmedabad and Sholapur. Textile wages are highest in Ahmedabad and lowest in Sholapur. The annual averages of percentage absenteeism in these three centres for the year 1941 were Ahmedabad 4.15, Bombay 9.64, and Sholapur 15.13—figures which tell their own story. Low wages and adverse conditions must necessarily tend to weak health, incapacity for sustained effort and to the growth of a desire for change in order to improve one's lot. These are problems which the new autonomous provinces in India and Indian industrial employers will have to try and remedy instead of devising methods of enforcing good attendance and continuity of employment by the infliction of monetary penalties and other forms of punishment.

Under the Payment of Wages Act, every employer is required to draw up lists specifying the acts or omissions for which fines will be inflicted. These lists have to be approved by such authority as a Provincial Government may prescribe and are required to be prominently displayed in all places where the employees concerned are working. Apart from this employers were not required to draw up any Standing Orders or rules of conduct governing the conditions of employment between them and their employees. The Bombay Industrial Disputes Act, 1938, however, requires every employer in an industry to which the Act has been made applicable to submit a draft for the Standing Orders which he proposes to adopt for regulating the relations between him and his employees to the Commissioner of Labour within two months of the date of the application of the Act to any industry, and the Commissioner of Labour is empowered to "settle" such standing orders after he had consulted all the interests concerned in the industry. Appeal against the orders of the Commissioner of Labour lies with the Industrial Court constituted under the Act. In accordance with these provisions, the Commissioner of Labour, Bombay, settled the Standing Orders for Cotton mill operatives in Bombay, Ahmedabad, Sholapur and other centres in the Province of Bombay in September and October 1939. Appeals against most of these Orders were filed with the Industrial Court both by individual employers and associations of employers and by Trade Unions and individual workers. These appeals were heard by the Industrial Court in November 1939 and the Court, after hearing the parties, settled a new set of Standing Orders which it directed should come into force on and from 12th December 1939. Copies of these Standing Orders can be obtained from the Secretary, The Industrial Court, High Court, Bombay. Since the beginning of 1940 many employers all over India have drawn up Standing Orders for their operatives on the lines laid down by the Industrial Court, Bombay.

all such cases both the qualities of the articles sold in such shops and the prices charged for them are controlled by a 'prescribed authority' who is generally the Chief Inspector of Factories. As a result of the outbreak of the Second World War, almost all Provincial Governments in India have not only notified cheap grain and cloth shops as "amenities" for the purposes of the Payment of Wages Act but have opened such shops of their own and have also encouraged employers to do likewise. The articles sold at these shops are bought at wholesale prices and are sold without any profit except for a small addition to cover working expenses of the shops. For more detailed information regarding the initiation and the progress of such establishments in cotton textile mills in Bombay and Ahmedabad reference may be made to page 563 of the 1941-42 Edition of this publication.

Loans and Advances—Speaking generally most industrial concerns in India do not grant loans to their workers except during periods of an acute shortage of labour when recruiting agents are empowered to liquidate debts in order to attract the required workers to join industry. But, all workers who subscribe to provident fund schemes in such concerns as have them or who are members of co-operative credit societies can secure loans on easy terms both as to interest and to repayment. A few concerns, however, have set apart special funds for the purpose. 'Advances'—applying the term to the small sums of money advanced against earned wages—on the other hand, are more widely prevalent. The Payment of Wages Act empowers Provincial Governments to frame rules for the regulation of these advances but no interest on such advances is now permitted.

INDUSTRIAL SAFETY.

As in other countries, the industrial progress of India has been accompanied by an alarming increase in the number of industrial accidents. The explanation generally offered for the increase is that the Workmen's Compensation Act is operating as an inducement both for workpeople and for employers to report accidents more frequently than in the past. But, the increase in the number of serious accidents suggests that the problem is a more serious one, and, that in spite of the statutory requirements which factory and mine owners and firms engaged in the loading and unloading of ships have to comply with in the matter of the fencing of dangerous machinery, an organised "safety-first" campaign for the better education of the workers in the matter of accident prevention is both necessary and desirable. All railways in India have undertaken extensive schemes of safety-first propaganda including the putting up of safety posters and safeguards both in English and in the vernaculars at all prominent points and places, the free issue of illustrated booklets on accident prevention, publication of special articles with photographs in railway magazines, addresses and magic lantern lectures, and the organisation of special safety-first committees in the larger workshops. The Millowners' Association, Bombay, has done a considerable amount of good work of a pioneering character in connection with Safety-First. In conjunction with the Factory Department and the Bombay Millowners' Mutual Insurance

Association it has posted attractive safety-first posters in all cotton mills in Bombay City. In conjunction with the St John's Ambulance Association it started classes in 1931 for first aid training. These are attended by large numbers of workers from many cotton mills in the city. Working in conjunction with the Safety-First Association of India, the Association drew up a Safety Code for the Cotton Textile Industry and this Code was published and put into operation from August 1940. In co-operation with the Labour Welfare Department of the Government of Bombay and the officials of the Khatau Mankaj Mills, a safety film for the textile industry was prepared and this has been exhibited in the various Government welfare centres and in some mills in Bombay. The Safety First Association is conducting special courses to train persons in Air Raid Precaution. In the Central Provinces and Berar fire drills are being systematically carried out in many large concerns. Many large labour employing organisations such as His Majesty's Indian Naval Dockyard, the Calcutta and the Bombay Port Trusts and The Tata Iron and Steel Works at Jamshedpur, to mention only a few, are with railways, pioneers in the field of organisation of 'safety-first' measures. It is of interest to note that most cotton mills in Ahmedabad had also established safety-first committees by the end of the year 1939. Factory Departments in all Provinces in India do all they possibly can in improving safety measures in factories. Since the beginning of the present war special attention has been paid to ordinance works consequent on the employment of workers not ordinarily used to machine shop hazards.

The provisions contained in the Indian Factories and Mines Acts and in the Indian Dock Labourers Act, 1934, and the rules made under these Acts in connection with the guarding and fencing of machinery are of a too technical character to be dealt with here. It may, however, be of interest if a brief summary were given in connection with the reporting of accidents. The Indian Factories Act requires the manager to report all accidents which cause death or bodily injury whereby the person injured is prevented from returning to his work in the factory during the 48 hours next after the occurrence of the accident. All classes of accidents namely, fatal, serious (i.e., accidents which prevent a person returning to work for 21 days or more) and minor are to be reported to the Inspector of Factories and to the District Magistrate and in cases of any accident resulting in death to the officer in charge of the police station in addition. It is the duty of the Inspector of Factories to make an investigation as soon as possible into the causes of and the responsibility for a fatal or serious accident, and to take steps for the prosecution of the person concerned if it is found that the death or serious injury resulted from any infringement of the provisions of the Act or of the rules framed under the Act. The Act also requires notice to be given of an accident which is due to any cause that has been notified in this behalf by a Provincial Government even though no injury may have resulted therefrom to any person. The provisions contained in the Indian Mines Act with regard to the reporting of accidents are somewhat

Rest Shelters, Dining Rooms and Canteens—Section 33 (1) of the Indian Factories Act, 1934, makes it obligatory for all factories employing more than 150 workers to provide adequate shelters for the use of workers during periods of rest. Apart from this almost all large industrial establishments in India do provide tiffin rooms and rest shelters for their workmen. Most concerns have also permitted the establishment of tea stalls on the premises but apart from this little effort has been made to run co-operative canteens on the lines of those which are associated with most of the large factories in the West. Pioneer work in this direction has been done by Messrs E. D. Sassoon & Co. in Bombay. This Company which manages eleven large cotton mills in the City has established large canteens in all their mills. The management in each case bears the salaries of staff and the on-cost for equipment, and hot meals are supplied to the workmen at actual cost. The Company has also established a hostel for boarding and lodging its poor women workers. The charges are exceedingly moderate and vary from Re 1-8-0 per month for a child to Rs 6 for an adult. In May, 1939, the Millowners' Association, Bombay, recommended to all its member mills that they should establish canteens with the help of the Indian Tea Market Expansion Board. The suggestion was adopted by a member of mills and permission to make deductions from the wages of workers on account of canteen coupons sold to them was granted by the Chief Inspector of Factories, Bombay, on the understanding that the canteens were run on a non-profit basis. A large number of mills in Bombay have now started such canteens and substantial surpluses are being built up especially in those mills where no rents or interest on loans are charged. The Association has now decided that after certain charges for depreciation and reasonable rent have been met, the surpluses realised should be spent for general welfare work, e.g., provision of milk and biscuits for children in creches, installation of cold drinking water facilities in the departments, health exhibitions, recreation club equipment including books, journals, a radio set, etc. The Tata Iron and Steel Company maintain a number of restaurants inside their works at Jamshedpur which ensure wholesome meals and refreshments to the workmen at cost price. The Company has its own plant for the manufacture of ice and soda which are provided free of charge to the employees in the works. A women's Rest House has also been provided where women employees can wash and change and leave their babies to be looked after in their absence, these babies being served with milk and biscuits free of charge. Communal factors such as the religious prohibition of Hindus to eat their food in the company of members of other communities, want of space and the constructional layout of the majority of the smaller industrial establishments are among the reasons given by the managements who do not provide rest shelters and/or tiffin rooms for their workmen.

INDUSTRIAL HEALTH.

Such statistics of health and mortality as are collected and published in India relate to the whole community and no statistics are compiled separately for industrial workers alone. In the

absence of such data it is not possible to generalise about these matters. The problems associated with health are always difficult, they are much more so in a country like India where the solution of the problems associated with physical health and social environment is complicated by the evils of ignorance and poverty to which is commonly added a fatalistic outlook arising, it may be, from the low standard of living which has been the experience of so many generations past. Climatic conditions, highly insanitary housing conditions and the illiteracy of the people also contribute to recurring outbreaks of such deadly tropical diseases as cholera and small-pox in epidemic form. The wide-spread prevalence of malaria in certain congested areas of the Provinces of Bengal, Bombay and Madras is responsible for a considerable undermining of the health and the vitality of the poorer classes who cannot afford to sleep under mosquito nets, and although the more advanced municipalities are doing all they can to combat the disease by filling up wells and surface-treating small ponds and pools of stagnant water, malaria still continues to take a big toll of human life. *Beri-beri* and tuberculosis in Bihar and Orissa, *kala-azar* among the jute workers in Bengal, ankylostomiasis in South India and tuberculosis in the Punjab are some of the many diseases which are widely prevalent in certain tracts.

The maintenance of the good health of town and city populations is in the hands of the municipalities and although all provincial Governments appoint health officers for groups of districts to supervise and co-ordinate the work of the municipalities, the interference and control of Governments in these matters is of a somewhat nominal character. But wherever control is possible, Government have done much to make for an improvement in sanitary and hygienic conditions. For example, following the recommendations of the Royal Commission on Indian Labour in the matter, several provisions for the maintenance of the good health of factory workers have been incorporated in the Indian Factories Act, 1934. These include the maintenance of cleanliness in accordance with rules to be framed by local Governments with regard to lime or colour washing, painting, deodorising and disinfecting, the provision of proper standards of ventilation and the adoption of adequate measures to prevent the inhalation of gas, dust and other impurities generated in the course of work, the installation of apparatus for cooling the air in factories in which the humidity of the air is artificially increased, the prohibition of overcrowding by laying down the standards of cubic feet of space to be provided for each worker, the provision of suitable and sufficient lighting, the provision of adequate supplies and sources of water both for drinking and for washing, and for the maintenance of sufficient latrine accommodation separately for male and female workers. Remarkable progress has been recorded during the last five years with regard to the installation of air conditioning and cooling plants, progress in this direction was hitherto confined mostly to spinning and weaving sheds but since 1930 expansions have been made in other departments as well by installing large hoods and trunks harnessed to powerful exhaust fans, to enable

the steam to be drawn away from striking rythm. Attempts are also being made to reduce dust to a minimum and many cotton mills have installed special plants to carry the dust away.

As in most things connected with the welfare of labour, Indian railways are in the forefront in the matter of the provision made for medical aid and relief. All railways maintain fully equipped hospitals with qualified European physicians and nursing staffs of suitable caliber. In addition to fully equipped dispensaries in charge of qualified medical officers at all places where there are sufficient numbers of workers to justify them. As all the industrial workers of Government have free access to Government hospitals and dispensaries, the provision of separate medical establishments attached to large Government establishments has not been considered necessary in the case of concerns under the control of the Provincial Government. Let the Government of India have provided adequate medical facilities in most of the Government establishments such as the Majors' Indian S.S. Dockyard and their various Ordnance and Ammunition factories. Several of the large municipalities and public bodies, such as the Port Trusts also maintain their own hospitals and dispensaries for the benefit of their workers. Following the lead of Government and public and local bodies in the matter almost all the large labour employing establishments in India cotton and jute mills, mines, engineering works, tea plantations etc. maintain fully equipped dispensaries in charge of whole or part time qualified medical officers.

HOLIDAYS WITH PAY.

In India, holidays with pay have hitherto been enjoyed by a very small percentage of the population and most leave whenever it has been granted has been without pay. Exceptions are workmen in Government and railway factories and in the industrial establishments of local bodies, public utility companies and in the factories of petroleum and kerosene installations and in some go-ahead concerns like General Motors India Ltd., Ford Motors India, Ltd., and Messrs. Lever Bros. (India), Ltd. to mention a few.

All permanent monthly rated employees in Government factories in all industries are entitled to leave with pay—in the case of the concerns under the Government of India, according to the Fundamental Rules, and for the factories owned and controlled by the Provincial Government, according to the Civil Service Regulations in force at the time in the different provinces. Daily rated employees and certain categories of menials and piece rated workers are governed by special orders suited to each case. According to the rules which are in operation at present, the minimum period of leave with pay which can be earned by all permanent Government servants is more than one month for every eleven months of duty plus ten to twenty days casual leave in every calendar year. To cite an example of special leave rules for certain categories, reference may be made to daily rated workmen and piece workers in all ordnance and clothing factories of the Army Department of the Government of India who since 1931 get 10, 15 or 20 days leave with pay

every year according to whether they have put in three to ten, ten to twenty or over twenty years' service.

The leave rules for railway workmen who joined before the 1st September 1924 vary not only between railway and railway but also according to the dates when the men were first engaged. As far as the workmen who joined after 1st September 1924 are concerned, all railway systems appear to have accepted the principle of a standardization of conditions on the basis of those laid down by the Army Department. Leave rules for those employees who joined before the date mentioned are more liberal. The big company owned railways grant fifteen days casual leave in a calendar year plus Empire Day and King's Birthday or any 17 paid holidays in addition to the above privileges to all workshop employees irrespective of a qualification minimum period of service.

Perhaps the most liberal leave rules in any private industry obtainable in India are those found in the Tata Iron and Steel Works. In fact, here all monthly rated workers receive one month's leave with full pay for every six months of service with the right to accumulate leaving to three months. Daily rated workers get 10 to 15 days casual leave and fourteen days paid leave with pay, and daily rated workers get 11 weeks get five days casual leave with pay. Monthly rated employees in addition get six months' leave on full pay or three months on full pay after seven years' service with the Company.

Proposed Legislation for Holidays with Pay.

In accordance with the decision taken at the First and the Third Conferences of Labour Ministers the Government of India have prepared a Draft Bill on the subject of Holidays with Pay and this has been forwarded to all Provincial Governments for opinion. The proposed provisions are intended to be applied in the first case to permanent factories alone and the necessary legislation is therefore to be put through by amending the Factories Act 1934. The main features of the Draft Bill are (1) the minimum number of paid holidays is seven to run in one block, (2) holidays cannot be accumulated, (3) the qualifying service is to be one year, (4) half the wages due for the holiday period are to be paid at its commencement, (5) workers will be prohibited from undertaking other remunerative work during the period of paid holidays, and (6) "compensatory" holidays are provided for workers deprived of the weekly holidays as a result of exemption or a factory from the provisions of section 35 of the Factories Act. No provision has been made in the Draft Bill for the continuance or otherwise of local and other customary holidays at present given by individual employers; the matter has been left for mutual adjustment between the employers and employees.

LABOUR WELFARE.

Except for the information contained in the written memoranda submitted to the Royal Commission on Labour in India and that collected by the Government of Bombay during the General Wage Census of 1934, no effort has been

made in India to collect accurate data regarding the welfare activities conducted by individual employers in industry. There is no recent information on the subject at all but it is well known that certain large organizations such as the Tata Iron and Steel Company at Jamshedpur, the Railways, the Buckingham and Carnatic Mills in Madras, the Elgin Mills in Cawnpore, the Empress Mills in Nagpur, Messrs E D Sassoon & Co, Ltd in Bombay, the British India Corporation in the United Provinces and some others have devised wide welfare schemes for the benefit of their employees. In most cases these schemes are controlled by expert and experienced welfare Officers specially trained for the job. All this is, however, but a drop in the ocean and the vast majority of employees in India have no welfare schemes of any kind at all. It is obviously not possible for us to give even the briefest outline of the different schemes that are in existence in India within the compass of a work such as this.

Welfare work for labour employed in Indian industries has, since the advent of Provincial Autonomy, been taken over by Government. Pioneering work in this direction was done by that great and zealous friend of Indian Labour—Mr Guizari Lal Nanda, since 1921 the Secretary of the Textile Labour Association, Ahmedabad and Parliamentary Secretary for Labour to the Prime Minister in the Congress Ministry in the Province of Bombay. He knew that employers as a whole were doing little or nothing for the welfare of labour and that no amount of persuasion would yield tangible results. He also knew that legislation to enforce welfare measures would not create that personal enthusiasm which is so vital for the success of any welfare scheme that might be launched. He persuaded his Cabinet to set aside a sum of Rs 1,20,000 in the budget estimates for the year 1938-39 for "industrial welfare" and he then started looking for a benevolent person or persons who would donate the necessary buildings and equipment for the purpose. He found such a person in Mr Ramnath Podar, Managing Director of the Toyo Podar Mill in Bombay who contributed a sum of Rs 25,000 for the building of a recreation centre at DeLisle Road in Bombay City. The lead given in the matter by Bombay has been successively taken up by the Governments of the United Provinces, Bengal, Sind, the Central Provinces and Berar and Bihar. The Central Government too have recognised the value of Governmental effort in the field of Labour Welfare and they have recently appointed Mr R S Nimbkar, the prominent Labour Leader of Bombay who for many years was the Secretary of the Girm Kamgar Union (Red Flag), Bombay, as Central Adviser on Labour Welfare to the Government of India.

The total sum provided by the Government of Bombay for "Industrial Welfare" in the Budget Estimates for the current financial year (1942-43) amounts to Rs 1,93,200. The other Provincial Governments who have gone in for this type of work are not spending anything as much but still their activities in this direction are showing a tangible widening year by year. It is not necessary for the purposes of this note to give an account of the manner in which Government activities in this

direction have grown during recent years. We are, however, giving a fairly full account of the scheme as it stands in the Province of Bombay today for purposes of guidance to other governments, employers and welfare workers who might like to know as to what is being and what can be done in this field.

Government Welfare Centres in the Province of Bombay are divided into four types "A", "B", "C" and "D" according to the type and the extent of the activities provided and the times at which they are open. The scope of the work in the "A" type centres is of a very comprehensive character and covers almost all forms of outdoor and indoor recreational activities, periodic cinema and dramatic performance and bharian parties, the running of libraries, reading rooms, canteens and restaurants, the organization of debates, magic lantern and other lectures and many types of educational classes, the provision of nursery schools, medical aid and advice on maternity and health, radios and add-a-giams, etc. These centres are open from 8.30 to 11 in the mornings and from 5 to 9.30 in the evenings for men and boys and from 1 to 4 in the afternoons for women and girls but the nursery school section supervised by a full time lady teacher is open at each "A" type centre from 8 a.m. to 5 p.m. The "C" type centres are open from 7.30 to 10.30 a.m. and from 6 to 9 p.m. for men and boys and literacy and sewing classes and indoor games for women are conducted from 1 to 4 p.m. The activities in the "C" type centres mainly cover indoor recreation and reading rooms. The "D" type centres only cover outdoor recreation. The Municipality of Bombay has consented to place ten open spaces in Bombay City at the disposal of Government for this purpose.

An "A" type centre was erected at DeLisle Road out of the contribution of Rs 25,000 given to Government by Mr Ramnath Podar and this started functioning in March 1939. Two additional full fledged "A" type centres were started at Worli and Naigam with effect from 1st June 1940. At the moment of writing (June 1942) there are three "A" type centres in Bombay and one in Ahmedabad. One is in the process of erection at Sholapur. There are ten "C" type centres in Bombay, four at Sholapur and one at Hubli and there are four "D" type centres in Bombay. It is the intention of Government to extend these welfare activities so as to cover all the industrial areas of the Province.

The Industrial Welfare Scheme of the Government of Bombay also covers an Industrial Training Workshop at Ahmedabad which was established to impart instruction in elementary engineering work to apprentices. The primary aim of the workshop is to afford help in solving the problem of industrial unemployment. It is also intended to raise the standard of skill and efficiency of operatives in the cotton textile industry. A sum of Rs 65,000 was earmarked in the budget estimates for the year 1941-42 from the Development Fund for the purchase of machinery for a second workshop at Ahmedabad, for constructional alterations in the existing "A" type centres and for starting circulating libraries. Stores have been put up at the three "A" type centres in Bombay and these have also been

supplied with water taps and shower baths. Circulating libraries have been established in Bombay, Ahmedabad, Sholapur and Hubli. The books are circulated in such a way that they reach all *mohollas* (localities) consisting of ten or more chawls. Each Moholla has a Committee of 5 or 6 members and the Anti-Drink Propaganda Inspector, where one exists, acts as the Secretary of the Committee. Social welfare institutions and well organized labour unions are also to be used as agencies for circulating the books.

Until about the end of the year 1941, the whole of the Labour Welfare Department of the Government of Bombay was under the control and direction of Mr. Gulzar Lal Nanda under the designation of Honorary Commissioner for Amenities to Industrial Labour. Consequent on his resignation, the control of this Department has been transferred to the Commissioner of Labour with effect from 15th December 1941, and a special Assistant Commissioner of Labour (Mr. A. S. Iyengar) has been appointed to assist him in this work. Messrs E. J. S. Ram, M. P. Vigos and B. J. Mhatre are the Labour Welfare Officers at Bombay, Ahmedabad and Sholapur and Miss P. G. David is the Lady Welfare Worker at Bombay.

The Government of the United Provinces have opened five welfare centres in Cawnpore, two at Lucknow and one each at Allahabad, Hathras and Firozabad. Each centre provides facilities for free medical aid, a reading room and a library, some indoor and outdoor games, a tea stall at which tea is sold at one pice per cup and a Co-operative Store. A children's Section is attached to all the centres at Cawnpore and at

one centre in Lucknow. A *dar* and a trained Assistant Health Visitor look after the cleanliness of the children and the work is supervised by a trained Health Visitor. Milk is distributed free of charge to those workers' children who are under three years of age and toys are also supplied. Each centre is in charge of a full-time staff consisting of an organiser, an assistant organiser, a medical officer and a compounder. The Doctor visits the patients at home free of charge and the Health Visitors visit the *ahals* frequently, attend to maternity cases and deliver lectures on sanitation and personal hygiene. As in Bombay, cinema and dramatic performances are held periodically and debates, lectures, literacy and sewing classes are held frequently as a regular feature of a Centre's activities. Besides a detailed programme of annual sports, a Provincial Labour Welfare Tournament is organized every year under the auspices of the Government Labour Office. Employers co-operate not only by participating in the events but also by giving generous contributions for the prizes "Better living societies" with their own Committees have also been organized. In addition to the above centres a number of libraries and reading rooms have been established in important labour mohollas.

It is not necessary to describe the welfare work done by Government in the Provinces of Bengal and Sind and in other Provinces. This is conducted on lines similar to those adopted in Bombay and in the U.P. Over fifteen welfare centres have been opened in Calcutta and Howrah and two at Karachi. The Government of Bengal have established Local Advisory Committees to assist the Labour Department with the work of administration of the centres.

COST OF LIVING AND STANDARD OF LIFE

COST OF LIVING.

Bombay was the first Province in India to complete and publish a price series intended for measuring changes in the cost of living. A monthly cost of living index number for working classes in Bombay City compiled on the aggregate consumption method and with July 1914 as the base period was regularly published in the *Bombay Labour Gazette* from September 1921 to June 1937 when this series was replaced by another. The scope and the method of the compilation of the old index were described in the issues of the *Labour Gazette* for September 1921, September 1923 and April 1929. A table giving the figures from that index for the months of January, April, July and October in each year from 1918 to 1936 and for the months of January and April 1937 was given at page 572 of the 1941-42 Edition of this publication. These figures are now of purely historical interest but it would be useful to reproduce the annual averages for the years 1918 to 1936 in order to show the general trend of prices: 1918—154, 1919—175, 1920—183, 1921—173, 1922—164, 1923—154, 1924—157, 1925 and 1926—155, 1927—154, 1928—147, 1929—140, 1930—137,

1931—110, 1932—109, 1933—103, 1934—97, 1935—101, and 1936—102.

The old Bombay Cost of Living Index series was considered to be somewhat defective as the weights used for its compilation were not based on any family budget enquiry. The Labour Office of the Government of Bombay, therefore, conducted a comprehensive family budget enquiry in Bombay City between May 1932 and June 1933 and taking the weights based on the results of that enquiry it compiled a new cost of living index series on the price relative method with the average prices for the year ended June 1934 equated to 100. A full note on the method used in the compilation of this index number has been given at pages 370-72 of the issue of the *Labour Gazette* for January 1940. This new index has been made as comprehensive as possible by expanding the list of commodities covered and by adding a new group for "miscellaneous expenditure" which did not find a place in the old index. The annual averages of the index numbers in the new series for the years 1934 to 1941 were as follows: 1934 (four months)—99, 1935—100, 1936—101, 1937—106, 1938—106, 1939—106, 1940—112, and 1941—122. As this is the most important cost of living index series compiled in India we are reproducing in the table below the monthly movement of the

index since January 1939 (the year in which the Second World War broke out)

**Bombay Cost of Living Index
(1933-34=100)**

Month	1939	1940	1941	1942
January	105	114	117	137
February	104	112	119	135
March	103	110	119	137
April	103	110	121	138
May	103	111	122	142
June	104	111	122	152
July	105	113	126	
August	105	114	131	
September	106	112	129	
October	108	113	125	
November	109	113	126	
December	113	115	129	

In addition to the cost of living index series which the Labour Office of the Government of Bombay compiles for working classes in Bombay City, it also compiles similar cost of living index series for three other centres in the Province of Bombay (1) Ahmedabad, (2) Sholapur, and (3) Jalgaon. Those for Ahmedabad and Sholapur are published regularly in the *Labour Gazette* along with that for Bombay City. The average prices for the year ended July 1927 have been adopted as the basis for the Ahmedabad series while the one for Sholapur is based on the average prices for the year ended January 1928. Details regarding the scope and the method of compilation of the Ahmedabad and Sholapur series have been published in the issues of the *Labour Gazette* for January 1930 and for February 1931 respectively.

Other Provinces in India which compile cost of living index series for working classes are Madras, the Central Provinces and Berar, the United Provinces, Bihar, the Punjab and Orissa. The Government of Madras compiles nine series in all one for Madras City with the average prices for the year ended June 1936 equated to 100 and eight other series for low paid employees at Vizagapatnam, Ellore, Bellary, Cuddalore, Coimbatore, Madurai, Trichinopoly and Calicut with the average prices for the twelve months from July 1935 to June 1936 as base. The Government of the Central Provinces and Berar compiles two series for Nagpur and Jabulpore with prices in January 1927 as base. In the United Provinces, one series with August 1939 as the base is compiled for working classes in Cawnpore and three other series with prices at 31st July 1939 equal to 100 are specially compiled for low paid Government employees at

Lucknow, Meerut and Gorakhpur. The Government of Bihar compiles cost of living index numbers with the average cost of living for the five years ending December 1914 as the base for the following six centres in the Province: Patna, Muzaffarpur, Monghyr, Jamshedpur, Jharia and Ranchi. Average prices for five years are also the base for cost of living indexes for Lahore, Sialkot, Ludhiana and Rohtak in the Punjab but the base period in the Punjab is the quinquennium ending December 1935. The Government of Orissa compiles only one cost of living series for its headquarters town of Cuttack; this is done on the same method and base as those adopted by the Government of Bihar.

In view of the varying base periods adopted by different Provinces for their cost of living series and also by the same Province for the series for different centres in that Province, we do not think that it would be desirable to reproduce the cost of living index figures for a number of centres in one table. It is obviously not possible for us, with the space at our disposal, to give separate tables for every cost of living series compiled in India in the same way as we have done for Bombay. It will be noticed that the general averages for the old and the new series for Bombay City for the two years 1935 and 1936 are very similar (1935—old 101, new 100, 1936—old 102, new 101). The general trend in prices is fairly uniform all over India and we are inclined to the view that the figures for Bombay may, for all practical purposes, be regarded as fairly continuous from 1914 to 1942 with 1914 as the base for the whole of India.

STANDARD OF LIFE.

The results of family budget enquiries conducted by what is known as the 'extensive method' form the most satisfactory basis of determining the standard of life of any particular class or community. A higher standard of life means better opportunities to satiate wants and desires other than the primary human needs. A larger percentage expenditure on clothing, housing and miscellaneous items such as education, recreation, etc., is therefore a sure indication of an improved standard of living. The Bombay Labour Office has carried out two family budget enquiries for working classes in Bombay City, one in 1921-22 and the other in 1932-33 and the results were published in the years 1923 and 1935 respectively. As has already been mentioned, similar enquiries have also been conducted in Ahmedabad and Sholapur cities and the results of both these enquiries were published in the year 1928. In Burma, the Labour Statistics Bureau, Rangoon, published in the same year the results of an extensive enquiry conducted by the Bureau into the standard and cost of living of four different classes of industrial workers in Rangoon. In Madras, the Director of Industries published in 1938 the results of an inquiry into the family budgets of industrial workers in organized and unorganized industries in Madras City conducted under the direction of the Commissioner of Labour. A number of family budgets have also been collected at Cawnpore in the United Provinces and at Nagpur and Jabulpore in the Central Provinces with the object of compiling cost of living indexes

The following comparative data regarding the distribution of expenditure will serve to indicate the standards of life of working classes at certain different centres in India :—

Percentage Distribution of Expenditure.

Groups	Bombay (1932-33)	Ahmedabad (1933-35).	Sholapur (1925)	Nagpur (1927).	Jubbulpore (1927)	Rangoon (1928).	Madras (1938).
Food	46 60	49 31	49 25	64.10	66.00	52.7	52.63
Fuel and light	7.11	6 65	9 60	9 02	7.95	5.2	6 67
Clothing	7.75	9 12	11.86	10.70	10.86	10.6	4.50
House rent	12 81	10 97	6 27	1.92	1.44	13.9	11.14
Miscellaneous	25 73	23 95	23.02	13.66	13 75	17.6	25 06
Total	100 00	100 00	100.00	100 00	100.00	100.0	100.00

NOTE—The figures are not *strictly comparable* due to differences in the items included in the different groups. But they nevertheless serve to show the variations in the distribution of expenditure in a general way.

The standard of life is more often than not conditioned by the size of the family and its income. The following figures are of interest in this connection.—

—	Bombay	Ahmedabad.	Sholapur	Nagpur	Jubbulpore.	Rangoon (Burmese)	Madras
Average size of the family (in persons)	3 70	4 05	4.57	4 33	3 76	3.01	6 03
Average monthly income	Rs a p 50 1 7	Rs a p. 46 5 0	Rs. a p 39 14 10	Rs a p ..	Rs a. p ..	Rs a p 58 8 3	Rs. a. p 37 5 11

It will be seen that the 'miscellaneous' group of expenditure accounts for a comparatively large percentage of the expenditure of the average working class family. In this group is included such items as interest on loans and instalments of debts repaid. Delays in the receipt of earned wages lead to indebtedness of the worker in many cases. The Royal Commission on Labour made certain important recommendations with a view to lessening the burden of indebtedness of the worker and also to prevent its accumulation. The Payment of Wages Act 1936 was intended to secure to the workmen prompt payment of earned wages so that they may not be put to the necessity of incurring or accumulating debts. The Government of India have had under consideration certain other pieces of legislation which were all designed to improve the lot of the industrial worker. Following the recommendations of the Labour Commission, the Government of India have amended the Civil Procedure Code with a view to exempting salaries below a defined limit from attachment. Another recommendation of the Labour Commission was that at least so far as industrial workers in receipt of wages or salary amounting to less than Rs. 100 per month are concerned, arrest and imprisonment for debt should be abolished except when the debtor has been proved to be both able and unwilling to pay. The Government of India after consulting the provincial Governments decided to undertake legislation on the recommendation on an experimental scale restricted to the province of Delhi in the first instance. A third recommendation of the Whitley Commission was made with a view to protect workers from harassment for debts. After consulting public opinion and the views of the various Provincial Governments on this question, the Government of India came to the conclusion that Central legislation on the subject was not called for. The Government of Bengal, at the suggestion of the Government of India, passed a Workmen's Protection Act in 1934 which makes besetting of industrial establishments for the purpose of collecting debts a criminal and cognizable offence. Some other provinces are also contemplating similar legislation. The Bombay Moneylenders' Bill introduced by a non-official member in the Bombay Legislative Council in March 1934 was an effort in this direction. But, unfortunately, the motion for the reference of the Bill to a Select Committee was lost.

GROWTH OF THE TRADE UNION MOVEMENT IN INDIA

The earliest known trade unions in India were (1) The Bombay Millhands' Association, a loose organisation formed in 1890 for the purpose of memorialising Government for improvements in factory law and which soon became moribund after the passing of the 1891 Act, (2) The Amalgamated Society of Railway Servants of India and Burma formed in 1897 by Anglo-Indians and Domiciled Europeans employed on railways, more as a friendly society than a combination for securing concessions, (3) a Printers' Union started in Calcutta in 1905, and (4) The Bombay Postal Union which was formed in 1907. The Kamgar Hitwardhak Sabha, Bombay, which came into existence in 1910, was a body of social workers who were interested in questions connected with the general welfare of labour and was an association rather for the workers than of the workers. Apart from the cases cited, the trade union movement, as this is known in the West, did not begin in India till almost after the end of the first World War.

The decade following the end of that War witnessed rapid developments in the field of trade unionism in India, but it must be regretfully admitted that even today organised association of the workers in the country is far below the stage of development which it has reached in Great Britain and in many other countries of the world. The reason for this can be put in a nutshell: lack of a will to organize as far as the workers are concerned and the absence of efficient leadership. Some labour leaders were men who had the good and welfare of labour genuinely at heart. But quite a few went into the movement merely for the opportunities which it would give them for coming into the limelight. Whereas the former went about affairs with a measure of considered moderation, the latter were mere propagandists and mischief-makers who strung together all kinds of impossible and preposterous demands in the hope that by doing so they would transport Indian industrial labour at once into an Arcadia. Both these types of leaders together with some of the more intelligent of the workers at first constituted themselves into strike committees. Many of these committees secured a considerable measure of success in so far as concessions in wage rates were concerned, but, whereas most of them fell into a state of inanition on the conclusion of a dispute, a good few of them, emboldened with the success they had met with, set themselves to the task of creating permanent associations or trade unions of the workers. These were the beginnings of the trade union movement in India, and within a period of five years (1919 to 1923) scores of unions were formed in all parts of the country. As there are no official records to show the names of and the memberships claimed by these earlier bodies, nothing definite can be stated with regard either to their number or to their total membership, but it can be safely asserted that the movement had made a fair penetration on the railways, in postal and telegraph departments, among seamen and in the textile industry in Ahmedabad City, and in some other centres.

The pressing need for a co-ordination of the activities of the individual unions was recognised

at a very early stage of the movement and both central and provincial federations were formed. A central organisation at the apex was also necessary because only such a body could make recommendations with regard to the personnel of the labour representation on Indian delegations to the Annual Sessions of the International Labour Conference. Thus, the All-India Trade Union Congress was formed in 1920 on a national basis. The Central Labour Board, Bombay, and the Bengal Trades Union Federation were formed in 1922. The All-India Railwaymen's Federation, co-ordinating all unions of railwaymen on an industrial basis, was formed in the same year and this was closely followed by the creation of both provincial and central federations of unions of postal and telegraph employees. The latter bodies received a very generous measure of recognition both from the Railway Board and the Director-General of Posts and Telegraphs in India. In the former case, half-yearly conferences are held between the representatives of the Railway Board and the Railwaymen's Federation and at these conferences all the more important questions connected with railway establishments are discussed and as great a measure as possible of agreed solutions are arrived at.

Although there are a few unions of jute mill workers in Bengal and seven or eight unions of cotton textile mill workers in Bombay City, the trade union movement has not made any appreciable progress in the two chief centres of these two important industries in India. The main reason for this is that the leaders at the head of these unions hold widely diverging views and cannot compose their differences sufficiently enough to enable them to meet on a common platform.

If employers in Indian industry had had the sagacity and the foresight towards the end and immediately after the close of the Great War to have taken the trouble to adjust wage rates to the increases in the levels of prices and so to balance real wages, the history of industrial strife in India round about and during the third decade of the present century might have been entirely different. To a limited measure, the history of the trade union movement in India too might have been somewhat different. Trade unionism was bound to come. The Treaty of Versailles in providing for the creation of an International Labour Organisation and the holding of periodical International Conferences had laid down that the delegates representing labour from the States Members should be chosen by national labour organisations. Representatives of Indian labour had attended the earliest of these conferences and had had an opportunity of studying the growth and the powerful position of workmen's associations in the West, and on their return to India they had set themselves to the task of forming trade unions in the country. This was an entirely new development in the eyes of the Indian employer. One powerful group of employers who had hitherto not organised set themselves to form an association whose primary object was to combat trade unionism. It is unfortunately too true that many employers in India have looked and even

today look askance at the growth of organisation among their workers and that employees who take part in trade union activities are victimised. The trade union movement, therefore, instead of getting its most important support from within the ranks of labour itself, was thrown by Indian employers into the waiting hands of the outside agitator, and, unfortunately for Indian trade unionism, no body of outsiders versed in proper trade union methods and principles was available. Such outsiders as could collect some of the hot-heads among the workers in particular units or industries, formed unions in those units or industries, but with the exception of Ahmedabad where a strong trade union had been formed of the workers in cotton textile mills under the leadership of Mahatma Gandhi and also of certain sections of railways which were manned by a more intelligent and literate type of persons, these unions were hardly representative of the workmen in the organisations concerned owing to the smallness of their membership as compared with the total number of workers employed.

As far as recognition by the employers was concerned, trade unions were faced with a three-edged weapon. On one side workmen taking interest in trade union activities were victimised, on another, the majority of the employers refused to recognise unions whose executives were composed of outsiders and on the third, an amendment passed in the Indian Penal Code in 1913 for the purpose of dealing with criminal conspiracies was such as to make trade unions doing the only kind of work for which they are generally formed illegal bodies in the eyes of the law. We have already dealt with the first two of these three questions. As far as the third is concerned, the matter was brought to a head by the historic Buckingham Mill case of 1920 in which the Madras High Court granted an interim injunction against the strike committee of the Madras Labour Union forbidding them to induce certain workers to break their contracts of employment by refusing to return to work. This was a bolt from the blue for the trade union movement in the country. Trade union leaders suddenly discovered that they were liable to prosecution and imprisonment for *bona fide* union activities and it was at once apparent that some legislation for the protection of trade unions was necessary. In March 1921, the Legislative Assembly of the Government of India, on the motion of Mr. N. M. Joshi, then General Secretary of the All-India Trade Union Congress, passed a resolution recommending that Government should introduce legislation for the registration and protection of trade unions. Opposition to such a measure from associations of employers was, however, so great that it was five years before the necessary legislation could be placed on the Statute Book.

The height of the trade union movement in India was reached in 1928-29 when communists sat on the top of the world of Indian labour. Communist leaders had captured almost every important union in India except the textile union in Ahmedabad and they had succeeded in securing a membership of over 50,000 textile workers in Bombay City for their Bombay Girm Kamgar Union. The membership figures of the various other unions which they controlled

also showed remarkable increases. The success which they had met with as the result of the general cotton textile strike of 1928 in Bombay was, as subsequent events have proved, purely adventitious. The doctrines they had preached to the masses during that and the oil strike of the winter of that year were responsible for rioting in Bombay City on a scale previously unknown. Thirty-one of the ring-leaders of the movement were arrested early in 1929 on charges of organised conspiracy and were taken to Meerut for trial. Such of the communists as remained unarrested engineered the general cotton textile strike in Bombay of the year 1929. This lasted for more than three months and was called off only after the publication of the report of a Court of Enquiry appointed by Government and which allocated the whole of the blame for this unwarranted strike to the Bombay Girm Kamgar Union. The publication of this report and the effects of the 1929 strike dealt a blow to the trade union movement from which it took ten years to recover.

The communists made a successful attempt in 1929 either to capture or to break the All-India Trade Union Congress. They affiliated the Bombay Girm Kamgar Union with a membership of 54,000 and the G.I.P. Railway Workers' Union with a membership of 41,000 to that body during the year and with the assistance of the voting strength which these two unions together with some of their other unions gave them, they captured both the Congress and its Executive Committee at the Tenth Session of the Congress which was held in Nagpur in that year. Resolutions were adopted favouring the affiliation of the Congress to international communist organisations and for the boycott of the Royal Commission on Indian Labour, the International Labour Conference and the Round Table Conferences on Indian Reforms. Moderate trade unionists under the leadership of Mr. N. M. Joshi thereupon seceded from the Congress and formed a new organisation called the Indian Trades Union Federation. The All-India Railwaymen's Federation which was till then affiliated to the Trade Union Congress left that body in 1929 and remained outside till 1935.

At the eleventh session of the All-India Trade Union Congress held at Calcutta in July 1931, a further split occurred in its ranks and the extreme left wing under the leadership of Messrs S. V. Deshpande and B. T. Randive broke away to form the All-India Red Trade Union Congress. By this time, however, trade unionism in India was at a thoroughly low ebb and none of the three national organisations could by any manner or means make a claim to speak on behalf of Indian labour, but, as the Congress had already decided to boycott the International Labour Conference, the Government of India accepted the Indian Trades Union Federation as the body competent to recommend delegates for the International Labour Conference.

With a view to bring about unity in the ranks of Indian labour, a committee called the Trade Union Unity Committee was appointed at a representative conference held in Bombay on the 10th May 1931 under the auspices of the All-India Railwaymen's Federation. This

Committee found that three different and distinct sections of labour were in existence in India—(1) the communist group, (2) the liberal group, and (3) the rest—and that the gulf which divided the communists from the other sections was not bridgeable. The Committee, therefore, recommended a platform of unity for the remaining sections of labour in India. It was proposed to organise and unite all unions which accepted this 'platform of unity' under a new federation to be called the National Federation of Labour. At a joint meeting between the General Council of the Indian Trades Union Federation and the Provisional Committee of the National Federation of Labour held at Calcutta in April 1933, the two federations were amalgamated on the basis of the platform of unity as finally evolved by the Trade Union Unity Conference but subject to certain modifications and the new amalgamation was named the National Trades Union Federation. In 1935, the two sections of the All-India Trade Union Congress composed their differences and it was agreed that the parent body should be recognised as the central organisation of the working classes in India. In the month of February of the same year an agreement was reached between the representatives of the All-India Trade Union Congress and the National Trades Union Federation by virtue of which a Joint Committee of the two organisations was to be formed with a view to exploring the possibilities of common action with the assistance of the affiliated unions of both. Another direction in which an effort towards common action on agreed matters was made was the agreement entered into between the National Federation of Labour and the All-India Congress Socialist Party for joint action on specific political and economic issues. At the end of the year 1937, the National Trades Union Federation had a membership of 83,000 with 62 affiliated unions and the All-India Trade Union Congress had a membership of 46,000 with 98 affiliated unions. It is interesting, however, to note that the labour unions of Ahmedabad which draw their inspiration from Mr. Gandhi have throughout remained aloof from both these bodies.

At a special joint session of the All-India Trade Union Congress and the National Trades Union Federation held at Nagpur on the 17th April 1938, it was decided to combine these two bodies into one central organisation. The principal terms of the agreement approved by the executives of both these bodies were that the basis of representation on the joint General Council of the new combined Trade Union Congress be fifty-fifty—44 members from each group—and that the Trade Union Congress accept the constitution of the National Trades Union Federation *in toto*. The General Council was to act for the combined body with the one limitation that questions relating to general strikes and affiliation with international bodies should be decided by a three-fourth's majority. If this scheme worked well, the task of unification should be pushed further and the two bodies merged into one. The Provisional Affiliation entered into at Nagpur in April 1938 was formally ratified at the Eighteenth Session of The All-India Trade Union Congress held at Bombay on the 28th and 29th September, 1940.

This very same Session, however, was responsible for yet another split in the Congress. The Session adopted a resolution of neutrality in connexion with the War Effort but certain elements headed by Dr. Asf Ali, President of The Seamen's Union at Calcutta desired to support the War Effort. The Trade Union Congress while adhering to the principle of neutrality, however, gave a free hand to such of their affiliated members as desired to support the War Effort. This attitude of luke-warmness did not satisfy Mr. Asf Ali and he disaffiliated his Union from the Congress. Another section, headed by Mr. M. N. Roy and known as the Royists with Mr. Jammadas M. Mehta, Barrister-at-Law, formed a new central organisation known as The Trade Union Federation with its head office at Delhi. Mr. Jammadas M. Mehta was appointed its President and Mr. M. N. Roy its General Secretary. Two hundred trade Unions in India with a total Membership of over a quarter of a Million have affiliated themselves to the new Federation which is carrying on a country-wide campaign and propaganda for all-out support by Indian Labour of the War Effort.

The Nineteenth Session of the All-India Trade Union Congress was held at Cawnpore in February 1942. No resolution on the war was passed owing to the want of a three-fourth's majority. The following office bearers were appointed: President—Mr. V. V. Giri, Vice Presidents—Mrs. Chando Behl, Dr. Suresh Bannerjee, Dr. Charu Bannerjee and Messrs. A. A. Zaman and M. Khan, Treasurer—Mr. Laljee Pendse, General Secretary—Mr. N. M. Joshi, M.L.A. (Central), and Assistant Secretaries—Mr. R. A. Khedgikar and Miss Shanta Bhaleiao.

The All-India Trade Union Congress, at the moment is made up of three distinct groups: (1) the Communists, (2) the Nationalists (including the Indian National Congress and the Congress Socialist Party), and (3) the pure Trade Unionists. There are, however, two important groups outside the Trade Union Congress. One is the Royists. The other is the Hindustan Mazdoor Seva Sangh which is the permanent off-spring of the Labour Sub-committee set up by the Gandhi Seva Sangh in 1937 to organise labour on the principles set up by Mahatma Gandhi—Principles which have been followed by the Textile Labour Association, Ahmedabad, since its inception in 1921. The original Sub-committee established a training school in Ahmedabad to educate interested persons in trade union work. After completing a course of training in this school, the trainees are sent out to different centres to organise and conduct *bona fide* trade unions. Today, the sphere of work of the Hindustan Mazdoor Seva Sangh of which Sudar Vallabhai Patel is the President and Messrs. J. J. and S. S. Boudhhan and Shankarlal Banker are Secretaries extends to the Provinces of Bombay, Madras, the Central Provinces and Berar, Bihar (the Bihar Coal field) and Sind. The Sangh acts as an Advisory Body and is not a federation of unions. In politics its policy is the same as that of the Indian National Congress but it does not organise or conduct trade unions of workers on political lines.

STATISTICS OF TRADE UNIONS.

In the section dealing with the Indian Trade Unions Act we have given a table showing the growth in the number of registered unions and their membership in India since the Act was brought into operation in July, 1927. It is not possible to give similar statistics for all trade unions because no Province except Bombay has maintained any records for both registered and unregistered unions. The Labour Office of the Government of Bombay has, however, collected full and complete information regarding all trade unions in the Province of Bombay since the years 1922. The following Table shews the progress of the trade union movement in that Province during the last twenty years.

Growth of Trade Unions in the Province of Bombay.

Year.	Average number of Unions during the year	Average Membership during the year
1923	18	41,030
1926	52	62,772
1929	91	191,037
1932	86	104,458
1935	103	103,429
1936	103	97,302
1937 ..	105	93,453
1938	140	126,455
1939	170	159,026
1940 ..	177	191,942
1941	174	184,517
1942 (First Quarter)	179*	185,541*

* Actual figures

If the figures contained in the above table for the year 1942 (1st March) are analysed by industries, the results are as set out below

Distribution of Membership of Bombay Unions.

Class of Industry	Number of Unions	Membership	Percentage to total Membership
Textiles	31	86,944	46.86
Railways. ..	7	26,884	14.42
Seamen	3	14,693	7.99
Post and Telegraph	35	6,910	3.72
Municipal ..	10	9,817	5.29
Miscellaneous	93	40,293	21.72
Total	179	185,541	100.00

Out of the 81 unions of cotton-textile workers in the Province of Bombay, eight with a total membership of 26,505 are in Bombay City and ten with a total membership of 48,898 are in Ahmedabad.

REPRESENTATION OF LABOUR INTERESTS IN THE PROVINCIAL LEGISLATURES.

The question of representation of Labour in the Central and Provincial Legislatures has in recent years assumed considerable importance owing to the growing interest taken by the public in matters connected with Labour. We have given a fairly detailed account of the extent of this representation prior to the advent of Provincial Autonomy and also in the New Legislatures which came into being by virtue of the Government of India Act, 1935, at pages 592 and 593 of the 1941-42 Edition of this publication. In view of the improbability of any fresh elections to the Provincial Legislatures being held during the duration of the present War we do not consider it necessary to reproduce the details regarding the qualifications of electors and candidates in this edition. We, however, reproduce the name of the various Labour Constituencies in the different Provincial Legislative Assemblies together with the names of the persons elected from these Constituencies below.

MADRAS LEGISLATIVE ASSEMBLY.

Railway Trade Unions
Textile Trade Unions
Textile Workers
Madras City Dock and Factory Labour (excluding Textile and Railway Labour)
Vizagapatam cum East Godavari Dock and Factory Labour
West Godavari cum Krishna cum Guntur Factory Labour

Mr G Krishnamurthi Ayl
Mr Genta Chelvapathi Chetti Garu
Mr N G Ramaswami Nayadu Ayl

Mr P R K Sarma Ayl

Mr Subbarao Karunakaram Garu.
Mr V V Narasimham Garu

BOMBAY LEGISLATIVE ASSEMBLY.

Bombay City and Suburban Textile Unions
Ahmedabad Textile Unions (Two seats)
Ditto
Railway Unions (Two seats)
Ditto
Trade Unions of Seamen and Dock Workers

Mr D K Jagtap
Mr Gulzarilal Nanda
Mr K K Desai
Mr S H Jhambhala.
Vacant
Mr A. H. Mirza

BENGAL LEGISLATIVE ASSEMBLY.

Railway Trade Unions
Water Transport Trade Unions
Calcutta and Suburbs (Registered Factories)
Barrackpore (Registered Factories)
Howrah (Registered Factories)
Hooghly *cum* Serampore (Registered Factories)
Colerries (Coal Mines)
Bengal Dooars (Western), Darjeeling Sadar, Bengal
Dooars (Eastern) and Kurseong

Mr J N Gupta
Mr Aftab Ali
Mr Suresh Chandra Banerjee
Mr Niharendra Dutt Mazumdar
Mr Sibnath Banerjee
Mr M A Zaman.
Mr B Mukerjee
Mr Latta Sirdar

UNITED PROVINCES LEGISLATIVE ASSEMBLY.

Trade Union Constituency
Cawnpore Industrial Factory Labour
Industrial Factory Labour in Lucknow, Agra, Allahabad
and Aligarh

Mr Raja Ram Shastri
Mr Suraj Prasad Awasthi
Mr B K Mukerjee

PUNJAB LEGISLATIVE ASSEMBLY.

Trade Unions
East Punjab
North Punjab Labour Constituency

Mr Lala Sita Ram Mehra
Mr Dewan Chaman Lal
Rai Saheb Sohan Lal

BIHAR LEGISLATIVE ASSEMBLY.

Mining Trade Unions
Jamshedpur Factory Labour
Monghyr *cum* Jamalpur Factory Labour
Hazariabag Mining Labour

Nil
Mr Babu Natha Ram
Nil
Mr Babu Khetra Nath Sen Gupta

C. P. AND BERAR LEGISLATIVE ASSEMBLY.

Trade Union Labour
Factory Labour

Mr G S Page
Mr V R Kalappa.

ASSAM LEGISLATIVE ASSEMBLY.

Doom Dooma, Tinsukia and Dibrugarh
Jorhat, Nazira and East Golaghat
Thakurbari, Biswanath and Paneri
Silchar Srimangal and Longa Valley

Mr Bideshy Pan Tanty
Mr Bhairab Chandra Das
Mr Babu Binode Kumar J Sarwan
Mr Sanat Kumar Ahir

ORISSA LEGISLATIVE ASSEMBLY.

Orissa Labour Constituency

Mr Babu Pyari Sankara Roy.

SIND LEGISLATIVE ASSEMBLY.

Sind Labour Constituency

Mr N A Bechar

THE FUTURE OF TRADE UNIONISM IN INDIA.

The proposals of the Indian Delimitation Committee with regard to the formation of certain constituencies for the return of representatives of labour to the Provincial Legislative Assemblies on the basis of registered trade unions have had considerable effect both on the formation of new unions and on the registration of such of those as had not registered under the Indian Trade Unions Act. Since Provincial Autonomy has come into existence registered unions have been making better endeavours than they had hitherto done in maintaining proper books of accounts and registers of members in view of their compulsory examination by officials of Government for the purposes of preparing electoral rolls. As far as the workmen in Indian industries are concerned, however, trade unionism has not taken on anywhere near to the

extent which it has with workmen in the West. the fear of victimisation is still strongly entrenched in the minds of the workers to enable them to enter into combinations promoted to safeguard their interests but things are showing a marked improvement during the last year or two. One great difficulty experienced by trade union workers is the collection of subscriptions from members. The experience of the last fifteen years shows that most of the unions which became defunct went to the wall owing mainly to the fact that their officials were not able to collect subscriptions for the reason that the Indian workman will not part with money for a purely problematic advantage. He wants a return for his outlay in the form of an increase in his wages and if he does not get this within a reasonable period he pays no union subscriptions. The Ahmedabad Textile Labour Union is, happily, in a somewhat different position because it provides a host of welfare schemes in

the form of hospitals and dispensaries, education and facilities for recreation, co-operative stores and cheap grain shops, etc., and its members get more than value for their money. In addition, the union is under the control of extremely disinterested, able and zealous officials like Mr Gulzarilal Nanda, Mr Khaudibhai K Desai and Mr. S. P. Dave, who have made the union their life-work. The office of the union with its hundred or more clerks is a beehive of industry.

Unfortunately for the trade union movement in India, there are few, if any, unions which are run on the model of the Ahmedabad Textile Labour Union. The vast majority of those which have been kept alive through the zeal of interested outsiders are hollow structures with

no funds and bolstered figures of membership—bolstered in order to convince the employers concerned of their *bona fides* for recognition. No trade union movement can stand on foundations such as these. It is possible, however, that with the spread of education and literacy, Indian industries will attract a more educated type of workman who will be able to persuade his fellows of the advantages of organised combination and that a healthier movement built on more solid foundations will take the place of the weak structure which exists to-day. Whilst there are no indications for optimism there is, at the same time, no cause for pessimism in the matter but the hopes of all persons interested in the welfare of the labour movement in India are, as far as trade unionism is concerned, in the laps of the gods.

THE INTERNATIONAL LABOUR ORGANIZATION.

Reference has already been made in the preliminary sections of this note to the creation, by the Treaty of Versailles, of an International Labour Organisation and to the work of the International Labour Conference. Since the holding of the first session of the Conference in Washington in 1919, twenty-four further sessions were held till the end of the year 1939 and a total of sixty-seven Conventions were adopted. I give below, in serial order, the year and the date at which each of the twenty-five sessions of the Conference were held, the composition of the delegation from India, and the titles of the different Conventions which were adopted at each session. In the notes on the composition of the delegation Government Delegates are represented by the capital letter "G," the Employers' Delegates by the letter "E," and the Workers' Delegates by the letter "W." The names of the technical advisers to the Government, Employers' and Workers' Delegates have been omitted in all cases. Symbols (full meanings and explanations of which are given at the end of this section) are placed beside the titles of the Conventions with regard to which action has already been taken by the Government of India. In all cases where no symbols appear alongside the titles, no action has been taken.

1st Session (Washington, 1919) Indian Delegation—Government—Sir Atul Chatterjee and Sir Louis Kershaw, Employers—Sir Alexander Murray, Workers—Mr. N. M. Joshi

Conventions

- 1 Hours of Work (Industry)—(AB)
- 2 Unemployment—(C).
- 3 Childbirth
- 4 Night Work (Women)—(AB)
- 5 Minimum Age (Industry)—(D)
- 6 Night Work (Young Persons)—(AB)
- White Phosphorus—(D).

2nd Session (Geneva, 1920) G—Sir Louis Kershaw and Capt. D. F. Vines, Stamen's Delegate—Mr. A. M. Mazarello.

Conventions.

7. Minimum Age (Sea)—(L).
- 8 Unemployment Indemnity (Shipwreck)—(E).

9 Placing of Seamen.

3rd Session (Geneva, 1921) G—Sir Atul Chatterjee and Mr. I. N. Gupta, E—Sir Nowroji Saklatvala, W—Mr. N. M. Joshi, Secretary—Mr. A. G. Glow.

Conventions

- 10 Minimum Age (Agriculture)
- 11 Right of Association (Agriculture)—(AC)
- 12 Workmen's Compensation (Agriculture).
- 13 White Lead (Painting)
- 14 Weekly Rest (Industry)—(AB)
- 15 Minimum Age (Trimmers and Stokers)—(AB)

16 Medical Examination of Young Persons (Sea)—(AB)

4th Session (Geneva, 1922) G—Sir Bhupendra Basu and Sir Louis Kershaw; E—Sir Alfred Pickford, W—Mr. N. M. Joshi, Secretary—Mr. C. H. Silver

5th Session (Geneva, 1923) G—Sir Dadilab M Dalal and Sir Louis Kershaw, E—Sir Joseph Kay, W—Mr. K. C. Roy Chowdhury.

6th Session (Geneva, 1924) G—Sir Atul Chatterjee and Sir Louis Kershaw, E—Sir Alexander Murray, W—Mr. Joseph Baptista

7th Session (Geneva, 1925). G—Sir Atul Chatterjee and Sir Louis Kershaw, E—Sir Thomas Smith, W—Mr. N. M. Joshi, Secretary—Mr. R. N. Gilchrist.

Conventions.

17. Workmen's Compensation (Accidents)
- 18 Workmen's Compensation (Occupational Disease)—(AC)
- 19 Equality of Treatment (Accident Compensation)—(AB)
- 20 Night Work (Bakeries).

8th Session (Geneva, 1926) G—Sir Atul Chatterjee and Sir Louis Kershaw, E—Sir Arthur Froom, W—Mr. Lajpat Rai; Secretary—Mr. R. N. Gilchrist

Conventions.

21. Inspection of Emigrants—(AC)

9th Session (Geneva, 1926) G—Sir Atul Chatterjee and Sir Louis Kershaw, E—Sir Arthur Froom W—Mr M Daud, Secretary—Mr R N Gilchrist.

Conventions.

22. Seamen's Articles of Agreement—(AB).

23. Repatriation of Seamen

10th Session (Geneva, 1927) G—Sir Atul Chatterjee, Sir Louis Kershaw and Dr R P Paranjpe (Substitute), E—Mr G D Birla W—Mr V V Giri, Secretary—Mr S Lall

Conventions.

24. Sickness Insurance (Industry, etc.)

25. Sickness Insurance (Agriculture)

11th Session (Geneva, 1928) G—Sir Atul Chatterjee and Dr R P Paranjpe, and Mr. J. O Walton (Substitute), E—Mr Narottam Morarjee; W—Mr Diwan Chaman Lall, Secretary—Dr R C Rawley

Conventions

26. Minimum Wage Fixing Machinery.

12th Session (Geneva, 1929) G—Sir Atul Chatterjee and Dr R. P Paranjpe, and Mr A. G Clow (Substitute), E—Mr Kasturbhai Lalbhai, W—Mr N M. Joshi, Secretary—Mr A Diddin

Conventions

27. Marking of Weight (Packages Transported by Vessels)—(AB)

28. Protection against Accidents (Dockers).

13th Session (Geneva, 1930) G—Sir Atul Chatterjee and Sir Geoffrey Corbett, and Mr C. W A Turner (Substitute), E—Mr Jadunath Roy, W—Mr M Daud, Secretary—Mr C W A Turner.

14th Session (Geneva, 1930) G—Sir Atul Chatterjee and Dr R P Paranjpe, and Mr A. Latiff (Substitute), E—Mr A L Ojha, W—Mr S C Joshi, Secretary—Mr G Graham Dixon

Conventions

29. Forced Labour

30. Hours of Work (Commerce and Offices)

15th Session (Geneva, 1931) G—Sir Atul Chatterjee and Mr A G Clow, E—Mr Walchand Hirachand, W—Mr R R Bakhale, Secretary—Mr N A. Mehrban

Conventions

31. Hours of Work (Coal mines)

16th Session (Geneva, 1932) G—Sir Bhupendra Nath Mitra and Sir Atul Chatterjee, E—Mr Shanmukham Chetti, W—Mr Diwan Chaman Lall, Secretary—Mr K R. Menon

Conventions

32. Protection Against Accidents (Dockers) (Revised, 1932)—(D).

33. Minimum Age (Non-Industrial Employment)

17th Session (Geneva, 1933) G—Sir Atul Chatterjee and Mr J F Gennings, E—Sir Phiroze C Sethna; W—Mr. Aftab Ali, Secretary—Mr K R Menon

Conventions.

34. Fee-Charging Employment Agencies.

35. Old-Age Insurance (Industry, etc.).

36. Old-Age Insurance (Agriculture)

37. Invalidity Insurance (Industry, etc.)

38. Invalidity Insurance (Agriculture)

39. Survivors' Insurance (Industry, etc.).

40. Survivors' Insurance (Agriculture).

18th Session (Geneva, 1934) G—Sir Bhupendra Nath Mitra and Mr A G. Clow, E—Seth Kasturbhai Lalbhai, W—Mr Jamnadas M. Mehta, Secretary—Mr A. Diddin

Conventions

41. Night Work (Women) (Revised)—(AB)

42. Workmen's Compensation (Occupational Diseases) (Revised)

43. Sheet-Glass Works

44. Unemployment Provision

19th Session (Geneva, 1935) G—Sir Bhupendra Nath Mitra and Sir Joseph Bhore, E—Mr H A Lalljee, W—Mr V M Ramaswami Mudaliar, Secretary—Mr S R Zaman.

Conventions

45. Underground Work (Women)—(A).

46. Hours of Work (Coal Mines) (Revised)

47. Forty-Hour Week

48. Maintenance of Migrants, Pension rights

49. Reduction of Hours of Work (Glass-Bottle Works)

20th Session (Geneva, 1936) G—Sir Bhupendra Nath Mitra and Mr S N Roy, E—Sir H M. Mehta, W—Rao Sahib R W Fulay, Secretary—Mr S R Zaman

Conventions.

50. Recruiting of Indigenous Workers

51. Reduction of Hours of Work (Public Works)

52. Holidays with Pay.

21st Session (Geneva, 1936) G—Sir Firoz Khan Noon and Mr A Diddin, E—Mr M A. Master, W—Mr. Aftab Ali, Secretary—Mr A. F Morley

Conventions

53. Officers' Competency Certificates.

54. Holidays with Pay (Sea)

55. Shipowners' Liability (Sick and Injured Seamen)

56. Sickness Insurance (Sea)

57. Hours of Work and Manning (Sea)

22nd Session (Geneva, 1936) Same Delegation as at the 21st Session

Conventions

58. Minimum Age (Sea).

23rd Session (Geneva, 1937) G—Sir Firoz Khan Noon and Sir Frank Noyce, E—Sir Hormusjee P. Modi; W—Mr. S C Sen, Secretary—Mr S R Zaman.

Conventions.

59. Minimum Age (Industry) (Revised).
 60. Minimum Age (Non-Industrial Employment) (Revised).
 61. Reduction of Hours of Work (Textiles)
 62. Safety Provisions (Building).

24th Session (Geneva, 1938) G—Sir Firoz Khan Noon and Sir Frank Noyce, E—Lala Shri Ram; W—Mr. S. V. Parulekar, M.L.A. (Bombay), Secretary—Mr. M. Ikramullah.

Conventions.

63. Convention concerning statistics of wages and hours of work in the principal mining and manufacturing industries, including building and construction, and in agriculture

25th Session (Geneva, 1939) G—Sir Firoz Khan Noon and Sir Frank Noyce; E—Mr. M. L. Dahankar, W—Mr. R. S. Nimbkar, Secretary—Mr. M. Ikramullah

Conventions

64. Convention concerning the regulation of written contracts of employment of indigenous workers

65. Convention concerning penal sanctions for breaches of contracts of employment by indigenous workers.

66. Convention concerning the recruitment, placing and conditions of labour of migrants or employment

67. Convention concerning the regulation of hours of work and rest periods in road transport

- A = Unconditional ratification
 B = Legislative or other measures passed since the adoption of the Convention
 C = Legislative or other measures anterior to the adoption of the Convention by the Conference.
 D = Legislation passed
 E = Legislation in progress or in preparation

India has ratified the following Conventions unconditionally: Hours of Work (Industry), (2) Night Work (Women), (3) Night Work (Young Persons); (4) Right of Association (Agriculture), (5) Weekly Rest (Industry), (6) Minimum Wage (Trimmers and Stokers), (7) Medical Examination of Young Persons (Sea), (8) Workmen's Compensation (Occupational Diseases), (9) Equality of Treatment (Accident Compensation), (10) Inspection of Emigrants, (11) Seamen's Articles of Agreement, (12) Marking of Weight (Packages transported by Vessels), (13) Night Work (Women) (Revised), and (14) Underground Work (Women). In 1938, India denounced the Unemployment Convention which it had ratified in 1921. Legislative or other measures have been adopted in India with reference to the following Conventions: (1) Hours of Work (Industry), (2) Unemployment, (3) Night Work (Women), (4) Minimum Age (Industry), (5) Night Work (Young Persons), (6) Right of Association (Agriculture); (7) Weekly Rest (Industry);

(8) Minimum Age (Trimmers and Stokers), (9) Medical Examination of Young Persons (Sea); (10) Workmen's Compensation (Occupational Diseases), (11) Equality of Treatment (Accident Compensation), (12) Inspection of Emigrants, (13) Seamen's Articles of Agreement, (14) Marking of Weight (Packages transported by Vessels), (15) Protection against Accidents (Dockers) (Revised 1932), (16) Night Work (Women) (Revised), and (17) Underground Work (Women). In addition, legislation is either in progress or under preparation in connection with the following Conventions: (1) Minimum Age (Sea), and (2) Unemployment Indemnity (Shipwreck).

The outbreak of the Second World War found the International Labour Office prepared to continue its work and to carry out its constitutional obligations. So far back as February 1939, the Governing Body had decided to appoint an Emergency Committee with a tripartite and representative character from its membership which could meet more rapidly in times of crisis. The Committee set forth two important principles: first, that the I.L.O. must continue to function as effectively and as completely as possible in case of war, and, second, that the continued existence of the Organization as an instrument of co-operation between Governments, employers and workers would be of unusual importance in such circumstances.

The Twenty-Sixth Session of the International Labour Conference fixed to begin on 3rd June 1940 had to be postponed *sine die* on account of the War. Several Committee Meetings had also to be cancelled. By July 1940, Swiss territory was almost completely surrounded by German Occupation Forces and it became increasingly difficult to envisage the continuance in Geneva of an international organization which depended for its effectiveness upon regular communications with its States Members. It became necessary, therefore, to establish a working centre outside Geneva and to transfer to it the staff required in order to carry out the obligations of the Organization to its members. In August 1940, the Government of Canada officially indicated its willingness for the temporary transfer to the Dominion of the personnel necessary to maintain the essential services of the Organization. Montreal was chosen as the most suitable and convenient site for its location and the McGill University very generously agreed to provide the necessary office accommodation and library facilities. The transfer from Geneva to Montreal necessitated drastic administrative changes and reduction in personnel. The work of collection and distribution of information regarding labour and social conditions throughout the world is now being continued from Montreal and plans have been made for carrying on unimpaired, as far as conditions permit, all the manifold activities of the Organization from that centre.

In furtherance of this programme, a Conference of the International Labour Organisation was held at New York from 27th October to 5th November 1941 and on 6th November 1941 at the White House, Washington. Technically, the Conference was not a Session of the International Labour Conference and it, therefore, had no powers to adopt Conventions and Recommendations in the manner provided for in the

Constitution of the International Labour Organization, but ample evidence of the value of its work is furnished by the influence exercised by its debates and by the action taken by various Governments to implement the more important of the resolutions which it adopted. Further, this Conference has a particular importance attaching to it as the first general international meeting held in the world since the outbreak of the War. Thirty-four States Members of the Organization were represented, twenty-two of them by delegations including representatives of Governments, employers and workers, Major C. R. Attlee, Deputy Prime Minister, represented the Government of Great Britain while the Government of India was represented by Sir Shanmukham Chetty and Mr. H. S. Malik, I.C.S. The agenda consisted of two items: (1) consideration of the report submitted by the Director of the International Labour Office under the title of "The I.L.O. and Reconstruction", and (2) the question of "Methods of Collaboration between Public Authorities, Workers' Organizations and Employers' Organizations".

Some twelve Resolutions were adopted by the Conference. The most important of these was that on post-war emergency and reconstruction measures. The resolution requested the Governing Body of the I.L.O. (a) to call the attention of Governments to the desirability of associating the International Labour Office with the planning and application of measures of reconstruction and to ask that the International Labour Organization should be represented in any peace or reconstruction conference which may be held after the end of the War, (b) to suggest to Governments that they should, if they had not already done so, set up representative agencies for the study of the social and economic needs of the post-war world and that such agencies should consult with the appropriate organs of the I.L.O., (c) to set up from its own membership a small tripartite committee, instructed to study and prepare both measures of reconstruction and emergency measures to deal with unemployment, in co-operation, where necessary, with governmental inter-governmental and private agencies, (d) to make full use of the existing organs of the I.L.O. and set up such new agencies as may be needed in order to meet the responsibilities implied in the Resolution, (e) to direct the

programme of the I.L.O. to fulfil the purposes of the Resolution, and (f) to report on the subject matter of the Resolution to the next and subsequent meetings of the International Labour Conference so that the I.L.O. should be in a position to give authoritative expression to the social objectives confided to it in the rebuilding of a peaceful world upon the basis of improved labour standards, economic advancement and social security. A second resolution endorsed the social and economic principles of the Atlantic Charter and urged that the fullest use be made of the machinery and experience of the I.L.O. in giving effect to these principles. Another resolution provided for the continuation of the work of the World Textile Conference held by the I.L.O. in 1937 and requested the Director to begin immediately the preparation of a definite scheme for the establishment, under the aegis of the I.L.O., of a World Textile Office, based on the tripartite principle, to be responsible for the international organization of measures to secure prosperity and social justice in the textile industry. The leading resolution on Government-employer-worker collaboration declared that real collaboration is possible only "within the framework of democratic political institutions which guarantee the freedom of association of workers and employers" and if in law and in fact the right of industrial organizations to represent workers and employers is recognised by the State.

In addressing the Conference on the part to be played by the International Labour Organization in the winning of the War and of the peace at the concluding Session held at White House, President Roosevelt said: "In the planning of such international action the International Labour Organization, with its representation of labour and management, its technical knowledge and experience, will be an invaluable instrument for peace. Your organization will have an essential part to play in building up a stable international system of social justice for all peoples everywhere."

The Indian Branch of the International Labour Office of which Dr. P. P. Pillai, Ph.D., is the Director and Mr. K. F. Matthew, the Deputy Director, maintains its activities unimpaired and continues to function from its office at New Delhi.

GOVERNMENT ADMINISTRATION OF LABOUR QUESTIONS.

Prior to the year 1920 there was little co-ordination between the Centre and the Provinces in matters connected with Labour. The participation by India in the first Session of the International Labour Conference held at Washington in 1919 and the increasing interest taken by the Indian public in questions connected with labour made it necessary, however, both for the Government of India and the Governments of the more industrialised Provinces not only to consider the question of the representation of labour in the Central and provincial legislatures but also to allocate to special departments or offices the administration of labour questions. The Government of India established a Labour

Bureau in the year 1920 which instituted inquiries into certain phases of factory work and published some reports in a series known as "Bulletins of Indian Industries and Labour". Before the utility of the Central Labour Bureau could be established it was abolished in March 1923 on the recommendation of the Indian Retrenchment Committee. The Department of Labour of the Central Government has, however, endeavoured to carry on as much as possible of the work initiated by that Bureau but owing to its limitations in staff and personnel it is not in a position to initiate and conduct all India inquiries into wages and conditions of employment in Indian Industries.

The Government of Bengal, in 1920, invested a Deputy Secretary in the Commerce Department with the additional work of a Labour Intelligence Officer whose duty would be to keep a record of industrial disputes in the Province as well as of labour organizations. It was intended that this officer should conduct special inquiries from time to time as circumstances required but owing to financial stringency, the Provincial Government could not provide him with adequate staff for the purpose. A full-time appointment of a Labour Commissioner was created in 1939 and this officer has now been supplied with a full staff. The Government of Madras appointed a Labour Commissioner in the year 1920. This Officer's duties were, however, primarily confined to the organization and the control of the operations for the betterment of the condition of the Depressed Classes in the Province with special regard to provision of water supply, assignment of lands, acquisition of house sites, education through special schools and the grant of assistance in the form of scholarships and boarding grants and to the administration of Criminal Tribes Settlements. He was also to watch and study the conditions of labour, particularly industrial labour, throughout the Province and to keep Government informed by periodical reports of its movements and tendencies and of the existence of any disputes between employers and employed. The duty of settling labour disputes through negotiation and conciliation has only been placed upon him during recent years.

The lead in the matter of the creation of a proper and stable department of Government with investigators and an adequate statistical staff to deal with all questions connected with labour was taken by the late Lord Lloyd, then Governor of Bombay, who created a Labour Office for the Bombay Presidency in 1921. In the Government resolution announcing the establishment of this office the following were declared to be its functions—

“(1) *Labour Statistics and Intelligence*—These relate to the conditions under which labour works and include information relating to the cost of living, wages, hours of labour, family budgets, strikes and lock-outs, and similar matters;

“(2) *Industrial Disputes*—As experience and knowledge are gained and the activities of the Labour office develop it will promote the settlement of industrial disputes when these arise;

“(3) *Legislation and other matters relating to Labour*—The Labour Office will advise Government from time to time as regards necessary new legislation or the amendment of existing laws.”

When the Labour Office was first started it was placed under the charge of a full-time Director. This post was abolished in 1926 and the Office was placed under the charge of the then Director of Information whose designation was changed to Director of Information and Labour Intelligence. This designation was again altered in 1933 to Commissioner of Labour and Director of Information. In 1939, on the retirement of Mr J. F. Gennings, C.I.E. C.B.E., who had held the post of Director of Information since 1921, the two posts were again separated and the

Commissioner of Labour has since then dealt only with matters connected with labour.

Consequent on the introduction of Provincial Autonomy in India with effect from 1st April, 1937, Sind was separated from the Presidency of Bombay and made into a separate Province. The new Government of Sind modelled its administration of all labour questions on Bombay and created a Labour Office with a special Commissioner of Labour. Since the year 1937, the Governments of the United Provinces, Assam, the Central Provinces and Berar and Bihar have also created special appointments of Commissioners of Labour, but, whereas the appointments in the United Provinces and Bihar are full-time ones that in the Central Provinces and Berar has been coupled with the post of Registrar of Co-operative Societies and that in Assam with that of The Controller of Emigrant Labour. In the Punjab, administrative matters connected with Labour are in the hands of the Director of Industries. Labour conditions in Orissa and in the North-West Frontier Province are not considered such as to justify the creation of special appointments of Labour Commissioners.

When the Workmen's Compensation Act was passed in 1923, the Governments of Bengal and Bombay created special full-time appointments of Commissioners of Workmen's Compensation. In the other Provinces, Judges of Small Causes Courts in Provincial Headquarters towns and District Magistrates, District Judges or Sub-Judges in the mofussil were appointed ex-officio Commissioners and the administration of the Act was decentralised. Even in those Provinces where Special Commissioners of Workmen's Compensation were appointed, the jurisdiction of these Officers, except in Bengal, was limited to one or two cities of chief industrial importance. Thus, the jurisdiction of the Bombay Commissioner extended to Bombay City and the Ahmedabad and the Bombay Suburban Districts, the railway systems of the G.I.P. and the B.B. & C.I. Railways in the Province, the electricity generating plants conducted by Messrs Tata Sons (Ltd) and he was also Commissioner for non-contested matters from the whole of the Province which could be disposed of in Bombay. The special post of Commissioner for Workmen's Compensation in Bombay was abolished in April 1928 and the duties attaching to this post were transferred to the Director of Information and Labour Intelligence, and later to the Commissioner of Labour.

Under the Indian Trade Unions Act, 1926, every Provincial Government was required to appoint a Registrar of Trade Unions. In those Provinces where special appointments for administering matters connected with labour already existed, the officers holding those appointments were entrusted with the duties of Registrars of Trade Unions, e.g., in Bombay, Madras and Bengal and later, in Sind. In others such as the Central Provinces and Berar and in the Punjab, the Director of Industries was appointed the Registrar. Today most Commissioners of Labour in the Province where such posts have been created are Registrars of Trade Unions as well. In addition, Commissioners of Labour have also been appointed as the Authority under the Payment of Wages Act, 1936.

Only two Provincial Governments in India publish journals similar to "The Labour Gazette" which is published monthly by the British Ministry of Labour (1) Bombay, where the "Labour Gazette" has been published every month since September, 1921, and (2) the United Provinces, where the "Labour Bulletin," modelled on the lines of the sister publication in Bombay, has been published monthly since January, 1941. The Bombay "Labour Gazette" is intended to supply complete and up-to-date information on Indian labour conditions and especially on the conditions existing in the Province of Bombay and to supply to local readers the greatest possible amount of information regarding labour laws and labour conditions in the outside world. Its contents include statistics and discussions regarding the cost of living index series which the Labour Office of the Government of Bombay regularly compiles for Bombay, Ahmedabad and Sholapur, wholesale prices index numbers for Bombay, retail food prices for five important centres in the Province, statistics of industrial disputes and workmen's compensation, full information regarding all industrial disputes in India, statistics of absenteeism with notes on the employment situation in five important industrial centres and information regarding prosecutions under the Factories Act. Since 1939, when the Bombay Industrial Disputes Act, 1938, was first applied to the cotton textile industry in the Province, the full proceedings of the Industrial Court and the reports on settlements reached in conciliation under the Act have been regularly reproduced in this publication. The "Labour Gazette" also gives, once in every three months, complete information with regard to all known trade unions in the Province. The only Province in India which maintains a first class and up-to-date library of books and periodicals on all kinds of matters connected with Labour is Bombay. The Library of the Bombay Labour Office is open to everybody who desires to make use of it on the premises.

THE CENTRAL GOVERNMENT.

The work of the Labour Department of the Government of India has increased considerably since the outbreak of the present war. This Department administers and controls all matters in connexion with the work of the National Service Labour Tribunals, the Technical Training Scheme and the Bevin Training Scheme. In accordance with one of the recommendations of the Rau Railway Court of Inquiry, the Labour Department has opened a new Branch for conducting family budget inquiries in important railway centres all over India and for compiling cost of living index number series for these centres. It is proposed that this Branch should co-ordinate and eventually centralise the compilation of all cost of living index number series which are being compiled by the different Provincial Governments at present. Mr S R Deshpande, M B L, B Litt (Oxon), who since 1924 was Assistant Commissioner of Labour with the Government of Bombay was appointed Officer on Special Duty in connexion with the work of this new Branch with effect from May 1942. Mr Deshpande's headquarters are at Simla.

In the same month, the Government of India appointed Mr R S Nimbkar, a prominent Labour Leader from Bombay as a Central Adviser on Labour Welfare. Mr Nimbkar's appointment is, at present, limited for the duration of the War. It is quite probable, however, that it will be made permanent. Mr Nimbkar is attached to the Headquarters of the Labour Department at New Delhi. The present Executive Staff of the Department is as follows:

Member-in-Charge The Honourable DR B R AMBEDKAR, M A, Ph.D, D Sc (Lond), Bar-at-Law

Secretary The Honourable MR H C PRIOR, C I E, I C S

Deputy Secretaries H TUFNELL BARRETT, I C S, S H ZAHEER, I C S, and D S JOSHI, I C S

Under Secretary W G LAMARQUE, I C S

Labour Welfare Adviser R S NIMBKAR

BENGAL.

The Government of Bengal appointed an officer of the Indian Civil Service in 1939 as an Employment Officer to investigate the problem of unemployment in the Province and to suggest remedial measures. This Officer made a comprehensive survey of the whole subject and as a result of his investigations he compiled two handbooks giving complete information about the prospects of employment in various Government Services and in important trades and industries. Besides furnishing information to unemployed young men regarding various suitable openings for them, this Officer now puts potential employees into touch with potential employers and also finds out what additional facilities employers are prepared to offer in their mills and factories for the training of Bengali youths. It is stated that he has succeeded in persuading a large number of the more important industrial and commercial firms to initiate training schemes for raw youths and to regularly provide a number of seats in their establishments for this purpose. With the invasion of Burma, the duty of finding employment for evacuees from Burma and the Far East has been placed on the Employment Officer.

In the year 1940, the Government of Bengal gave its approval to a scheme prepared by the Board of Economic Inquiry for conducting an Industrial Family Budget Inquiry in five zones for the whole of the Province at an estimated cost of Rs 30,000. The grant was placed at the disposal of the Indian Statistical Institute and the whole of the work was to be supervised by Prof P C Mahalanobis, I E S, the Secretary of the Institute. The Board submitted a report to the Government of Bengal in February 1942 giving the details of the work done in connexion with the inquiry up to the 15th of November 1941. The enumeration of families and collection of family schedules was completed for three out of the five zones into which the Province was divided. The round of collection of family budgets in a third zone was completed in a time which was much less than the time taken in the first two zones. The total number of families covered was 1,20,000.

The Bengal Trade Union Regulations have been so amended as to empower the Registrar of Trade Unions to exercise greater control over registered trade unions with a view to the prevention of mal-administration of their affairs. It is hoped that many undesirable features in the administration of trade unions will disappear when the staff of the Registrar is sufficiently augmented to enable the work of inspection to be carried out efficiently.

No Court of Inquiry or Board of Conciliation was appointed in Bengal under the Trade Disputes Act, 1929, during the year ending 31st March 1942 but it is of great interest to observe that the Officers attached to the Labour Department dealt with 702 conciliation cases during the year 1941.

During the year 1941, many requests were received by the Labour Commissioner, Bengal, from factories situated in Calcutta and other places, considered to be danger zones, for assistance in the formation of fire-fighting parties and rescue and demolition squads from among their workers. Such assistance was readily given by deputing the Labour Officers to address propaganda meetings where the objects and functions of the organisations were fully explained. Very encouraging response was received from workers to the appeals made to them by the Labour Officers to join the A R P Organization. Slit trenches and covered shelters have been provided in all factories under the supervision of the Factories Department. The personnel of the Labour Department of the Government of Bengal is as follows:

Minister-in-charge of Labour The Honourable Mr ARDUL KAPIM, Nawab Bahadur of Dacca

Joint Secretary, Commerce and Labour Department. M. K. KIPPALANI, ICS

Deputy Secretaries, Commerce and Labour Department A. D. KHAN, ICS and D. L. MAZUMDAR, ICS

Labour Commissioner and Registrar of Trade Unions A. HUGHES, ICS

Assistant Labour Commissioner and Chief Inspector, Shops and Establishments, Bengal KHAN BAHADUR S. A. E. B. MURSHEDI

Commissioner for Workmen's Compensation and Authority under the Payment of Wages Act S. N. MODAK, ICS

Labour Officers A. TALIB K. M. AZAD, D. CHATTERJEE, G. MOHAPAL and S. B. DATTA

Chief Inspector of Factories J. B. McBRIDE, OBE, A. M. MURCHIE

Certifying Surgeon A. PRUDHMAN, M.B., L.R.C.P., M.R.C.S.

BOMBAY.

Of all the Provincial Governments in India, the Government of Bombay have always maintained a progressive lead in their zealous and earnest solicitude for the welfare and well-being of the industrial labour employed in the Province, and the real pioneer work in the field of labour information and statistics in India during the last twenty years has been done by the

Bombay Labour Office. The Government resolution creating this Office and its various activities have been already dealt with in the prefatory paragraphs of this Chapter. The principal work of the Labour Office during the year ending June 1942 was a successful effort to maintain the pre-war standard of life of the vast majority of the workers employed in the industries of the Province by securing for them, from their employers, adequate dearness allowances rising on a sliding scale with each upward movement in the cost of living. The administration of the Bombay Industrial Disputes Act, 1938, has resulted in a heavy strain on the Labour Organization of the Government. The personnel of the executive and administrative staff of the Government of Bombay dealing with matters connected with Labour is as follows:

Adviser to H.E. The Governor on Labour C. H. BRISTOW, C.I.E., ICS.

Chief Secretary to the Government of Bombay H. K. KIRPALANI, C.I.E., ICS

Industrial Court. President: The Honourable Mr Justice H. V. DIVATIA. *Members* G. S. RAJADHYAKSHA, ICS, and B. K. DALVI.

Commissioner of Labour, Commissioner for Workmen's Compensation, Chief Conciliator, Bombay Industrial Disputes Act, and Registrar of Trade Unions G. B. CONSTANTINE, ICS

Assistant Commissioners of Labour N. A. MEHRBAN, MBE, FSS, J.P., S. V. JOSHI, BA (Cantab), J.P., A. S. IYENGAR; and V. P. KENI. Mr Keni is stationed at Ahmedabad. Mr Mehrban is also Registrar of Unions, Bombay Industrial Disputes Act and Mr. Joshi is Assistant to the Registrar of Trade Unions. Mr Joshi and Mr Keni are also conciliators under the Bombay Industrial Disputes Act.

Labour Officers M. P. LABOTCHAPDIEPE, I.P., A. S. BANAVLIKAR, M. S. WARTY and S. S. REGE

Assistant Labour Officers C. N. BAGVE and T. D. SAPPÉ

Chief Inspector of Factories T. W. JOHNSTONE, OBE

Labour Welfare Officer, Bombay: E. J. S. RAM

Lady Welfare Worker Miss P. G. DAVID

MADRAS.

The Commissioner of Labour in Madras is also the Chief Inspector of Factories but for the administration of the Factories Act he has a Technical Personal Assistant at Headquarters who is also in charge of the Madras Factories Circle. The Labour Commissioner in Madras has no special statistical office to deal with labour statistics and no reports have been published of any special inquiries into questions connected with industrial labour in the Province. The conduct of the Quinquennial Census into Agricultural Wages has, however, been placed in his hands and, with a view to the proper administration of the Payment of Wages Act a beginning has been made for a more accurate collection of

Industrial wages statistics information regarding which is included in the Annual Reports on the Administration of the Factories Act

Adviser to H E The Governor on Labour
T G RUTHERFORD, CSI, CIE, ICS

Commissioner of Labour, Commissioner for Workmen's Compensation, Registrar of Trade Unions, Chief Inspector of Factories and the Authority under the Payment of Wages Act
F R BRISLEE, ICS

Labour Conciliation Officers K S KRISHNASWAMI AYYANGAR (at Coimbatore), R JAGANNADHAM NAIDU (at Bimlipatam), and M VENKANNA NAIDU (at Nellimarla)

CENTRAL PROVINCES AND BERAR

Prior to January 1942 when the Government of the Central Provinces and Berar created the post of a Commissioner of Labour, matters in connexion with the administration of questions connected with Labour were dealt with by the Director of Industries. The new Labour Office in Nagpur has been modelled on lines similar to that in Bombay and it is to be responsible for the collection of statistics relating to the cost of living, industrial disputes and trade unions. The Commissioner of Labour is assisted by a Labour Officer and two Assistant Labour Officers. The Commissioner and the Labour Officer have been appointed Conciliators under the Trade Disputes Act, 1929

As a result of prolonged strikes in the Empress and in the Model Mills at Nagpur in May 1941, the Government of the Central Provinces and Berar appointed a Textile Labour Inquiry Committee to make a survey of wages, dearness allowances and industrial strife in textile mills in the Province and to make recommendations. The Committee was composed of Mr T C S Jayaratnam, CIE, ICS, as Chairman, Messrs R W Fulay, C B Parakh and K D Guha (Director of Industries) as members, and Messrs S H Batliwala, G Mohota, R S Ruikar and J N. Mujumdar as Associate Members. Mr Guha was also Secretary to the Committee. This Committee submitted its Report to Government in October, 1941. It recommended restoration of wages to the levels of 1931-32, supported the recommendations of the Mahalanobis Committee regarding the payment of dearness allowances, and advised legislation for the recognition, by employers, of registered trade unions. Among other important recommendations were the creation of a Labour Office, institution of provident funds for industrial workers, payment of a regularity bonus, etc

Adviser to H E The Governor on Labour
SIR GEOFFREY POWELL BURTON, KCIE, ICS.

Labour Commissioner and Registrar of Trade Unions D V REGF, B.A. (Cantab), ICS, Bar at-Law

Labour Officer R D GOUD, BSc

Assistant Labour Officers M P SHREIVASTAVA, MSc and R T VARMA MA

UNITED PROVINCES.

Following the recommendations of the Cawnpore Labour Inquiry Committee, the Government of the United Provinces sanctioned the post of a whole-time Labour Commissioner in March 1940. This Officer, like the Commissioner of Labour in Bombay, was to hold all the statutory appointments connected with Labour and he was provided with a permanent staff with effect from 1st April 1941. The work of the Labour Office of the United Provinces has been defined under the following four main heads: (1) Settlement of industrial disputes and disposal of individual complaints received from workmen or their organizations, (2) Collection compilation and publication of statistics of prices, wages, hours of work and conditions of employment, (3) Superintendence, direction and control of Labour Welfare Work, and (4) Publication of a Monthly "Labour Bulletin" on the lines of the Bombay "Labour Gazette".

Adviser to H E The Governor on Labour
DR PANNA LAL, MA, BSc (Cantab), D Litt (Agra), Barrister-at-Law, CIE, ICS

Labour Commissioner, Commissioner for Workmen's Compensation, Registrar of Trade Unions, and Chairman, Sugar Commission, United Provinces and Bihar J E PEDLEY, CIE, MC, ICS

Labour Officer DR R B GUPTA, MA, PH D (This Officer is on deputation to the Government of India as Labour Welfare Officer, Gun and Shell Factory, Cossipur)

Chief Inspector of Factories and Boilers
K K BATLIWALA, MI MAR E, A INST NAV E.

BIHAR.

In pursuance of the recommendations of the Bihar Labour Inquiry Committee, a permanent Department of Labour on the lines of the Bombay Labour Office was brought into existence in Bihar with effect from 1st July 1942. When the appointment of its full personnel is completed the staff will consist of a Labour Commissioner, two Assistant Labour Commissioners, two Labour Officers and Statistical and other assistants. The newly formed Labour Department has been engaged in the settlement of industrial disputes and in the examination of the recommendations contained in the Report of the Bihar Labour Inquiry Committee.

Adviser to H E The Governor on Labour
R E RUSSELL, CIE, ICS

Commissioner of Labour S N MAZUMDAR, ICS

Labour Assistant to Government VIDYA BHUSAN SHUKLA, MA

Registrar of Trade Unions Rai Bahadur NRIPTENDRA NATH DAS, MA, B.L.

Chief Inspector of Factories R SANAY

SIND.

In July 1940, the Government of Sind constituted an Advisory Board of Labour consisting of persons interested in labour matters for promoting better relations between employers and employees and to advise Government on labour matters in general. The Honourable Minister holding the Education Portfolio is the Chairman and the Commissioner of Labour is the Secretary. There are thirteen other members of the Board whose functions are to examine labour problems.

and to conduct surveys on all questions connected with Labour, to devise schemes for the development of better relations between employers and employees and to offer expert opinion and advice to Government on all important matters concerning Labour. In March 1941, the Government of Sind opened a Government Labour Exchange in Karachi and appointed the Commissioner of Labour as Labour Exchange Officer.

It is of interest to observe that the Commissioner of Labour in Sind has been appointed as an Arbitrator in a number of industrial disputes and that the Government of Sind has also appointed him as an Adjudicator in several cases referred to adjudication under Rule 81-A of the Defence of India Rules. As far as we believe Sind is the only Province in India where adjudication has been entrusted to an Officer of the Labour Department.

Minister for Labour The Honourable PIR ELAHI BAKHAWATI MA LLB

Commissioner of Labour, Registrar of Trade Unions, Labour Exchange Officer, Chief Inspector of Shops, and Conciliator, Trade Disputes Act M A SAYYID BA (Hons) (Oxon), MA LLB, JP

Chief Inspector of Factories and Boilers A J TUFFIELD, A M I M E

PUNJAB.

Punjab is the only Major Province in India which has so far not appointed a Commissioner of Labour. The administration of labour matters in the Province is in the hands of the Director of Industries who is also the Registrar of Trade Unions. The personnel of the administrative staff of the Government of Punjab dealing with matters connected with Labour is as follows:

Minister for Development and Labour The Honourable SIR CHATTURJI (HHOTI) RAY

Secretary to Government for Labour S K KHALANI, ICS

Director of Industries and Registrar of Trade Unions M H MAHMOOD, BA (Oxon) Barrister-at-Law

Chief Inspector of Factories C W STOWERS

OTHER PROVINCES AND INDIAN STATES.

In Assam the main question connected with labour is that concerning the recruitment of labour for tea plantations from other provinces. As inter-provincial migration is a central subject, the Provincial Government are not very actively interested in the special consideration of other labour questions. Notwithstanding this, however, the Government of Assam have obtained the approval of the Government of India and the vote of the Legislature for appointing the Controller of Emigrant Labour as part-time Labour Commissioner, with a whole-time Assistant. In Assam, J N TALBOT, ICS, is the present Controller of Emigrant Labour and Commissioner of Labour but as no Trade Unions have as yet been registered in the Province there is no Registrar of Trade Unions functioning but for the purposes of the Act the Registrar of Joint Stock Companies is ex-officio Registrar of Trade Unions. Labour conditions in Orissa and the North-West Frontier Province are not considered such as to justify the appointment of Labour Commissioners. In

Orissa, the Revenue Commissioner (P T MANSFIELD, CSI, CIE, ICS), is the Registrar of Trade Unions. In the North West Frontier Province, the Secretary to Government in the Legislative Department has been entrusted with the work of industrial and labour disputes and Khan Saheb SHAIKH ABDUL HAMID KHAN is the Registrar of Trade Unions. In Ajmer-Merwara, the Extra Officer, Ajmer-Merwara is Registrar of Trade Unions.

At pages 607 to 609 of the 1941-42 Edition of this publication we gave a special Chapter to Labour in Indian States. As there have not been any changes of substance with regard to the administration of questions connected with Labour in those States for which information was given—Mysore, Baroda, Indore, Travancore and Cochin—we are not reproducing the information already given regarding these States in the present Edition. We have, however, received information regarding Labour in H E H The Nizam's Dominions for the first time this year and some interesting particulars connected therewith are reproduced below.

On the 1st April 1941, there were 629 industrial concerns subject to the Hyderabad Factories Act in the State of Hyderabad employing 42,219 operatives of whom 12,828 were engaged in coal mining, 9,516 in cotton spinning and weaving and 7,891 in Shahabad stone quarrying. Various Labour Acts and Regulations have been instituted in the Dominions. In addition to the Factories Act which embodies provisions for the health and safety of labourers, there is a Mines Act (1320F), a Boiler and Machinery Act. The Hyderabad Labour Compensation Act (1349F) and a Maternity Benefit Act. Debt Conciliation, Land Mortgage and Money-Lenders Regulations have been framed for the protection of agriculturists and agricultural labour. Hours of work in the majority of the factories do not exceed 54 or 60 per week and in Government concerns are limited to 7 to 8 per day.

H E H The Nizam's Government have appointed a Committee for speeding up further labour legislation to regulate trade unions, payment of wages and employment of child labour and to provide for the settlement of industrial disputes. The Hyderabad Trade Unions Bill and the Protection of Debtors Bill were under the consideration of the Hyderabad Legislative Council when we went to Press. In the new scheme of Reforms which is being drawn up, the Government has approved of the proposals to reserve two seats for labour representatives in the Legislative Council and to form a Board for safeguarding the interests of the labouring classes. A departmental Employment Bureau has been created for solving the problem of unemployment. The Department of Statistics (*Director* MAHABHUSAIN) has instituted quinquennial inquiries into wages and conditions of employment of agricultural and industrial labourers since the year 1920 and the first printed Report on the Labour Census was published in 1935. The Second Report on Labour Wages Census (Rural and Urban) 1940 is under the consideration of Government. The Department is reported to have chalked out schemes for adequate standards of life for families of labourers and for the compilation of cost of living index numbers for working and middle classes.

THE INDIAN TRAIN SERVICE.

The distance and 1st and 2nd class single journey railway fares (inclusive of increased charge) from Bombay to the Principal centres of other parts of India are as follows.—

G. I. P. Railway.

VICTORIA TERMINUS to	Miles	1st Class	2nd Class
		Rs a p	Rs a p
Delhi (<i>via Agra</i>)	957	98 12 0	49 5 0

CIVIL AVIATION.

The development of internal air services in India was first essayed by Lord (then Sir George) Lloyd during his Governorship of Bombay (1918-23). The first air service was organised by the Government of India between Karachi and Bombay and was operated by the Royal Air Force. It was purely a Government venture and was established as a temporary and experimental measure during the fair-weather season of 1920, with the object of testing the extent to which an airmail service was likely to be used by the public. It was closed down as sufficient data as to running expenses had been collected and its continuance as a purely commercial concern was not advocated.

The general attitude of the Government of India for some time after this was that as no air services in the world had yet been run without a Government subsidy and as India had no money available for such a purpose, a general development of air services in India must await more prosperous times. The pressure of external conditions in favour of Indian aerial enterprise gradually increased. The inauguration of French and Dutch air services across India, as well as the institution of a regular weekly service between England and Karachi, and the general increase of civil aviation in all parts of the world and of visits of flyers of different nations to India, stimulated both Government and public opinion. India had become a party to the International Air Convention and under this was under a moral

obligation to provide ground facilities for aircraft from other countries.

The problem of internal air services was freshly taken up by the Government of India in the Department of Industries and Labour when Sir Bhupendranath Mitra was member of Government for that portfolio. Force of circumstances has already necessitated the appointment of a Director of Civil Aviation and the first holder of the post was Lt-Col F. C. (now Sir Francis) Sheldermine, O.B.E.

Non-official members of the Assembly, under the leadership of Dr. Moonje, then an elected member, for sometime strongly pressed Government to institute a practical system for the training of young Indians in civil aviation. They foresaw that the development of civil aviation in India was only a matter of time.

The reflection of this foresight is mirrored today in the organisation of the trunk air line of India. The aerodromes and landing ground on the main air routes are controlled by Indian Aerodrome Officers who are responsible for their safe operation, while the flying personnel on the internal air routes is 90 per cent Indian. On the engineering side Indians are now taking their places not only as Assistant but as Chief Ground Engineers to internal operating companies and are already finding their way to responsible positions as Aircraft Inspectors with the Directorate of Civil Aviation.

Development of Indian Air Services.—Sir Bhupendranath Mitra was in due course obliged to reconsider the question of assisted internal aerial services in India. An arrangement was made by which the Imperial Airways' Service between Croydon and Karachi was on 30th December, 1929, extended to New Delhi, mails from and for Europe being carried to and from each week. This conveyance of mails between New Delhi and Karachi was performed under a special arrangement, the chief point of which was that the service was conducted by the Government of India and that British Airways chartered to them machines for the purpose. This meant, in effect, that the Western service of the Airways Company continued to Delhi, but that technically the service from Karachi eastwards, belonged not to them but to the Government of India. Passengers as well as mails were carried. On the expiration of the period for which the contract on these lines was arranged, the Government of India decided not to renew their charter with British Airways and adopted the alternative course of contracting with the Delhi Flying Club to carry the weekly Karachi-Delhi air mail. Passengers were also carried by this service. This, like the earlier special arrangement with British Airways, was obviously a transitional plan. It came into operation early in 1932. It filled the need of the moment pending the development of a permanent scheme. Before Sir Bhupendranath Mitra could critically develop the matter, he was succeeded in charge of the Departmental portfolio by Sir Joseph Bhore and the latter entered with enthusiasm into the problem. Its solution was largely assisted by a great deal of spade-work carried out by Col. Shelmerdine before he resigned his appointment as D.C.A. in order to take up the corresponding post in England. A scheme was worked out under the direction of Sir Joseph Bhore for the institution of a weekly air service between Karachi and Calcutta in connection with the weekly arrivals and departures of air mails conveyed by British Airways Ltd., from and to England. If the Government of India had at this time taken no steps towards the organisation of a service of the kind, they would have been unable to prevent British Airways or some other non-Indian concern from establishing one and the authorities in India were determined that civil aviation within India should be Indian in character, either through the development of private enterprise or through the institution of Government owned services.

The acute financial stringency following on the world depression, necessitated the abandonment of the Government Karachi-Calcutta service in 1931. Four Avro-10 aeroplanes had already been purchased for the service and they were sold, one of them being retained for the use of Their Excellencies the Earl and Countess of Willingdon, who had newly arrived in India on the appointment of the Earl to be Viceroy. The machine continued in Their Excellencies' service until 1934, when a new up-to-date aeroplane was purchased for their use and their old one was retained for the use of senior Government officials.

Efforts to attain the desired result were revived successfully in 1933. Arrangements were made

with the British Government and British Airways, Ltd., for the extension of the London-Karachi air service across India from Karachi to Singapore, as a link in the England-Australia air service. A private company called The Indian Trans-Continental Airways, Ltd., was formed with a rupee capital and a majority of Indian Directors, in which shares are held by British Airways, Ltd., hold 51% of the shares, Indian National Airways, Ltd. 25 per cent and the Government of India 24 per cent. This Company then operated jointly with British Airways a weekly service from Karachi to Singapore, where it connected with Qantas Empire Airways' weekly service from Singapore to Australia.

Indian National Airways, Ltd. was established largely through the efforts of Mr. R. E. Grant Govan, C.B.E., to participate as a shareholder in Indian Trans-Continental Airways, and to develop feeder and other internal air services in North India. They opened a bi-weekly service between Calcutta and Rangoon and a daily service between Dacca and Calcutta with prospects of extension to Assam. Under a ten year contract with the Government of India they also instituted a weekly service from Lahore to Karachi, to link with British Airways London-Karachi services. The Rangoon and Dacca services from Calcutta were abandoned in 1935, owing to lack of public support.

Before all these developments, however, the first move had taken place in Western India. Through the enterprise of Tata Sons Ltd., under a ten year contract with the Government of India, a feeder service was started in 1932 between Karachi, Bombay and Madras, connecting at Karachi with the London-Karachi service. From the beginning of 1935, British Airways London-Karachi service, and with it the Trans-India service to Calcutta and the feeder services Karachi-Lahore and Karachi-Bombay-Madras, were operated twice weekly. The second trans-India service was extended to Australia in 1936.

Empire Air Mail Scheme.—The initiative in this development was taken by His Majesty's Government. In September 1936 an agreement was reached with the Government of India and the Government of India simultaneously negotiated with the Government of Ceylon for the extension of the Karachi-Madras service to Colombo. The new services were inaugurated on the 28th February 1938, with four services a week each way from London to Calcutta. The frequency of the two feeder air mail services in India, viz., Karachi-Madras-Colombo and Karachi-Lahore was simultaneously increased to four each service maintaining connection with the easterly and westerly flights of the main trunk service. The frequency was increased to five when the services in the Australian section were augmented at the end of July, 1938, and all first class mails to Empire participating countries were conveyed by air. The Empire Air Mail scheme was suspended in September, 1939, on the outbreak of the War with Germany, but a restricted service was maintained until June, 1940, when, on Italy's entry into the war, air mails to the United Kingdom were totally suspended. In December 1940, the possibilities of introducing a direct air link between Britain

and Durban investigated and a "short circuiting" route was inspected by Major J. R. McCrindle, Deputy Director-General of the British Overseas Airways

India-England Airgraph Service—This new service was inaugurated on February 2, 1942. The airgraphs are photographed at Bombay on a miniature film measuring about half an inch square. The films are sent throughout by air from India to the United Kingdom, where a photograph facsimile, measuring about five inches by four inches, of the original letter, is made from the film and delivered to the addressee by the British Post Office enclosed in a cover. The rate of postage originally fixed at fourteen annas was reduced to eight annas on March 2.

The daily average number of airgraphs despatched during the first month was about 4,500.

How the airgraph conserves load capacity is seen from the fact that one spool of 3,000 filmed letters weighs only 12 ounces, while 3,000 half-ounce letters would weigh about 100 pounds.

A certificate of posting of airgraphs are obtained on payment of the usual charges just as is done in the case of other letters. If desired, the cover containing the airgraph addressed to the Airgraph Section Bombay G P O, may, be registered, in that case the registration charges only need be paid.

The question of installing an enlarging apparatus in India, so as to permit of an inward airgraph service from the United Kingdom, is under consideration, but it may be some time before it will be possible to secure the necessary apparatus.

Internal air services—In 1937 Messrs. Tata Sons, Ltd., established a service between Bombay and Delhi, calling at Indore, Bhopal and Gwalior. At present, the service runs twice weekly during the cold weather season (October to May). Besides this Tata Sons have extended their Bombay-Trivandrum service to Trichinopoly where it connects with one of the four main services to Colombo. This service is also operated seasonally during the fine weather months. Surcharged air mails are carried on both services.

The Air Services of India Ltd., Bombay, inaugurated in November, 1937, an air service from Bombay to Bhavnagar, Rajkot, Jamnagar and Porbandar in the Kathiawar States. The service was terminated in 1940. The twice weekly Bombay/Poona/Kolhapur Line was also terminated due to War in 1940.

The Indian National Airways run two services, viz., Delhi-Lahore-Karachi and Karachi-Calcutta via Lahore and Delhi, the former once a week, the latter twice a week, in each direction.

The K L M were operating once a week between Lydda (Palestine) and Sydney (Australia). They have now suspended their services across India in view of the international situation. After the entry of Italy into the war, Lydda, in Palestine became the westbound terminus of

the service. The fall of Batavia made the service unremunerative and the aircraft are now likely to be made over to Government for the duration of the war.

Air Force not operating

Instruction in Aviation—It is satisfactory to note the speed with which young Indians have qualified themselves in almost every sphere of commercial aviation, considering the high qualifications, long and expensive training and paucity of facilities for this training in India itself. At one time it was essential for instructors to be trained in England but now it is possible for this training to be obtained in India. It must still be recognised that certain forms of advanced training are not yet available in India. The training of Aerodrome Officers is now carried out in India at Karachi Air Port under the supervision of the Chief Aerodrome Officer.

Flying training is given in India through Clubs. There are ten flying clubs in all, namely—The Bengal Flying Club (Dum Dum), Bombay Flying Club (Juhu), Delhi Flying Club (New Delhi), Karachi Aero Club (Karachi Air Port, Drigh Road), Northern India Flying Club (Lahore), United Provinces Flying Club (Cawnpore and Lucknow), Madras Flying Club (St Thomas Mount), Jodhpur Flying Club (Jodhpur), Hyderabad State Aero Club (Begumpet, Hyderabad), and Jaipur Flying Club (Sanganer). The first seven of these clubs are subsidised by Government.

The club movement dates from March, 1927, when as a result of the interest taken in the subject by Sir Victor Sassoon, Bt, M L A, it was discussed by the Indian Legislative Assembly. An encouraging atmosphere was thus created and in the same month the Aero Club of India and Burma was formed. Strong committees were then formed in Delhi, Calcutta, Bombay and Allahabad, with the object of developing interest in the movement and in order to utilise the Government grants which were at this time proposed. The formation of four local flying clubs followed. In December, 1927, the Government of India received from Sir Victor Sassoon a letter saying that subject to a grant of Rs. 30,000 to the Aero Club for the year 1928-29 and a grant of Rs. 20,000 to each club formed, he would bear any deficit between the clubs' income and expenditure until the grants became available. This offer the Government accepted and further decided that they would provide for each club an initial equipment of two aeroplanes, a spare engine and a contribution towards the cost of a hangar where no hangar was already available. The grants commenced on 1st April, 1928.

Three more clubs were started later, the Northern India, the UP and Madras, and seven clubs are now subsidised.

Subsidy to Flying Clubs—It has become increasingly evident in recent years that saturation point was being reached in the entry of new pupils able to afford the cost of learning to fly at the prevailing rates. An endeavour has been made to bring about a small measure of improvement in the new scheme of subsidy to the

seven clubs in British India, which came into operation on 1st April, 1939, for a period of three years. Bonuses of Rs 100 and Rs 50 are paid cheapening the cost of flying to the individual and so tending to promote a revival of interest in private flying as a sport, the scheme is also designed to encourage the clubs to equip themselves with more modern types of training aircraft. The subsidy which is limited to a maximum of Rs 25,000 per annum (hitherto Rs 21,000) to each club is divided into two parts as shown below —

(1) *Fixed Annual Subsidy*—A fixed payment is made to each club according to the number and types of aeroplanes maintained for the use of members, on the following scale —

No of aeroplanes	Class A (over 120 H P.) Rs	Class B (between 75-120 H P) Rs	Class C (below 75 H P) Rs
1	10,000	8,000	6,000
2	12,000	9,500	7,000
3	14,000	11,000	8,000
4 or more	16,000	12,500	9,000

Whereas the previous scheme provided a fixed subsidy for the maintenance of aircraft up to a limit of three, under the new scheme the number is raised to four. Aircraft are reclassified each year. The horse power is a general guide, but such factors as obsolescence of the type of aircraft and general utility for training purposes are also taken into account.

(2) *Bonus for pilots trained*—Subject to a maximum payment of Rs 9,000 a year for each club, a bonus of Rs 300 is paid for each new pilot trained *ab initio* for an 'A' licence on club aircraft and Rs 100 for each 'A' licence renewed with a minimum of five hours' flying on club aircraft (provided that the pilot does not hold a higher category of licence). From these bonuses, payments of Rs 100 and Rs. 50 respectively are made to the pilots, as already mentioned, in the case of British subjects and the subjects of Indian States only. Bonuses at the above rates are also paid to the Jodhpur Flying Club.

In the year 1938-39, the last year of the previous subsidy scheme, it was again found that the clubs were unable to earn the maximum grants permissible under the subsidy agreements. As in previous years, this situation was met by granting a bonus on flying hours in addition to the payments made for pilots' 'A' licences issued and renewed.

In 1941 the Air Force took over the Lahore Club and was also using the Delhi Club. The Calcutta Club has now decided to close down and the Calcutta Club is unable to function.

The Government of India have not decided to stop subsidies to flying clubs, but the position of clubs is not very clear in view of operational factors which determine whether a particular club can continue to function or not.

In March 1942, one of the members of the Council of State moved a resolution recommending to Government not to discontinue the subsidies to civil flying Clubs in the country except in provinces where a proclamation of emergency was in force. In reply the communications Secretary observed that if the Air Force felt that more concerted training was required at a central organisation under the immediate control of the Defence Department with a view to obtaining more co-ordinated and quicker results the flying clubs must give way. If, however, after satisfying Air Force requirements, Government considered it possible to enable some clubs to discharge their present functions, Government would continue to help them.

Purchase of Tiger Moths—In order to assist the clubs in modernising their equipment and to meet the need for a larger reserve of modern training aircraft in India, the purchase of seven Tiger moths was sanctioned, one of which was issued on loan to each of the seven subsidised clubs. The cost of the seven aeroplanes amounted to Rs 1,20,000. The Tiger Moth is a type widely used by the Royal Air Force for *ab initio* training and is already in use by a number of the clubs in this country. It has the particular advantage that it is simple to repair and maintain and spare parts are readily obtainable. The aircraft was complete with blind flying and night flying equipment for advanced training.

The Indian Gliding Association—The Indian Gliding Association was founded by Mr P M Kabali as a private enterprise in 1931. It has instituted fortnightly instructional courses in gliding and soaring. The course is designed for the benefit of those who are willing to devote a holiday to learn to glide or, if already qualified pilots, to add as much as possible to the quality and quantity of their flying. During the first two years the Association trained several pupils. Mr Kabali was the first in India to be given a licence. From the year 1938 onwards the Association remained defunct. In 1940 it received Government support and as a result the Association has revived its activities. The Office is located at Brabourne Stadium, Bombay.

Aero Club of India and Burma—The Aero Club of India and Burma, besides being the parent club to which the flying clubs are affiliated, is also the representative in India of the Federation Aeronautique Internationale, the Royal Aero Club of Great Britain and the Automobile Association. The Aero Club also serves the private aviator in connection with customs carnets, diplomatic permits, licences for the carriage of arms and camera and maps for flights abroad. Due to war the normal Club activities have been suspended.

Civil Aviation Scholarships—(a) *Government of India* Apart from the assistance given to pilots for advanced training, the Government gave the undermentioned scholarships —

Pilot Instructors—A scholarship was awarded to an Indian 'B' pilot. He was given an instructor's course with the United Provinces Flying Club and has since found employment.

Transport Pilots—An Indian 'B' licence pilot with assistance from the Government of India has completed his training in England for employment as a First Officer by Indian Trans-Continental Airways, Ltd

(b) **Provincial Governments**—The Government of the United Provinces has provided a sum of Rs 5,000 for the training of 10 'A' licence pilots at half rates, of whom two will be selected to train for the commercial pilot's 'B' licence, also at half rates

(c) **Private Bodies**—The Trustees of the Parsee Panchayat Funds and Properties of Bombay have awarded financial assistance to two 'A' licence pilots for obtaining 'B' licences

The Trustees of Sir Ratan Tata Trust of Bombay have awarded assistance amounting to Rs 5,300 to two students for aeronautical training. One will be enabled to train for A,B,C and D ground engineer's licences in England. The other will receive training for the pilot's 'B' licence in India

The Trustees of Sir Dorabji Tata Trust of Bombay have also awarded assistance to two students for technical training in England. One student has been given a grant of Rs 3,000 and the other a grant of £300

(d) **Public Companies**—Two scholarships have been given by British Airways, Ltd, and one by Sir Homi Mehta, Vice-Chairman of Indian Trans-Continental Airways, Ltd, for a special course of training in England for Indian 'B' licence pilots with a view to their employment as First Officers

Indian Pilots and Empire Air Mail—In 1935, British Airways sent an Indian 'B' licence pilot to England for advanced training with a view to his employment as a First Officer. This pilot was given further training by Government in 1938 in the Avro X Aeroplane on his return to India. He was confirmed in his appointment as a First Officer, but subsequently resigned. Pursuing the policy of training selected Indians as First Officers for the Empire air mail routes Government gave assistance in 1935 to another Indian, but he did not complete his course. In 1936 assistance was given by Government to a third Indian who has completed his training. Early in 1939 a selection was made of three Indian 'B' licence pilots for training in England. Two of these received scholarships from British Airways and the third from Sir Homi Mehta, Vice-Chairman of Indian Trans-Continental Airways Ltd

Advanced Training of Pilots in India—There is no training school in India for giving advanced training to commercial pilots to enable them to obtain endorsements on the 'B' licences to fly multi-engined aircraft. In 1937, Government placed its three engined Avro X at the disposal of selected 'B' licence pilots for this purpose. In 1937, six pilots were afforded some degree of financial assistance for the training. Owing to the success of the scheme two further schemes were sanctioned in 1938. Under the first scheme, two pilots received training on their own expense

and two at half the normal flying rate. Under the second scheme, nine commercial pilots were given 5 hours flying instruction each at Government expenses. Out of these, four were again selected for further training to complete 10 hours solo in this aeroplane. This scheme was completed early in 1939

Wireless Operators—Three candidates for W-T Operator's licences received training at the Aeronautical Training Centre during 1938

Eleven licences were issued in 1938, of which four were for operators holding United Kingdom licences. Four are provisional licences to enable the holders to secure the flying experience necessary for the issue of a regular licence. Of these 11 operators, nine are in employment.

Ground Engineers—48 ground engineers obtained licences in 1938. Ten were trained by the flying clubs, 22 by the Aeronautical Training Centre, six in England and 10 by operating companies. The majority of these men have received training only up to the standard of the 'A' or 'C' categories. 23 of them have only the single 'A' or 'C' category. For the present, since the field for employment of ground engineers with these qualifications is limited, the flying clubs have been advised to restrict new entries of apprentices

Aeronautical Technical Institute—Since 1937 the Air Services of India, Limited, run the Aeronautical Technical Institute at Jamnagar which has provision for training a limited number of students as ground Engineers according to the course prescribed for 'A' and 'C' licences and also for 'B' and 'D' licences issued by the Government of India. Besides their own cadets for ground engineering, the Institute has also undertaken to train 100 Government mechanics

Indian Air Races—The first Indian Air-race was flown over a Delhi-Agra-Jhansi-Lucknow-Agra-Delhi course in February 1932, and was very successful. There was a similar race over approximately the same course in February 1933, when the entries were good and included two competitors who specially came out from England for the contest and the event was again completely successful

The origin of these two races was the offer by Their Excellencies the Viceroy (the Earl of Willingdon) and the Countess of Willingdon, of a Challenge Trophy for such a race

There was no race in 1934. One was programmed for December 1934, to be flown from Calcutta to Bombay with a halt for one night at Cawnpore. Six months' notice was given and substantial cash prizes, in addition to the Viceroy's Challenge Trophy, were offered, but only six entries were received. The Aero Club Committee in their announcement to this effect said that in their opinion the programme was too ambitious for the class of competitors who had hitherto entered, most of whom could not afford to fly to the start, race over 1,200 miles and then fly home again. They added, "Air racing, like every other form of racing, costs money and can only be

encouraged by the patronage of wealthy sports men and in India this has been the exception rather than the rule up to now" The only funds regularly available for the purpose are the interest on one lakh of rupees given by Sir V Sassoon to form an Irwin Flying Fund for flying sport prizes The fund is held by a Trust the members of which are the Director of Civil Aviation and the Chairman of the Aero Club

The club held in February, 1936, a two-day race from Madras, via Bombay to New Delhi Entries were received not only from different parts of India but from abroad. The race was a great success. It was won by an Indian amateur competitor and was regarded as having contributed in an important degree to general air-mindedness in India.

All-India Air Rally—On the 5th and 6th December 1938, an All-India Rally was held at Karachi on the occasion of opening of the newly constructed Air Port Building His Excellency the Governor of Sind performed the opening ceremony and gave away the prizes to the winners

All flying clubs in India affiliated to the Aero Club of India and Burma participated. The Viceroy's Cup given for the best aggregate results obtained by one of the competing clubs was won by the Karachi Aero Club The Sir Victor Sassoon Challenge Trophy given for the best all round progress during the year was awarded to the Karachi Aero Club

International Flights—In 1938 there were 21 international flights to, from or across India by non-Indian Aircraft and one flight to India by an Indian Aircraft.

Two Royal Air Force aeroplanes succeeded in flying non-stop from Ismailia (Egypt) to Darwin (Australia), a distance of 7,126 miles, which was flown in just over 48 hours at an average speed of 149 miles per hour A third machine landed owing to lack of fuel only a few hundred miles short of its destination These flights were aided by the aeronautical wireless and meteorological services in India

A non-stop flight in an Arado light aeroplane from Benghazi (Tripoli) to Gaya was made at the beginning of January by the German pilots, Lieutenants Pulkowski and Jennet The distance covered was approximately 4,000 miles and the feat was claimed to be a record for light aeroplanes Lieutenant Pulkowski unfortunately met his death in an accident to the aeroplane at Adras

Two French military aeroplanes crossed India in January, 1939, on their way to Indo-China.

Record flights were made in March, 1938, by flying Officer A E Clouston and Mr V Ricketts from England to New Zealand and back, and in April 1939 by Mr H F. Broadbent from Australia to England

Flying by Private Owners—While no flights by Indian private owners were noteworthy from a record-breaking point of view,

three of them deserve mention A private owner in a two-seater Hornet Moth flew with a passenger from Calcutta to Batavia and back. Inclusive of two days' sight-seeing in Batavia and a day's halt at Singapore, only 14 days were spent on the round journey The same return trip by boat takes about one month

The second flight was from Lahore to Srinagar and back The pilot claimed to be the first private owner to take a single engined aeroplane into Kashmir. In order to get above the clouds over the Pir Panjal Range he found it necessary to fly as high as 19,000 feet

A third private owner flew his two-seater Miles Hawk on a business trip from North Bihar to Rangoon and back His flying time to Rangoon was 8½ hours as against 4 days by train and boat He stated that his actual expenses in fuel worked out to Rs 130 for the double journey As he and his passenger shared the expenses it cost them Rs 65 each as against a fare by train and boat of Rs 450

The number of registered privately-owned aircraft on the 31st December, 1938, was 65, as against 64 on the same date in the previous year All except ten were of British design and manufacture Twenty were owned by Ruling Princes and Chiefs

Ground Organisation—An additional Rs 10.82 lakhs was made available for Civil Aviation Capital Works by the decision that capital expenditure on wireless works, which had been included originally in the Civil Aviation Works Programme, should be borne by the Posts and Telegraphs Department The total amount provided for expenditure under this head in India now stands at Rs 87.93 lakhs (£659,475) The expenditure during 1938-39 amounted to Rs 19,80,000 (£147,000), making the total expenditure to the end of that year Rs 69,21,000 (£519,100)

Night Lighting Equipment—The lighting installations are continuing to give excellent service and to be used with increasing frequency. At Karachi for example, the number of arrivals and departures between sunset and sunrise on regular air services increased from 163 in 1937 to 743 in 1938 Revenue from the extra fees charged for night landings at all lighted aerodromes amounted to Rs 3,581 in 1938 as against Rs 3,041 in 1937. The value of the free facilities given to air mail contractors in respect of such fees was Rs 4,653 and Rs 2,643 respectively The Electrical and Mechanical staff which is responsible for operation and maintenance is being recruited up to full strength and the entire work of maintaining ground lighting installations is undertaken departmentally With the exception of temporary breakdowns of new beacons installed at Larkhana and Nawabshah on the Karachi Lahore route, there have been no instances of failure of lighting equipment

Several improvements have been made to lighting systems At Dum Dum and Allahabad flood-lights have been resited to conform with other improvements effected to the aerodrome approaches At Delhi, Allahabad, Cawnpore, Bombay and Hyderabad (Sind) the substitution

of red for orange boundary lights on sections of the aerodrome boundary which are unfavourable for take-off and landing has been completed

Arrangements have been made with the Chief Inspector of Lighthouses for trials to be made at Karachi to determine the effectiveness of the Manora marine light as an air beacon Karachi Airport is already provided with a location beacon of Neon type which affords guidance to pilots within a range of 25 miles, when they may be flying at a height above the beam of the Manora light

On the Karachi-Jacobabad route, the ground lighting installations at Jacobabad and Padidan have been completed and the airway beacons at Nawabshah and Larkhana are operating regularly Indian National Airways have found these beacons very useful during the short days of the cold weather season when early departures and late arrivals at Karachi have necessitated a certain amount of night flying Lighting equipment on the Karachi-Bombay route has been completed

Aerodrome and route traffic control—The efficiency of the system of aerodrome and route traffic control has in the past been handicapped by the shortage of aerodrome staff, the lack of training of recently recruited staff and the incomplete state of the communication system

On the Trans-India route the ground services are now staffed to provide a 24-hour watch when required, whilst the developments which have taken place in wireless and meteorological facilities and the progressive improvement in methods have raised the efficiency of the organisation very considerably The training school at Karachi is now actively at work and the staff side of the new aerodrome organisation is now in a position to obtain the specialised technical knowledge as well as the practical experience which the duties require

Trans-India Seaplane Route Organisation—An inspection of the organisation of the seaplane route from England to Singapore to assist in reaching a decision on all outstanding problems was carried out early in 1939 by Lt-Commander A J Tillard of the Air Ministry

It was decided after consideration of all the data and experience collected in the past years that there is no suitable alternative to Raj Samand

The lighting of the Calcutta seaplane port for night operation has been completed Schemes for night lighting at Allahabad, Gwalior and Raj Samand have been drawn up Hitherto lighting facilities had been provided only at Karachi seaplane port

During the cold weather months, December to February, some difficulty was experienced in connection with early departures and late arrivals of flying boats at Calcutta owing to the prevalence of morning and evening fog on the river Arrangements were therefore made with the Director General of Observatories to station a current weather observer at Bally Reach to give immediate warning of fog formation This

precaution proved effective in keeping pilots informed of the possibility of dangerous conditions developing

The problem still remains of finding an alternative alighting place so much less subject to influence of fog conditions that it can be relied upon to serve as an emergency base at times when Bally Reach is fog-bound Further action in this direction will be taken in conjunction with the Air Ministry At the request of the Air Ministry investigations have been made with regard to the selection of a permanent shore site at Bally Reach

Wireless Services—The aeronautical wireless service now comprises eleven stations, namely—Allahabad, Allahabad, Bombay, Calcutta, Chittagong, Delhi, Gaya, Hyderabad (Deccan), Jodhpur, Karachi and Madras In addition, there are three stations at Gwalior, Raj Samand and Jiwani which at present are operated by British Airways, Ltd, on behalf of the Air Ministry

The installation of new wireless equipment is still in progress both on the Trans-India route and the South India route and the process of improvement will be carried several steps further by the programme of new works sanctioned When it is completed it is expected that the full development of the present wireless programme will be reached and a sufficient number of operators will have been trained to provide the full hours of watch demanded A 24-hour service is now being given at D F stations on the Trans-India route, but for the present, except at Karachi, the short and medium wave installations at the aerodromes will not usually be manned for more than 18 hours daily

On the South India route the aeronautical wireless service between Karachi and Bombay, on the standard aviation wave length of 900 metres, is regularly used by Tata's aircraft To relieve congestion at Karachi it is intended to adopt a wave length of 850 metres for the South India route as soon as a second medium wave transmitter and receiver have been installed there

South of Bombay a wireless service for aviation is at present operated on the shipping wave length of 600 metres of Madras and Colombo pending the completion of aeronautical stations at these places Tata's aircraft operating on this section of the route are not at present equipped with wireless and the traffic consists of point-to-point messages

In August 1939, Tata Air Lines erected their own wireless station at Bhuj aerodrome This station gives advance information regarding weather conditions for the Bhuj-Karachi and Bhuj-Ahmedabad sections and also intimates the pilot in advance the condition of the Bhuj landing ground during the monsoon

Wireless communication facilities are also given from this station to British Airways' flying boats when operating on the Karachi Jai/Raj Samand route

Meteorological Services—Further improvements were effected by the India Meteorological Department—Meteorological arrangements for double-pilot

balloon observatories were established at Raj Samand and Gwahor to meet the requirements of the flying boat service. The pilot balloon and current weather observatory at Gwadur was transferred to Jiwani, the pilot balloon and current weather observatories at Allahabad and Alipore (Calcutta) were moved to the aerodromes, and a temporary observer was posted at the seaplane base at Calcutta for the issue of special reports, particularly regarding visibility for the benefit of the flying boat service. On the Karachi-Colombo route, the observatories at Bhuj, Malegaon and Hyderabad (Begumpet) began taking regular afternoon pilot balloon observations and arrangements were made for an additional pilot balloon ascent at Ahmedabad in the early morning. The observatory at Bangalore also commenced an additional daily pilot balloon observation in the afternoon.

A new aviation section has been set up at the Upper Air Office, Agra, which will be later transferred with the upper Air Office to Delhi. This aviation section will be responsible for the organisation of the meteorological service on air routes, and, when transferred to Delhi, will maintain liaison with the Civil Aviation Department.

The international codes have been adopted for all current weather reports, including reports of dangerous phenomena and improvement thereof. New editions of the pamphlet on meteorological organisation for airmen and of the Aviation Weather Codes (Pocket Card) were issued.

On the Trans-India air route, the routine arrangements for the issue of forecasts, upper wind and current weather reports by W/T to all main aerodromes and to aircraft in flight were continued. Airmen are able to refer to the latest report on Weather Notice Boards at aerodromes or to get reports by W/T while in the air at routine times and at other times on requisition. On other routes weather reports are prepared by the Meteorological Office to suit the time-table and needs of the air services.

Arrangements have been made for the routine distribution of pilot balloon and current weather reports along the Karachi-Colombo route and the system is working satisfactorily.

Legislation, Rules, etc.—The Indian Aircraft Act, 1934, was further amended by the Indian Aircraft (Amendment) Act, 1938. The latter empowers the Central Government to take measures for the sanitary control of air navigation in emergencies.

The draft of the Public Health (Aircraft) Rules which are based on the International Sanitary Convention for Air Navigation, with modifications to suit conditions in India, has reached a final form and the Rules will be promulgated shortly.

International Commission for Air Navigation.—India was represented at the 26th Session of the International Commission for Air Navigation, held at The Hague during May and June 1935, by Mr J. A. Shillidy, C.S.I., I.C.S. (ret'd).

Aeronautical Maps.—The preparation of a series of aeronautical maps for India on the scale of 1/1,000,000 has been undertaken by the Survey of India. Hitherto, there have been two series of general maps on this scale, namely the "Carte Internationale" series and the "India and Adjacent Countries" series. In order to facilitate the work of keeping the maps up-to-date, it has been decided to concentrate in future on one series only. The "Carte Internationale" has been selected and this will be the basis of the new aeronautical maps. As an essential first step the map sheets are being completely revised and reprinted in turn. As each sheet is completed a special edition will be prepared on which will be surprinted air information conforming so far as possible with the recommendations for the International Local Aeronautical Map of Annexe F of the International Convention.

The Aeronautical information comprises details of aerodromes and landing grounds, wireless and meteorological facilities, obstructions to air navigation such as high factory chimneys and power lines, air and marine lights, prohibited areas, etc.

Accidents.—A total of 24 notifiable accidents occurred in the calendar year 1935, all of which were flying accidents. The corresponding totals for 1936 and 1937 were respectively 1936, 30 (all flying accidents), 1937, 18 (15 flying accidents).

Aircraft Manufacture.—The demand for aircraft caused by the war led to the exploration of possibilities of aircraft manufacture in India and two Indian industrial concerns evinced interest in the project. The matter was taken up seriously by Mr Walchand Hirachand. As a result, The Hindustan Aircraft Company with a capital of Rs. 40 lakhs was floated in December, 1940. The Company decided to establish a factory in Bangalore. The choice of Bangalore was prompted by the availability of cheap electricity and high grade steel from the Bhadravathi Iron and Steel Works. Subsequently, the issued share capital of Rs. 40 lakhs, of which one half was subscribed by the Mysore Government, was raised to Rs. 75 lakhs and instead of only two parties, the Mysore Government and Mr Walchand Hirachand, Government of India also subscribed to the Company's capital. Latterly, however, the Government of India took over the Company for the duration of the War.

India's first plane came out for test flight in July, 1941. The aircraft assembled in India was the Harlow, an up-to-date type of aircraft having the same characteristics as modern fighters and bombers. It was a low-wing, single-engined monoplane with constant speed propeller, flaps and retractable undercarriage.

Parachute Manufacture.—The possibility of making complete parachutes in India is also being examined at the instance of the Supply Department, Government of India. The Department has asked the Controllers of Supplies in the provinces to investigate the availability of materials and facilities for their manufacture. The proposal is likely to result in an extension of the scope of Indian industry.

Air Routes.

A Trans-Continental Air Routes Across India—Air services operating from Europe to and across India to the East were as follows—

(1) **British Airways and Indian Trans-Continental Airways Limited.**

Until September, 1939, the two companies abovementioned operated five services each way per week between India and England. Of these, three services were operated by British Airways Limited with 'C' Class Flying Boats between Southampton and Sydney. The other two were operated jointly by British Airways and Indian Trans-Continental Airways Limited between England and Calcutta. The England-Australia air service was suspended in June, 1940, on Italy's entry into the war, but a weekly service was established between South Africa and Australia *via* Egypt. A Government *communiqué* from Simla, issued on July 11, 1940, announced that arrangements had been made for the transmission of mails by air to the United Kingdom and European countries with which communication was still maintained, by the Sydney-Durban service up to Durban and by sea the rest of the way.

(2) **K L M and Air France**

K L M (Dutch) operated a regular service thrice per week from Amsterdam to Bandoeng, and Air France once weekly from Paris to Hanoi. Both the services operated to a 2½ day schedule from Europe to Karachi and their route across India was from Karachi *via* Jodhpur and Allahabad to Calcutta. K L M operated a weekly service between Lydda (Palestine) and Sydney (Australia). Both these services have now been suspended.

B Indian Air Services—There are three companies operating scheduled air lines in India. They are—

(1) **Tata Air Lines, Bombay**, commenced operating a weekly air mail service between Karachi and Madras in 1932, connecting at Karachi with British Airways' service. The service was duplicated from January 1935

With the introduction of the Empire Air Mail Scheme the service was extended to Colombo and increased in frequency to four times per week. The frequency was further increased to five times per week from the end of July 1938, and later reduced to four. The route is from Karachi *via* Bhuj, Ahmedabad, Bombay, Hyderabad, Madras and Trichinopoly

to Colombo. In 1935, Tata Sons established a weekly service to Trivandrum from Bombay *via* Goa and Cannanore connecting at Bombay with one of the Karachi-Madras services. This service has since been extended from Trivandrum to Trichinopoly connecting there with one of the Karachi-Colombo services. From November 1937, the Company began a bi-weekly service from Bombay *via* Indore, Bhopal and Gwalior to Delhi. The Bombay-Trivandrum-Trichinopoly and the Bombay-Delhi services are operated only during the fair season (October to April). Passengers, freight and mails are carried on all these services.

(2) **Indian National Airways Limited, New Delhi**—This company began operations in December 1934 and now run the following services—Delhi-Lahore-Karachi, every Tuesday; Karachi-Calcutta, *via* Lahore and Delhi, Sundays and Mondays; Calcutta-Karachi, *via* Delhi and Lahore, Thursdays and Fridays.

They are the principal agents in India for the British Overseas Airways Corporation and Indian Trans-Continental Airways, Ltd, and maintain a fleet of large and small aircraft for charters.

(3) **Air Services of India, Limited, Bombay**—This company was formed during 1936 and opened a regular service from Bombay to the Kathiawar States in November 1937. The service has now been suspended.

Calcutta-Chungking Air Service

On January 18, 1941, the China National Airways Corporation sent a machine on the first trial trip to India. All the negotiations now being complete, the Corporation has established a regular service between Calcutta and Chungking. At the present time the Corporation runs three inward and three outward services each week.

Sub-Stratosphere Flights

The Director-General of the British Overseas Airways, Mr. Leslie Runciman, who recently returned to London after escaping from Thailand, foreshadows sub stratosphere flights bringing all parts of the world closer to Britain. He considers it possible to reach India, South Africa and Australia in 20, 30 and 50 hours respectively. On the India-Australia route stops would be in Cairo, Karachi, Calcutta, Singapore, Darwin, and Sydney with not more than two hours' wait at each halt.

THE SUEZ CANAL.

Opened formally in 1869, the Suez Canal constitutes an artificial waterway about 105 miles long, linking Port Said on the Mediterranean with Suez on the Red Sea. The Canal shortens the route from England to Calcutta and Bombay by 3,660 and 4,500 miles respectively, also, of course, substantially reducing the distance to Australia. Using the Canal, the Mediterranean fleet could reach the Singapore base in less than three weeks. The alternative route round the Cape lengthens Britain's lines of communications by about 4,000 miles.

Control and Finance.

The Suez Canal is controlled by a company, whose property, valued in the market at £120,000,000, (before the war) passes to the Egyptian Government when the concession expires on November 17, 1968. This is of course in default of other arrangements. The British Government owns 44 per cent of the shares, thanks to Disraeli's celebrated coup in 1875 when for £4,000,000 he bought the majority of the bankrupt Khedive's holdings. The shares before the war were valued at £84,000,000 and the profits amounted to about £3,500,000 a year. Most of the remaining shares are held in France, but not by the French Government, which does not own a share. The Board comprises 21 Frenchmen, 10 Britishers, a Dutchman and an Egyptian. Only three of the British directors represent the British Government, the remaining seven represent British shipping and commercial interests. Incidentally, nearly 60 per cent of the total tonnage passing through the Canal is British. The enterprise is managed in Egypt.

Development.

Since the Great War, the work of widening, deepening and straightening the Canal has been taken in hand with redoubled vigour. Operations are directed from Ismailia. When the Canal was opened in 1869, the width was 72 feet and the depth about 26 feet 2 inches. The declared policy of the Canal Company in regard to the deepening of the Canal is to offer a slightly greater depth of water than that available in

ports east of Suez. It is claimed that, with the exception of Sydney, there is no Eastern port which at low tide has a greater depth of water than that now provided in the Canal throughout the full length of nearly 105 miles. Today, the Canal is on an average, 45 feet deep and 70 yards broad. It can be traversed in just under thirteen hours. About 15 ships can pass in the 24 hours. One ship has, however, still to tie up to let a second pass, though there is plenty of room for both. The biggest vessel yet to navigate "The Cut" was of 27,000 tons.

Neutrality.

Absolute neutrality is the law of the Company, guaranteed by an international Convention of 29th October, 1888. The provisions of the Convention are that subject only to exercise of the right of the legitimate self-defence and to action to injure the safety of the canal there can be no restriction, provided that the rules are observed, on the free use of the Canal. On two occasions in the past the Canal has been closed and on a third the question of free use was raised. The first was in 1882, six years before the signature of the Conventions when during the revolt of Arabi Pasha against the Khedive of Egypt, the safety of the Canal was thought to be imperilled. During the Spanish-American war of 1898 the attempt of the Spanish Fleet to call at Suez on its way through the Canal was frustrated by the Canal authorities in accordance with the provisions of Article IV of the Convention. The third occasion on which the Canal was closed was during the Great War when free access and transit was stopped for a short period during which the Egyptian territory and the safety of the Canal were actually endangered by the advance of the Turkish Forces.

Since Italy entered the present war, several bombing attacks have been made on the Canal.

No traffic or revenue statistics of the Suez Canal for 1940 are, of course, available, nor can any be had for the duration of the War. The latest figures available are those for 1939. See *Indian Year Book, 1940-41*.)

Travel in India.

Fifty years ago, a tour in India was possible only to the wealthy, the leisured and those who had friends in the country. The cost of the journey was very high, the methods of transportation were very slow, and the facilities for travel were so indifferent that he was a bold man who consigned himself to the mercies of the country without a sheaf of letters of introduction. Nowadays travel in India is easy and is no more expensive than travel in other countries. The Indian railways provide facilities on the trunk lines which eliminate—at any rate reduce—changes to a minimum and the Indian Hotels have improved very considerably in the last few years.

The traveller to India has a choice of many ports by which he may enter. To the majority of visitors from Europe and the West, Bombay provides their first glimpse of India, while others enter by Calcutta, Madras and Karachi and *via* Colombo.

Owing to its geographical position Bombay is known as the Gateway of India through which for more than a century, the import and export trade of India has largely passed. Ash-purple against the dawn, the spurs of the Western Ghats, thrones of mystery, stand sentinel about the inner sanctuary of Bombay Harbour. Among and above these mountain heights Wellington fought the battles which earned for him his early military greatness. Every school boy knows the stories of the Mahratta campaigns and the bright anecdotes of Rajput courage and chivalry, but Rajputs and Mahrattas are not all that India has. They are only a few of the tribes and clans that inhabit this vast sub-continent. One of the greatest attractions of India for the visitor is the great diversity to be found in every respect, mode of living, dress, food, language and religion. In fact a traveller can never get bored. You will find life in its most up-to-date form and next to it the customs and habits of a nation which have not changed for hundreds of years. Life will surge past you in a picturesque procession. You will hear a medley of strange sounds—the tinkle of the temple bells, the throb of the drum, the chant of the 'muezzin' announcing that God is Almighty and Mohammed is his Prophet and the song of the Pandit consisting of character-sketch of 'Rama' or 'Krishna'. The tropical sun blazing like a ball of molten gold in a turquoise sky, the silver moon sailing across the purple vault of heaven will awaken in you feelings which you have never known before. If the visitor seeks variety and picturesqueness, there is no region in all the world so full of vivid colour, of populous cities, of buildings designed by master architects, of bygone days, of diverse races, of absorbing subjects for study and observation such as the customs, religions, philosophy and art of one of the oldest civilisations.

To the true lover of nature, the botanist and the naturalist, India can offer every charm in forest, mountain, valley, cultivated plain, and wild waste.

To the sportsman, it can furnish sport such as few countries can give, the tiger in the forest, the great mahseer in many rivers, the

wily snipe on the wheels, the strong winged-duck, the sinking pig and many another kind. Jungle life in its enchanting reality still calls the visitor to the Sunder Bans (the Pretty Jungle) in Bengal.

To the mountaineer, the Himalayas offer the highest mountains in the world and some of the few famous peaks which are still unclimbed. Nanda Devi and Mount Everest still provide thrills to many.

To the statesman, businessman or politician who seeks rest and change without idleness, India presents a sense of busy administration, a nation in the making and an experiment such as has never before been tried.

Bombay itself is cosmopolitan like many of the world's great ports and in it you will find jostling each other in the streets representatives of half the races of mankind. The Towers of Silence and the Caves of Elephanta are among the sights to be seen. Elephanta is one of those delightful islands which are freely scattered upon the waters over which Bombay reigns as Queen.

But Bombay is a gateway and through it many interesting trips await the visitor and northwards to Delhi he has the choice of two routes either by the G I P Railway *via* the Ellora and Ajanta Caves, Sanchi, Gwalior, Agra and Muttra or by the B B & C I Railway *via* Baroda and through Rajputana with its famous cities of Mount Abu, Udaipur, Ajmer and Jaipur to Agra and Muttra. If you decide to go by the G I P Railway route, you will find at Ajanta frescoes which rival many of the old frescoes found in Europe while at Ellora are the most wonderful caves in the world, mountains cut into colossal sanctuaries. You will be able to compare the work of the Buddhists, the Jains and the Brahmins and learn more of Indian mythology than many hours of study will give you. At Sanchi are Buddhist buildings dating back to 150 B.C. The stone carvings are remarkable and are well worth a visit. As you proceed further north, Gwalior is reached. The great Fort of Gwalior has been described by Fergusson as "the most remarkable and interesting example of a Hindu palace of an early age in India." Seventy miles further on lies Agra and of all the romantic cities of India, Agra must surely come first for it contains that crowning glory in marble, the Taj Mahal. Generations have come and gone since that far day when that most splendid of emperors Shahjehan bowed his head before his wife's coffin in the vault of the finished Taj. The building is better known than any other in the world. Visit it by moonlight and later by daylight if you must. By moonlight its seduction is irresistible. Sit on the steps by the entrance gate and watch the moon drift above the trees and the ring of silver light stealing round the base of the dome and creeping gently upwards to the pinnacle. See it also in the fading evening light when amber and rose and gold, the sun sinks in the west behind the crenelated ramparts of Agra Fort. If you must visit it in the broad light of noonday then forget the first view from the gateway and wander awhile about the gardens where

you will find exquisite glimpses of snowy structures so light and graceful that they seem to rest on air, of buoyant cupola and climbing campanile. Here is grandeur as well as beauty.

The Taj Mahal, however, is only one of the many interesting sights of Agra, and its Fort, Itmad-ud-Daulah's Tomb, Akbar's Tomb, 5 miles from Agra, and Fatehpur Sikri, the deserted city of Akbar about 23 miles distant are all well worth a visit. No other fortress in the world presents so great an appearance of knightly splendour, of proud and noble dignity or, with a more sovereign grace, crowns its red bastions with so wonderful a collection of palaces, mosques, halls of state, baths, kiosques, balconies and terraces as Agra Fort, a mile and a half in circumference, with walls 70 feet high faced with red sandstone. The vigorous style of decorative architecture that Akbar introduced into his red sandstone palaces was embellished by his grandson Shah Jahan who was largely responsible for the delicate inlay work and the low reliefs in white marble. There are no buildings to equal these except those found in the Palace in Delhi Fort which Shah Jahan built when he transferred his headquarters to Delhi. Akbar's vigorous but supremely attractive style appears at its best in Fatehpur Sikri which he built in his joy at the realisation of his fondest hopes when his son Jahangir was born.

There in the year 1569 A.D. on a lonely eminence, Akbar founded his city and there began to rise as if by magic those great battlemented walls, the magnificent palaces and courtyards, the great mosque and the other superb specimens of the skill of the Moghul stone-masons which stand to this day a source of endless wonder and admiration to visitors.

The traveller moves northward past Muttra and Brindaban, famous places of Hindu pilgrimage due to their association with the birth and early life of Lord Krishna, until Delhi is reached. Delhi, the capital of India in days gone by and now the Imperial Capital of India, has no rival in greatness, as all men know that he who holds Delhi holds India. Here the visitor will find much that will interest and enthral him. Here he can trace the growth and fall of dynasty after dynasty, here he will find some of the best examples of the work of the Moghul Period at its zenith as he wanders with muffled feet in the great courtyard of the largest mosque in India, the Juma Masjid, or in Shahjahanabad the Fort and Palace of Shahjahan whose halls rival those of the palace in Agra Fort with their delicate inlay work in marble and their gardens. Here are crumbling memorials of the Mutiny, Hindu Rao's house, the Kashmir Gate beneath which some still salute dead Home and Salkhed as they pass, the tree encumbered sites of redoubt and battery, Nicholson's grave, Asoka's pillar, the site of the great Durbar.

Kutab, the first of the so-called seven cities of Delhi with its Kutab Minar, 238 feet in height, erected in the 12th century A.D. of red and cream sandstone overlooks the plain where many of the pages of history were written. The Kutab Minar, tapering from the base to the summit, is divided by five corbelled balconies while on the futing is carved an intricate design

in which are introduced verses from the Koran. In the main courtyard stands the famous pillar of solid wrought iron devoid of rust and dating back to about 400 A.D. Visitors to Delhi should not miss seeing the Kutab for it is unique in India.

New Delhi, the eighth city of Delhi, is worthy to rank with its seven predecessors, Kutab, Siri, Tughlakabad, Jahanabad, Ferozabad, Purana Qila and Shahjahanabad, the present-day Delhi. Here you find an example of town planning carried out by some of the leading architects and engineers in the world on a site where they could start with a free hand.

If you decide to take the route northwards from Bombay via Rajputana, then you will see another but equally interesting side of India. Rajputana, the land of chivalry, attracts the visitor as few places do. Alone at Udaipur is there, in its perfection, the fairy palace of one's childhood, just such a long cataract of marble terraces and halls falling into the waters of a mountain encircled lake, as the illustrator of an Andrew Lang fairy book delights to draw.

Mount Abu, the Rajput Olympus, combines the delights of a hill station with one of the historic homes of the gods. The Dilwara Temples, the masterpiece of Jain architecture, contain some of the finest carvings in India. Forests of marble columns, carved and polished till they resemble Chinese ivories, are linked by flying arches that twist and twine from pillar to pillar like exquisite creepers, softening outlines and producing the effect of a symphony of graceful movement.

Northwards from Delhi is the Punjab and the North-West Frontier Province whence most of the recruits for the Indian Army come. Here you will find Amritsar the home of the Sikhs, Lahore, one of the most ancient and famous cities of India, the Khyber Pass, the historic gateway into India from the North, the flourishing cities of the Canal Colonies which have risen up since British Engineers have harnessed the waters of the Punjab "the Land of the Five Rivers" which formerly ran to waste and many another city. Through the Punjab also you will travel to reach Kashmir, famous since the days of the Moghul Emperors.

The glory of Amritsar is the Darbar Sahib (the Golden Temple). The pavements of the sacred tank are all of marble from Jaipur and the tank itself contains a sheet of water 510 feet square. In the midst approached by a marble causeway, rises the Golden Temple, nearly cubical in form and decorated with wonderful richness.

Lahore grew in importance with the dawn of Moghul supremacy when Babar, the founder of that dynasty, made it a place of Royal Residence, reminiscences of which are to be found to-day in the pleasure gardens, tombs, mosques and pavilions of Moghul architectural beauty which have won undying fame for that dynasty here and elsewhere in India.

Khyber Pass, the great natural highway into India through the almost impregnable mountain barrier of the North-West Frontier, is rich in historical association and has from time immemorial been the route by which conquering

hosts have passed into India to disturb the peace of her people and continually alter their destiny. It is still the great trading route between India and the Central Asian States. On Tuesdays and Fridays when the continual string of caravans of great shaggy camels laden with merchandise, accompanied by stern, strong and picturesquely dressed men with their women and children from Central Asia are moving to and from Afghanistan, the pass presents a most interesting and unique sight.

Kashmir, described by poets as "an emerald set in pearls" is a land of rich forests and upland pastures, of slow flowing rivers and glittering mountain torrents, ringed with an almost unbroken girdle of mountain snow-capped all the year. If you can imagine Venice set in the heart of Switzerland, that is Srinagar, the capital of Kashmir. Life is good as you glide along the face of the lakes in a houseboat when the lotus flower is out and the banks are one mass of colour with the snow-capped mountains in the background. When days are warm on the lakes, a trip can be made up the valleys and you can live in Arcady and see the hear in his native haunts and the mountain does on the hill-tops.

For those who have arrived at Delhi via Bombay an interesting return trip can be made via Benares and Calcutta. Many visitors, however, enter India via Calcutta and from here also many interesting tours can be made.

Calcutta, one of the first trading ports of the British East India Company in India, was founded by Job Charnock, it is now the second largest city in the Empire. Its public buildings, the Indian museum, the Fort, the Jain Temple, the Hindu bathing ghats along the river front, the Hindu shrines particularly the 'Kali Temple' are all worthy of attention.

Before winding your way towards Delhi, trips should be made to Darjeeling and to Puri. The ambition of every visitor to Darjeeling is to see Mount Everest, the world's highest peak, and, in order to do so they must travel some 7 miles away, past Ghoom station to Tiger's Hill (8,514 ft.) as from Darjeeling the mountain is not visible. The best time to see sunrise on Mount Everest is in the early Spring or late Autumn. Then at the end you will find a view unequalled in any other part of the world. Twelve peaks over 20,000 feet with the awe-inspiring Kanchanjungha in the centre are spread out before you.

Darjeeling is one of the nicest hill stations in India and is unequalled for its snow views. From any where in the town you see the awe inspiring Kanchanjungha. The sheer grandeur of the Kanchanjungha snows give Darjeeling a high place in the list of hill stations.

Puri also is an easy run from Calcutta. There in front of the gate of the temple is the famous black marble pillar, one of the most beautifully worked things in India with a tiny figure of the Dawn on its capital. Incongruous as it may seem, in Puri all caste vanishes. The significance of this can be understood only by those who know India. Once a year the image of Krishna is carried in procession upon the

famous Jagannath cars to the Garden Temple. These cars, 45 feet high, standing on solid wooden wheels, seven feet in diameter, are dragged along by the devotees.

Twenty miles north of Puri, along the sea coast, or 54 miles by motor road stands the unique chariot temple at Konarak, the temple of Surya (The Sun God).

On the road to Delhi, the visitor will travel through the Gangetic plain, one of the most fruitful areas of India. Here he will find cities sacred to the Hindus such as Budh Gaya and Benares, cities intimately connected with the mutiny like Lucknow and Cawnpore and other flourishing cities.

Budh Gaya is one of the most famous and most interesting of all the sacred sites of the Buddhists for it is the scene of the "Great Renunciation" and the Enlightenment of Gautama afterward named Buddha. It marks the site of his long penance and his final victory over worldly desire.

Benares is reputed to be the oldest city in India, but there is no authentic record how old it is except that it is mentioned in those two great Hindu epics, the Mahabharata and the Ramayana, which deal with events long before the Christian era. Benares is, however, one of the most holy cities in India for the Hindu, and its spiritual significance is shown in the quotation "Happy is the Hindu who dies in Benares, for he is transported at once to Siva's Himalayan Paradise on Mount Kailasa, north of Lake Manasa, where the great three-eyed ascetic seeing the past, the present and the future, sits in profound meditation."

Benares rests on the banks of the Ganges and floating down the river in a boat the sight of Aurangzeb's Mosque and the many picturesque temples and ghats recalls to one's imagination through the dim vistas of time the endless processions of devout people wending their way down the narrow lanes to the temples with fragrant garlands to hang round the necks of the gods or to wreath in solemn devotion the emblem of Siva's divinity.

About 6 miles away from Benares lies Sarnath where Buddha preached his first sermon after obtaining divine wisdom at Gaya and in the adjoining Deer Park is a Museum of Archaeology of vivid interest. The Mahabodhi Society (The Central Organisation of the Buddhists) have their headquarters here and in their grounds is included a Buddhist temple with marvellous friezes on its walls.

Lucknow is a city hallowed by memories of a grim struggle, of heroic deeds and noble sacrifice, its appeal to the Westerner is influenced by its historical connections, its beautiful buildings and the mysterious glamour so closely associated with the Last. Legend connects the founding of the city with Lakshmana, son of King Dasaratha of Ayodhya and brother of Rama, the mythological hero of the Ramayana, the epic poem of the Hindus but Lakshmanpur or Lucknow as it is now called was at its greatest under the five Khans of Oudh 1750-1856.

Visitors wend their way to the Residency and pay homage to the gallant band who held it during the Mutiny against terrific odds until relieved by Sir Colin Campbell. The deeds of Lawrence who was in command until he was killed and of Havelock who made his historic but unsuccessful attempt to rescue the garrison and was himself besieged are well-known. Sir Henry Havelock is buried in Alam Bagh (Garden of the World) which is about 4 miles from the Residency.

Among the historic monuments of Lucknow are the Great Imambara, (Machhi Bhawan) the Small Imambara (Palace of Lights), and Shah Najaf built by Nawab Haidar Ali as a Mausoleum. An old institution of note are the La Martiniere Colleges built by General Claude Martin for the education of European and Anglo-Indian boys and girls, though latterly children of Indian gentlemen are also being admitted. Claude Martin is buried in one of the vaults in the building. Fifty boys from the college helped in the defence of the Residency during the Mutiny. Other places of interest are the Dilkusha Gardens, Sikandra Bagh (now Government Horticultural Gardens) and Victoria Park. Life size portraits of the Nawabs of Oudh are hung in a building situated in the last named resort. Two huge mausoleums rise on Hazratganj Road—the main business centre—which are the tombs of Wajid Ali Shah, the last Nawab of Oudh and his Begum.

Lake Delhi, Lucknow is replete with historical lore and a visit to this town will greatly interest the visitor. Lucknow also boasts of an up-to-date museum and in the Harcourt Butler Zoological gardens, the animals live as near as possible in their natural surroundings.

Cawnpore is one of the most important industrial cities of India and here you will find up-to-date factories, a symbol of the West with the teeming bazaars where business is still carried on as it has been done for generations.

Northern and Central India is, however, not the only interesting part of India and the South can show you sights unlike those in any other part of the World. South India is a land of temples, full of the most wonderful carving while Mysore, one of the most progressive Indian States, can show you fine buildings, falls higher than Niagara and wonderful scenery.

Madras is the capital of the Madras Presidency and the third largest town in India, and the Presidency includes that part of India, which was one of the first in which English and other foreign nations settled. The visitor will still find in the large houses belonging to the merchant Princes with their far spreading compounds, in the conveyances still used by the local inhabitants and in the scenery, which is the India of the old picture books, traces of what India used to be when first the English settled there.

Mysore commemorates in its name the destruction of Mahishasura, a minotaur or buffalo headed monster by Chamundi, the form under which the consort of Siva is worshipped as the tutelary goddess of the ruling family. Mysore State is a picturesque land of mountain and

forest presenting the most diversified and beautiful scenery. The Capital which bears the same name as the State is a city with many fine buildings and a visitor to India who wishes to see the working of an up-to-date Indian States situated among wonderful scenery cannot do better than visit Mysore. Elephants range throughout the southern forests and from time to time keddah operations are undertaken when wild elephants are captured in stockades. Tigers, leopards and bears are numerous and bison are found in certain forests. The famous Gersoppa Falls present one of the most beautiful sights of wild untarnished nature to be found in India. Many of the temples contain examples of the finest carving, and Seringapatam famous as the capital of Tippu Sultan and about nine miles from Mysore is well worth a visit. For those who are travelling from Bombay to Colombo an interesting trip can be arranged via Mysore.

At Madura and Trichinopoly will be found examples of some of the best and most interesting work in South India.

Madura has been aptly described by European scholars as the "Athens of South India" and from time immemorial has been the abode of South Indian culture in all its aspects.

It contains one of the finest and largest temples in South India and unlike many other temples the tourist is allowed to wander without restrictions over most of it. Near Shiva's shrine and in the hall (Mandapam as it is called in the Vernacular and Sanskrit) of a Thousand Pillars can be seen some of the finest carving in stone in all the world. The workmanship is so fine, the chiselling so delicate that one is lost in silent admiration as one looks at the representations of the Hindu Pantheon and at the graceful figures of men, women and animals.

Trichinopoly is noted for its rock temple and about three miles away is Srirangam with its famous temple which is claimed as the earthly abode of Vishnu the Lord of Creation.

Travancore, the most beautiful and fertile region in all southern India has many charms to offer the traveller within its domains. It has scenery ranging from a countryside of lakes, creeks and canals, to low hills, undulating land, rice fields and forests of coconut and areca palms, with a heavy undergrowth of pepper vines and tapioca. The dominant note in Travancore is one of luxuriance in vegetation. It has a wonderful highland zone with mountains touching heights of from 5,000 feet to over 8,000 feet, and hills covered with the densest of virgin jungle, the home of great herds of wild elephants and bison, tiger, bear, black panther and wild boar, and where lies the lovely Periyar Lake over which one may cruise in comfort and see wild life in its natural habitat.

Trivandrum, the capital, is also accessible by well-kept roads from British India, and is connected by air with Bombay, Madras and Colombo, except during the monsoon.

About seven miles south of Trivandrum is Kovalam, a pleasant sea-side resort with good facilities for bathing. Cape Comorin, the Land's End of India, is the southernmost

point of Travancore, where the sunrise and sunset are magnificent sights. It is a sacred spot to Hindus and a place of pilgrimage as the reputed abode of Kanyakumari, the virgin Goddess to whom the temple there is dedicated.

North of Trivandrum is the ancient town of Quilon and to the north of this, a pleasant trip by boat along delightful backwaters or by car along a good motor road, is the busy seaport of Alleppey.

No one visiting India should miss the opportunity of seeing Burma for it is a country of extraordinary charm, a country of contrasts. Whatever be your hobby, whatever be your interest, be it sport, history, ethnology or botany, or should you be merely fond of beautiful scenery you will find a greater variety in Burma than in probably any other country. You can see huge snowy ranges and alps spangled with rhododendrons and flowers unknown to science. You can find magnificent jungles almost impenetrable to man, bordering rushing torrents, or yet again you can see emerald green paddy fields and great winding rivers in the plains. Should you be adventurous and seek the wilder regions, you will find great gaps in the frontier unvisited by civilised men and peopled by head hunters, Chins, Nagas and the fierce Black Lisu. Yet you will also find civilisation in the big cities like Rangoon and Maymyo. Rangoon, the capital, is of special interest in that it possesses the famous Shwe Dagon Pagoda, the Sacred Golden Pagoda visited by more pilgrims than any other Buddhist Temple in Indo-China.

This short account of India is not intended to be comprehensive and does not even mention many of the interesting places to be visited, but it is hoped that it will give some indication of the wonderful pageantry, the magnificent buildings of an older age, the sport, and the

many things of interest which India and India alone can offer.

December, January and February are the most pleasant months for a visit to India. The days are pleasantly cool and except on the seaboard the nights are cold. India speaking broadly has no winter except in the far north. It is a land of sunshine and colour. But the traveller arriving before November or staying in the country beyond the month of March must expect to find the tropical sun asserting its sway unless he wends his way to fair Kashmir or to one of the hill stations of India; Simla, the summer capital of India, Darjeeling the delightful or one of the many others situated among the hills of India.

Standard Tours.

The planning of an itinerary for an Indian or Burman tour will depend upon the port of arrival, the port of departure, personal desires of the party and the time available. Any of the leading tourist agencies such as Thos Cook & Son, Ltd., the American Express Co, Cox's & King's (Agents) Ltd, Army & Navy Stores, Grindlay & Co, Messrs. Jeena & Co., Bombay, etc., and the Publicity Officers of all the more important Railways. Many of the leading tourist companies will also arrange for inclusive and conducted tours. There are certain places, which are very well-known such as Delhi, Agra, Benares, Darjeeling, Jaipur, the Khyber Pass, Kashmir and Mysore, but there are innumerable other places almost as well-known containing sights which cannot be equalled in other parts of the world. Puri, Lucknow, Amritsar, Udaipur, Mount Abu, Gwalior, Ellora and Ajanta Caves and Madura are a few of them while in Burma, Mandalay and, the famous old cities of Ava and Amarapura nearby are well worth a visit.

HOTELS IN INDIA AND CEYLON

AGRA—Cecil, Imperial, Empress, Lawries
AMRITSAR—The Amritsar
AURANGABAD—State Railway Hotel
BANGALORE—The West End, Lavender's, Central
BARODA—State Guest House, near Railway Station (For Europeans and Indians)
BENARES—Clarke's, Cecil, Civil
BOBNAY—The Taj Mahal, Green's, Majestic, Ritz, Grand, Pyrites Apollo
CALCUTTA—Grand, Great Eastern, Spence's, Continental
CAPE COMORIN—The Cape Hotel
CAWNPORE—Berkeley House, Bellevue Hotel

Hill Stations.

In India especially during the months of April and May, and at Christmas time, everybody tries as much as possible to take a holiday in the hills. Being anything from 2,000 to 8,000 feet above the level of the sea and difficult of access for motor traffic, the hill stations are delightfully cool and peaceful. Here one can usually ride, walk, play tennis and golf, or simply laze in beautiful surroundings and forget all about the trials of work and prickly heat. These are the principal hill stations in alphabetical order —

COONOR.

An ideal health resort. It is 12 miles from Ootacamund by rail and stands on the lower ridge of the main plateau at an altitude of 6,000 feet. The town has a good water supply and natural drainage facilities and is claimed to be one of the cleanest towns in South India. The climate is best described as "mild and genial," neither hot in summer nor cold in winter, the keenness of the air not being biting as that of Ootacamund. The mean day temperature is 64 degrees. The north-east monsoon sets in about the middle of October and lasts for about two months but even during this period, a day rarely passes without a few hours' brilliant sunshine. To those who have spent a long time on the plains, the climate is especially recommended.

There are many places in and around Coonor which are the favourite haunts of picnic parties owing to their beautiful scenery. The Droog, Sims Park, The Dolphin Nose, The Lamb's Rock, Laz Falls, Kateri Falls, Lady Canning Seat, The Ralliash Dam and Catherine Falls. Mount Pleasant, near the railway station which contains several Indian residential quarters is on an elevation and commands a fine prospect of the country around.

Like its sister station Ootacamund Coonor has equal facilities for visitors in the way of hotels and shops while the easy journey by rail lends itself to an exchange of amenities.

Hotel — Hill Grove

DARJEELING.

(8,000 ft.)—From Darjeeling the highest mountain peaks in the world can be seen. The temperature averages 2° above that of London all the year round that is, it neither exceeds 80° in summer nor falls below 30° in winter. Darjeeling is the summer seat of the Government of Bengal. To reach it, the traveller must start from Calcutta by taking train to Siliguri, a journey of 10 hours. From Siliguri the journey is completed either by motor in about 3 hours or hill railway in about 6 hours. The principal hotels in Darjeeling are the Mount Everest, the Bellevue, and the Windmare Hotel.

KANGRA VALLEY.

The Kangra Valley is situated about 100 miles east-north-east of Lahore at the foot of the Dhaul Dhar Range of the Himalayas. There are magnificent landscapes and many historic temples and buildings. The visitor must take train from Lahore to Pathankot where he changes over the newly-opened narrow-gauge railway running between Pathankot and Jogindarnagar in Mandi State. Places to stay at are Dalhousie,

Dharmasala and Kangra. The best hotels at Dalhousie are Stiffle's Grand View and the Arraunmoor, and at Dharmasala the Switzes's.

KASHMIR.

Perhaps the most famous beauty spot in the world can be reached by taking train (either G I P or B B & C L) from Bombay to Rawalpindi or Jammu (Tawi)—about 48 hours—whence the remainder of the journey to Srinagar, the capital city of Kashmir, about 200 miles by either route, is accomplished by motor. Maximum temperature of the place is 98° Fahr and the average height of the valley about 6,000 ft.; it is entirely surrounded by the snow-covered lofty, outer-ranges of the Karakoram and the Himalayas. The valley covers an area of 85 miles north to south, and 30 miles east to west. The river Jhelum gliding gracefully, south to north, connects with the lake area near Srinagar by a canal and grazes the outskirts of the Wular Lake near Banyar and Sopore. Visitors usually stay at Srinagar, Gulmarg, Schhabal and Pahalgam in boarding houses and bungalows rented through agencies. The Sind, Brighi and Ledar valleys are also frequented where camping arrangements can reliably be entrusted to one of the numerous agencies in Srinagar. Or one can hire houseboat which is always available and live in the lake area near Srinagar at Nagin Bagh, Nasim Bagh, Sadrakhum and Gagrabal, or on the river Jhelum at Chinar Bagh, Shahteng, Shadipore, Ganderbal and Nigli. At Gulmarg Nedou's is the only Hotel but boarding houses are also available, besides a sufficiently large number of well furnished wooden huts. People also live in tents as at Pahalgam, Sonemarg and Kokarnag or when on trekking, trout fishing and shooting.

KODAIKANAL.

Kodaikanal was discovered about 1820 and became popular with the advent of the American Missionaries from Madras who founded a colony in the Hills. Successive Collectors of the district chose the hills as a summer habitation and to these must be attributed the many improvements that were undertaken. In particular Mr Vere Levinge who was Collector of Madras in 1860, planned the lake, constructed several roads and bridlepaths and introduced European fruits and flowers.

Kodaikanal, one of the healthiest hill stations in India, stands on the southern crest of the upper Palni Hills at an elevation of about 7,000 feet above sea level. It is within three hours' reach from the railway station at Kodaikanal Road. Until about 30 years ago when the first car ascended the hill travellers had to undergo a wearisome journey by bullock carts and dhokla, and the more adventurous on horse-back. The journey occupied nearly forty-eight hours, and though the wooded hills and the mountain air rendered the prospect cheerful, it was a fatiguing attempt not undertaken by all. Now there is an excellent motor road. An enterprising firm once made attempts to construct a tramway to the hills, but the project was finally abandoned and all attention was concentrated on perfecting the road. There is now a regular bus service between the hills station and the plains. Kodaikanal is within fifteen hours' journey from Madras.

The station has a mean annual rainfall of about 65 inches, a major portion falling in the months of October, November and December. Pleasant showers are experienced during April, May and June, the season months and help to keep the station dust-free for parties and picnics. Neither hot nor cold, Kodaikanal ever accords a warm welcome to every visitor seeking a holiday, a haven of ease and comfort to recoup and rejuvenate, free from the heat of the plains. Kodaikanal is the delight of the gardener. Flowers bloom all the year round.

Water-Supply.—The town enjoys the benefit of an excellent water-supply from the Pambar stream which was dammed and converted into a reservoir in 1914. Within the last thirty years, there was not a single occasion on which the water was found to be chemically or bacteriologically impure. This is mainly due to the fact that the entire catchment area comprising 500 acres has been properly enclosed.

Amenities.—Kodaikanal affords a variety of exhilarating amusements to the tired visitor. The lake is the chief attraction and is skirted by a three-mile road which provides excellent walks. Overlooking the lake are the several residences. The excellent golf course is popular during the season. The many waterfalls make for ideal picnic resorts. The "Fairy-falls" just below the Observatory, "Silver Cascades" on the Law, Ghat Road, "Bear Shola Falls" extremely pretty and a good place for picnics and "Glen Falls" on the way to Vипatli, are some of the popular sights.

Coaker's Walk (so named after a Lieutenant who was on duty in the district from 1870 to 1872) is a semi-circular footpath, by the side of the English Church, which runs along the southern brink overlooking the plains. The view from here is considered by many as unrivalled. On Coaker's Walk the visitor is alone with nature in its varied profusion. Away in the hazy distance lies the ancient city of Madura and on the right the rugged face of the cliff known as the Dolphins Nose.

"The Pillar Rocks" are three masses of granite, some 400 feet high, which stand on the edge of the same side of the plateau as Coaker's Walk but about three miles farther on. They are reached by a fine road which runs through beautiful scenery, well wooded with pines and eucalyptus and form a favourite rendezvous for picnic parties. Between and below them are several caves and chasms into which the more adventurous can descend.

Solar Observatory.—Crowning the heights of the Palni Hills, and 850 feet higher than the lake is the Government Solar Observatory surrounded by beautiful fir plantations. It is a long pull and a strong pull from the lake bund though only two miles in distance.

Sport.—The adventurous can find big game within a few miles of Kodaikanal. Riding is not popular on the hills for lack of facilities. Hiking finds many votaries. The station is well equipped with the ordinary amenities of life.

Kodaikanal Club is open to visitors. There are also the Bort Club, an Indian Club and a Ladies' Club. Hotels and travellers' bungalows are available. The Municipal authorities publish annually a list of bungalows available

for renting and are willing to help visitors during their stay at the station.

For those in quest of real rest, tonic air and the company of serene nature there is no better place in India than this lovely hill station.

The latest addition to the roads on the hills is the Goschen Road popularly known as the "Forty-Miles-Round" leaving the municipal limits at Pillar Rocks to the Berijam lake and thence to Mannavanur and back to Kodaikanal. The Scenery throughout is of pleasing downs in contrast to the wooded areas in the vicinity of Kodaikanal.

The South Indian Railway has opened an Out Agency on the hills for through booking and transport of all descriptions of traffic between Kodaikanal Road station and the hills. Rail cum Road tickets to the Out Agency are issued from and to all stations in India and Ceylon. A regular bus service connects all important trains at Kodaikanal Road station. Pleasure cars can also be obtained on previous notice at about Rs 20 for each trip.

KOTAGIRI.

It is about 14 miles from Coonoor and 18 miles from Ootacamund. Motor buses run from Coonoor railway station daily in connection with the Mail trains and the road journey does not occupy more than an hour. The bus fare is about ten to twelve annas per passenger for a single journey. Cars are also available at about Rs 7 per trip or Rs 10 to and fro.

Kotagiri stands, similar to Coonoor, on the lower ridge of the main plateau, but 500 feet higher than Coonoor and 800 feet below Ootacamund. It thus enjoys a climate half way between that of Coonoor and Ootacamund—the mean day temperature being 62 degrees. It is also visited by the north-east monsoon and its rainfall is identical with that of Coonoor.

There are not naturally the same facilities as at Coonoor or Ootacamund, but the natural surroundings are even more beautiful, and to those who seek rest and seclusion in a mild form it is an ideal resort.

Hotel—Blue Mountain

KULU VALLEY.

The Kulu Valley (Valley of the Gods, so named because of each little Hamlet having its own deity) is situated north of Simla and east of Kangra. There is a fairly good motor road from Pathankot via Baijnath Paprola and on via Mandi through the Kulu Valley to Manali, where the road terminates and only a track is then available over the Rohtang Pass (13,500 ft) to Lahoul, thence to Leh and Ladakh.

From Pathankot to Baijnath Paprola there is also a small mountain railway running a daily service, but the connection for passengers proceeding via Amritsar is not very satisfactory at the present time as the service is Inter and 3rd class only. It is cheaper and quicker to travel from Pathankot by bus—the fare Pathankot-Baijnath Paprola is less than Rs 4 per person.

No other motorable roads into Kulu are available but the journey could be made by trekking from Simla and a few other centres.

From Pathankot to Manali a distance of about 198 miles, the road is through well wooded

hills offering magnificent scenery, rising on either side of the Valley to heights of 7,000 ft to 10,000 ft the river Beas running part of the way nearby.

Climate.—The Valley is open the whole year, and having a fairly temperate climate it can be visited at any time. Climatically the best seasons are from April to May and from August to October inclusive. June and July are usually hot months, particularly in Raison and Katrain, whilst July in Manah is generally wet.

Visitors are advised to take certain of their own stores to which they are partial, especially liquor and tobacco as these are not usually obtainable in the Valley and even when obtainable, the price would be high.

The main centres in Kulu Valley are

Bajjnath Paprola (3,500 ft) The present terminus of the mountain railway. It provides comfortable accommodation in a P.W.D. and Civil Rest Houses.

Kulu (or Sultanpur) 4,000 ft The principal town in Kulu District and the main shopping centre for the higher part of the Valley. Has a comfortable Rest House.

Raison 4,700 ft Situated amidst very fine scenery and a good centre for trout fishing. Good accommodation for European visitors. Golf, Tennis and Swimming available. Hotels Mayflower and "The Shacks".

Routes.—The main route is via Pathankot at which place visitors can either take the mountain railway or the motor road to Bajjnath Paprola, thence by road to Raison, Katrain and Manah.

The Kangra Union Motor Service Co runs between Pathankot and Bajjnath Paprola, whilst the Mandi Transport Co and the Kulu Valley Motor Company run services between Bajjnath Paprola and the Kulu resorts. These services usually connect with the train arrivals at Pathankot and Bajjnath Paprola, but it is advisable to order seats in advance.

MATHERAN.

(2,500 ft)—The nearest hill station to Bombay, deal for walkers and anybody wanting rest and quiet. Reached by taking train from Victoria Terminus, Bombay to Neral (about 1½ hours), whence Matheran may be reached by hill railway (2 hours) or by pony, rickshaw, or on foot by a good walker.

Though Matheran is no more than 2,650 feet high, there are few stations in India, even though their height is far greater, which yield such magnificent views. The reason for this is that the plain from which hills rise is itself several hundred feet above sea level. Matheran looks on to the sea, and the coastal plain rises imperceptibly until it reaches the steep ascent of the Ghats.

In his walk round the eighteen miles circumference of Matheran Hill, the visitor can reach no less than twenty points. Each has its own character and at almost every one of them the visitor will find comfortable seats, shady trees and fine views. At least six points call for special notice—Garbut, Panorama, Porcupine, Louisa, Chowk and Alexander Points.

Hotels.—S. Lord's Central, Lord, Dave, Hindu and the Rugby.

MAHABLESHWAR.

(4,500 ft)—Until recently, when expenditure had to be cut down, the summer seat of the Government of Bombay. Those who do not motor the whole way from Bombay, a distance of about 180 miles, usually take train to Poona and then hire a car from Poona to Mahableshwar. Mahableshwar is noted for its delightful vegetation, orchids and lilies bloom in April and May.

Hotels.—Frederick, Hotel de Russe, Race View.

MOUNT ABU.

(4,500 ft)—An ideal place for combining the pleasures of a mountaineering holiday with the interests of an archaeological excursion. Reached by B.B. & C.I. trains to Ahmedabad, thence by metre-gauge to Abu Road, whence the journey is completed by car. The Rajputana Hotel is recommended. There is also a Dak Bungalow containing four furnished rooms, permission to use which must be obtained from the Assistant Engineer, P.W.D., Mount Abu. There are excellent golf links and arrangements have been completed to electrify the station.

MURREE.

(7,000 ft)—The summer headquarters of the Northern Command. Magnificent views and walks. Visitors take train to Rawalpindi, whence they complete the remaining 37 miles by car. The principal hotels are the Cecil, the Viewforth and the Brightlands.

MUSSOORIE.

(7,500 ft)—Much frequented on account of its exceptionally fine climate. Reached from Bombay by G.I.P. or B.B. & C.I. trains to Dehra Dun, a journey of 35 hours, where it is necessary to change over to motor which reaches Mussoorie about two hours later.

Mussoorie has an excellent water-supply, electric lighting system, hospitals, Nursing Homes, churches, banks and some of the best schools in India, both for boys and for girls.

What it particularly boasts of, however, are the number of interesting and beautiful walks and places for excursions.

The leading hotels are the Charleville, Hackman's, and the Savoy.

NAINI TAL.

(6,500 ft)—Is the summer residence of the Governor of the United Provinces. From Bombay there are two ways of getting there. The first is to take either G.I.P. or B.B. & C.I. train to Muttra, thence by metre-gauge to Kathgodam, and thence by motor (2 hours). The second route which takes about 5 hours longer is to take G.I.P. train to Lucknow and then change over to the metre-gauge railway. The Manor House, Metropole and Royal are the best hotels.

OOTACAMUND.

Familiarly known as Ooty is situated on the famous Nilgiri Hills at an altitude of 7,500 feet. The mean average of temperature for the year from sunrise to sunset is 57.33 degrees.

In no month is the day temperature less than 54.33 degrees, or more than 61.66 degrees. The nights are, however, cold and, during the winter months, the thermometer touches a freezing point.

One of the main features that distinguish Ootacamund from other hill stations is the length of motorable roads it has. The town itself has the appearance of a vast park with its broad well-kept roads which traversed country of beautiful gardens and extensive stretches of turf studded with ornamental trees. The Botanical gardens in the centre, the Race Course, the palaces of the several noblemen, the Assembly rooms and the Government House help to make the town attractive and cheerful. The hydro-electric head works at Pykara is within 18 miles of Ootacamund and is worth a visit.

Ootacamund is the administrative centre of the District and the seat of the Government of Madras for three months of the year from April to July. Reached either by taking train to Mysore (40 hours from Bombay) and then changing to motor-car for five hours, or by taking train to Mettupalayam *Via* Madras and thence by hill railway of Ootacamund.

Ootacamund is a Sportsman's paradise where plenty of shooting is available. Trout fishing is a special attraction. It possesses one of the best golf courses in India and tournaments are held in May and September.

The principal hotels are the Savoy and Cecil.

PACHMARHI.

(3,500 ft.)—Situated on a plateau in the Mahadeo Hills of Satpura Range, is the summer quarters of the Government of the Central Provinces. A delightful hot-weather health resort. Reached by G.I.P. railway to Pipariya *Via* Jabulpore, and a two hours' motor journey. The best hotel is the Pachmarhi Hotel.

SIMLA.

The summer headquarters of the Government of India (Central Government) and the Government of the Punjab, the General Headquarters and the Royal Navy, is situated on several small spurs of the lower Himalayas at a mean elevation of 7,100 feet above sea-level. The Governor-General and C-in-C are in residence in Simla from May to October every year.

For 1942 at least, because of the war, the seat of Government will be New Delhi. The Viceroy, Commander-in-Chief and staffs and the major portion of General Headquarters will not move to Simla.

From the beginning of October to about the middle of December, Simla enjoys the best climate in the world and throughout the year it is very equable there being a variation of about 10 degrees between night and day temperatures. The mean rainfall approximates 64 inches. Mean maximum temperature 60 degrees, mean minimum 50 degrees. Kalka, which is 2,100 feet above sea-level, is the terminus for the broad-gauge railway system and from thence onwards the metre-gauge takes its place, meandering to Simla through over 100 tunnels. For those who prefer a more luxurious mode of travel, rail motors are run by the railway and *en route* the scenery is superb with luxuriant foliage, chiefly of conifers, oak and rhododendron. At Kalka motor cars are available for those who would prefer to travel by road and the journey is completed within 3½ hours.

There are several excellent hotels in Simla, the Cecil, Corstorphan's, Clarke's, Grand and for orthodox Indians, Hindu, Muslim and Royal. In Mashobra, 7 miles out of Simla, there are the Gables and Wild Flower Hotels. Boarding houses are in the minority, the best known is Talbot House. The Y.W.C.A. and the Y.M.C.A. hostels are open for the greater portion of the year.

The climate of Simla may be divided into four seasons of about three months each. The first quarter beginning with January, rough, snowy, stormy and raw. The second dry and sunny with gradually increasing dust and heat. The third rainy, damp and relaxing. The fourth bright, clear and bracing. In May and June the average maximum temperature is about 73 degrees. In January and February the average minimum temperature is about 36 degrees.

There is a very good road into the interior and hikers to Narkunda, Kotgarh and Rampur Bushahr are lodged in rest-houses that line the road. From Simla there are 2 routes to Mussoorie a distance of 145 miles and little difficulty is experienced for accommodation *en route*, permission to occupy Dak bungalows and Forest Rest Houses must be obtained from the officials concerned.

There are also direct routes to Tibet, Srinagar, (Kashmir) and Dalhousie, and motor vehicles are permitted to ply by the Municipality on a pass as far as Narkunda. The scenery *en route* is lovely.

CLIMBING IN THE HIMALAYAS.

Owing to their immensity and the time and cost involved in undertaking expeditions into the Himalayas a great deal of mountaineering and exploration remains to be done in the world's highest mountain range. There are over fifty summits of 25,000 ft. and of these only two, Kamet (25,447 ft.) and Nanda Devi (25,660 ft.) have been scaled, whilst there are innumerable lesser summits of such formidable difficulty, owing to the comparatively recent geological formation of the range, that judged by modern mountaineering standards the majority are inaccessible. The highest peak is Mount Everest, which by latest measurements is 29,141 ft. Next come Kanchenjunga

and K2, both about 28,150 ft., though which is the higher of the two is not certain.

Pioneer Climbers.—Mountaineering in the Himalayas began some eighty years ago when surveyors crossed high passes and scaled peaks in the course of their work. Among these pioneers must be mentioned the Schlagintweit brothers, who in 1855 reached a height of 22,329 ft. on the Eastern Ibi Gamlin, one of the subsidiary peaks of Kamet, whilst I. S. Pocock of the Survey of India set up a plane table at 22,040 ft. in the same district. Another notable early explorer was the famous botanist Sir Joseph Hooker who, in 1849, explored the Sikkim valleys of Kanchenjunga and

made attempts to climb Kangchenjau, 22,700 ft and Paubunri, 23,180 ft. Some remarkable explorations were also carried out by the Pandits of the Survey of India. Among these men was Babu Sarat Chandra Das who traversed the Jonsong La, 20,200 ft.

Later in the nineteenth century came Lord Conway who, in 1892, made explorations in the Karakoram Himalayas, particularly in the region of the Baltoro Glacier, the greatest of Himalayan glaciers, and climbed a peak of 23,000 ft. Sir Francis Younghusband also made explorations in the Karakorams and accomplished the first crossing of the Karakoram Pass. The Duke of the Abruzzi also made a number of expeditions into this range and reached a height of 25,000 ft. on the Bride Peak. Mountaineering developed rapidly in the "nineties", and a bold attempt was made by A. F. Mummery, Professor N. Collie and Brigadier-General the Hon. C. G. Bruce to climb Nanga Parbat. In a final attempt on the mountain Mummery and his two Gurkhas were lost. In 1899 D. W. Freshfield made the first circuit of Kanchenjunga and explored the Nepal side of the mountain.

A New Phase—Meanwhile, thanks to Brigadier-General Bruce, Gurkhas, and later Sherpas and Bhotias were trained for mountaineering and, with the advent of first-class portage, Himalayan mountaineering entered on a new phase. Dr. and Mrs. Bullock Workman made a number of expeditions into the Karakorams and W. W. Graham made a number of remarkable ascents, with Swiss guides, including an ascent of Kabru, 24,000 ft., which has been the subject of much controversy. Kabru was later attempted by two Norwegians, Messrs. Rubenstein and Monrad Aas, who got within a few feet of that top.

The present century opened with a number of remarkable ascents by Dr. A. M. Kellas, who died during the 1921 Everest expedition. He climbed several great peaks including Kangchenjau, Paubunri and Chomolomo and made expeditions to the Central Himalayas where, with Colonel H. T. Morshead he reached in 1920 an altitude of 23,500 ft on Kamet.

In 1907 Brigadier-General Bruce, Dr. T. G. Longstaff and A. L. Mumm explored the Garhwal, Himalayas and reconnoitred Kamet. After this Longstaff, with the Swiss guides Alexis and Henri Brocherel, ascended Trisul, 23,406 ft. which, until the Jonsong Peak, 24,344 ft., was climbed in 1930 remained the highest summit reached. In 1911 and 1912 attempts were made to climb Kamet by C. F. Meade and his Swiss guides and a height of 23,500 ft. was gained. Captain Morris Sluagby also attempted Kamet at this time.

Attempts on Kanchenjunga—The first attempt on Kanchenjunga was made in 1905 but ended in disaster, Lieut. Pache and three porters being killed by an avalanche. The second attempt in 1929 was made by a solitary American, E. F. Farmer, who lost his life. In the same year a determined attempt was made by a party of Bavarian Mountaineers led by Paul Bauer. A height of over 24,000 ft. was reached on the north-east spur before bad weather forced the party to retreat.

In 1930 a fourth attempt was made by an International expedition led by Professor G. Dyhrenfurth. The party attempted the mountain from the Nepal side, but were repulsed by an ice avalanche which killed one of the porters. Subsequently, they ascended a number of peaks including the Ramthang Peak, 23,200 ft. and the Jonsong Peak 24,344 ft.

The fifth attempt in 1931 was made by Bauer and his party, but failed at a slightly greater elevation than was attained in 1929. One of the party H. Schaller and a porter were killed by a fall during the expedition.

In the summer of 1931 a party of young British climbers led by Mr. F. S. Smythe succeeded in reaching the summit of Mount Kamet (25,447 ft.), the first peak over 25,000 ft. to be climbed.

Mount Everest—There have been six Expeditions to Mount Everest of which those in 1921 and 1935 were reconnaissances and those in 1922, 1924, 1933, 1936 and 1938 attempts to reach the summit.

The preliminary expedition for the reconnaissance of the approaches to Mt. Everest carried out its work in the most complete manner under the leadership of Lt.-Col. C. K. Howard-Bury. The approaches to Mt. Everest on all its northern faces were thoroughly examined, and relations were established with the local authorities. On the information and experience of the reconnaissance expedition the second expedition to Everest was organised and set off the following year under the leadership of Brig-Gen the Hon. C. G. Bruce. Capt. G. I. Finch and Capt. J. G. Bruce succeeded with the help of oxygen in reaching the height of 27,800 ft. During this expedition seven men were killed when an avalanche swept them over an ice cliff some 60 feet high.

The 1924 expedition was again commanded by Brig-Gen. Bruce. But owing to his ill health Lt.-Colonel E. F. Norton took on the command. Lt.-Col. E. F. Norton and Dr. T. H. Somervell reached a height of 28,100 feet. Then a final attempt was made by G. I. Mallory and A. C. Irvine. They were assisted by a supporting party consisting of N. E. Odell and J. de V. Hazard. On June 6th they left the 25,000 feet camp with three porters who carried loads for them up to 28,800 ft. On June 8th they left camp for their attempt and were never seen again. On June 10th for the third time Odell climbed up to the 28,800 feet camp but could find no sign of Mallory and Irvine, and communicating with Norton evacuated the mountain.

The expedition of 1933 followed a successful effort by Lt.-Col. J. L. R. Weir, Political Officer in Sikkim, to obtain the permission of the Tibetan Government for a further attempt to climb the mountain. An Everest Committee was formed under the aegis of the Royal Geographical Society and the Alpine Club, and Mr. Hugh Rutledge, formerly of the I.C.S., accepted its invitation to take charge of an expedition. Included in it as members were Mr. F. S. Smythe, leader of the successful Kamet Expedition of 1931, and Capt. E. St. J. Birnie, E. E. Shipton and Dr. C. R. Greene who climbed with Mr. Smythe in 1931. The Expedition reached Calcutta in February and forthwith proceeded to its main task.

The 1933 expedition established its base in the Rongbuk Valley on April 17th and on April 21st Camp I was established. Thenceforward the expedition was dogged by exceptionally bad pre-monsoon weather which greatly hindered the establishment of camps and made the ascent to the North Col, 23,000 ft prolonged and arduous work. Camp IV, 22,800 ft, was not established until the middle of May after a 40 feet ice wall on the North Col slopes had been climbed. The expedition was equipped with wireless which enabled weather reports to be received from the meteorological authorities at Alipore. One installation was at Darjeeling, one at the base camp and a third at Camp III, 21,000 ft. Camp III was linked to the North Col by field telephone so that messages could be received up to 23,000 ft from the plains of India in a short space of time.

Owing to a series of blizzards and high winds Camp V was not established until May 22nd. But it was pitched at 25,500 ft several hundred feet higher than previously. The party was then cut off for three days by a furious blizzard and eventually had to retreat to Camp IV. The Camp was re-established on May 28th and on May 29th. Wyn Harris, L. Wager and J. L. Longland continued the ascent and finally pitched Camp VI at 27,400 ft, 600 ft higher than in 1924, after a magnificent effort on the part of the porters. Longland then brought the porters down but had a terrible time in a blizzard and only by exercising great mountaineering skill steered them down to Camp V. The following morning Wyn Harris and Wager made a reconnaissance of the route to the summit and failing to discover a route along the crest of the north-east ridge finally followed the same route as Norton in 1924. They were stopped by dangerous conditions at 28,100 ft and returned to Camp VI where they met Shipton and Smythe who had come up from Camp V, after which they descended to Camp V. The following morning Shipton and Smythe were unable to leave Camp VI owing to a high wind but on June 1st they made their attempt on the summit.

An hour and a half after leaving the Camp Shipton had to return owing to some internal trouble. Smythe carried on alone and reached approximately the same point as Wyn Harris and Wager before he was forced to retreat owing to the deep powdery snow resting on the steep slabs. Shipton descended to Camp V the same day in very bad weather and Smythe spent a third night at Camp VI descending to Camp IV next day in a blizzard. Owing to frostbites, strained hearts, and high altitude deterioration the party had to retire to the base camp. A week later they returned to Camp III to make another attempt. Owing, however, to the breaking of the monsoon this had to be abandoned and the expedition returned to Darjeeling.

An extraordinary attempt to climb Everest was made in 1934 by Maurice Wilson, a young airman. Having penetrated Tibet in disguise he marched to Everest and with a few porters went on in reaching 21,000 feet. He then succeeded alone and nothing more was heard of him, until his body was discovered near the site of Camp III, 21,000 feet, by Mr. E. E. Shipton's party in 1935.

Early in 1935 the Tibetan Government granted permission for a further attempt to take place from June 1935 to June 1936 inclusive.

As there was no time to organise an attempt on the summit it was decided to send out a small party under the leadership of Mr. E. E. Shipton. This had as its objects: Collection of data as to monsoon snow and weather conditions, examination of alternative routes from the west, the trying out of new men for the summit attempt, physiological observations; a stereo-photogrammetric survey, examination of ice formations on the North Col.

This expedition proved that Everest cannot be ascended during the monsoon and that the only hope of an ascent is during the period immediately before the monsoon.

Conditions during the monsoon are extremely dangerous and the party had a narrow escape from an enormous avalanche that fell from the slopes of the North Col.

During the course of this reconnaissance two dozen peaks over 20,000 feet high were ascended.

The 1936 expedition was led by Mr. Hugh Rutledge and included three of the 1933 climbers: Messrs. Shipton, Smythe and Wyn Harris, and one of the 1933 Signals Officers, Lieut. Smith Windham. It encountered exceptionally bad weather and unusual conditions. Before the monsoon, snowstorms rendered the mountain unclimbable and the usual pre-monsoon north-west wind was lacking to clear the snow away. However, Camp IV on the North Col. was established to schedule and the party were in position to attack the summit when the weather broke and two feet of snow forced them to retreat down the dangerous slopes of the North Col. To cap their discomfiture the monsoon arrived on the exceptionally early date of May 24th. Two attempts were made to re-open the route to the North Col but on both occasions the party were in great danger and the attempt had to be abandoned when Shipton and Wyn Harris were carried down by an avalanche and nearly lost their lives. Subsequently reconnaissance parties ascended the main Rongbuk glacier and examined the west side of the North Col which, in spite of Mallory's unfavourable verdict, was found to be not only practicable but less dangerous in monsoon conditions than the east side.

The 1938 expedition consisted of seven climbers, H. W. Tilman, E. E. Shipton, F. S. Smythe, N. E. Odell, Dr. C. B. M. Warren, P. Lloyd and Capt. P. R. Oliver and was led by Mr. Tilman. It was considerably smaller than previous expeditions owing to economic reasons and because experience has shown that the small light expedition has as good and perhaps better chance of achieving its object than a large cumbersome expedition rendered comparatively immobile by its transport and tied down to a fixed plan. Though the expedition failed to reach the summit of Mount Everest it fully justified these beliefs and cost only £2,500 as against the £10,000 or more of previous Everest expeditions.

The expedition reached Rongbuk on April 6th and established Camp 3 on April 26th. Wind and cold made further advance impossible.

and the party descended to the Kharta valley for a rest and to recuperate from influenza, chills and sore throats. They returned in the middle of May during the commencement of the monsoon which broke on the unprecedented date of May 5th, one month to six weeks earlier than usual. The route up the North Col was forced in dangerous snow conditions and the party had a narrow escape from an avalanche. Camp 4 was established on May 24th but snowstorms drove the party down. It was then decided to regain the North Col from the west via the Main Rongbuk Glacier and Camp 4 was re-established after a difficult ice climb on June 5th. On June 8th Camp 6 was established by Shipton and Smythe with seven porters and the following day an attempt was made to reach the summit. Conditions, however, proved impossible owing to deep monsoon snow, and the party was forced to retreat after reaching a height of 27,300 ft. A further attempt by Tilman and Lloyd on June 11th met with no more success and the expedition had to be abandoned.

Aerial Expedition—An interesting side to the exploration of Everest was an aerial expedition undertaken in 1933 for the purpose of photographing the mountain from the air. This venture was financed by Lady Houston. Major L. V. S. Blacker, formerly of the Guides, was its leader and in charge of its survey work, Lord Clydesdale chief pilot, Flt. Lt. A. McIntyre second pilot and Major P. T. Etherton, its London manager. Two specially equipped aeroplanes, adaptations of the well-known Wapiti, were provided. A special point in their equipment was the provision of compressed oxygen for supply through gas masks to the aviators at high altitudes. The expedition was not permitted to fly across the Tibetan frontier, so as to circle Mt. Everest, but both machines successfully flew over the peak and several good photographs were taken of it. By permission of the Nepal Government a line of flight from Purnea, the base of the expedition, across Nepal territory to Mt. Everest, was taken and along this good survey photographs as the somewhat poor visibility at the time of the flight, in April permitted.

An interesting mountainflight of which details were published in 1933 was one from Risalpur to Gilgit and back, undertaken by the R. A. F. at Risalpur in the course of its routine duties in October, 1932. The expedition was commanded by F. Lt. Isaac and was made by five of the machines ordinarily in use by the Force. The distance from Risalpur by way of the Indus Valley and past Nanga Parbat to Gilgit is 286 miles. It was covered in 2 hrs 20 mins. on the outward flight and in 2 hrs. 5 mins. on the return journey. From Gilgit the machines further proceeded upon flights over the Hunza, Nagar and Rakjot areas. Brilliant photographs of Nanga Parbat and Rakaposhi, as well as of other places of importance or interest, were taken. Such flights are now frequently made by the R. A. F.

The year 1932 saw a well organised expedition to Mount Nanga Parbat. It was conducted by Dr. Merkl, of Munich, and included Lt. R. N. Frier, of the Gilgit Scouts, who acted as transport officer, an American Mr. Rand Herron and Miss E. Knowlton, of Boston, U.S.A.

Several determined attempts to reach the summit of the mountain in August were brought to an end by the break-up of the weather before they attained success.

The Disaster of 1934.—In 1934 Herr Merkl returned to the attack with an even stronger party, which included a number of well-known German and Austrian mountaineers and Captains Frier and Sangster of the Indian Army as transport officers. Fatality early overtook the expedition, Herr Drexel dying of pneumonia. Owing to various delays, Camp IV was not established until the end of June. The party then proceeded to rush to the peak leaving only skeleton camps behind. Finally, after a height of 25,600 feet had been reached, and Camp VIII established at 24,800 feet, a terrible blizzard broke. The party retreated, but owing to the storm and ill-equipped camps retreat became a route during which no fewer than nine lives were lost, Herren Merkl, Welzenbach and Wieland and six Darjeeling porters—men who had accompanied the 1933 Everest Expedition. Of the Europeans only the two Austrians Herren Schneider and Aschenbrenner escaped whilst of the surviving porters, all of whom were frostbitten, one or two spent a week without food or shelter.

In May 1937, another attempt was made to climb Nanga Parbat by a German expedition, headed by Dr. Wien. News reached Simla on June 20 that disaster had overtaken the expedition and subsequently it was learned that the entire party of climbers with the exception of one survivor, Dr. Luft, had perished. Eight of the nine members of the expedition were killed along with nine Sherpa porters. Mountaineering experts are of the opinion that the season was not very propitious for the ascent of the peak, which is considered to be more accessible in the autumn.

A further German attempt to climb Nanga Parbat was made in 1938 under the leadership of Dr. Paul Bauer. During the second half of July the party succeeding in reaching a height of over 23,000 ft. but were forced to retreat by bad weather. During the climb the bodies of Herr Willy Merkl and the porter Gay Lay, who perished in 1934 were discovered.

In 1939 another German expedition led by Herr Peter Aufhäuser explored the Diamir flank of Nanga Parbat.

Another expedition to the Karakoram took place in 1934 under the leadership of Dr. O. Dyhrenfurth. All four peaks of "Queen Mary" were climbed. The highest of these has been triangulated as 24,350 feet, but the party state it to be more than 1,000 feet higher.

In 1934 Messrs. E. E. Shipton and H. W. Tilman, by a magnificent piece of exploration and mountaineering, succeeded in penetrating the hitherto impracticable Rishi Ganga to the glacier basin of Nanda Devi, thereby solving a problem that had exercised the minds of Himalayan mountaineers for many years and completing the work of pioneers such as Dr. T. G. Longstaff and Mr. Hugh Ruttledge. Messrs Shipton and Tilman also crossed from Badrinath to Ganpot via the Satopanth Pass and explored the head of the Gangotri glacier. Profiting by the

discovery of the route to the Nanda Devi basin an Anglo-American party, the leader of which was Mr H W Tilman, successfully scaled Nanda Devi via its south-west ridge, Messrs H W Tilman and N E Odell being the climbers to reach the summit. This expedition was remarkable in that owing to the sickness of the porters the climbers had to carry their own camps up the mountain. This is the finest and most difficult peak yet climbed in the Himalayas.

In 1939 the first Polish expedition to visit the Himalayas succeeded in making the ascent of the East Peak of Nanda Devi. Unfortunately an accident led to the death of M M A Karpinski and S Bernadzikiewicz on Trisul above the Milam Glacier.

Lt.-Col C. F. Stoehr, R.E., and Lt D M Burn, R.E., lost their lives on 12th August 1932, while climbing on Panjtarni, near Pahlgam in Kashmir.

In 1935 an attempt to scale Peak 36,25,400 feet, in the western Karakoram was made by Lieut J Waller, Lieut J Hunt, Dr J S Carslaw and W R Brotherhood, R.A.F. A series of blizzards were experienced but the party reached a height estimated as 24,500 feet. There is no great difficulty between this point and the summit.

In the Autumn of 1935 the summit of Kabru was reached by Mr C R Cooke who was accompanied to the foot of the final rocks by Mr G Schoberth who was forced to give up owing to a high altitude, cough and the risk of frostbite. This ascent was made on November 18th, an unusually late date and is of great interest as proving that high Himalayan peaks can be climbed in early winter at least.

The 1936 French expedition to the Karakoram, like the Everest expedition, encountered very bad weather and accomplished little.

After Nanda Devi the most remarkable ascent of 1936 was that of Siniolchu, a peak once designated as the "embodiment of inaccessibility", in the Kanchenjunga range. This was made by a small German party under the leadership of Herr Paul Bauer. Siniolchu is one of the most beautiful peaks in the Himalayas.

In 1939, a party of Munich mountaineers, consisting of Herren Grob, Paidar and Schmauder, made the first ascent of the Tent Peak in the Kangchenjunga range and attempted the Twins Peak but were defeated by bad weather.

Other ascents in Sikkim were made by Mr Marco Pallis's party who attempted Simvu unsuccessfully and by Mr C R Cooke and Mr. F. Spencer Chapman who ascended several peaks of over 20,000 feet including the Fluted Peak.

During the summer of 1937 a number of peaks were climbed, the most notable being Chomolhari 23,997 ft by Mr F. Spencer Chapman with one porter, and the Mana Peak 23,860 ft by Captain P R Oliver and Mr. F. S Smythe. The latter completing the ascent along as Capt Oliver was insufficiently acclimatised. Three other peaks of 21,400 ft, 21,500 ft. and 22,431 ft. were also climbed by Messrs. Oliver and Smythe and attempts made on Nilkanta and Dunagiri which were frustrat-

ed by bad weather. They also explored a remarkable plateau above the Banke Glacier, discovered in May 1937 by Lieut R A Gardiner of the Survey of India. In addition, Mr Smythe with three Tibetan porters climbed seven peaks of the Zaskar Range among them the very difficult peak of Nilgiri Parbat, 21,264 ft. During this expedition Mr. Smythe came upon some remarkable tracks in the snow which the Tibetan porters believed were made by a Mirka or Abominable Snow Man. These tracks were afterwards identified as bear tracks by the Natural History authorities in London. It is believed that there is now enough evidence to explain this strange legend of the Himalayas.

Garhwal was visited in 1939 by a Swiss expedition led by M Andre Roch and two fine peaks were scaled, Dunagiri and the Wedge Peak.

In 1938 Mr C S Houston led an expedition to the Karakoram during the course of which a bold and determined attempt was made to climb K2, 28,150 ft. After failure to obtain a footing on the N W ridge, the party, which included several veteran Sherpa porters, ascended the N E ridge to a height of 26,000 ft.

A further attempt on K2 was made by an American party in 1939 but ended in disaster, Mr Dudley Wolfe, and three Sherpa porters losing their lives in stormy weather high up the mountain.

Another expedition to the Karakoram was that undertaken by Capt J B Harrison, Lieut J O M Roberts, Mr R A Hodgkin, Dr T. Graham Brown and Lieut J Waller together with Dr G A J Teasdale and Dr Elizabeth Teasdale. The principal objective was Masherbrum, 25,660 ft. After establishing Camp 7 at 24,600 ft Harrison and Hodgkin reached a height of about 25,000 ft before being forced to retreat by bad weather. In descending to Camp 6 they were overtaken by a blizzard and forced to spend a night in the open as the result of which they were seriously frostbitten. The devotion of the Sherpa porters prevented a more serious disaster.

Further exploration of the Badrinath, Kedarnath ranges at the sources of the Ganges as well as various ascents was made by a German expedition under the leadership of Dr R. Schwarzgruber in the autumn of 1938.

The Survey of India are now very active and much work has been accomplished during the re-survey of Garhwal and Kumaon under the direction of Major Gordon Osmaston, whilst several thousand square miles of country have been mapped by Messrs Shipton and Tilman during their expeditions to the Shaksam in 1937 by Mr Shipton during his expedition to the Kara Koram in 1939.

The Himalayan Club was founded on 17th February 1923, at New Delhi with the object of encouraging and assisting Himalayan travel and exploration, and extending knowledge of the Himalayas through science, art, literature and sport. The initiation of this Club was due to the late Sir Geoffrey Corbett, Secretary, Commerce Department of the Government of India, and to Major Kenneth Mason, M.C., R.E., assistant Surveyor-General.

Freemasonry in India.

In 1728 a dispensation was granted by the Grand Lodge of England to Geo Pomfret, authorising him to "open a new Lodge in Bengal." Of his personage nothing further is known but under Capt. Farwinter, who in the following year succeeded him as Provincial Grand Master of India, a Lodge was established in 1730, which in the Engraved Lists is distinguished by the arms of the East India Company, and is described as "No 72 at Bengal in the East Indies." The next Provincial Grand Masters were James Dawson and Zeesh. Gee, who held office in 1740, after whom came the Hon Roger Drake, appointed 10th April 1755. The last named was Governor of Calcutta at the time of the attack made on the settlement by Surajah Dowlah in 1756. Drake missed the horrors of the Black Hole by escaping and was accused of deserting his post, but, though present at the retaking of Calcutta by Admiral Watson and Clive, it is improbable that he resumed the duties of his masonic office after the calamity that befell the settlement.

The minutes of the Grand Lodge inform us that William Mackett, Provincial Grand Master of Calcutta, was present at the meeting of that body, November 17, 1760, and we learn on the same authority that at the request of the "Lodges in the East Indies" Gullin Smith was appointed P. G. M. in 1762. At this period it was the custom in Bengal "to elect the Provincial Grand Master annually by the majority of the votes of the members present, from amongst those who passed through the different offices of the (Prov.) Grand Lodge and who had served as Dep. Prov. Grand Master." This annual election as soon as notified to the Grand Lodge of England was confirmed by the Grand Master without its being thought an infringement of his prerogative. In accordance with this practice, Samuel Middleton was elected (P. G. M. circa) in 1767; but in passing it may be briefly observed that a few years previously a kind of roving commission was granted by Earl Ferrars in 1762-64 to John Bluvitt, Commander of the "Admiral Watson," Indiaman "for East India where no other Provincial Lodge is to be found." Middleton's election was confirmed October 31st, 1768, and, as the dispensation forwarded by the Grand Secretary was looked upon as abrogating the practice of annual elections, he accordingly held the office of D. G. M. Unfortunately the records of the P. G. L. date back only to 1774, and thus much valuable information is lost to us. This Grand Lodge continued working until 1792 when it ceased to meet. It seems that the officers were selected from only two Lodges much to the dissatisfaction of the other Lodges, and resulted in most of the dissatisfied bodies seceding and attaching themselves to the Athol or Ancient Grand Lodge. In 1813 at the Union both the Ancients and Moderns in Calcutta combined and gave their allegiance to the United Grand Lodge of England and have since been working peaceably under the Provincial Grand Lodge of Bengal which was revived in that year and in 1840 created a District Grand Lodge.

Madras.—The earliest Lodge in Southern India (No. 222) was established in Madras in 1752. Three others were also established about 1766. In 1767 Capt. Edmund Pascal was appointed P. G. M. for Madras and its Dependencies and in the following year another Lodge was established at Fort St. George. In 1768 the Athol (or Ancients) invaded this District and in 1781 established a Provincial Grand Lodge and both these Provincial Grand Bodies continued working peaceably side by side until the Union. Indeed, though not generally known, these two Grand Bodies made an attempt at coalition long before any such movement was made by their parent bodies, the Grand Lodge of England, and the Ancient Grand Lodge, and Malden in his History of Freemasonry in Madras states that in a great measure they succeeded. At the Union in 1813 all the bodies in Madras gave their allegiance to the United Grand Lodge. One event worthy of note was the initiation in 1774 at Trichinopoly of the eldest son of the Nawab of Arcot, Umdat-ul-Umara, who in his reply to the congratulations of the Grand Lodge of England stated "he considered the title of English Mason as one of the most honourable that he possessed." This document is now stored in the archives of the United Grand Lodge.

Bombay.—Two Lodges were established in this Presidency during the 18th century, Nos. 234 at Bombay in 1758 and 569 in Surat in 1798, both of which were carried on the lists until the Union when they disappeared. A Provincial Grand Master, James Todd, was appointed but there is no record that he exercised his functions and his name drops out of the Freemasons' Calendar in 1799. In 1801 an Athol Warrant was granted (No. 322) to the 78th foot which was engaged in the Maratha War under Sir Arthur Wellesley. In 1818 Lord Morla was asked to constitute a Lodge to be known by the name of St. Andrew by eight Masons residing there and also to grant a dispensation for holding a Provincial Grand Lodge for the purpose of making the Hon. Mountstuart a Mason, he having expressed a wish to that effect. The Petitioners further requested "that his name might be inserted in the body of the warrant, authorising them to instal him after being duly passed and raised a Deputy Grand Master of the Deccan." Of the reply to this application no copy has been preserved. Lodge Benevolence was established in Bombay in 1822.

In 1823 a Military Lodge "Orion-in-the-West" was formed in the Bombay Artillery and installed at Poona as No. 15 of the Coast of Coromandel. It seems from Lane's records that in 1830 it was discovered that this Lodge was not on the records of the United Grand Lodge of England. A Warrant was subsequently issued bearing date 19th July 1833. According to the early proceedings of this Lodge, members were examined in the Third Degree and passed to the chair in the Fourth Degree for which a fee of three gold mohurs was charged. In the following year a second Lodge was established at Poona by the Provincial Grand Lodge of Bengal which, however, left no

trace of its existence. In 1825 the civilian element of "Orion" seceded and formed the "Lodge of Hope" also at Poona No 802

Here "Orion" unrecognized at home, aided in the secession of some of its members, who obtained a warrant, on the recommendation of the Parent Lodge from the Grand Lodge of England. Two years later it was discovered that no notification of the existence of "Orion-in-the-West" had reached England, nor had any fees been received, although these including quarterages had been paid into the Provincial Grand Lodge, Coast of Coromandel. It was further ascertained that in granting a warrant for a Bombay Lodge the Provincial Grand Master of Coromandel had exceeded his powers. Ultimately a new warrant No. 598 was granted as already stated in 1833. Lodge "Perseverance" was started in Bombay No 818 in 1828. Up to this time the jurisdiction of the Grand Lodge of England in India had not been invaded, but in 1836 Dr. James Burnes was appointed by the Grand Lodge of Scotland P G M of Western India and its Dependencies. No Provincial Grand Lodge however was formed until 1st January 1838. A second Scottish Province of Eastern India was started which on the retirement of the Marquis of Tweedale was absorbed within the jurisdiction of Dr. Burnes, who in 1848 became Provincial Grand Master for all India (including Aden) but with the proviso, that this appointment was not to act in restraint of any future sub-division of the Presidencies. Burnes may be best described as being in 1836 in ecclesiastical phrase as a Provincial Grand Master "in partibus infidelium" for whatever Lodges then existed throughout the length and breadth of India were strangers to Scottish Masonry. But the times were propitious. There was no English Provincial Grand Lodge in Bombay and the Chevalier Burnes, whom nature had endowed with all the qualities requisite for Masonic Administration, soon got to work and presented such attractions to Scottish Freemasonry that the strange sight was witnessed of English Masons deserting their mother Lodges, to such an extent that these fell into abeyance, in order to give support to Lodges newly constituted under the Grand Lodge of Scotland. In one case, indeed, a Lodge "Perseverance" under England went over bodily to Scotland, with its name, jewels furniture, and belongings, and the charge was accepted by

Scotland. This Lodge still exists in Bombay and now bears No 338 on the Register of Scotland. From this period, therefore, Scottish Masonry flourished, and English Masonry declined until the year 1848 when a Lodge St. George No 549 on the Rolls of the Grand Lodge of England was again formed at Bombay, and for some years was the solitary representative of English Masonry in the Province. In 1844 Burnes established a Lodge "Rising Star" at Bombay for the admission of Indian gentlemen the result of which is seen at the present day. Thus the seed planted at Trichinopoly in 1774 by the initiation of Umdat-ul-Umra has borne fruit resulting in the initiation of thousands of Indian gentlemen of all castes and creeds, and which has gone far to establishing that mutual trust between West and East, a distinguishing characteristic of Speculative Freemasonry. A Provincial Grand Lodge was re-established in Bombay in 1860, and converted into a District Grand Lodge in 1861

The Grand Lodge of England—All three Constitutions of the United Kingdom, the United Grand Lodge of England, the Grand Lodge of Ireland and the Grand Lodge of Scotland hold jurisdiction in India. By far the largest is the first, the next largest is the third and the number of Lodges under Ireland is as yet small. The Grand Lodge of England divides its rule under Five District Grand Masters independent of each other and directly subordinate to the Grand Master of England by whom they are appointed.

The Grand Lodge of Scotland exercises its rule through a Grand Master of All-Scottish Freemasonry in India, who is nominated by the Lodges under the jurisdiction subject to confirmation by the Grand Lodge of Scotland. The Hon'ble Mr Justice Cecil Patrick Blackwell, Kt, M B E, the present incumbent of the office, and controls 71 Lodges Under him the several districts are in charge of the following Grand Superintendents:—

Lt-Col T T Jones, G Supdt, Northern India

N Iredale, G Supdt., Central India.

J Dundas, G Supdt, Southern India

Dr B N C Roy, G. Supdt, Eastern India

I H Taunton, C I E, I C S, G Supdt., Sind

The Grand Secretary is R.W Bro Khan Bahadur J C Mistree, J.P., 17, Murzban Road, Fort, Bombay.

The Grand Lodge of Ireland granted a warrant to establish a Lodge at Kurnal in 1837, but it was short lived. An attempt was made in 1869 to establish a Lodge in Bombay, but on the representation of the Grand Secretary of England, to the Deputy Grand Secretary of Ireland that it would be objectionable to create a third masonic jurisdiction in the Provinces there being two already, viz, English and Scottish the Grand Lodge of Ireland declined to grant the warrant. In 1911, however, a warrant was sanctioned for the establishment of Lodge "St Patrick" and since that year three other Lodges have sprung into being, one of which is now defunct.

The Irish Constitution is governed in India by a Grand Inspector for India who is Rt. Wor. Bro. Mr Justice Munroe of the Lahore High Court. He has two Asst. Grand Inspectors, one for the Bombay Presidency, who is Wor. Bro. A. Finan, and one for Bengal who is Wor. Bro E. O. Rees

Eleven Lodges are working in India at the following places.

Bombay.

Nos. 319, 419, 648.

Calcutta

Nos. 263, 382, 464, 465, 490 and 567.

Lahore.

No. 19.

Sindia

No. 458.

Royal' Arch Masonry.—Under England the District Grand Master in any District is nearly always created also Grand Superintendent, who generally appoints his Deputy as Second and another Companion as Third Principal.

Under Ireland there is no local jurisdiction and under Scotland the office is elective subject to confirmation.

The English five Districts are constituted as under—

Bengal.

31 Chapters Grand Supdt. Most Ex. Comp
Capt A. Barr-Pollock

Madras.

20 Chapters. Grand Supdt. Most Excellent
Comp Sir George Boag, K C I E, C S I,
M A, I C S

Bombay

22 Chapters. Most Ex Comp Rt. Rev. Lord
Bishop of Lahore, C I E, O B E, V.D.,
M.A., D.D., Grand Superintendent.

Royal Arch Masonry under Scotland has a separate constitution to Craft Freemasonry. The District Grand Chapter of India is at present ruled by M. E. Camp. Sir Shapoorjee B. Millimoria, Kt, MBE, JP, under whom there are 33 Chapters in India. The Grand Secretary of All Scottish Freemasonry in India is also District Grand Scribe E. of Scottish R. A. Masonry.

There is one Irish Chapter in Calcutta.

Mark Masonry.—Under England, Mark Masonry is worked under the Grand Mark Lodge of England and Wales, and divided into separate Districts; but in most cases the District Grand Master is also District Grand Mark Master.

Bengal.

22 Lodges Rt W Bro Capt A Barr-Pollock, District Grand Master

Bombay.

18 Lodges Rt W Bro Sohrab R Davar, P G. O., District Grand Master

Madras.

10 Lodges Rt Wor Bro Sir George Boag, KCIE, CSI, MA, ICS, District Grand Master

Punjab.

12 Lodges. Rt. W. Bro Rt Rev. The Lord Bishop of Lahore, CIE., OBE, V.D., MA., DD, District Grand Master.

The Mark degree is incorporated with the Royal Arch degree in Irish Chapters. The Mark degree is worked in some S O. Lodges, but essentially in R. A. Chapters, in which the Excellent, R.A.M. and other degrees can be obtained. S O. Chapters insist upon candidates being Mark Master Masons before exaltation. The Mark degree in Scottish Craft Lodges is conferred by the Rt. Wor. Master as the S. O. Craft does not recognise the ceremony of Rt. W. Mark Master. This is confined strictly to Chapters. Each Chapter has a Lodge of M. M. working under its charter. Separate charters for Mark Lodges are only issued by the G. Chapter of Scotland.

Royal Ark Mariner.—The Royal Ark Mariner degree is worked in the English Constitution by lodge attached to Mark lodges. Its ruler is the District Grand Mark Master and only Mark Master Masons can take this degree.

There are 10 R. A. M. Lodges under Bengal, 5 under Bombay, 4 under Madras and 4 under Punjab

Other Degrees.—There are many side degrees worked in India, of the Ancient and Accepted Rite, no degree higher than the 18° is worked in India under England, but under Scotland the 30° is worked. The Knight Templar Degree is also worked in several places under both English and Scottish jurisdiction. There are fourteen 18th Degree Chapters working in India.

The Red Cross of Constantine has two Conclaves working in India. With them are worked the degrees of KHS and Kt of St John. They are governed by the Grand Council in England direct.

The Conclaves working in India are —

No. 43 Bombay and No. 160, Simla.

The Order of the Secret Monitor has 7 conclaves under Bombay, 7 under Madras, and 1 in Calcutta.

Benevolent Associations.—Each District works its own benevolent arrangements which include the Relief of Distressed Masons, educational provision for the children of Masons and maintenance provision for widows in poor circumstances.

All information will be given to persons entitled by the District Grand Secretary in each District. The names and addresses of District Grand Secretaries are given below:—

D. G. S., Bengal

Guy D Robinson, P. D. G. W. (Bombay), 19, Park Street, Calcutta.

D. G. S., Bombay.

Khan Bahadur Palanji N. Davar, P.A.G.R., P.D.G.W., Freemasons' Hall, Ravelin Street, Fort, Bombay.

D. G. S., Madras

Rao Bahadur S. T. Srinivasa Gopala Chari, P G D, P D G W, Freemasons' Hall, Egmore, Madras

D. G. S., Punjab

G. Reeves Brown, P A G D. of O. (Eng), Freemasons' Hall, Lahore.

Scottish Constitution.—It has two Benevolent Funds known as, (1) Scottish Masonic Fund of Benevolence (India), and (2) Scottish Masonic Benevolent Association in India. For information regarding the Benevolent Funds application should be made to Khan Bahadur Jehangeer C Mistree, JP, 17, Murzban Road, Fort, Bombay.

Scientific Surveys.

Zoological Survey of India—It was established in 1916, when the Zoological and Anthropological Section of the Indian Museum was converted into a Survey on a basis similar to that of the Geological and Botanical Surveys. The Indian Museum itself dates back to 1875, and at the outset the Zoological and Anthropological collections consisted almost entirely of material handed over by the Asiatic Society of Bengal, whose members had been accumulating systematic collections since 1814. Organised zoological investigation in India has thus been in continuous progress for nearly 126 years. From the foundation of the Museum in 1875 to the time when the Zoological and Anthropological Section was established as a separate Survey, the Curator (or as he was subsequently termed the Superintendent) of the Indian Museum has been a zoologist, and among the officers who have held the appointment have been such well-known members as Anderson, Wood-Mason, Alcock and Annandale.

The Survey is unique in that all its officers are Indians. The main functions of the Survey are to investigate the fauna of India and to arrange and preserve the section in the Zoological and Anthropological galleries of the Indian Museum. In addition the Survey issues two series of publications upon Zoological research, namely *The Records* and *The Memoirs* of the Indian Museum and an Anthropological work entitled "Anthropological Bulletins from the Zoological Survey of India."

Botanical Survey—The Botanical Survey department of the Government of India was under the control of a Director. The Superintendent of the Royal Botanic Garden, Calcutta was *ex-officio* Director. The Director having retired since December 3, 1939, the Department is awaiting some reorganisation. The duties of the Director are distributed amongst (i) Dr K P Biswas, M.A., D.Sc. (Edin.), F.R.S.E., Superintendent, Royal Botanic Garden, Calcutta, (ii) S. C. Sen, B.Sc. (Cal.), B.A. (Cantab.), A.M.I. Chem. E., Superintendent, Cinchona Bengal and Principal Quinine Officer of the Government of India, and (iii) S. N. Bal, M.Sc., Ph.D., Curator, Industrial Section, Indian Museum. There is a staff at headquarters of one officer for systematic work and at the Indian Museum a Curator who is engaged in the development and maintenance of the Industrial Section. The Director held administrative charge of the Government of India's cinchona distribution in India.

The existence of the Botanical Survey, like that of the Geological Survey, has both a cultural and an economic justification. On general grounds it is obvious that a progressive Government should acquaint itself with the vegetable resources of the area it administers, and although apart from the cinchona operations, the activities of the Survey cannot be said to have much immediate economic applicability—consisting as they do of investigations and researches into the systematics, limnology, distribution of plants, ecology and economic botany of plantlife—the work accomplished in pure and applied botany at the Royal Botanic Garden during the

last century and a half has exercised a profound and far-reaching influence upon the development of Agricultural Science and Forestry in India. The irreplaceable dried plant materials obtained by botanical explorations and preserved for more than one hundred and fifty years at the Herbarium of the Royal Botanic Garden, Calcutta, and several thousands of indigenous and exotic trees, shrubs and herbs cultivated in the open, prove to be most useful in dealing with such questions of considerable State-importance as naturalisation of useful plants, introduction of new vegetable products into the country, the adaption of raw produce to the requirements of manufacturing industry, land utilisation, preservation of rural areas, provision of national parks, drainage, sanitation and public health.

Survey of India.—The first authoritative map of India was published by D'Anville in 1752, when the exploration of the then unknown India was still largely in French hands. It had been compiled from routes of solitary travellers and rough chart of the coast.

The Survey of India may be said to have been founded in 1767—ten years after the battle of Plassey—when Lord Clive formally appointed Major James Rennell the first Surveyor General of Bengal, at that time the most important of the East India Company's possessions, though there were earlier settlements in Madras and Bombay.

Rennell's maps were originally military reconnaissances and latterly chained surveys based on astronomically fixed points, and do not pretend to the accuracy of modern maps of India based on the rigid system of triangulation commenced at Madras in 1802 and since extended over and beyond India. Even now, however, the relative accuracy of these old maps makes them valuable in legal disputes, as for instance in proving that the holding of a Bengal landowner was a river area at the time of the Permanent Settlement of 1793, so that he is debarred from its benefits.

From these beginnings, this department has gradually become primarily responsible for all topographical surveys, explorations and the maintenance of geographical maps of the greater part of Southern Asia, and also for geodetic work.

Geodesy means the investigation of the size, shape and structure of the earth, and the geodetic work of the department consists of primary (or geodetic) triangulation, latitude, longitude and gravity determinations. From these the exact "figure" of the earth is obtained, whereby points fixed by triangulation can be accurately located on its curved surface. The system of fixed points holds together all topographical and revenue surveys, and the existence of such a system from the early days of the department has avoided the outcroppings caused in other countries where isolated topographical surveys have been started without a rigid system. The inevitable result is that the

A geodetic framework is, therefore, essential in any large survey, but there are a number of other activities, all of them ultimately utilitarian which can be suitably combined with its execution, and the following are some of those which are carried out in India:

Precise levelling for the determination of heights;

Tidal predictions and publication of Tide Tables for thirty-one ports between Suez and Singapore

The Magnetic survey;

Observation of the direction and force of gravity;

Astronomical observations to determine latitude, longitude and time,

Seismographic and meteorological observations at Dehra Dun.

Indian geodesy has disclosed widespread anomalies of gravitational attraction in the earth's crust, which have recently led to a reconsideration of the whole theory of isostasy.

Topographical Surveys.—In the past this department used to carry out the large scale revenue surveys for most of India, and was still conducting this work for Central and Eastern India and Burma in 1905.

Though revenue survey is primarily a record of individual property boundaries and is unconcerned with the surface features, ground levels and exact geographical position essential to a topographical survey, it was on the whole found economical to carry out both surveys together.

By 1905, however, all the Provinces had taken the revenue surveys, for which they had paid, and the Survey of India was enabled to concentrate its energies on a complete series of modern topographical maps in several colours on the 1-inch to 1-mile scale as recommended by a commission which sat at that time to consider the existing maps of India.

This new series had been rendered necessary by the natural demand for more detailed information to be shown on maps, especially as regards the portrayal of hill features by contours, proper classification of communications and—more recently—air traffic requirements.

Although new surveys are carried out every year, covering from thirty to sixty thousand square miles—an area roughly that of England—the maps of a large part of the country are still over 50 years old, printed mostly in black only, and have hill features shown by roughly sketched form lines or hachures, such changes in town sites, canals and communications as have been embodied in them have not been surveyed on the ground but are entered from data gathered from outside sources.

While some of the unsurveyed places are in remote tracts like the Naga hills of Assam and the high Himalayas, most are accessible. Large areas in Central Burma, Eastern Bengal, North Bihar, South Bombay, Gujrat, Sind and Western Rajputana have yet to be mapped on modern lines.

On the separation of Burma from India on, 1st April 1937, the Burma Survey Party

Survey of India, has been placed on foreign service conditions under the Government of Burma. Technical and administrative control is, however, still exercised by the Surveyor General of India. The activities of the Survey of India have gone beyond the borders of India in the past. Nepal, for instance, was surveyed and mapped at the request of the local authorities in 1927.

Large Scale Surveys.—Surveys and records of international, state and provincial boundaries have always formed an important item of topographical work, and in recent years numerous Guide Maps have been published of important cities and military stations where the 1-inch to 1-mile scale is inadequate.

Miscellaneous.—While expending on topographical and geodetic work all funds allotted by Imperial Revenues, the department is prepared to undertake or aid local surveys, on payment by those concerned, such as

Forest and cantonment surveys,

Riverain, irrigation, railway and city surveys,

Surveys of tea gardens and mining areas, with such control levelling as is necessary for these operations

Administrative assistance is also given, and executive officers lent, in aid of the revenue surveys of various Provinces and States

The Printing Offices at Calcutta and Dehra Dun are always at the disposal of other Government departments, and the public, for such work as the printing of special maps, illustration for Reports and all diagrams for patents

Military Requirements and Air Survey.—The department is also responsible for all survey operations required by the army, and is in a position to meet the rapidly increasing complexity of modern military requirements, especially in air survey.

In view of its high military importance, air survey work for civil purposes is receiving all possible assistance, and continuous research is being carried on in the latest methods of mapping from photographs taken from the ground and in the air.

Administration is in the hands of the Surveyor General under the Education, Health and Lands Department of the Government of India.

The Headquarters office is at Delhi under the Asstt Surveyor General and there are 5 Directors. The circle area (covering Burma) is administered personally by the Surveyor General

Any enquiries regarding surveys, maps or publications may be addressed either to the Headquarters Office or to the Survey Director or Independent Party concerned, whose addresses are Director, Map Publication, Dehra Dun; Director, Geodetic Branch, Dehra Dun; Director, Frontier Circle, Simla; Director, Eastern Circle, Dehra Dun; and Officer-in-Charge Burma Survey party, Survey of India, Maymyo

Indian Science Congress.—The Indian science Congress was founded in 1914 largely through the efforts of Prof P S Macmahon and Dr J. L. Simonsen. These two gentlemen worked jointly as Honorary General Secretaries of the Congress till 1921. The general administrative work of the Office of the Congress was under the management of the Royal Asiatic Society of Bengal till 1939. The Association at present has a permanent staff of its own and an office to administer its own affairs. The objects are (1) to encourage research and to make the results generally known among science workers in India, (2) to give opportunities for personal intercourse and scientific companionship and thus to overcome to some extent one of the chief drawbacks in the life of workers in science in India, (3) to promote public interest in science, for this end the Congress is held at different centres annually.

The Congress meets in January each year in one of the principal cities. The proceedings last for six days. The Head of the Local Government usually becomes Patron of the Congress and the session is opened by a Presidential Address delivered by the President for the year. The President is chosen annually, the different sections being usually represented in turn. The sections are (1) Mathematics and Statistics, (2) Physics, (3) Chemistry, (4) Geology and Geography, (5) Botany, (6) Zoology and Entomology, (7) Anthropology and Archaeology, (8) Medical and Veterinary Sciences, (9) Agriculture Sciences, (10) Physiology, (11) Psychology and Educational Sciences, (12) Engineering and Metallurgy, when the Sections meet separately, each section is presided over by its own President also chosen annually. The mornings are devoted to the reading and discussion of the papers, Special discussions and symposia are held in the mornings or in the afternoon during the Session. Social functions and visits to places of scientific and industrial interest are arranged in the afternoons by the Local Reception Committee which is formed at the venue of the Congress to arrange for the work of the Session. Popular Lectures by eminent scientists and specialists are delivered in the evenings for the general public and form an important and attractive feature of the programme.

General Secretaries.—Prof S K Mitra, MBE, DSc, FNI, University College of Science, 92, Upper Circular Road, Calcutta, Prof. P Paria, MA, FNI, IES, Principal, Ravenshaw College, Cuttack.

The Indian Research Fund Association.—This Association was constituted in 1911 with a sum of Rs 5,00,000 set aside as an endowment for the prosecution and assistance of research, the propagation of knowledge and experimental measures generally in connection with the causation, mode of spread and prevention of communicable diseases. The Association can claim to be amongst the pioneers in organised medical research on a large scale and its work has been widely appreciated in other countries.

The control and management of the Association are vested in a Governing Body, the President of which is the Member-in-charge of the Department of Education, Health and Lands of the Government of India. This body is

assisted by a Scientific Advisory Board of which not less than three members have seats on the Governing Body. The Director-General, Indian Medical Service, is the Chairman of the Board and the Public Health Commissioner with the Government of India is the Secretary of the Board and of the Governing Body. Membership of the Association is open to non-officials. Every donor of Rs 5,000 is entitled to become a permanent life member, while every subscriber of Rs 100 per annum can be a temporary member.

The original Governing Body of the Association was, until 1929, composed exclusively of officials, but in that year the Raja of Parlakimedi, made a donation of Rs 1,00,000 to the Association and was appointed a life member. In the same year the Government of India, after taking into consideration the question of liberalising the constitution of the Governing Body, decided to enlarge it by including three representatives of the Indian Legislature, two representatives of Medical Faculties of Universities incorporated by law in India and one eminent non-medical scientist to be nominated by the Governor-General. As a result of further representations from the Universities and the Legislature, this Body was again enlarged in 1933 by the addition of a third representative of the Medical Faculties of Indian Universities, whilst it was decided that the non-medical scientist should in future be elected by the Indian Science Congress Association.

A Recruitment and Appointments Board has been formed from amongst the members of the Governing Body of the Association to select and recommend officers for appointment in the Medical Research Department and the All-India Institute of Hygiene and Public Health, Calcutta.

In order to ensure the closest co-operation between workers and to prevent overlapping of efforts, an annual conference of medical research workers and administrative heads of Medical and Public Health Departments used to be convened under the auspices of the Association up to 1938. (In that year it was decided that the Conference should be held biennially in future. No Conference has, however, been held since nor is one to be held in 1942 on account of the war.) At this conference free discussions were held on the work accomplished and on proposals for future work. The results of the discussions enabled the members of the Scientific Advisory Board to make their recommendations for the programme for the following year. The Board is assisted by Advisory Committees consisting of workers on more important items of research, e.g., cholera, malaria, maternal mortality, nutrition and plague, who examine the proposals for research work and make recommendations to the Scientific Advisory Board.

The results of researches carried out under the auspices of the Association are published in the "Indian Journal of Medical Research" and its "Memoirs" and the "Journal of the Malaria Institute of India," all of which are issued under the authority of the Association and have now a firmly established position in the scientific world. These publications are obtainable from Messrs Thacker Spink & Co, 3, Esplanade East, Calcutta, on payment.

Since the inception of the Association a large number of enquiries have been carried out and from small beginnings great expansion of its activities has taken place. Enquiries which have been, or are, in progress include investigations on cholera, bacteriophage, malaria, nutrition, leprosy, plague, vaccines, tuberculosis, pharmacology, indigenous drugs, maternal mortality, helminthology, medical mycology, dracunculiasis and filariasis, protozoal parasites, cancer, epidemic dropsy, kala-azar, dried blood plasma, sandfly fever, typhus, bacillary dysentery, snake venoms, fluorosis, etc.

Besides financing investigations which are conducted by workers in its direct employment, the Association gives grants-in-aid to institutions and also to outside workers. The expenditure for the last few years has amounted to between seven and eight lakhs of rupees per annum. The Association has been supporting the Malaria Institute of India, which now enjoys international recognition. As a part of the activities of this organisation and in commemoration of Sir Ronald Ross's intimate association with India, an experimental malaria station was opened in Karnal in January, 1927, and named the "Ross Field Experimental Station for Malaria." This was transferred to Delhi on 1st March, 1939. Besides carrying out experiments in connection with the prevention of malaria, annual classes are held at which candidates from all over India are shown the latest methods for dealing with the malaria problem. The Public Health Section of the Institute has been taken over by Government since April, 1940.

The Association maintains the Nutrition Laboratories at Coonoor, which carry out investigations which have a direct bearing on the problem of nutrition in India. The diet surveys undertaken by the laboratories have provided very valuable information as to food requirements. The publication of Health Bulletin No. 23 'The Nutritive value of Indian Foods and planning of satisfactory diets' has made available to the public useful knowledge about Indian foodstuffs. Besides carrying out experiments in nutrition, annual classes are held at which candidates from all over India are trained in the problems of nutrition. The Coonoor laboratories undertake the task of collaboration in the nutrition work of the League of Nations and act as a liaison laboratory for the Far Eastern countries. The nutrition advisory committee of the Association has been recognised by the Government of India as the National Advisory nutrition committee for India.

Research work at the nutrition Research Laboratories, Coonoor, brought to light the high value of dried amla powder as an anti-scorbutic. As a result of this, and at the request of the Medical Stores Department, the Association's laboratories at Coonoor have manufactured large quantities of amla powder for army purposes.

The Association have recently adopted a scheme for the award of Research Fellowships of the value of Rs. 150 per mensem, each tenable for a period of 2 years. The fellowships are intended to encourage young medical graduates

who have shown initiative and are considered suitable to undertake independent research. Five scholars have been selected this year to hold the fellowships.

Geological Survey.—The Geological Survey of India is one of the oldest Geological Surveys of the world. It was initiated in 1846 with a view to making a geological examination of the coal formations of India in order to provide accurate information on the mode of occurrence of the coal seams and thus enable mining operations for the extraction of coal to be conducted with knowledge and confidence. By 1857, the activities of the Geological Survey of India included a systematic geological survey of the whole of India as well as special investigations in connection with mineral deposits. The gazetted cadre of the Department at present consists of a Director, 4 Superintending Geologists, 16 Geologists, 1 Chemist, 1 Assistant Chemist and 26 Assistant Geologists.

The primary function of the Geological Survey of India is to investigate and estimate the mineral resources of the country. The fundamental work underlying such investigations is a thorough comprehension of the geological structure of the country and for this purpose a systematic field geological survey is undertaken and geological maps are prepared. From the data thus obtained, it is possible almost automatically to locate the possible sources of mineral wealth. A considerable portion of the mineral wealth of India has been discovered direct by the Department while of the remainder (excluding Mysore which maintains its own Geological Department) the discoveries have been in a large measure rendered possible by the work of the Department.

The regular field work of the Department is supplemented by work at headquarters involving the study of specimens, completion of field maps and the writing of reports. The results of mineralogical and petrographical study often require confirmation by chemical investigation. For this purpose a chemical laboratory has been provided in which specimens of minerals, ores and rocks sent in by the public for determination are also examined. As a rule it is not possible to make quantitative determinations, but specimens are identified in return for the name of the precise locality from which they have been obtained and this information is kept confidential if so desired. After study, the specimens collected in the field are stored in the Indian Museum for future reference, to which the public (including students) have access. In all branches of Geological work, it is necessary to compare new results with those previously obtained both in India and abroad and for the purpose a Library is maintained in the Department. This Library is open to those who wish to consult geological and mining publications.

The results of the investigations and researches of the Department are published in three series of publications. These are—(a) Memoirs which are devoted to the more complete surveys, dealing either with a particular region or with a particular mineral; (b) Records which consist of shorter papers on stratigraphical, mineralogical, petrological or palaeontological subjects including Bulletins on minerals of economic im-

portance; (c) Palæontologia Indica containing the result of palæontological work with numerous illustrative plates

The advice of the Geological Survey of India is obtained by the Central Government on all questions of mineral policy

The functions of the Geological Survey of India are not confined to the investigation and estimation of mineral resources. The Department is prepared to advise and is frequently consulted on problems of water-supply, sites for storage dams and reservoirs, location of tunnels and bridge foundations, stability of hillsides, suitability of stone for building and road metal and other engineering aspects of geology. The Department has also been paying considerable attention in recent years to questions of earthquake danger, flood control and drainage on the one hand and the smelting of iron-ore, cement manufacture and the generation of electricity from coal on the other hand. It also undertakes to present collections of minerals, rocks and fossils to schools and colleges and to give lectures to students and at times to

the public with a view to popularising the study of geology

The chief aim of the Geological Survey is the development of the mineral resources of India. As mineral development is a Provincial subject under the new constitution, the work of the survey is done largely for the benefit of the Provinces. Every year before the programme of the field surveys is made, each Provincial Government is asked whether any geological investigations, mineral survey or engineering enquiry is desired in the Province during the regular field season. When any such work has to be done, it is included in the programme of work and is carried out as a normal work of the Department without any charge. But if any special problem has to be dealt with which does not come under the regular operations of the Department, *e.g.*, a mineral survey of a particular area or an enquiry connected with a great engineering project, a charge is made for the services of the officer deputed for such work.

Director—Dr Cyril S Fox, D Sc, M I Min E,
F G S *Address* 27, Chowringhee, Calcutta.

PROVING OF WILLS

In British India if a person has been appointed executor of the Will of a deceased person, it is always advisable to prove the Will as early as possible. If the Will is in a vernacular, it has to be officially translated into English. A petition is then prepared praying for the grant of probate of the Will. All the property left by the deceased has to be disclosed in a schedule to be annexed to the petition. The values of immovable properties are usually assessed at 16½ years' purchase on the nett Municipal assessment, in the absence of a report from a competent architect.

Scale of probate duty.—Up to Rs 1,000—Nil

For the next Rs 9,000 (*i.e.* upto Rs 10,000), 2 per cent, for the next Rs 40,000 (*i.e.* upto Rs 50,000) 3 per cent, for the next Rs 50,000 (*i.e.* upto Rs 1,00,000) 4 per cent, for the next Rs 1,00,000 (*i.e.* upto Rs 2,00,000) 4½ per cent, for the next Rs 50,000 (*i.e.* upto Rs 2,50,000) 5 per cent, for the next Rs 50,000 (*i.e.* upto Rs 3,00,000) 5½ per cent, for the next Rs 1,00,000 (*i.e.* upto Rs 4,00,000) 6 per cent, for the next Rs 1,00,000 (*i.e.* upto Rs 5,00,000) 6½ per cent, for amounts exceeding Rs 5,00,000 (or the portion over Rs 5,00,000) 7 per cent.

Exemptions from probate duty.—In determining the amount of the value of the estate for the purposes of probate duty the following items are allowed to be deducted:

- 1 Debts left by the deceased including mortgage encumbrances
- 2 The amount of funeral expenses
3. Property held by the deceased in trust and not beneficially or with general power to confer a beneficial interest

Procedure.—The particulars of the property of the deceased and the particulars of all items allowed by law to be deducted have to be shown in separate schedules. It is the practice of the High Court to send a copy of these schedules to the Revenue Authorities and if the properties, particularly immovable properties, have not been properly valued, the High Court issues a notice to the petitioner requiring him to amend the schedule of property accordingly. In certain cases the Court requires citations to be published and served on such persons as the Court thinks are interested in the question of the grant of probate. If no objection is lodged by any person so interested within the time mentioned in the citation to the effect that nothing should be done in the matter of the petition for probate without notice to the person objecting or to use the technical language the caveat, and if the Will is shown to have been properly executed, probate is ordered to be granted. If an objection or caveat is filed the petition for probate is converted into a suit in which the petitioner is plaintiff and the caveator is the defendant.

Probate Codicil, etc.—Probate has effect over all the property and estate moveable or immovable of the deceased throughout the province in which the same is granted and is conclusive as to the representative title of the person to whom the probate is

granted against all debtors of the deceased and all persons holding property which belongs to the deceased and will afford full indemnity to all debtors paying their debts and all persons delivering up such property to the person to whom such probate is granted. Probate can only be granted to an executor appointed by the Will and the appointment may be express or by necessary implication. Probate cannot be granted to any person who is a minor or is of unsound mind. Where several executors are appointed probate may be granted to them simultaneously or at different times. If a codicil is discovered after the grant of probate a separate probate of that codicil may be granted to the executor if it in no way repeals the appointment of executors made by the Will. If different executors are appointed by the codicil, probate of the Will will be revoked and a new probate granted of the Will and codicil together. When probate has been granted to several executors and one of them dies, the entire representation of the testator accrues to the surviving executor or executors. Probate of a Will when granted establishes the Will from the death of the testator and renders valid all intermediate acts of the executor as such. When a person appointed an executor has not renounced the executorship, letters of administration will not be granted to any other person until a citation has been issued calling upon the executor to accept or renounce the executorship, but when one or more of several executors have proved the Will, the Court may, on the death of the survivor of those who have proved, grant letters of administration without citing those who have not proved. The renunciation may be made orally in the presence of the Judge or by a writing signed by the person renouncing and when made will preclude him from ever thereafter applying for probate of the Will appointing him executor. If an executor renounces or fails to accept an executorship within the time limited for the acceptance or refusal thereof, the Will may be proved and letters of administration with a copy of the Will annexed may be granted to the person who would be entitled to administration in case of intestacy.

Residuary Legatee.—When no executor has been appointed by a deceased in his Will or when the deceased has appointed an executor who is legally incapable or refuses to act or who has died before the testator or before he has proved the Will or when an executor dies after having proved the Will but before he has administered all the estate of the deceased, a universal or a residuary legatee may be admitted to prove the Will and Letters of Administration with the Will annexed may be granted to him of the whole estate or so much of it as may be unadministered.

After any grant of Probate or Letters of Administration with Will annexed, no other than the person to whom the same may have been granted has the power to sue or prosecute any suit or otherwise act as representative of the deceased until such Probate or Letters of Administration has or have been recalled or revoked.

Earthquakes.

Physical divisions of India and their relation to Earthquakes—The Indian continent is divided geologically and therefore physiographically into three distinct and well-defined units. The northernmost unit consisting of sedimentary and crystalline rocks comprises the great mountain ranges of the Himalayas that were upraised, geologically speaking, in comparatively recent times, and are believed to be still undergoing elevation. They constitute India's most unstable region and are therefore the seat of the most violent earthquakes. The north-south running mountains of Burma are components of the same mountain system, the Andaman and Nicobar Islands being their southern continuation, and Burma likewise pays the same penalty for their instability.

The southward push of these mountains caused a sinking of the Himalayan foreland—the region of the Indo-Gangetic basin, now filled with alluvium. This constitutes the second unit, and on account of its proximity to the restless mountains in the north, it shares, though in a lesser degree, the effects of the Himalayan earthquakes. But it also makes its own independent contribution of such catastrophes, as we know from our recent experience of the Bihar earthquake (January 1934).

The triangular portion of the Peninsula proper constitutes a stable landmass—a Horst—as the geologists call it—and is the third and most stable region in India, being comparatively free from severe earthquakes. Only one earthquake which did any considerable damage has been recorded from this region (April 1843). From the apex of the Peninsula to Madras, however, runs a region of minor shocks, probably connected with some dislocation in the earth's crust, though there is no direct evidence of this. These three units, then, constitute regions of decreasing intensity of earthquakes as we travel from north to south. They are indicated on the accompanying map, which is essentially the same as the one prepared by W D West of the Geological Survey of India.

Causes—It will be unnecessary to go into the origin of the individual earthquakes, but a few remarks on the main causes of these phenomena will be illuminating. While minor earthquakes may be due to volcanic activity, the major ones are almost invariably the result of movement along dislocations in the earth's crust or "faults" as the geologists call them, and thrust planes. In the case of thrust planes certain sets of rocks override others, instead of being merely dislocated. The epicentre, that is the place of maximum intensity, frequently coincides with these faults or thrust planes, which proves that a close relationship exists between earthquakes and the dislocations. A number of important faults run close to the southern edge of the Himalayas and the Himalayan foot is therefore a very unstable region. A similar fault runs along the foot of the Shan Plateau in Burma while the Kyaukkyan fault runs north and south in the Northern Shan States, and has probably given rise to earthquakes. It may, however, be pointed out that it is only such "faults" as are still active that give rise to earthquakes. Thus the faults in

the Peninsular area appear to be inert and therefore few earthquakes occur there. Although the immediate cause of the shocks may be movement along a fault or faults, the ultimate cause is often the rapid denudation of steep ranges, which upsets the equilibrium of the earth (Kangra, 1905) in the readjustment of which these movements occur. There is, however, no consensus of opinion on this point for in Norway, where the steep mountain ranges are subject to rapid denudation, there are no earthquakes. The cause may be more deep-seated as, for example differential cooling and contraction of the earth's interior. The same result is achieved by the slipping of large alluvial masses in deltaic areas or their uplift owing to tectonic forces (Rangoon Dec. 1927). The regions where mountain ranges, take sharp bends, being highly folded, are naturally areas of pent up strains seeking relief and are therefore zones of great danger. The violent Quetta earthquake of 1935 and the earlier ones of Mach and Sharigh (1931) were of this nature, for these places lie near sharp bends in the Suleiman, Bugti or Kirthar ranges.

Frequently more than one cause contributes to these earthquakes and the results are then even more disastrous.

Factors Controlling Damage and Loss of Life—The intensity of the earthquake is not the only factor upon which the extent of damage and loss of life depends. Much depends upon the time of shock, the nature of the buildings, the habits of the people, etc. Thus the amount of damage done is often greater in India, where *pucca* houses are more common, than in Burma, where houses are mostly wooden, though the latter may suffer more from fire, as happened in the case of the Pegu earthquake (5th May, 1930).

The time at which the earthquake occurs makes a considerable difference to loss of life, for an earthquake occurring at night takes people unawares (Kangra, 20,000 lives lost, Quetta, toll of life 25,000). Had the Bihar earthquake, in which 10,000 lives were lost, occurred at night the toll of life would have been unthinkable. Dr A. M. Heron, Director, Geological Survey, makes certain observations in the case of the Baluchistan earthquake of 1909. He remarks that certain communities suffered more heavily than others because more of their number slept indoors and, being better off, lived in two storied houses, which naturally suffered more damage. The fact to be emphasised is that the loss of life, etc., does not entirely depend upon the severity of the shock, but upon the time of occurrence and various other factors.

Sources of Information.—Very little is known of the Indian earthquakes previous to the year 892 A D and accounts of the earlier of the recorded earthquakes are necessarily incomplete. T. Oldham has recorded the different sources of information of the earlier Indian earthquakes in his catalogue. Among the works in which records of Indian earthquakes later than 892 A D. occur are—*History of the Caliph* by

Ibnulathir—a historical work of the Arabians, the *Mir-at-ul-'Alam*, an unpublished work in the library of the Royal Asiatic Society of Bengal, *Badaoni* (Bibliotheca Indica), Bâber's memoirs, Khâfi Khân's *Muntakhab ul-lubb*, etc. Much information is gleaned from the Journals of the *Royal Asiatic Society of Bengal*, the *Philosophical Transactions*, etc. Accounts of the later earthquakes appear in detail in the records and memoirs of the Geological Survey of India, from which much of the information here given is drawn.

Historical Review.—The chronological occurrence of the more important earthquakes may now be given.

The earliest earthquake authentically recorded in India took place about the close of the year 892 A.D. or early in 894 A.D., when Daibul or Daipal, an important town on the coast of the Indian Ocean was severely shaken and about 150,000 persons lost their lives. As noted by Oldham a record of this earthquake appears both in the *Târikhul Khulafâ* (History of the Caliphs) and in *Alkâmil-fi-l Târikh*. According to him both these works mention the month of Shawwâl (Hijra 280) as the date of occurrence. Since the month of Shawwâl commenced 90 days before the 13th of March 894 A.D. that is the 14th December 893, the date of this earthquake is fixed by Oldham about the close of A.D. 893 or early 894 A.D.

6th July 1505—This earthquake affected Afghanistan and Northern India. It is recorded that great fissures appeared in many parts and there were extensive landslips causing much damage and loss of life. In one day as many as thirty-three shocks were felt and continued for a whole month. Oldham mentions that this earthquake is recorded in the *Mir-at-ul-'Alam*, an unpublished work in the library of the Royal Asiatic Society of Bengal, in *Badaoni* (Bibliotheca Indica Vol I, p 319) in the Memoirs of Bâbar (Erskine's edition, p 170) in *Furûsiah* (Lucknow edition, p. 183) and its date is therefore authentically recorded.

The Province of Kashmir was shaken by an earthquake in 1552, but no details are available.

Several earthquakes of less intensity took place between the years 1618 and 1664. On the 26th of May, 1618, Bombay experienced an earthquake in which nearly two thousand lives were lost. The accompanying hurricane resulted in the destruction of several vessels. Lakhnagar in Assam suffered an earthquake on the 7th February 1663. Shocks were felt in certain parts of eastern Bengal for a period of thirty-two days during the year 1663.

The next earthquake of great intensity which affected India occurred in 1663, between the dates 2nd—11th May. Its effect was so serious that Samâji or Samâwânî—a town of 30,000 inhabitants sank into the ground. A record of this appears in the *Ma'asir-i A'lamiyya* (Edit. Bibl. Indica, p 74).

Following this terrible catastrophe there was a period of comparative quiescence of about 50 years. Upper India was however shaken by an earthquake on the '14 Muharam of Aurangzib's 12th year' (*Mir-at-ul-'Alam*, an unpublished work of Bakhtiyâr Khan) that is, the 4th of June 1669. This earthquake was accompanied by a big shower of meteors, which, it is reported, falling into a lake caused its waters to overflow.

Kashmir and Attock were affected by shocks on 22nd June 1669 and 23rd June 1669 respectively, but not much damage appears to have been done.

A severe earthquake shook Delhi on Friday, the 17th of July 1720, at about mid-day and was accompanied by considerable damage to the fortress, Fatehpur Mosque and other property, as well as loss of life. It is reported that comparatively severe shocks continued for more than a month, so much so that the population of Delhi had to sleep out of doors during this period!

A violent earthquake accompanied by a hurricane of great intensity occurred in Calcutta and the delta of the Ganges in October 1737. It is reported that 20,000 craft plying on the Ganges were cast away, the steeple of a church sank completely into the ground, and 300,000 people lost their lives. It is further reported that 60 ton barques were blown two leagues up the river!

Bengal, Burma and the Arakan coast were affected on 2nd April 1762. In fact it is reported that the emergence of the Arakan coast from the sea is due to this earthquake, but that is an obvious exaggeration, though partial elevation of the coastal strip probably occurred. It is stated that oysters were found attached to rocks forty feet above ground level. Near Chittagong 60 square miles of land sank permanently under water.

Several shocks of varying intensity occurred in different parts of India—Calcutta, Kashmir, Ongole and the upper reaches of the Ganges between 13th July 1762 and 22nd May 1803, but they were not of much importance.

A violent earthquake took place on 1st Sept. 1803, affecting Mathura, Calcutta, Garhwal, Kumaon and Delhi. At Mathura the domes of several mosques erected by Ghazi Khan sank into the ground. Several villages were swallowed up in Garhwal.

This earthquake is noted for the fact that the upper portion of the famous Qutab Minar fell as a result of it, though it is stated that the Minar was also struck by lightning.

16th June 1819—This was one of the worst earthquakes experienced in India. Its effect was the severest in Cutch, the chief town of which—Bhuj—was completely ruined and 2,000 persons perished. Ahmedabad, Broach, Surat and Poona were all affected.

In the western region of Cutch the town of Sindree and the neighbouring area was submerged as a result of tidal waves. A tract 15 miles wide was raised in front of a branch of the Indus and the river had to cut a fresh channel across it. This ridge is known to the local inhabitants as Allah Band, or God's Embankment.

One very severe shock followed by minor ones occurred on 29th October 1826 and resulted in several houses falling in Khatmandu and Patan, in Nepal.

1827 Sept. (before 26th Sept. 1827)—The fort of Kolliatran, near Lahore, was destroyed and about 1,000 persons lost their lives. It is stated that a hill falling into the river Ravi resulted in extensive floods.

6th June 1828—There is record of at least eighty earthquakes affecting the Indian region between the aforementioned date and the year 1839, but of these only two are worth mention, namely, the one that shook the vale of Kashmir on 6th June 1828 and the other that affected Nepal and the eastern and central region, Northern India. In Kashmir alone over a thousand persons lost their lives and for at least two months following the earthquake the number of shocks was as high as one to two hundred per day!

26th August 1833—Felt in Khatmandu (Nepal) and North Bihar. In Khatmandu alone 100 houses were levelled to the ground and a similar fate overtook other places. There was continuous agitation for full 24 hours.

An earthquake of great intensity affected Burma, more particularly Amarapura and Ava, on 23rd March 1839. It is reported that shocks continued for four or five days, every fifteen to thirty minutes. 200—400 lives were lost and pagodas and other buildings in Ava, Amarapura and Sagaing suffered heavily.

19th February 1842—Lasted for about three minutes in Kabul and affected Peshawar, Jallalabad, etc. It was very destructive at Peshawar and one-third of the town of Jallalabad was destroyed. Hot springs at Sonah became cold and the amount of water also diminished. The area affected was about 216,000 square miles. The epicentral area was probably near Jallalabad.

Numerous later earthquakes which occurred in different parts of the Indian region do not call for much attention as they were of minor importance. Two earthquakes which affected the Deccan in March and April 1843 may be here recorded, for the Deccan, being a stable landmass, is rarely affected by earthquakes of any intensity. Sholapur, Maktal, Singrurgarh, Bellary, Kurnool, Belgaum were all affected and much damage was done. This is the only earthquake known in the Deccan which caused considerable damage. The epicentre was near Bellary.

Severe shocks, local in their effect, occurred in Upper Sind on 24th January 1852. Fort Kahan was completely ruined and about 350 persons were killed.

24th August 1858—Burma was affected, but the shocks were not of great intensity. False Island situated south-east of Cheduba Island (18° 38' N 93 55½ E) disappeared entirely under the Ocean. The same earthquake affected the Punjab and Bengal, but very little damage was done.

10th January 1860—Experienced in Assam (Cachar), total area where shocks were felt was 250,000 square miles.

A severe earthquake occurred in the Bay of Bengal on the morning of 31st December 1831. The radius of the area affected was about 800 miles, and the total area over which the shock was felt was in the neighbourhood of 2,000,000 square miles, most of it being sea. It was felt at Gaya, Hazaribagh, Akra, Ootacamund and Calcutt in India, and in Burma at Akyab where it was followed by the eruption of a mud volcano. In Ramri. The northernmost point affected was near Monghyr.

30th May 1885—This earthquake, although comparatively not so severe, resulted in heavy loss of life and about 3,000 persons perished in Kashmir. The epicentre was a few miles west of Srinagar. The radius of felt area was 300—450 miles, the total area affected being about 110,000 square miles.

14th July 1885—The epicentre of this earthquake was north-west of Dacca. It was felt violently throughout Bengal, but extended also into Chota Nagpur, Bihar, Sikkim, Bhutan and Assam. The area affected was approximately 230,400 square miles.

20th December 1892—This was felt over the greater part of Baluchistan, and was connected with an old fault line that runs along the foot of the Kojak range in a N.N.E. direction. The foot of the range is marked by a depression and numerous springs which are indicative of the fault. It is interesting to note that as a result of this earthquake the area west of the fault subsided about one foot and moved southward about 2½ feet! The earthquake was, however, local in its effects.

The worst earthquake which has affected Assam and probably the greatest within historic times occurred on 12th June 1897. Stone buildings in Shillong, Goalpara, Gauhati, Nowgong and Sylhet were almost entirely destroyed everywhere and Calcutta was seriously affected. Over 1,600 lives were lost and the earthquake was felt in an area of 1,730,000 square miles. The earthquake was caused by a "movement along a thrust-plane or thrust-planes, and along secondary thrust and fault-planes, which had a maximum length of about 200 miles and a maximum width of about 50 miles." This movement was due to the relief of differential strains set up in the interior of the earth.

The district of Kangra in the Punjab suffered heavily on 4th April 1905, more particularly because the shocks occurred early in the morning when people were still asleep. There was heavy loss of life—20,000 persons having perished. The area affected was 1,825,000 square miles. Kangra and Dharamsala were completely destroyed. The main shock was from north to south, followed by an equally severe one from south to north. The earthquake is ascribed to movement along one of the reverse faults of the Himalayas.

21st October 1909—This earthquake affected the Kachhi plain, Baluchistan. Considerable damage was done and over 200 lives were lost. The radius of the felt area was about 15—45 miles. The elongated epicentre was N.W.—S.E. in direction. The earthquake was presumably due to the presence of a fault, though, the area being covered with alluvium, this is more or less conjectural.

A violent earthquake occurred over the greater part of the Northern and Southern Shan States on 1st May 1911 and was felt practically throughout the whole of Yunnan. It was a severe day.

continued in May, June, July and August, when they finally ceased. The epicentre was close to the great Kyaukkyan fault in the Northern Shan States.

No severe earthquake is recorded during the six years following the last earthquake in Burma, but a violent shock was felt on 8th July 1918 and affected Eastern Bengal, Assam, Burma, North-west India as far as Lahore. It was most strongly felt in Srimangal (Assam) where many tea-estates were ruined. The total area over which it was felt was 800,000 square miles. This earthquake was due to subsidence along a fault and was accompanied by pouring out of sand, mud and water from fissures created in the ground.

17th December 1927.—Was experienced in Rangoon, but very little damage was done. Affecting as it did a big commercial city like Rangoon its importance cannot be denied. Investigation appears to show that the shock was due to "forces of uplift causing movement along lines of weakness below the deltaic alluvium." Although the area is covered with alluvium and direct observations are not possible, the probability of such a zone of weakness existing in the neighbourhood of the town must be accepted.

The areas around Rawalpindi, Peshawar and Attock are regarded as very unstable, as one big fault and numerous smaller ones are located in this region. The earthquake on 1st February 1929 in the North-West Himalayas was at first thought to be connected with these faults. But it has been shown that the focus of this earthquake lay at a considerable depth—160 kms. Which is a point of interest, for it shows that the shocks were not connected with any surface features such as faults. The epicentre was situated about 25 miles north-west of Abbottabad. Some damage was done to property and a few lives were lost.

8th August 1929.—This earthquake, which affected the small town of Swa in Burma, was connected with several of the later earthquakes that occurred in different parts of Burma—the Pegu earthquake of 5th May 1930, the Podo earthquakes of July to December 1930 and the Pyn disaster of 4th December 1930. The epicentral area was quite small and lay about 6 miles to the north-west of Swa. Damage was done to railway lines and bridges. Loaded trucks were lifted off the track and thrown to one side. The shocks were due to movement along a fault in the Tertiary rocks, more or less parallel to the great fault which is known as the Boundary Fault.

A violent shock occurred at about 8-15 P.M. on 5th May 1930, and practically levelled the whole town of Pegu. About 550 lives were lost and considerable damage was done to property in Rangoon as well. The actual area affected was about 220,000 square miles. This earthquake came without any preliminary warning and lasted only 30 seconds. The earlier Burmese earthquake previously mentioned was presumably a forerunner of the present one and did not indicate the dying out of still earlier movements. It is thought that the movement was connected with the boundary faults of the Shan Plateau, which was accentuated by the forward movement of terra firma into the gulf of Martaban.

Assam was shaken by a severe earthquake on 3rd July 1930, after about 12 years of comparative quiescence. The total area affected was about 350,000 square miles. The town of Dhubri suffered considerable damage, but fortunately no loss of life occurred. This is probably due to the fact that many houses are built of 'flexible superstructure supporting light, often galvanised iron roofs' and at that time of the year many persons were not sleeping inside their houses. The earthquake was probably due to weakness at the foot of the Assam range, movement along which zone was assisted by the rapid denudation of the mountains, which presumably upset the equilibrium.

3rd/4th December 1930.—Several severe shocks were felt between 10-15 P.M. and 1-22 A.M. in Pyn, Burma. Most of the brick buildings were destroyed and about 30 persons lost their lives. The shocks were felt over an area of approximately 220,000 square miles.

27th August 1931.—This was one of the worst of the Baluchistan earthquakes, and about 200 lives were lost. It was preceded on the 25th by an earlier earthquake the epicentre of which was near Sharigh. The March earthquake was felt over an area of 370,000 square miles. Both these earthquakes were connected with the sharp bends of the Sulaiman, Bugti and Kirthar hills for such bends are regions of strain where earth movements are likely to occur.

15th January 1934.—This, the North Bihar earthquake, is still fresh in our minds. It was one of the most violent earthquakes that have affected India. It is estimated that over 10,000 lives were lost and several crores worth of property was damaged. Sitamarhi, Madhubani, Monghyr, Patna, Jamalpur, Muzaffarpur, Darjeeling, etc., and the Nepal valley suffered heavily. The epicentre of this earthquake ran from near Motihari through Sitamarhi to Madhubani. The total area over which it was felt was 1,900,000 square miles. The earthquake is attributed to faults underlying the alluvium. It is fortunate that it occurred in the afternoon (about 2-15 P.M.), for had it occurred at night it would have been one of the worst of such disasters experienced upon the earth.

31st May 1935.—The Quetta earthquake is one of the latest of the more violent catastrophes that have overtaken the Indian region. This can be estimated from the fact that 25,000 lives perished and damage to private property, railways, etc., ran into several crores. The town of Quetta was practically destroyed and the area affected was about 100,000 square miles. The causes leading to these earthquakes are unknown, but the focus was probably shallow. The earthquake is probably connected with the sharp bend in the hill ranges near Quetta.

The frequency of aftershocks of the Quetta earthquake of May 1935, according to the Geological Survey of India, appears to be considerably diminished, but several sharp shocks were felt during the year in the Assam seismic area, including those of 16th January at about 18 45 hours and of 21st March at 21 45 hours, Indian standard time.

The last severe earthquake to be experienced in India occurred in the Hindu Kush on 14th November 1937, and was felt throughout the North-West Frontier Province, Kashmir, as well as largely over the Punjab, United Provinces, northern Sind and Baluchistan. Severe shocks were felt at Lahore, Rawalpindi, Peshawar, Kangra, Chitral and Drosh, and considerable damage was done. No loss of life was reported.

Although minor earthquakes have been reported from different parts of India later than November 1937, none of these has caused damage or loss of life. Details of some of these are given below.

6th January 1938—Two shocks were felt at Drosh in the Chitral District, North-West Frontier Province. Another shock of the same intensity was felt on the 7th January, but there was no damage or loss of life.

14th April 1938—An earthquake shock was felt at Monywa in the Lower Chindwin district, Burma, at 7-47 a.m. Cracks appeared in the walls of several buildings, but there was no loss of life.

3rd May 1938—Two shocks were felt at intervals of about five seconds at Shillong in Assam, at 10-21 p.m. The shocks lasted for about 40 seconds. There was very little damage to property and no loss of life.

16th August 1938—Shocks were experienced in the Upper Chindwin district, Burma, and were felt over a fairly wide area. The shocks, which lasted about 30 seconds, seem to have been severe at Kalembo, Pucca buildings and Pagodas tumbled down, but there was no loss of life. Smaller shocks were also felt at Mawlaik, Paungbyin, Mingin, Indaw, Kalewa, Homalin, Tabyin, etc.

7th February 1939—Two shocks were felt at Drosh in Chitral at intervals of two seconds, but there was neither material damage nor loss of life.

Reports received by the Geological Survey of India from various parts of India and Burma show that 82 earthquake shocks were felt in 1937 in India. With the exception of the rather severe shock of 14th November, which originated in the Hindu Kush region and affected a considerable tract of north-west India, the rest were of slight intensity, unattended by any damage to buildings or persons.

Regionally the shocks were distributed as follows—

Burma, 28; north-eastern India, including Sikkim, Nepal and Tibet, 31, north-western India, including Kashmir, Chitral and Baluchistan, 21, and Peninsular India, 2.

The epicentre of the shock of 14th November 1937 has been located in the Hindu Kush mountains, north-west of Drosh, in Chitral. This has been deduced from observers' reports and from seismographic records available from the Meteorological Observatories at Bombay, Agra, Calcutta and Kodakanal. This shock was felt at such distant places as Kabul, Dehra-Dun, Simla, Multan, Dera Ismail Khan and Roorkee.

At least sixty earthquake shocks were felt in India during the year 1939. Fortunately all these shocks, without exception, were of slight intensity and caused neither loss of life nor serious damage to property.

About twenty of these shocks affected the unstable Assam region, of which four were felt at Dhubri, six at Gauhati and a like number at Shillong. Kashmir, Drosh (Chitral State), Quetta, Rawalpindi, Gilgit, Lahore, Shikarpur (Cutch), Peshawar, Begumpet (Hyderabad State) and many other towns experienced shocks during the year.

It is unnecessary to give details of the large number of shocks felt during 1939 for most of these were of minor importance. Mention must, however, be made of the earthquake of 21st November, 1939, which was felt at Jammu, Mianwali, Dehra Ismail Khan, Peshawar, Rawalpindi, Srinagar, Dalhousie, Kabul, Gilgit, Skardu, etc. Its epicentre was in the Hindu Kush range, being situated at 36° N 75° E. Its focal depth was 200 KM.

The intensity of this earthquake at Srinagar and Gilgit was VII on the Mercalli scale. At Srinagar three shocks were felt at intervals of 10 seconds each. Cracks developed in the walls of the Observatory and other buildings in the city. At Gilgit, which suffered three shocks at intervals of 2 seconds each, boulders slipped down from the surrounding mountains and dust spread all over the valley.

During 1940 earthquake shocks were felt at Gulmarg in Kashmir, at Barmer (Rajputana) and at Bhuj and Radhanpur in the Western Indian States.

At Gulmarg two shocks of moderate intensity were felt on the 3rd August at 14 45 I.S.T. and cracked walls of *lutchas* houses. Shocks of moderate intensity were also felt on 8th August and 21st September, 1940, but apart from cracks in *lutchas* houses no damage was done. Barmer and Bhuj experienced a slight shock on 31st October while Bhuj had another shock on 13th November, 1940.

There was no loss of life or serious damage to property during any of these earthquakes.

A large number of earthquake shocks occurred in India during the year 1941. It is unnecessary to give details of all these but particulars of three or four of the more important ones may be given.

An earthquake of moderate intensity took place on the 21st of January 1941 at 18-16 hours (I.S.T.) with its epicentre to the north of Assam. The shocks lasted for about one minute but no damage was caused.

Another earthquake occurred on the 26th June at 17-27 hours (I.S.T.). This earthquake whose epicentre lay in the neighbourhood of Nicobar Islands, was of very great intensity and was felt in Madras, Cuttack, Chandwadi, Colombo, etc. Extensive damage to buildings occurred in Port Blair where 4 persons were killed and 4 seriously injured. The duration of the shock was less than half a minute.

On the 30th of June at 23-58 hours (I.S.T.) a shock of moderate intensity was felt at Port Blair. Its epicentre lay in the neighbourhood of north Andaman.

Another earthquake occurred on the 2nd of September at 11-35 (I.S.T.) at Quetta. The shocks lasted for 35 seconds and caused damage to houses in Quetta.

MAP SHOWING THE EARTHQUAKE ZONES OF INDIA.

Geological Survey of India,
(After W. D. West.)

Posts and Telegraphs.

POST OFFICE.

The control of the Posts and Telegraphs of India is vested in an officer designated Director-General of Posts and Telegraphs whose office is attached to the Department of Communications of the Government of India. For the efficient working of the Department there is a Financial Adviser, Communications. The superior staff of the Direction, in addition to the Director-General himself, consists on the postal side of one Senior Deputy Director-General, one Deputy Director-General (postal services) and eight Assist Deputy Directors-General and one Assistant Director-General, War.

For postal purposes, the Indian Empire is divided into eight circles namely, Bengal and Assam, Bihar and Orissa, Bombay, Central, Madras, Punjab and North-West Frontier, United Provinces and Sind and Baluchistan. Each of the first seven is in charge of a Postmaster-General and the Sind and Baluchistan Circle is controlled by a Director, Posts & Telegraphs. The Central Circle comprises roughly the Central Provinces and the Central India and Rajputana Agencies. With effect from 1-4-1937 Burma Circle was separated from the Indian Posts and Telegraphs Administration, and it started its career under a separate administration under the new Government of Burma.

The Heads of Circles are responsible to the Director-General for the whole of the postal arrangements in their respective circles, including those connected with the conveyance of mails by railways, inland steamers, and air services. All the Postmasters-General are provided with Deputy and Assistant Postmasters-General while in the Sind and Baluchistan Circle, the Director is assisted by two Assistant Directors. The eight Postal Circles are divided into Divisions, each in charge of a Superintendent of Post Offices or Railway Mail Service as the case may be and each Superintendent is assisted by a certain number of officials styled Inspectors.

Generally there is a head post office at the headquarters of each revenue district and other post offices in the same district are usually subordinate to the head office for purposes of accounts. The Postmasters of the Calcutta, Bombay, and Madras General Post Offices

and of the larger of the other head post offices are directly under the Postmasters-General. The Presidency Postmasters have one or more Inspecting Postmasters subordinate to them. When the duties of the Postmaster of a head office become so onerous that he is unable to perform them fully himself a Deputy Postmaster is appointed to relieve him of some of them, and if still further relief is required, one or more Assistant Postmasters are employed. The more important of the offices subordinate to the head office are designated sub-offices and are usually established only in towns of some importance. Sub-offices transact all classes of postal business with the public, submit accounts to the head offices to which they are subordinate incorporating therein the accounts of their branch offices, and frequently have direct dealings with Government local sub-treasuries. The officer in charge of such an office works it either single-handed or with the assistance of one or more clerks according to the amount of business.

Branch offices are small offices with limited functions ordinarily intended for villages, and are placed in charge either of departmental officers on small pay or of extraneous agents, such as school masters, shop-keepers, land-holders or cultivators who perform their postal duties in return for a small remuneration.

The audit work of the Post Office is entrusted to the Accountant-General, Posts and Telegraphs, who is an officer of the Finance Department of the Government of India and is not subordinate to the Director-General. The Accountant-General is assisted by Deputy Accountants-General, all of whom, with the necessary staff of clerks, perform at separate headquarters the actual audit work of a certain number of postal circles.

In accordance with an arrangement which has been in force since 1883, a large number of sub-post offices and a few head offices perform telegraph work in addition to their postal work and are known by the name of combined offices. The policy is to increase telegraph facilities everywhere and especially in towns by opening a number of cheap telegraph offices working under the control of the Post Office.

The Inland Tariff (which is applicable to Aden, Nepal, Ceylon and Portuguese India except as indicated below) is as follows—

	When the postage is prepaid	When the postage is wholly unpaid	When the postage is insufficiently prepaid
<i>Letters</i>	Anna Pies.		
Not exceeding one tola	1 6		
And every additional tola	0 6		
<i>Book and pattern packets</i>			
For the first five tolas or fraction thereof	0 9	Double the prepaid rate (chargeable on delivery)	Double the deficiency (chargeable on delivery)
For every additional two and a half tolas, or fraction thereof, in excess of five tolas	0 3		

Postcards

Single	9 pies.
Reply	1 anna 6 pies

(The postage on cards of private manufacture must be prepaid in full Reply postcards cannot be sent to Nepal)

Parcels (prepayment compulsory).

Parcels not exceeding 12½ seers (1,000 tolas) in weight—

	Rs a.
Not exceeding 40 tolas	0 4
For every additional 40 tolas or part of that weight	0 4

Registration is compulsory in the case of parcels weighing over 440 tolas.

All parcels to Aden should be registered There is no parcel service to Nepal. These rates are not applicable to parcels for Ceylon and Portuguese India

Registration fee. Rs a

For each letter, postcard, book or pattern packet, or parcel to be registered 0 3

Ordinary Money Order fees.

For every sum of Rs 10 or fraction thereof 0 2

In the case of money orders for Ceylon and Portuguese India, the rates prescribed for foreign rupee money orders are applicable There is no money order service to Nepal

Telegraphic money order fees—The same as the fees for ordinary money orders plus a telegraph charge calculated at the rates for inland (the cost of the telegraphic advice to Aden and Ceylon in respect of those countries) telegrams for the actual number of words used in the telegram advising the remittance, according as the telegram is to be sent as an "Express" or as an "Ordinary" message. In addition to the above a supplementary fee of two annas is levied on each telegraphic money order.

There is no telegraphic money order service to Nepal or Portuguese India In the case of Ceylon the telegraph charge is calculated at the rates shown below—

Express—Rs. 2-6-0 for the first 12 words and 3 annas for each additional word.

Ordinary—Re. 1-3-0 for the first 12 words and 2 annas for each additional word

Value-payable fees—These are calculated on the amount specified for remittance to the sender and are the same as the fees for ordinary money orders.

Insurance fees Rs. a

Where the value insured does not exceed Rs. 100	0 4
Where the value insured exceeds Rs. 100 but does not exceed Rs. 200	0 5½
Where the value insured exceeds Rs. 200 but does not exceed Rs. 300	0 8

For every additional Rs. 100 or fraction Rs a thereof over Rs. 300 and upto Rs. 1,000 0 2

For every additional Rs. 100 or fraction thereof over Rs. 1,000 0 1

As regards Aden, Ceylon and Portuguese India see Foreign Tariff.

Acknowledgment fee—For each registered article 1 anna.

The Foreign Tariff (which is not applicable to Aden, to Ceylon, to Nepal or to Portuguese India except as indicated below), is as follows—

Letters—To Aden, Ceylon, Nepal and Portuguese India—Indian inland rates. To Burma—2 annas for the first tola and 1 anna for every additional tola or part thereof.

To all other countries.

3½ annas for the first ounce and 2 annas for each additional ounce or part of that weight.

Postcards, Single	2 annas
.. Reply	4 annas

Postcards to Burma: Single 1 anna and reply 2 annas

Printed Papers—½ anna for every 2 ounces or part of that weight.

Business Papers—For a packet not exceeding 10 ounces in weight 3½ annas

For every additional 2 ounces or part of that weight ½ anna

Samples—1½ annas for first 4 ounces and 1 anna per 2 ounces thereafter.

Printed Papers, Business Papers and Samples—To Burma, 9 pies for the first five tolas and 6 pies for every additional 5 tolas or part of that weight

Parcels

Parcel postage varies for different countries as shown in the Foreign Post Directory included in the Post and Telegraph Guide. Information relating to the rates of postage on parcels for Great Britain and Northern Ireland is given below—

(1) Parcels not exceeding 22 lbs. in weight and addressed to Great Britain and Northern Ireland are forwarded as mails to the British Post Office, the rates of postage applicable to such parcels being as follows—

	Rs a	Rs a p
For parcel		
Not over 3 lbs	1 8 0	
Over 3 lbs but not over 7 lbs.	2 12 0	
.. 7	3 15 0	
.. 11	6 3 0	

Via Gibraltar

These parcels are delivered by the post office and the postage paid carries them to destination

- (u) Parcels which exceed 11 lbs but which do not exceed 50 lbs (the maximum allowed) in weight are forwarded from India through the medium of the P & O S N Co, and are delivered at destination under arrangements made by that Company. The postage charge applicable to such parcels is twelve annas for each pound, or fraction of a pound. The parcels are delivered free of charge within a radius of one mile from the Company's Head Office in London, if addressed to any place beyond that radius, carrier's charges are levied from the addressees on delivery. Parcels thus forwarded through the P & O S N Co cannot be insured during transit beyond India, but must, if they contain coin, etc., be insured during transit in India. No acknowledgment of delivery can be obtained in respect of these parcels, nor can such parcels be transmitted to Great Britain and Northern Ireland under the value payable system.

Limits of Weight.

Letters—4 lbs 6 oz

Printed Papers and Business Papers—To Great Britain and Northern Ireland, and Ireland, British Australasian Colonies, Togo (British), the Union of South Africa, Rhodesia and the Bechuanaland Protectorate—5 lbs

To Aden or Ceylon—No limit

To all other destination—4 lbs 6 oz

Samples—To Great Britain and Northern Ireland, and Ireland, Burma, Togo (British), the Union of South Africa, Rhodesia, and the Bechuanaland Protectorate—5 lbs

To Aden or Ceylon—200 tolas

To all other destinations—1 lb 2 oz

Parcels—11 lbs, 20 lbs or 22 lbs

Limits of Size.

Letters—35 inches in length, breadth and thickness taken together and 23½ inches in any one direction. If in form of roll, 39 inches in length plus twice the diameter and 31 inches in any one direction.

Printed Papers and Business Papers—To Aden and Ceylon—2 feet in length by 1 foot in width or depth. If in form of roll, dimensions are 30 inches in length and 4 inches in diameter.

To all other destinations—35 inches in length, breadth and thickness taken together and 23½ inches in any one direction. If in form of roll, 39 inches in length plus twice the diameter and 31 inches in any one direction.

Note—Printed papers sent open, i.e., without a cover or wrapper in the form of cards, whether folded or not should not measure less than 4 inches in length and 2½ inches in width.

Samples—To Great Britain and Northern Ireland, and Ireland, Burma, Ceylon, the Union of South Africa, Rhodesia and the Bechuanaland Protectorate—2 feet in length by 1 foot in width or depth. If in form of roll, dimensions in all cases are 39 inches in length plus twice the diameter and 31 inches in any one direction.

To all other destinations—35 inches in length, breadth and thickness taken together and 23½ inches in any one direction. If in form of roll, dimensions in all cases are 39 inches in length plus twice the diameter and 31 inches in any one direction.

Money Orders—To countries on which money orders have to be drawn in rupee currency, the rates of commission are as follows—

	Rs a
On any sum not exceeding Rs 10	0 3
On any sum exceeding Rs 10 but not exceeding Rs 25	0 6
On any sum exceeding Rs 25	0 6
for each complete sum of Rs 25 and 6 annas for the remainder, provided that, if the remainder does not exceed Rs 10, the charge for it shall be only 3 annas	

To countries on which money orders have to be drawn sterling, the rates are as follows—

	Rs, a
On any sum not exceeding £1	0 4
" " exceeding £1 but not exceeding £2	0 7
" " " £2 " " £3	0 10
" " " £3 " " £4	0 13
" " " £4 " " £5	1 0
" " " £5	1 0
for each complete sum of £5 and 1 rupee for the remainder, provided that if the remainder does not exceed £1, the charge for it shall be 4 annas, if it does not exceed £2, the charge shall be 7 annas, if it does not exceed £3, the charge shall be 10 annas, and if it does not exceed £4, the charge shall be 13 annas	

Registration fee

For each letter, post-card & packet of printed or business papers and samples .. 3 annas

Insurance fees (for registered letters and parcels only)

For insurance of letters and parcels to Aden and Ceylon and of letters to Portuguese India—Insurance fees mentioned under "Inland Tariff"

For insurance of letters and parcels to Burma, British Somaliland, Mauritius, Seychelles, and parcels to Portuguese India.

Where the value insured does not exceed Rs. 200	Annas 5½
For every additional Rs 200 or fraction thereof	7½

Note—Insurance service to Burma and British Somaliland has been temporarily suspended.

For insurance of letters and parcels to Great Britain and Northern Ireland and to British Possessions and Foreign countries (other than those mentioned above) to which insurance is available.

Where the value insured does not exceed £14 Annas 5½
For every additional £14 or fraction thereof .. 5½

Acknowledgment fee—3 annas for each registered article 1 anna in the case of registered article addressed to Aden, Ceylon or Portuguese India

Air Mails—Letters, postcards and packets can be sent by air in the inland post as well as to certain foreign countries on payment of special Air Mail fees. Such letters can be registered. Insured articles cannot be sent by Air Mail except to Ceylon. The Inland Air fees are as follows—

(i) For a postcard . 6 pies *plus* ordinary postage.

(ii) For a letter and packet . 1 anna for each tola or part thereof *plus* ordinary postage.

For Air fees to foreign countries, see the Post and Telegraph Guide.

Magnitude of Business in the Post Office:—

At the close of 1940-41, there were 120,816 Post & Telegraph officials, 25,338 post offices and 159,074 miles of mail lines. During the year, 1,215 million articles, including 39.8 million registered articles were posted; stamps worth Rs 69.4 millions were sold for postal purposes, about 43 million money-orders of the total value of Rs. 80½ millions were issued, 895 thousand of Indian Postal orders to the value of Rs. 33 lakhs were sold, a sum of Rs 160 millions was collected for tradesman and others on V. P. articles, about 2.6 million insured articles valued at 780 millions of rupees were handled. Customs duty aggregating over 4.1 million was realised on parcels and letters from abroad, pensions amounting to about Rs. 17.2 millions were paid to Indian Military pensioners and nearly 20,000 lbs of quinine were sold to the public. On the 31st March 1941, there were 2,844,000 Savings Bank Accounts with a total balance of Rs. 595.1 millions and 99,200 Postal Life Insurance Policies with an aggregate assurance of Rs 198 millions

TELEGRAPH DEPARTMENT.

Telegraphs—Up to 1912 the telegraph system in India was administered as a separate department by an officer designated Director-General of Telegraphs who worked in subordination to the Government of India in the Department of Commerce and Industry. In that year it was decided to vest the control of Posts and Telegraphs in a single officer as an experimental measure with a view to the eventual amalgamation of the two Departments.

In pursuance of this policy an experimental amalgamation of the two services was introduced in the Burma and Central Circles from the 1st July 1912. The fundamental principles of this scheme which followed closely the system in force in the United Kingdom and several other European countries were that the traffic and engineering work of the Telegraph Department should be separated, the former branch of work in each Circle being transferred to the Postmaster-General assisted by a Deputy Postmaster-General and a suitable number of attached officers and the engineering branch being controlled by a Director of Telegraphs. Subordinate to this officer there were several Divisional Superintendents who were assisted by a number of attached officers.

In 1914 the complete amalgamation of the two Departments was sanctioned by the Secretary of State and introduced from 1st April. The superior staff of the Direction, in addition to the Director-General himself, consists on the engineering (including wireless) side of a Chief Engineer, Telegraphs, with two Deputy Chief Engineers, and two Asstt. Chief Engineers. For traffic work there is a Deputy Director-General, with two Assistant Deputy Directors-General. In the Circles the scheme which has been introduced follows closely on the lines of the experimental one referred to above. For telegraph engineering purposes India was divided up into five Circles,

each in charge of a Director. These five Circles were divided into eighteen Divisions each in charge of a Divisional Engineer. On the 1st July 1922 Sind and Baluchistan Circle was formed with its headquarters at Karachi. This Circle is in charge of a Director of Posts and Telegraphs. On the 31st March 1924 there were 7 Circles and 20 Divisions. With a view to complete fusion of the three branches of work, the engineering work of the Bombay and Central Circles was brought under the control of the respective Postmaster-General in 1925 and this unification proved an unqualified success and was gradually extended to other Circles. The fusion was completed in March 1930. The telegraph traffic and the engineering branches in the Circles are now controlled by the Postmasters-General and the Director, Posts and Telegraphs, Karachi. There are now 21 Engineering Divisions.

The audit work of the Telegraph Department is, like that of the Post Office, entrusted to the Accountant-General, Posts and Telegraphs, assisted by a staff of Deputy and Assistant Accountants-General.

With effect from 1-4-1937 Burma Circle was separated from the Indian Posts and Telegraphs Administration. It now forms part of the Government of Burma which started its independent career on and from that date.

Inland Telegrams and Tariff.—Telegrams sent to or received from places in India or Burma or Ceylon are classed as Inland telegrams. The tariff for Inland telegrams is as follows—

For delivery in India			
Private and State.			
Express. Ordinary.			
Rs. a.	Rs. a.	Rs. a.	Rs. a.
Minimum charge ..	1	8	0 12
Each additional word over 8..	0	2	0 1

	For delivery in Burma	
	Private	State
	Express	Ordinary.
Minimum charge	Rs a 2 10	Rs a 1 5
Each additional word over 8	0 4	0 2

	For delivery in Lhasa (Tibet).		For delivery in Ceylon	
	Private	State	Private	State
	Ex-press.	Ordinary.	Ex-press.	Ordinary.
Minimum charge	Rs a 1 14	Rs a 0 15	Rs a 2 6	Rs a 1 3
Each additional word over 12..	0 2	0 1	0 3	0 2
The address is charged for				

Additional charges.	
Minimum for reply-paid telegram	Minimum charge for an ordinary telegram.
Notification of delivery	Minimum charge for an ordinary telegram

Multiple Address telegrams, each 100 words or less in each copy beyond the first 4 annas

Colation One half of the charge for an ordinary telegram of same length

	Rs
For acceptance of an Express telegram during the hours when an office is closed	If both the offices of origin and destination are closed .. 2
	If only one of the offices is closed. 1
	If the telegram has to pass through a ny closed intermediate office an additional fee in respect of each such office 1

Boat hire Amount actually necessary

	For delivery in India.		For delivery in Ceylon.

Greetings Telegrams.—Inland Greetings telegram service has been suspended as a temporary measure

Inland De Luxe Telegrams—Senders of Greetings telegrams to or from offices in India may use their own phraseology in such telegrams on payment of 2 annas in addition to the charge appropriate to the class of message (Express or Ordinary)

This DE LUXE service is not applicable to telegrams for Burma

The sender of a DE LUXE telegram should write before the address the special instruction =LX= which will not be charged for

Foreign Tariff—The charges for foreign telegrams vary with the countries to which they are addressed. The rates per word for telegrams to countries in Europe, America, etc., are as follows —

Cables are not now accepted to the following enemy or enemy-occupied countries—Germany, Italy, Belgium, Denmark, Norway, Luxemburg, France, Albania, British Somaliland, Bulgaria, Channel Islands, Croatia, Greece, Holland, Hungary, Italy and Italian Possessions except Vatican City, Liechtenstein, Rumania, Lebanon and Yugoslavia

Urgent Telegrams—
Late double of ordinary rate

Daily Letter Telegrams—
One third ordinary rate with a minimum charge of 25 words

Code telegrams are accepted at 3/5th of the ordinary rate. Code telegrams for countries within the British Empire are accepted at 1/3rds of the ordinary rate (*Vide clause 425, 2. & T. Guide*).

Telegrams are accepted at all Government Telegraph Offices.

Usual rules apply regarding Registration of abbreviated addresses, Reply Paid, etc

Full lists published in Post and Telegraph Guide.

Radio-Telegrams.—For radio-telegrams addressed to ships at sea from offices in India and transmitted via the coast stations at Bombay, Calcutta, Karachi or Madras the charge is thirteen annas per word (ordinary) or eight annas per word (code) in nearly all cases.

The following are the charges (excluding supplementary charges) for radio-telegrams from offices in India transmitted to ships at sea through the coast stations mentioned in the preceding paragraph.—

	Total charge per word.	
	Ordinary.	Code
	Rs. a.	Rs a
(1) All Government or Private Radio-telegrams, excepting those mentioned in (2) and (3) below ..	0 13	0 8
(2) Radio-telegrams to His Britannic Majesty's Ships of War or Ships of the Royal Indian Navy ..	0 8	0 5
(3) Radio-telegrams to Spanish or Swedish ships ..	0 12	0 7½

The sender of a radio-telegram may prepay a reply. He must insert before the address, the instruction "R P" followed by mention in Rupees and annas of the amount prepaid, e.g., R P 7-8. This expression counts as one word

DAILY LETTER-TELEGRAMS.

Daily Letter-Telegrams in plain language, which are dealt with telegraphically throughout are accepted on any day of the week, and are ordinarily delivered to the addressee on the morning of the second day following the day of booking. They are subject to the conditions prescribed for Deferred Foreign telegrams with certain exceptions as stated below.

The charge for a Daily Letter-Telegram is ordinarily one-third of the charge for a full rate telegram of the same length and by the same route subject to a minimum charge equal to the charge for 25 words at such reduced rate including the indication DLT.

The late fee system does not apply to Daily Letter-Telegrams and such telegrams are not accepted during the closed hours of an office.

On Indian lines Daily Letter-Telegrams are transmitted after Deferred Foreign telegrams.

The only special services admitted in Daily Letter Telegrams are Reply paid, Poste Restante, Telegraph restante, Multiple addresses, de Luxe and telegraph redirection under orders of the addressee.

NIGHT LETTER TELEGRAMS.

Night Letter Telegrams (NLT) are accepted for all Empire countries, except Australasia, with which the Daily Letter Telegram Service (DLT) will remain in force, at the same rates and under the same conditions as prescribed for Daily Letter Telegrams, except as follows.—

(i) They will be delivered on the morning of the day following the day of booking

(ii) The special instruction and the class prefix for Night Letter Telegrams will be NLT

EMPIRE SOCIAL TELEGRAMS.

Empire Social Telegrams (GLT) conveying solely greetings, family news or non-commercial personal affairs can be availed of throughout the year at special reduced rates, for all Empire countries except Sudan.

Empire Social Telegrams (GLT) for the purpose of transmission and delivery to a territory or place to which NLT service is available is deferred until the morning of the day following the day of acceptance, where there is no NLT service but a DLT service is available, an Empire Social Telegram is deferred and delivered on the second day following the day of acceptance or as soon as possible thereafter. Minimum charge for an Empire Social Telegram is Rs 3-6-0 for the first 12 words (excluding the Special Instruction-GLT-which will not be charged) and 4½ annas for every additional word.

The only Special Services admitted in Empire Social Telegrams are "Reply Paid" and "De Luxe"

Foreign De Luxe Telegrams.—Telegrams relating to happy events or greetings may be sent to certain foreign countries for delivery on an artistic form in an envelope of the same character. A supplementary charge of four annas per telegram in addition to the charge at the appropriate rate according to the class (i.e., Urgent, Ordinary, Code, Deferred, DLT, etc.) is charged for such telegrams

Greeting Telegrams (Foreign).—Telegrams conveying Christmas and New Year wishes are accepted for most non-empire countries from the 14th of December to the 6th January inclusive at special reduced rates, subject to a minimum charge for 10 words per telegram. To all Empire countries except Sudan, such greetings may be conveyed by means of Empire Social Telegrams.

Growth of Telegraphs.—At the end of 1897-98 there were 50,305 miles of line and 155,088 miles of wire and cable, as compared with 103,600 miles of line including cable and 648,600 miles of wire including conductors respectively, on the 31st March 1941. The

numbers of departmental telegraph offices were 257 and 83, respectively, while the number of telegraph offices worked by the Post Office rose from 1634 to 4,009

The increase in the number of paid telegrams dealt with is shown by the following figures —

		1897-98	1940-41
Inland	{ Private .	4,107,270	13,066,957
	{ State ..	860,382	1,063,381
	{ Press ..	35,010	385,388
Foreign	{ Private ..	735,679	3,388,314
	{ State ..	9,896	117,055
	{ Press .	5,278	64,897
		<u>5,754,415</u>	<u>18,985,092</u>

The outturn of the workshops during 1940-41 represented a total value of Rs 39,13,000

Wireless.—The number of messages handled during the year 1940-41 by departmental wireless stations in India was over 800,000. This shows an increase of about 75,000 over the previous year

Telephones.—On the 31st March 1941 the number of Departmental telephone exchanges was 289 with 28,596 straight line connections and 4,620 extension telephones. The number of telephone exchanges established by Telephone Companies was 28 with 58,474 telephones

Posts and Telegraphs.—The capital outlay of the Indian Posts and Telegraphs Department during and to the end of the year 1940-41 was Rs 4,98,75,250 and Rs 22,69,44,897 respectively. The receipts for the year ended 31st March 1941 amounted to Rs 13,28,25,000 and charge (including interest on capital outlay) to Rs 12,03,45,000, the result being a net gain of Rs 1,24,80,000

Public Health.

The history of the Public Health departments in India goes back for about sixty years. During that period great improvements have been effected in the sanitary condition of the towns, though much remains to be done; but the progress of rural sanitation which involves the health of the great bulk of the population has been slow, and incommensurate with the thought and labour bestowed on the subject. "The reason lies in the apathy of the people and the tenacity with which they cling to domestic customs injurious to health. While the inhabitants of the plains of India are on the whole distinguished for personal cleanliness, the sense of public cleanliness has ever been wanting. Great improvements have been effected in many places; but the village house is still often ill-ventilated and over-populated; the village site dirty, crowded with cattle, choked with rank vegetation, and poisoned by stagnant pools, and the village tanks polluted, and used indiscriminately for bathing, cooking and drinking. That the way to improvement lies through the education of the people has always been recognised."

Of recent years the pace has been speeded up as education progressed, and funds were available. One of the greatest changes effected by the Reform Act of 1919 was the transfer of sanitation to the provinces making it a subject directly responsible to local control through Ministers. This condition continues under the Government of India Act of 1935. The Public Health Commissioner with the Government of India in a general review of health organisation in British India which he laid in January 1928, before the Interchange Study Tour organised for Medical Officers of Health from the Far Eastern Countries by the Health Organisation of the League of Nations, concluded "that the State effort in regard to Health Organisation in British India is one of no mean importance, that it has evolved over a couple of centuries during which many mistakes in policy must be admitted, that it has provided the Officers and the stimulus necessary for laying the foundations of medical education, that it has tried to uphold the ethical standards of western medicine and that in whichever way it is regarded it is an effort of which no Government need be ashamed."

Vital Statistics.

India's birth rate in 1938 was more than twice that of England and Wales, her death rate was also more than twice that of England and Wales and nearly one and a half times that of Japan, and her infantile mortality rate was more than three times that of England and Wales and one and a half times that of Japan. "The information furnished for the great group of infectious diseases of world import, i.e., plague, cholera, small-pox, yellow fever, typhus, malaria, and dysentery shows (says an earlier Public Health Report) that if we except typhus and yellow fever, India is one of the world's reservoirs of infection for the others and the main reservoir of infection for plague and cholera." The significance of these facts must, adds the Commissioner, be obvious to all

who think. "Briefly their implication is that India's house, from the public health point of view, is sadly out of order and that this disorder requires to be attended to. It is not for India to say that so far as she is concerned prevention is impossible. If we think of the effect of sunlight on tubercle ridden children, of the effect of feeding on rickets, scurvy and beri-beri, of the way in which malaria, cholera, yellow fever, dengue, ankylos-tomiasis and filariasis can be and have been overcome we need have no fear in regard to India provided the necessary measures are put into operation." These observations are as true to-day as when they were made.

In June 1937 His Excellency the Viceroy, Lord Linlithgow, inaugurated the Central Advisory Board of Health. This body had existed prior to 1923, when it was abolished on the recommendation of the Inchcape Retrenchment Committee. It has now been reconstituted on up-to-date lines, after consultation with the provinces, in a manner which brings it into conformity with the constitutional changes in the country. Its Chairman is the Member for Education, Health and Lands with the Government of India. Most of the provinces have nominated their Ministers in charge of Public Health as their representatives on the Board. The Public Health Commissioner with the Central Government is Secretary-Member and several expert officials and members of the Central Assembly are also nominated to the Board. The inaugural meeting was addressed by Lord Linlithgow, who declared that every where in India he discerned unmistakable signs of a growing consciousness of the value and significance of public health. His Excellency particularly drew attention to the conditions of urban housing and sanitation and the comments thereon of the Whitley Commission on Labour which reported in 1931.

Anti-Tuberculosis Campaign.

In December 1937 H. E. the Marchioness of Linlithgow inaugurated a nation-wide campaign against tuberculosis. A sum of Rs 76 lakhs was subscribed and the Tuberculosis Association of India was formed, incorporating the King Emperor's Anti-Tuberculosis Fund and King George's Thanksgiving Anti-Tuberculosis Fund. Provincial and State Associations were subsequently affiliated with the Central Association from which in each case they received a quota of 95 per cent of the monies subscribed in their areas.

By the end of 1940, much progress had been made in the organised campaign against tuberculosis, a Central clinic had been opened at New Delhi and a sanatorium was nearing completion at Kasauli. The functions of the central body are to offer expert advice, assist co-ordination and standardised methods, educate the public by propaganda and promote research. The affiliated bodies undertake the establishment of hospitals and clinics and the carrying out of preventive work. Thus there is demarcation of spheres of activity and positive results may be expected to follow in the near future.

The year 1941 saw all the provincial associations affiliated to the central organisation and support from the Indian States was forthcoming in large measure. Despite the war the campaign continued to make encouraging headway, and according to Lieut-General Sir Gordon Jolly, Chairman of the Tuberculosis Association of India, there were 27 organisations in 1941, of which 14 were provincial and 13 State representatives, all of them affiliated to the Central body. During 1941, 7 new tuberculosis clinics were opened in different parts of India.

Many general hospitals throughout the country now possess improved arrangements for the diagnosis and treatment of phthisis and among the provinces recently provided with tuberculosis hospitals is Bombay. The New Delhi tuberculosis clinic has fully justified the expectations of its sponsors and in the two years since its opening over 20,000 patients took advantage of its facilities and both patients and the medical profession gained confidence in the institution. The progress of "organised home treatment" was particularly encouraging. Equally encouraging was the progress of the Lady Laththgow Sanitarium at Kasauli from where it is hoped a steady stream of trained personnel will soon flow.

In 1941 the anti-tuberculosis campaign in India suffered a grievous loss with the resignation of the distinguished specialist Dr Frimodt Møller, who rendered valuable service not only in organising the New Delhi clinic and the Kasauli Sanitarium, but in guiding the general campaign throughout the country.

The Public Health Commissioner with the Government of India in his report for 1940 observes that the year was not marked by any abnormal outbreaks of disease, a contrast to the privations and epidemics in many other parts of the world. Despite the war some of the voluntary health organisations were able to extend their operations. The Public Health Commissioner remarked on the failure of local bodies to exercise their powers to regulate house construction, pointing out that overcrowded, unhygienic houses are the breeding place of tuberculosis and other diseases. The year was notable for preventive measures carried out against disease carrying.

In 1940 the incidence of cholera in most provinces was on a smaller scale than during the previous year. Coorg was completely free from the disease and in Ajmer-Merwara only a single case was reported. The North-West Frontier Province and the Punjab had only localised outbreaks. Bihar, Bengal, Orissa, Bombay and Madras reported substantial decreases in their cholera incidence in 1940 in comparison with the previous year, while Assam recorded a small increase. The only provinces to show a high incidence were Sind and the Central Provinces.

The report also deals in detail with the anti-tuberculosis campaign which made considerable progress in this period. The Health Commissioner refers appreciatively to the anti-phthisis propaganda widely carried out throughout the country.

CENTRAL ADVISORY BOARD.

In the field of public health administration the most important event was the second meeting of the Central Advisory Board of Health in January 1939. This Board, which consists of the representatives of the Central Government, of provincial Governments and of certain Indian States, was inaugurated in June 1937 for the purpose of providing a forum for the discussion and formulation of public health policy. Within the short period of its existence it has already given proof of its usefulness. Mention may be made here of some of the valuable results of the joint consultations between the different governments which the existence of the Board has rendered possible during the past three years. The problems associated with the health of the mother and child are of supreme importance to every country and, in India, the high rates of child and maternal mortality place this branch of health work in the forefront of the national health programme. A special committee appointed by the Board reviewed the whole question and submitted a report, which has been approved by the Board and which should provide for many years a sound basis for the orderly development of maternity and child welfare work in this country.

The important part that festivals and large gatherings of pilgrims play in the spread of cholera is a subject of great concern to health authorities in India. While an improvement of the sanitation of the villages and towns through which the pilgrims pass is the most effective means of prevention, its realisation must be slow in view of the cost involved. Under the circumstances the most practical method of minimising the chance of the spread of cholera appears to be the provision of mass protection through anticholera inoculation. The possibilities of introducing a system of compulsory inoculation among pilgrims was investigated in 1939 by a special committee.

In 1940 the Central Advisory Board approved a plan of indirect compulsion for the inoculation of pilgrims against cholera. The report of the Committee on compulsory inoculation of pilgrims expressed the desirability of Governments selecting suitable festival centres in their areas for trying out a system of indirect inoculation of pilgrims against cholera on the lines of the scheme worked out by the Bombay Government at the Pindharpur pilgrimage. It also emphasised the need of adopting certain measures which the Committee proposed for providing the funds and the trained personnel necessary for carrying out mass inoculation.

Special attention was paid to ward off yellow fever from India with the increase of aerial communications with Africa. No one was allowed to land in India from the yellow fever area without having been inoculated or without undergoing quarantine. Aircraft arriving from yellow fever areas were compelled to produce a certificate that they were effectively disinfected at either Khartoum or Cairo. Within the country measures were taken to deal with any possible outbreak of the disease. The health authorities of the Provincial and State Governments were requested to report promptly to the Public Health Commissioner any suspected cases of the disease.

SOCIAL LEGISLATION

Repeated stress has been laid in the Health Commissioner's reports on the fact that public health cannot be regarded as an entity distinct from the general social and economic life of the community. It is, therefore, satisfactory that the advent of provincial autonomy and the conferment of extensive powers on Provincial Governments have been followed in many provinces by social legislation which will undoubtedly have far-reaching effects on the economic life and general well-being of the people. Agricultural indebtedness, land tenure and industrial problems, to cite a few examples, are all receiving serious attention and, in so far as legislative and administrative action goes to raise the standard of life, these measures will inevitably help in improving the standard of public health.

In order that there may be no undue feeling of pessimism, it should always be remembered that, less than a century ago, conditions in Great Britain were not much different from those found in India to-day and that, with respect to other countries, reduction of the general death rate below that at present recorded in India dates back to only a few years. There seems no reason why India should not accomplish what has been achieved in other parts of the world, if only organised effort is continued and if public support is given to that effort.

POPULATION PROBLEM

In successive reports Health Commissioners have drawn attention to the urgency and importance of the population problem and, as this question has such an important bearing on all others relating to national reconstruction and to public health in particular, no apology is needed

for returning to the subject. No useful purpose is ever served by shutting one's eyes to indisputable facts. The subject is no academic one, it is, for instance, not merely a matter of the verification or otherwise in this country of the Malthusian doctrine of population outstripping the food supply in the presence of unrestricted multiplication of numbers. Available data may be insufficient for drawing definite conclusions, but it seems too optimistic to assume that the population problem is neither pressing nor deserving of serious study because of possible extensions of improved agricultural practice and the possible application of new scientific discoveries.

In India the low standard of living and the steadily growing population constitute a disquieting combination, but the resources of the country are immense and there is no need for despair so long as the different governments are determined so to organise the material and human resources at their disposal as to produce the maximum benefit to the community. Most of the questions relating to the health and economic welfare of the people are statutorily the functions of provincial Governments and it is their responsibility to set up the machinery necessary for the study of demographic problems within their areas of jurisdiction. In addition to official agencies, universities and research institutions should be induced to help and the work could perhaps be suitably co-ordinated by the formation of a committee in each province to plan the necessary investigations and to place its expert knowledge at the disposal of the Government so that a sound economic and social policy might be reached. Such a committee could also perform the extremely useful function of educating public opinion on correct lines.

Natural increases accruing from excess of births over deaths for decennial periods from 1871 to 1930 and for individual years from 1931-38 are given in the following table—

	Annual number of Births	Birth rate p m	Annual number of deaths	Death rate p.m.	Annual excess of births over deaths.
1871-1880 ..	Not available.	Not available	3,540,202	19	Not available.

N B—The figures below the horizontal line represent actuals

The health of the British Army in India in 1939 was on the whole thoroughly satisfactory, although the admission rates for both officers and men increased compared with the previous year, both for general admissions and for particular diseases.

This increase was more apparent than real in that there were considerable reductions in the strengths of both officers and men of the British Army in India during the year. These reductions took place principally in the latter half of the year, and many of the sick and unfit from the units which proceeded out of the country remained to affect relatively the proportion of "sick" to strength.

Actually there was a reduction of nearly 100 admissions for officers and over 2,000 for men during the year, and ratios of sickness based on the original strengths would give a yet happier picture of the health of the Army.

It can safely be claimed that the year 1939 was satisfactory, particularly so in view of the increased chances of disease which war activities brought, and that from the medical point of view the fighting fitness of the army was good.

Similarly, the health of the Indian Army was on the whole satisfactory. There were no epidemics of any note and such increase as there was, viz., 32.2 per 1,000 in admission rates, can be fully accounted for by conditions of war service. Large numbers of reservists returned to their units, there was a considerable influx of recruits and many defensive posts had to be manned in relatively unhealthy areas. Death rates decreased to 2.12 per 1,000 and invaliding increased to 6.43 per 1,000. The average constantly sick figure increased to 16.25 per 1,000.

Among officers of the British Army in India, 435.1 per 1,000 were admitted to hospitals

during the year, compared with 428.0 in 1938. The death rate, in spite of the increase in admission rates, fell sharply, at 2.14 being less than half that of the previously recorded year. The average constantly sick in hospital increased slightly—14.88 compared to 13.86 in 1938, and the invaliding rate jumped up by 10 per 1,000 to 25.09 for the year. 506.7 per thousand were treated as out-patients compared to 527.0 in 1938.

Among British soldiers there was a further sharp rise, 63 per 1,000, in admission rates from 603.7 in 1938 to 666.1 in 1939, a figure well in excess of any since the post-war quinquennium 1920-24. The actual number of admissions showed the sharp reduction of 2,000 (approx) on the previous year, the relative increase being due to the departure of considerable numbers of British troops overseas and the retention in India for a time of their units. Invaliding, at 9.14 per 1,000, showed a further reduction.

The death rate was 2.75 per 1,000, which was almost the same as 2.76 of the previous year and little above the quinquennial average of 2.54.

The chief causes of death were —
Local injuries (including 18 gunshot wounds) . . . 0.78 per 1,000
Infectious diseases . . . 0.58 " "
General injuries . . . 0.39 " "
Digestive diseases . . . 0.36 " "
Circulatory diseases . . . 0.19 " "
Pneumonia . . . 0.14 " "

The principal cause of admission to hospital of British troops was malaria of which there were 58.1 cases per 1,000, diseases next in order being cellulitis with 51.1, tonsillitis 24.4, gonorrhoea 32.7, sandfly-fever 22.2, dysentery 29.0, bronchitis 18.2, diarrhoea 17.0, sprain 17.0.

LEPROSY IN INDIA.

A conservative estimate of the incidence of leprosy in India places the figure in the neighbourhood of a million persons affected and, though the number of infectious cases may be only a quarter of this figure, the amount of sickness, suffering and incapacitation caused by the disease is immense. Leprosy in India is mainly a rural problem although the growth of towns and cities together with the development of industrialism, has, in recent years tended to produce a steady flow of lepers into urban areas. The prevalence of the disease is highest along the eastern coast of the peninsula and in the western parts of Bengal. From this area the disease gradually diminishes in incidence to the north and west, until a fairly wide area of comparative freedom from leprosy is reached comprising the northern half of Bombay Presidency, Gujarat Rajputana, the western portion of the United Provinces the Punjab the N.W.T. Province, Sind and Baluchistan.

Early in the year 1924, the British Empire Leprosy Relief Association was constituted in England with H. R. H. The Prince of Wales as Patron the Viscount Chelmsford as Chairman of the General Committee and H. E. the Viceroy of India as one of the Vice-Presidents. Following its formation and in view of the good results being obtained from the newest treatment of leprosy, H. E. the Viceroy felt that the time was auspicious for the inauguration and carrying on of an earnest campaign with the object of ultimately stamping out leprosy from India.

His Excellency invited certain gentlemen representing various interests to form an Indian Council of the Association, which he formally inaugurated at a public meeting in Delhi on the 27th January 1925.

A general appeal for funds in aid of the Association was issued by His Excellency the Viceroy on the date of the inauguration of the Indian Council which was closed after a year with realizations amounting to over Rs 20,00,000 which was invested in the end of 1928. The investments amounted to Rs 20,63,065 yielding an annual revenue of over Rs 1,22,000.

The policy and principles of the British Empire Leprosy Relief Association, Indian Council, with regard to provincial committee are expressed in its "Memorandum on the method of conducting the anti-leprosy campaign in India" which was published in 1926. This document sought to bring out the following main points which according to the latest scientific researches should be the basis upon which all efforts ultimately to eradicate leprosy must rest —

(1) Pauper lepers form only a small fraction of the leper population, and the disease is common among all classes of the community.

(2) Segregation is not the most appropriate method of dealing with lepers for

(a) financially it would be impossible,

(b) any attempt to impose forcible segregation would drive patients, particularly those who are suffering from the earlier stages of the disease, to conceal their misfortune, and, as has been the case where such means have been adopted, only the more advanced and obvious lepers would be segregated.

(3) The majority of the advanced cases are not highly infectious and are less amenable to treatment, while the early cases in which the disease has made but little outward manifestation, can be controlled by treatment.

(4) The strongest hope of stamping out the disease lies in providing facilities for the treatment of early cases.

The Indian Council, therefore, while it did not desire to minimise the usefulness of homes and asylums for the care of lepers, strongly recommended that the efforts of the Provincial Committees should, for the present at least, be concentrated upon the establishment of dispensaries to serve the following objects —

(a) to induce patients to come forward at an early stage in the hope of recovery instead of hiding their malady till it becomes more advanced, more infectious and less remediable, and so

(b) to shut off the sources of infection as the number of infectious cases will continually tend to diminish and the opportunities for infecting the next generations will become fewer.

The Council's main work during the first several years of its life has been organisation and planning and the outlining of a programme of work varied by the selection of the most fruitful soils for experimentation in methods of work. One valuable product of its activities is the fact that "the leper is becoming less prone to hide his disease and there is an increase of general interest in the subject"

The survey figures published by the Council have aroused much interest throughout India and many Provincial Governments give grants in-aid for asylums, homes and clinics. Through the generosity of the Council and of the Calcutta School of Tropical Medicine training in modern methods of treatment is given to doctors sent up by all Provinces and several Indian States and they, in turn, pass on their training to others in their own parts of the country. The Calcutta School commenced leprosy research in 1920, is still continuing it and has obtained most valuable results. Treatment has consequently

improved and early cases are more readily coming forward than formerly.

Provincial Governments have begun to take an increasing interest in the leprosy problem, particularly in those provinces in which the incidence of the disease is high. The Indian Council of the British Empire Leprosy Relief Association has taken an active part in the organisation of laboratory and field research, the provision of out-patient treatment centres, the training of doctors in anti-leprosy work and educational propaganda. The Mission to Lepers has built up a chain of leper homes all over the country during the past 66 years and during 1930 the number of patients treated as in-patients in these institutions was 8,213 and as out-patients 6,096. In addition, over 800 healthy children were cared for separately from the patients. A welcome feature of the development of anti-leprosy work in India has been the growing co-operation between Governmental and voluntary agencies.

His Excellency the Viceroy is the President of the Indian Council, the Director General of the I.M.S., the Chairman of the Governing Board, and Sardar Bahadur Balwant Singh Puri, the Honorary Secretary.

BLINDNESS IN INDIA

All over the East, and in fact in most tropical and sub-tropical countries, blindness is most prevalent and only recently have people come to realise the gravity of this huge problem.

India is regarded as a land of blindness by many in foreign countries, whether this statement is justified or not, at present it is difficult to prove.

It is probably correct that there are about one and a half million blind persons in India, and for every one person blind there are three partially blind, out of a total population of about 360 millions, whereas the census figures of 1931 show about half a million blind persons.

The system of ophthalmic relief now prevailing in Egypt was started in 1903 by a gift of a sum of £43,000 by Sir Ernest Cassells. Thus arose the ophthalmic section of the Public Health Department under a Director of ophthalmic hospitals and a start was given by establishing eye hospitals. These hospitals became a definite branch of the Egyptian Government in 1906. The scheme subsequently developed, the cost being borne partly by Government grants and local taxation and partly by donations and subscriptions.

Between 1904 and 1914, sixteen eye hospitals were opened in various parts of the country, the permanent hospitals being reinforced by travelling eye dispensaries which are an important part of the system.

In India there has been practically no effort to count the number of blind, although the method is very simple to carry out, i.e., a person is considered blind when he cannot count the fingers of a hand held up in front of his eyes at a distance of one foot.

This is the method followed in Egypt and this was adopted by the Government of Bengal in the census of 1931 at the suggestion of Lt Col E O'G Kirwan, C.I.E., I.M.S.

The first blind relief Association in India was started in Western India in the Ratnagiri District by the late Mr C G Henderson, I.C.S., in 1919. In subsequent years, several branches were inaugurated. This Blind Relief Association carried out a special survey of the blind in some districts with the following results and wherever this has been done, the census figures have been found far too low. Nasik Dist 4.4 per 1000, Bijnor 2.6, Ratnagiri 1.5, the corresponding census figures are 1.74, 0.7 and 0.7. In the United Provinces a Deputy Commissioner had a count made and found no less than 9 persons blind per 1000.

Unfortunately this Blind Relief Association, with its branches, practically collapsed after Mr Henderson left due to lack of funds.

Mr Henderson resigned from the service in 1928 and an All-India Blind Relief Association was started in the year 1929 due to his devotion and energy.

Up to the end of 1929, there was no blind relief Association in Bengal where there are about 75,000 blind persons out of a total population of 4,66,95,536 (census 1931).

In March 1930, the Association for the Prevention of Blindness, Bengal was started in Calcutta with a strong Committee with Sir George Rankin, the then Chief Justice of Bengal, as President.

The first notable donation of \$500 dollars was received from Mrs Winifred Holt Mathier, Founder-Secretary, New York Association.

for the Blind, New York, U S A , who with her husband came to India in connection with the work of prevention of blindness. Six years later in March 1936, the first travelling eye dispensary was started in Bengal by this Association out of a gift of Rs 35,000 from Their Majesties' Silver Jubilee Fund, the amount being the budgeted recurring cost of the dispensary for five years.

By 1940, the Association possessed four such travelling eye dispensaries and it was in 1939-40 that the Government of Bengal sanctioned a recurring grant of Rs 15,000 for three years. In March 1941, this Association added one more travelling eye dispensary, making a total of five now operating in Bengal.

These travelling eye dispensaries have been started as a temporary measure until such time as there are more eye surgeons and sufficient eye hospitals scattered throughout Bengal. Up to March 1941, 2,85,606 cases have been treated and 8,071 operations have been performed by these dispensaries.

These travelling eye dispensaries work in the district headquarters and sub-divisions and also penetrate into the interior to bring preventive education and curative relief to the villages in the rural areas. The activities of these dispensaries are mainly preventive but curative work is also undertaken simultaneously which appeals much more to the public.

Preventive measures are carried out by lectures, demonstrations with the help of magic lantern slides, movie shows, posters, pamphlets, leaflets, models and first aid outfits.

Curative work, viz, treatment of eye diseases and operations, is carried out in dispensaries and hospitals but operations are only done where in-door accommodation can be arranged.

All operative works are suspended one week before a dispensary is due to move on so as to enable the doctors to complete the after-care of the operations they have done.

In addition to preventive and curative works, medical officers as a routine method carry out an enumeration of the blind by methods which are simple and accurate. They also carry out

school inspection, viz, systematic survey of eye defects amongst school students.

The Bengal Association has already done counts in 500 villages and have found about 148 blind persons per 100,000, which is double the number recorded in the census of 1931.

In 1939, the Association has started a sixth unit called the Eye Examination and Lecture Unit for Calcutta and its suburbs.

The activities of this Unit are mainly preventive and comprise lectures and demonstrations in schools, exhibitions, jute mills and other public places.

The eye examination of students in schools, workers of jute mills and inmates of orphanages forms an important part.

Considerable progress was made in 1934 with a scheme which the Indian Red Cross Society is carrying out in co-operation with the National Institute for the Blind, London, for training teachers in the prevention of eye disease and care of the eyes. The National Institute gave a grant of £170 for the purpose, out of which a sum of Rs 1,650 was given to the Association for the Prevention of Blindness, Bengal, (through the Bengal Provincial Branch of the Indian Red Cross Society) for organising lectures in schools in Bengal and with this amount this Association delivered a course of two lectures each in 82 schools in Bengal.

St. Dunstan's Section of the War Purposes Fund—In November, 1939, His Excellency the Viceroy initiated the St. Dunstan's Section of the War Purposes Fund, to afford relief to the war-blinded, an appeal for which was carried on throughout India by Sir Clutha MacKenzie, working on behalf of His Excellency and St. Dunstan's. A small All-India St. Dunstan's Committee was formally constituted at a meeting presided over by the Hon'ble Sir A. Ramaswami Mudaliar, Commerce Member to the Government of India, with Sir Ramaswami as Chairman of the Committee, Mrs T S Pillay as Hon'y Secretary, and Sir Ernest Burdon and Mr. A C Badenoch as Hon'y Treasurers. The Chairman emphasised at the meeting that the first claim on the funds subscribed would be for the Indian War-blinded.

MALARIA.

Malaria is without doubt India's major public health problem both from the point of view of morbidity and that of mortality. Whilst no province can claim to be free from its ravages, in some the incidence of malaria is extremely high. In Bengal, it is stated that more than two-thirds of the villages are subject to malaria and that "over 60 per cent. of the total population actually suffer from it every year. Roughly about 1,000 people die from malaria every day throughout the year." It is unofficially estimated that over India as a whole, upwards of a million people die from malaria every year.

Moreover, its incidence is probably three times higher in the rural areas than in the towns, so that it forms a terrible handicap to improved

health and a higher standard of living among the rural populations. The three main lines of attack may be classified as (1) anti-mosquito measures, (2) general quininisation and (3) improvement of the economic standard of the people. Anti-mosquito measures on a scale sufficient to influence the incidence of malaria are probably not within the bounds of practical politics, although considerable relief would probably be attained by reduction of what is known as man-made malaria. The problem of quinine is complicated, serious difficulties deter rapid advance to any scheme of adequate quininisation of the malaria-stricken populations. Whether cheaper quinine can be made available is a matter which demands further serious study.

The Malaria Institute of India, which has for many years past been engaged in malaria researches, has made clear the directions in which practical anti-malaria works should be tackled. The time seems ripe for a wider use of the knowledge available, but it is much to be feared that financial stringency will continue to handicap progress. Recognising the importance of the malaria problem, the Government of India some years ago placed a special grant of ten lakhs of rupees at the disposal of the Governing Body of the Indian Research Fund Association for malaria research. On the advice of the Public Health Commissioner, the Governing Body decided that this grant should be devoted to intensive control schemes carried on for a period of years in restricted areas in order to demonstrate the practical method required for reduction of the incidence of malaria. Following that decision, grants were made to four provincial Governments on the conditions that those Governments contributed amounts equal to the I R F A grants and that approved schemes should be placed in charge of experienced anti-malarial officers. In addition, a grant was made to Delhi Province for anti-malarial work in the Najafgarh Health Unit area and for additional schemes in the villages lying round the cities of Delhi and New Delhi.

In Madras, Bengal and the United Provinces, suitable areas were selected on the recommendation of officers of the Malaria Institute of India in consultation with the provincial Directors of Public Health. The grant to Assam provided additional funds to the Assam Medical Research Society which had been engaged for some years past in intensive anti-malarial work. It is believed that these five-year schemes will not only be of great benefit to the local populations concerned, but will form a valuable guide to all Governments and malarialogists in India in planning future anti-malarial work.

Recent malarial surveys have shown that parts of Eastern Bengal, formerly regarded as free from malaria, are subject to moderately severe outbreaks of the disease. Malaria is largely a rural problem in India and during the past few years different methods of combating the disease have been tried intensively in certain parts of the rural areas of Delhi province, these measures deserve adoption in other parts of India. Much of the minor sanitary work necessary for eradicating mosquito breeding can be carried out by the people themselves if they are prepared to devote a small part of their leisure to such labour. Draining marshes, clearing the jungle, filling up hollows in which water collects—these are part of a village improvement scheme to which the villagers should contribute their share of work for the common good.

Whilst all these facts indicate that the problems associated with malaria have by no means been lost sight of, they are so important that much more requires to be done before any marked general reduction of malaria incidence will be obtained. Both governments and local authorities will require to allot much larger sums than in the past for anti-malarial works. If permanent betterment is to be achieved. Moreover, no expenditure should in future be sanctioned

by either authority until proposed preventive schemes have been thoroughly investigated and finally approved by skilled malarialogists.

PLAGUE

Plague in India started in Bombay in 1896 and, within a short time, the disease spread widely through the country. It reached its maximum in 1904 with a total mortality of 1,143,993. In contrast to this the average annual mortality from plague during 1936-38 was 18,759. That a considerable reduction in its geographical distribution has also taken place is clearly indicated. The N-W-F Province, the Punjab, Delhi, Orissa, Bengal, Sind, Assam and Ajmer-Merwara were free from the disease during the year, while in Madras Presidency plague was prevalent only in a mild form. After a marked decline in the number of plague deaths from 24,560 in 1933 to 406 in Bombay Presidency in 1938, this province registered an increase to nearly 1,500 deaths in 1939. In the other provinces the position in 1939 was substantially the same as in 1938. However, the history of plague through the centuries is a warning against taking a complacent view of the reduced prevalence of the disease in India. It is known that the disease can smoulder in its endemic homes for long periods and that, on certain occasions, it acquires an increased striking power and spreads far and wide in epidemic waves into distant lands, to retreat again after a while to those areas where it permanently resides. While therefore it is gratifying that plague as a public health problem has been of decreasing importance within the past decade, the fact that endemic foci exist makes it imperative that no slackening of effort for its complete eradication should be permitted. In fact the fight against the disease both by administrative measures and by research into its epidemiology, treatment and prevention has continued uninterrupted during the whole period.

A considerable diminution in the incidence of plague has taken place in India within the last decade. This satisfactory position was maintained in 1940 when the provinces of Baluchistan, Sind, North-West Frontier, Ajmer-Merwara, Delhi, Orissa and Assam reported no cases of the disease. The Punjab and Bengal were also free from infection except for a few reported cases. Bombay Presidency alone experienced a relatively extensive epidemic the number of deaths from plague being 5,573 in 1940, as against 1,472 in 1939.

In March 1941 it was announced that experiments carried on at the Haffkine Institute, Bombay, with sulphathiazole in the treatment of plague had yielded results which appeared to offer an effective cure for this scourge. Lt.-Col S. Sokhe, Director of the Institute, said that by the use of this drug at Bettiah in Bihar and later at the Plague Hospital at Larkar in Hyderabad, Deccan the percentage of recoveries in non-septicemic cases was 95 per cent, while in septicemic cases the cure was 80 per cent. The drug was prepared at the Institute and was available in quantities at a cheap cost.

THE MATERNITY AND CHILD WELFARE MOVEMENT.

Amongst the most pressing problems of India's health is that presented by the appalling maternal and infant mortality. The figures for maternal mortality are not accurately known, but they are certainly not less than 10 per thousand live births, often more. Every year more than 2½ million Indian children die before the age of 5 years, while many others survive only to grow weak and feeble from unhygienic surroundings during infancy and childhood. A noteworthy feature has been the further progress of the infant welfare movement, which owes much to the All-India Maternity and Child Welfare League initiated by Lady Chelmsford and also to the Indian Red Cross Society, which aims at gradually establishing a network of child welfare centres throughout India. The amalgamation of these two Bodies which took place in 1931 forming the Maternity and Child Welfare Bureau, has undoubtedly increased and developed the work. In all the great centres of population, work is now being done for the training of midwives, for the instruction of mothers and for the care of babies. Training centres for Indian and Anglo-Indian women have been opened in order to spread the elements of infant hygiene to other parts of India. Most hopeful sign of all, Indian ladies are beginning to interest themselves in this work in large numbers. But such is the magnitude of the field that a consistent, widespread effort on a scale hitherto impossible must be undertaken, if any appreciable reduction is to be made in the appalling mortality of young children.

Centres of Activity are organised on a provincial basis, though the various provinces differ considerably in the nature of the work undertaken and the amount of organisation displayed. It is noteworthy that the work is best co-ordinated and most energetically carried on where there are persons appointed under the Directors of Public Health whose special duty it is to foster Child Welfare activities.

The care given by the wives and children of sepoys in the Indian Army is being increasingly reduced and nowhere more than in the units themselves. The result has been in the last few years, the opening of much work in this direction. Much of it is purely medical work which, in the absence of families, hospitals for the Indian soldiers is a necessity.

But genuine child welfare activities are also present in some centres, many of them assisted by the M. & C. W. Bureau, Indian Red Cross Society which has undertaken the organising work in place of the Lady Birdwood Army Child Welfare Committee. A remarkable feature of this movement is the keenness of the men themselves to aid it, realising as they do the benefit to their own women and children. There are now very few cantonments where some work of this kind is not going on.

So far all the schemes have devoted their attention to educating women in the elements of mothercraft and attempting to preserve infant lives and improve child health. In a land of so many languages and superstitions, progress will necessarily be slow and India has yet to decide whether she will work intensively and try to rear a few well developed children as far as adolescence or extensively attempt to bring a large number of infants through the first critical months, only to have them perish at a later stage from the many ills that childhood is heir to in a land of great poverty, under-nourishment, epidemics and famine. In Western lands the Child Welfare Movement has no more marked characteristic than its inability to stop expanding. Its ramifications know no bounds. Its inevitable corollaries are endless, and like the banyan tree it will no doubt in India also develop innumerable fresh roots, medical supervision, dental clinics, better housing, open air playgrounds, etc., etc. But these are not yet. Its preliminary task is to educate the mothers of India to the enormity of allowing two million babies to perish every year and to convince them of the equally important fact that a high death rate always spells also a high damage rate of sickly, under-developed, incompetent citizens.

The Maternity and Child Welfare Bureau, which works in conjunction with the Indian Red Cross Society, spends a large proportion of its funds on education. It maintains schools for training health visitors and nursery schools. The Bureau provides a central adviser on the subject and thus helps co-ordinate work in different provinces. The Victoria Memorial Scholarship Fund is earmarked for the training of indigenous and other midwives. There is a large and growing demand for these attendants and systematic registration of them is desirable.

INDIAN RED CROSS SOCIETY.

When the Great War first broke out, what is generally termed Red Cross work was undertaken in India and Mesopotamia by the St John Ambulance Association and by a number of provincial organisations working on independent lines. From August 1916, the central work was taken over by the Indian Branch of the Joint War Committee of the Order of St John of Jerusalem and the British Red Cross Society. The final report of that Committee shows that up to June 1920 its total receipts amounted to Rs. 1,77,55,716 of which some 17 lakhs had been contributed by the British Red Cross Society. It had spent about 67 lakhs in Mesopotamia, nine lakhs on the Afghan War and Waziristan Expedition; in Mesopotamia and India combined it had spent on Red Cross objects in all about 117 lakhs.

It closed its career in June 1920 under the following circumstances. In the summer of 1919, an invitation had been received to join the International League of Red Cross Societies having for its object the extension of Red Cross work in the sphere of purely civil activity. Though there was then no formally constituted Red Cross Society in India, the invitation was accepted, thus giving India a distinct position in a world-wide League of humanitarian societies. A Bill to constitute an Indian Red Cross Society was introduced by Sir Claude Hill in the Imperial Legislative Council in March 1920, and duly passed into law as Act XV of 1920. This Act handed over the balance of the Joint War Committee to the new Society, and authorised it not only to direct the utilisation for war purposes of the capital funds at its disposal but

also to devote the interest, as far as possible, for civil purposes. As contemplated in the Act of Constitution of the Society, its activities are completely decentralised, and are being carried on through 27 Provincial and State Branches under which there are numerous sub-branches.

The objects on which the funds of Society may be spent are —

1 The care of the sick and wounded men of His Majesty's Forces, whether still on the active list or demobilised

2 The care of those suffering from Tuberculosis, having regard in the first place to soldiers and sailors, whether they have contracted the disease on active service or not

3 Child welfare

4 Work parties to provide the necessary garments, etc., for hospitals and health institutions in need of them

5 Assistance required in all branches of nursing, health and welfare work, ancillary to any organisations which have or may come into being in India and which are recognised by the Society

6 Home Service Ambulance Work

7 Provision of comforts and assistance to members of His Majesty's Forces whether on the active list or demobilised

The Society has five grades of subscribing members, namely, Honorary Vice-Presidents, Patrons, Vice-Patrons, Members and Associate Members. Their respective subscriptions are Rs 10,000, Rs 5,000, Rs 1,000, Rs 12 annually or a consolidated payment of Rs 150 and anything between Re 1 and Rs 12 annually or consolidated payment of Rs 50. At the end of 1941 there were 27,102 adult members of these various grades.

To stimulate interest in the aims and objects of the Society amongst the future generations, a Junior Red Cross movement has been instituted which embraces the student population. Out of the 28 Provincial and State Branches, 25 have organised Junior Red Cross groups which is a clear indication of the fact that this children's branch of Red Cross Society which seeks to develop a child's personality by encouraging his individual initiative making him think and act, is being firmly established all over India. At the end of the year the total membership of the Junior Red Cross was 6,00,962 in 15,840 groups.

Constitution—His Excellency the Viceroy is President of the Society. The Managing Body ordinarily consists of a Chairman to be nominated by the President and 25 members of the Society, of whom 12 are the Vice-Presidents nominated by Provincial or State Branches, 8 selected by the Society at the Annual General Meeting from among the members of the Society, and 5 nominated by the President.

The present Chairman of the Managing Body is Lt-General Sir Gordon Jolly, K C I L, K H P, I M S, and the Secretary, Sardar Bahadur Balwant Singh Puri, O B E.

The Indian Red Cross Society professes itself as an essentially Indian Society. Most of its members (about 96 per cent) are Indians. It

is controlled in India. Its headquarters are at New Delhi. The Society received a gift of a lakh and a half of rupees from H H the Nawab of Junagadh to build headquarters offices in New Delhi. It has branches in every Province of British India and in several Indian States. These branches are again sub-divided into districts, so that there is a network of Red Cross centres all over India. The provincial branches appoint representatives to the Central Committee, called the Managing Body. This Central body after deduction of management expenses, distributes all its income from invested funds among the branches for their activities.

Like other Red Cross Societies, the Indian Society has never lost sight of its primary obligation to act as an auxiliary to the Army Medical Service in case of war. It maintains a Central Supply Depot administered by headquarters. A large number of military hospitals are supplied with additional equipment and comforts, and these are much appreciated. The Bengal Branch has a Literature Committee, which supplies regular parcels of literature to troops, especially to those stationed in lonely outposts, and many grateful letters of thanks are received. Discharged soldiers suffering from chronic diseases, particularly tuberculosis are referred by the Army Medical Service to the Red Cross, which follows up the men on their return to their villages, and arranges, where possible, for their treatment. Under this scheme many hundreds of cases have been dealt with.

The greater part of the Society's income is spent upon its peacetime programme. It seemed to those who directed the Society in its early years that the first and most crying need was to teach mothers how to bring up healthy children and child welfare has been placed in the forefront of its programme.

The health visitors employed in the child welfare centre are trained at Health Schools which are at Delhi, Lahore, Calcutta, Poona and Bombay. Several students from India have been granted scholarships by the League of Red Cross Societies to follow the international courses for Public Health Nurses in London. The training is now arranged by the Indian National Committee of the Florence Nightingale International Foundation with the help of a scholarship given by the Indian Red Cross Society from the income of a special endowment received by the Society from the Silver Jubilee Fund.

Special mention must be made of the Army child welfare centres, most of which receive generous support from Red Cross funds. These centres are run for the wives and children of British and Indian troops, and are doing excellent work. The Central Provinces and Berar Branch of the Society opened a Nursery School in Nagpur, and this pioneer school, under Red Cross auspices, has proved a great success.

Popular health education is carried on steadily by the Society by varied methods. Health lectures in many different vernaculars are regularly organised under Red Cross auspices illustrated by films and slides.

A large number of civil hospitals in India receive regular assistance from Red Cross funds.

The war demand for nurses depleted the Red Cross Roll of Trained Nurses which the Society maintains for employment in civil emergencies. With the co-operation of the Provincial Branches of the Society and with the assistance of the Trained Nurses, Association of India the Roll was strengthened and at the end of the year the total number of nurses on it was 83

FINANCES—The operations of the Joint War Committee were brought to a close in June 1920 with a capital investment of the face value of Rs 56,33,000 and Rs 8,01,500-8-6 in floating and fixed deposit accounts. The Society has since invested further funds in various securities and its finances at the end of December, 1941, stood at a capital investment of the face value of approximately Rs 76½ lakhs. The income derived from the capital of the Society (which is 3 lakhs at present), after providing for certain liabilities of the Central Society, is distributable under the Act to the Provincial Branches in proportion to their contributions to the Central "Our Day" Fund.

By the direction of H. E. the Viceroy a Fund entitled "The Indian Forces, Medical After-Care Fund" has been instituted at the headquarters of the Society to provide medical relief and other ameliorative measures for discharged Indian soldiers who participated in the present war. The Fund has been instituted with the generous donation of Rs 3 lakhs from H. E. the Maharaja of Travancore together with certain other sums accumulated in H. E. the Viceroy's War Purposes' Fund for this purpose. Relief from this Fund is granted to a member of the Army in India or of the Royal Indian Navy or Indian Air Force who has participated in the present war. The personnel of the Indian State Forces serving with His Majesty's forces are also eligible for relief from the Fund.

On the outbreak of war, a Central Joint War Committee of the Indian Red Cross and St. John Ambulance Association was formed, whose object, as is that of the similar organisation in the United Kingdom, is to ensure that the Red Cross and St. John Ambulance Association operate as one harmonious unit in their war work. This Central Joint War Committee consists of the Chairmen of the Indian Red Cross

Society and of the Executive Committee, St. John Ambulance Association, with non-official members of these two bodies, the Director of Medical Service in India and the Red Cross Commissioner. In addition, a Central Finance Sub-Committee of 6 members was set up. Similar Joint War Committees were appointed by the Provincial and State Branches. Lieut-General Sir Bertrand Moberly is the present Red Cross Commissioner and acts as Chairman of the Central Joint War Committee and of the Finance Sub-Committee, his other main duty is to keep in close touch with General Headquarters in India in order that the work of the Organisation as a whole may be co-ordinated and co-related to the administrative requirements of the forces.

With the expansion of our forces both in India and overseas, the commitments of the Central Joint War Organisation have been constantly increasing. There are Indian Red Cross Commissions in the Middle East and Iraq and a third was in Malaya; in addition, Red Cross service has to be given to our sick and wounded in Aden, Burma and Ceylon, as well as to those in our hospitals in India. Other matters dealt with at the Centre are those connected with our prisoners of war in enemy hands. These include the financing of weekly food parcels for Indian prisoners of war in Germany which are packed by the Indian Comforts Fund in London and the packing of weekly food parcels in Bombay for British and Imperial prisoners of war in Europe, many questions also arise in connection with our prisoners of war and civil internees in enemy hands in the Far East. There are also matters connected with the provision of Red Cross stores and supplies both for India and overseas and also the Indian Red Cross Postal Message Service by which people living in India are enabled to communicate with relatives residing in enemy or enemy-occupied territory.

Articles of hospital clothing, surgical dressings and bandages and some ward accessories are being prepared by over 1,000 work parties in the 28 Provincial and State Joint War Organisations, during the year 1941 nearly 23,00,000 items of work party output were completed.

ST. JOHN AMBULANCE ASSOCIATION (INDIAN COUNCIL)

AND

ST. JOHN AMBULANCE BRIGADE OVERSEAS (EMPIRE OF INDIA).

The St. John Ambulance Association was founded in 1877, by the Order of the Hospital of St. John of Jerusalem in England, and has for its objects—

(a) The instruction of persons in rendering First Aid in cases of accident or sudden illness and in the transport of the sick and injured,

(b) The instruction of persons in the elementary principles and practice of nursing, and also of hygiene and sanitation, especially of a sick room,

(c) The manufacture, and distribution by sale or presentation, of ambulance material, and the formation of ambulance depots in mines,

factories, and other centres of industry and traffic,

(d) The Organisation of Ambulance Corps, invalid Transport Corps, and Nursing Corps,

(e) And generally the promotion of instruction and carrying out of works for the relief of suffering of the sick and injured in peace and war independently of class, nationality or denomination.

An Indian Council of the Association was constituted on a regular basis in 1910. It has since issued over 442,000 certificates of proficiency in First Aid, Home Nursing, Hygiene and Sanitation and Domestic Hygiene and

Mothercraft and over 20,000 tokens such as Vouchers, Medallions, Labels and Pendants for special proficiency in those subjects. In addition, over 91,000 certificates have been issued in the elementary course for school students known as Mackenzie School Course in First Aid, Hygiene and Sanitation.

The object of the Association is not to rival but to aid the medical man, and the subject-matter of instruction given at the classes qualifies the pupil to adopt such measures as may be advantageous pending the doctor's arrival, or during the intervals between his visits.

During the year 1941, 62,966 persons attended courses of instruction in First Aid, Home Nursing, Hygiene and Sanitation and Domestic Hygiene and Mothercraft. Of these 43,482 qualified for the Association's certificates, i.e. 39,739 in First Aid, 2,999 in Home Nursing, 356 in Hygiene and Sanitation and 188 in Domestic Hygiene and Mothercraft.

The St John Ambulance Association took up the question of training in A R P as early as 1938. Since then it has issued 3,161 certificates in this course, of this number 992 are Brigade personnel. During 1941, 121 classes in this subject were held at various stations and 1,092 qualified for certificates—184 for Instructors, 13 for vouchers, and 895 for ordinary certificates. This instruction has thus made great strides at various towns in India in connection with the local A R P measures for the protection of civil population from air attacks. In order to assist in the special drive in this subject the Government of India have given a grant of Rs 10,000.

The Association has five grades of members, namely, Patrons, Honorary Councillors, Life Members, Annual Members and Annual Associates. Their respective subscriptions are Rs 1,000, Rs 500, Rs 100, Rs 5 and Rs 2.

The income of the Indian Council at headquarters consists primarily of interest on securities, a fixed annual grant from Government, fees for certificates and membership subscriptions.

Their Excellencies the Viceroy and the Marchioness of Linlithgow and His Excellency the Commander-in-Chief as President, Lady President and Chairman, respectively, with 23 members from the Indian Council. The general business of the Indian Council is conducted by an Executive Committee of which Sir Cameron Badenoch, CSI, CIE, ICS, Knight of Grace of the Order of St John of Jerusalem, is the Chairman and Sardar Bahadur Balwant Singh Puri, OBE, the General Secretary.

The St John Ambulance Brigade Overseas is a uniformed, disciplined body of men and women, all of whom are holders of First Aid, and, in the case of women also Home Nursing certificates. They meet together regularly for practice, are inspected and re-examined annually and undertake to turn out for public duty whenever required.

The Brigade in India is commanded by Sir Cameron Badenoch as Chief Commissioner for the Empire of India. Under him are 5 Districts

covering almost all the provinces in British India and some of the Indian States, with headquarters at Lahore, Calcutta, Bombay, Madras, Bangalore, Lucknow, Nagpur, Patna, Delhi, Karachi, Peshawar, Shillong, Indore and Secunderabad, and there are three also on the North Western, East Indian and G I P Railways. In charge of each District there is an Assistant Commissioner or a Commissioner according to the membership strength of the District, and as the work of the Brigade lies so much in the medical and surgical sphere, the Officers-in-Charge of the Districts are generally the administrative heads of the Civil Medical Departments of the respective provinces. It is their business to organise and maintain the training and efficiency of Ambulance and Nursing Divisions and to see that they are available for public service on occasions when they are required.

At the end of 1941 the Brigade in India consisted of 314 Ambulance Divisions, 104 Nursing Divisions and 47 Cadet Divisions (boys and girls) with a total membership of about 13,000. These Divisions render first aid on public occasions, for example festivals, processions and public assemblages of all kinds. At times of special emergencies they turn out promptly and remain on duty so long as they are required. Some of the recent occasions when Brigade members have rendered valuable service are the Bihar Earthquake (1934), when Calcutta members established a camp hospital at Monghyr, the Quetta Earthquake (1935) when Lahore members living in railway trucks at Quetta station gave valuable help to the stricken people, the Bombay riots in successive years, where the local Divisions earned the warm appreciation of the Government of Bombay, the Bhitia railway disaster (1937) when the Dinapur Nursing Division gave prompt assistance, the Kumbh Mela at Hardwar (1938) when members from the United Provinces were on First Aid duty for over a fortnight and the Dacca Mail disaster (1940) when members of the Calcutta Police Sub-District rendered first aid and organized an emergency hospital at the Sealdah railway station.

The Indian Voluntary Air Service has been replaced by the Auxiliary Nursing Service, India. This Service has been constituted to provide a reserve of nurses sufficiently trained to be immediately useful when called up for duty during the present war. While admission to the new Service is not confined to members of the Nursing Divisions of the Brigade Overseas, preference in recruitment will be given to those already enrolled in the VAS. Candidates will undergo three months' training at the Hospitals to which they are allotted but the possession of the Association's certificate in First Aid and Home Nursing is recognised as part of the training for the purpose. The Lady District Superintendents of the St John Ambulance Brigade Overseas are acting as local recruiting agents and are responsible for the selecting and allotting of candidates to the various hospitals. Recruitment is made for two categories of service: (a) General for continuous service in Military Hospitals anywhere in India and overseas, and (b) those who specifically volunteer for a limited period for full or part-time.

duty arising out of the war in Military or Civil Hospitals situated within the area in which they have agreed to serve. There has been a prompt and most satisfactory response to the appeal for this service. While the services of the Brigade personnel both men and women, trained in Air Raid Precautions are at the disposal of Provincial Governments for the training of the general public and are also utilized in connection with other measures which are adopted for the protection of the civil population against aerial attacks. They have also formed Transport Units at the ports and at present are engaged in evacuating casualties received from overseas.

Both the St John Ambulance Association and Brigade work under the aegis of the Order of St John of Jerusalem and as their work is complementary to that of the Indian Red Cross

Society, close co-operation exists between the Order and the Society.

The war has greatly stimulated training in First Aid and Home Nursing, and consequently a very large number of men and women have in 1941 received training in these subjects in order to fit themselves for skilled service to the sick and wounded. A large number of new Ambulance and Nursing Divisions of the Brigade, consisting of the trained personnel, have also been registered this year. For its other war work the Association is working in concert with the Indian Red Cross Society, both at headquarters and in the provinces, under the title of the Joint War Committee of the Indian Red Cross Society and St John Ambulance Association, an account of whose activities is given under the Indian Red Cross Society.

INSANITY AND MENTAL HOSPITALS IN INDIA.

In India, facilities for the care and treatment of persons suffering from mental disorders is still very inadequate. To serve a population of over four hundred million, there are only 17 institutions with a total accommodation for about 15,000 patients. Most of these institutions are little more than lunatic asylums where hardly any provision exists for modern methods of treatment. Many patients are even confined in jails where, of course, no provision exists for any kind of treatment. The most modern mental hospital in India is probably the Mysore State Mental Hospital, Bangalore, which, built at a cost of over Rs 5 lakhs, is very well equipped for the care and treatment of 300 early mental cases.

According to the 1931 census, out of a total population of 352,837,778 (India and Burma) there are 120,304 persons insane, making a proportion of insane to sane of 3 per every 10,000. In the United Kingdom the proportion of insane to sane is roughly 40 per 10,000, while in New Zealand it is as much as 45 per 10,000. In reviewing these figures it must be borne in mind that those of the United Kingdom and New Zealand include the "feeble-minded", an item that is not included in the figures of British India. The figures of the 1941 Census are not available at the time of going to press.

National Association for Supplying Medical Aid by Women to the Women of India.

The National Association for Supplying Medical Aid by Women to the Women of India was founded by the Countess of Dufferin in 1885, the object being to open women's hospitals and women's wards in existing hospitals; to train women doctors, nurses and midwives in India; and to bring them out when necessary from Europe. An endowment fund of about 6 lakhs was obtained by public subscription. In addition branches were formed in each Province, each branch having its own funds and each having a number of Local Committees and Zenana Hospitals affiliated to it.

The Central Fund gives grants-in-aid to several Provincial branches; it gives scholarships to a number of women students at the medical schools of Bombay, Calcutta, Madras and Delhi. It has in the past brought from England a certain number of European medical women.

It has assisted by grants-in-aid the building of a number of zenana hospitals in different parts of India. It has affiliated to it 12 Provincial branches and a number of Local Committees.

The Government of India subsidise the Countess of Dufferin's Fund to the extent of Rs 3,70,000 per annum to maintain a Women's Medical Service for India—this service consists of 48 officers, with a training reserve of 18 doctors and a junior service. Medical women either British or Indian, holding, registrable British qualifications, are eligible for the senior service.

The President is H. E. The Marchioness of Linlithgow. The Hon. Jt. Secretary is the Surgeon to H. E. The Viceroy, and the Secretary, Dr G. Stapleton, C.M.O., W.M.S., Viceregal Estate, New Delhi and Viceregal Estates, Simla.

THE WOMEN'S MEDICAL SERVICE FOR INDIA.

This Service is included in the National Association for supplying medical aid by women to the women of India, generally known as the Countess of Dufferin's Fund, and is administered by the Executive Committee and Council of that Fund. The Government of India has so far allotted the sum of £27,750 per annum towards its maintenance. The present sanctioned cadre is forty-three first class medical women, with a training reserve of 14 women graduates in medicine of Indian Universities. Recruitment to the service is made (a) in India by a Medical sub-committee of the Council which includes the Director-General, Indian Medical Service, the Honorary Joint Secretary to the Council and the Chief Medical Officer, Women's Medical Service, (b) in England, by a sub-committee, including a medical man and two medical women conversant with conditions in India. These sub-committees perform the duties of a medical board examining candidates for physical fitness, and for return to duty after invaliding.

The Council determines what proportion of the members of the Service is to be recruited in England and in India respectively in the original constitution of the Service, duly qualified medical women who were in the service of, or who had rendered approved service to the Countess of Dufferin's Fund, were to have the first claim to appointment, and thereafter special consideration was to be paid to the claims of candidates who had qualified in local institutions and of those who were natives of India.

Qualifications—The qualifications are that the candidate must be (a) a British subject resident in the United Kingdom or in a British Colony or in British India, or a person resident in any territory of any Indian Prince or Chief under the suzerainty of His Majesty, exercised through the Governor-General of India or through any Governor or other officer subordinate to the Governor-General

of India. (b) Must be between the ages of twenty-four and thirty-two at entry. (c) She must be a first-class medical woman, i.e., she must possess a medical qualification registrable in the United Kingdom under the Medical Act, or an Indian or Colonial qualification registrable in the United Kingdom under that Act but this condition did not apply at the original constitution of the Service to medical women in charge of hospitals who, in the opinion of the Council, were of proved experience and ability. (d) The candidate must produce a certificate of health and character. But the Council reserves the power to promote to the Service ladies not possessing the above qualifications, but who have shown marked capacity. Members of the Service are required to engage for duty anywhere in India. After three years of probation have been satisfactorily passed, their appointments are confirmed.

The Training Reserve of the Women's Medical Service—This Service has a sanctioned cadre of 14, and is open to women graduates in medicine of the Indian Universities. Salaries range from Rs 175 to Rs 225 per month, with furnished quarters or the equivalent in money, to those employed in India.

2 Two of the 14 members of the reserve, but not more at any one time, may be deputed to Europe by the Executive Committee for post-graduate training, and shall receive a stipend at the rate of £200 a year each, paid quarterly, and return passage. Any member not so deputed shall be employed in India.

3 Ordinarily four years shall be spent in the reserve before a member is considered for appointment to the Women's Medical Service, but the Executive Committee shall have power to shorten this period in special cases. Service in the reserve shall be considered by the Executive Committee when appointments are being made to the Women's Medical Service, but shall not of itself constitute a claim to appointment.

VICTORIA MEMORIAL SCHOLARSHIPS.

The Victoria Memorial Scholarships Fund was organised by Lady Curzon in 1903, in order to secure a certain amount of improvement in the practising days of India. A sum of about 6½ lakhs was obtained by public subscription, and centres were organised in each Province to carry out the objects of the Fund. An additional Rs 1,39,000 was allotted to the Fund from Their Majesties' Silver Jubilee Fund in 1935. Thousands of

midwives have been trained in addition to large numbers who have been partially trained. Of late years the Fund has done much to pave the way for the registration and supervision of indigenous dais. It has also done much propaganda work. Registration is urgently needed. The Fund is now administered by the Maternity and Child Welfare Bureau of the Indian Red Cross Society.

LADY HARDINGE MEDICAL COLLEGE AND HOSPITAL

The Lady Hardinge Medical College was opened by Lord Hardinge on the 17th February, 1916. It is a residential Medical College staffed entirely by women, and was founded to commemorate the visit to Delhi, in 1911, of the Queen Empress. Lady Hardinge took the initiative in raising funds by public subscription to meet the cost of buildings and equipment. Thirty lakhs of rupees, in all, have been given for these purposes, mostly by the Ruling Princes

and Chiefs of India. After Lady Hardinge's death in 1914, it was suggested by Her Imperial Majesty Queen Mary that the institution should serve as a memorial to its founder, and be called by her name.

The Governing Body includes the Director-General, Indian Medical Service, the Chief Commissioner of Delhi, the Chief Engineer, D. P. Province, the Educational Commissioner with

Rules and Bye-laws The Sub-Committee reported that it appeared to be impossible to amend and revise the rules piecemeal and that the only way to put the things in order was to draft an entirely fresh constitution and rules

After fully considering the Sub-Committee's report, the Committee agreed that the Association be incorporated by an Act on the line of the Registration Act in the United Kingdom. Pending the passing of the Act, the New Memorandum of Association was brought into operation from 1st April 1929

Establishment of the Bombay Nurses, Midwives and Health Visitors' Council—The need of legislation for the Registration of Nurses, Midwives and Health Visitors had existed in the Province since a long time and with a view to protect the public from the activities of persons who misrepresent themselves to be fully qualified Nurses, Midwives or Health Visitors, Government, in April 1935, passed the Bombay Nurses, Midwives and Health Visitors' Registration Act. In the absence of State Registration the nurses trained in this Province were subject to certain disabilities and were refused Registration in other Provinces and in other countries, where state registration prevailed. The Act obtains for them the necessary status and secures their registration in other provinces in India or in other parts of His Majesty's Dominions which are willing to reciprocate with the Bombay Nurses, Midwives and Health Visitors' Council which was established in August 1935

From the date of the establishment of the Council, the Bombay Presidency Nursing Association became defunct. The training and registration of nurses, midwives and Health Visitors in this Province is now controlled by the Council. Nurses who are trained and registered in this Province can now get registration with the General Nursing Council of England and Wales and the General Nursing Council of Scotland and can practice as qualified nurses in these Countries

Lady Minto's Indian Nursing Association—The Lady Minto's Indian Nursing Association was founded in 1892 under the title of the "Up-Country Nursing Association" primarily, though not exclusively, to provide Europeans with the skilled services of the Nursing Profession

The Punjab and the United Provinces were the first provinces to consider the possibility of providing nurses for private work, but it was not until 1906 that provision was made on a really adequate basis

Lady Minto issued an appeal to the public both in India and England which met with a generous response, with the result that now Minto Sisters work in five centres and it is rare for a subscriber to the Association in any part of India to be refused the services of a nurse in case of need

The financial liabilities of the Association are met from five sources—

Interest on the Endowment Fund, Government Grant, Donations; Subscriptions, Fees

It is the practice of the Association to invite people to become annual subscribers. This

carries with it two advantages; priority of claim to the services of a Sister, and a reduction in the fees paid for those services. Thus Europeans who are members of the Association are enabled to obtain skilled nursing at moderate charges on a sliding scale of fees determined by the income of each patient

The control of the Association is in the hands of two Committees, one in England and one in India

The English Committee is responsible for the recruitment of the majority of the staff but if it happens that suitably and fully trained women are obtainable in India, the Central Committee in India has the power to enlist them on the spot

In addition to this duty the Indian Committee deal with all matters of administration delegating to the Provincial Branches questions of local significance

Her Majesty Queen Mary is a Patron of the Association

Her Excellency the Marchioness of Linlithgow is President of the Central Committee in India.

Hon. Secretary—Lieut.-Col H. H. Elliot, CIE, MBE, MC, MB, FRCR, FMS

Chief Lady Superintendent—Miss C. Wilson, Central Committee.

Lady Minto's Indian Nursing Association Viceregal Estates, Simla, and Viceregal Estates, New Delhi.

Secretary, Home Committee—Miss R. E. Darbyshire, RRC, 92, Ember Lane, Esher, Surrey.

Nurses' Organisations—The Association of Nursing Superintendents of India is now amalgamated with the Trained Nurses' Association of India, and has one set of officers. The Trained Nurses' Association of India and the Association of Nursing Superintendents of India are not Associations to employ or to supply nurses, but are organisations with a membership wholly of nurses with the avowed objects of improving and unifying nursing education, promoting an *esprit de corps* among nurses, and upholding the dignity and honour of the nursing profession. The Trained Nurses' Association of India has a membership of 1192. The Association of superintendents was started in 1905 as the Association of Nursing Superintendents of the United Provinces and the Punjab, but by the next year its membership had spread over the country to such an extent that the name was changed to include the whole of India. The Trained Nurses' Association was started in 1903, and the Nursing Journal of India began to be published in February, 1910

The Trained Nurses' Association of India was founded and incorporated with the Association of Nursing Superintendents in 1905. Its objects are (a) to uphold in every way the dignity and honour of the Nursing profession, (b) to promote a sense of *esprit de corps* among all nurses; (c) to enable members to take counsel together on matters affecting their profession, (d) to elevate nursing education, (e) to raise the standard of training; (f) to strive to improve

about a more uniform system of education, examination and certification for trained nurses; and (g) to arrange reciprocity between different provinces, States and other countries. Nurses eligible for membership are those holding a certificate of not less than three years' general training in a recognised training school. The Trained Nurses' Association of India is affiliated with the International Council of Nurses and its affiliated Associations are the Health Visitors' League, the Midwives' Union, the Nurses' Auxiliary of the Christian Medical Association, the Student Nurses' Association, and the National Council of Women in India. The combined membership of the Trained Nurses' Association of India, Health Visitors' League and Midwives' Union is 1,316 and the Student Nurses' Association comprises 29 units with over 999 members. The official organ of the Association is called "The Nursing Journal of India."

Patrons H E The Marchioness of Linlithgow, Simla, H E The Hon'ble Lady Hope Madras; H E Lady Lumley, Bombay and Her Highness the Maharani of Travancore

President - Miss D Chadwick, S.R.N., S.C.M., Government Hospital for Women and Children, Egmore, Madras

Vice-Presidents - Miss A. Wilkinson, S.R.N., S.C.M., Matron, St Stephen's Hospital, Delhi, Miss M. D. Winter, D.N. (Lond), S.R.N., S.C.M. & G. (on furlough), Lady Hardinge Hotel, New Delhi

Secretary Miss Diana Hartley, S.R.N., S.C.M., R.N. (Madras), 15 Hall Road Richards Town, Bangalore

Hon Treasurer Mrs E A Watts, Keswick Coonoor, Nilgiris, S India.

THE WOMEN'S MOVEMENT.

The women's movement has had a remarkably smooth run in India. Imperceptibly but steadily, during the past ten or twenty years, the women of India have acquired numerous rights, social and legal no less than political. Their political enfranchisement has been achieved with considerable ease.

Three fundamental causes have led to this remarkable success: first, the deep veneration that is given by the Hindu and Muhammadan religions to the feminine aspect of life equally with the masculine as shown by the importance of goddesses, by the necessity for the presence of the wife at all ceremonies performed by a Brahman, by the idea of the sacred mystery of womanhood implied by the purdah, and by the general veneration of motherhood. Secondly, the time was psychological, for a new era was beginning for the Indian people by the introduction of schemes of reforms in Indian government planned to give a basis of representative government on a progressively extended scale. The door was being opened to complete self-government but only men were being invited to enter through it, although women compose half the people of the country. It had been by the joint efforts of men and women that the agitation for reform in the government had been made. The men and women of India were too awakened and too just to allow this injustice to remain unredressed. Thirdly, the long and strenuous agitation for the vote by women in Britain and America and their recent victories had brought vividly to the consciousness of all educated Indian men and women the whole question of the franchise of women in public life, and it was also a national and international necessity that Indian women should be given as high a status as women in other parts of the Empire.

Though the Municipal franchise was granted to the women of the Bombay and Madras Presidencies over fifteen years ago it

was so limited in numbers that it had not made a large impact on women's consciousness. Indeed no protest was made when it was suddenly withdrawn from Madras women some years later. Over 1,700 women are qualified to vote for the Bombay Corporation and a percentage of these have polled at each election, similarly in other Municipalities. That Presidency women have exercised the vote responsibly and intelligently. Since 1905 scores of women have become Municipal Councillors and members of Local Boards. Their appointment has chiefly been by nomination but there have been notable successes won by election in open contest with men, such as the election of all the four women who first entered the contest for seats in the Bombay Corporation, also the instance in which the woman contestant in the Municipal elections at Lucknow secured the largest poll of all the candidates. Many important local reforms have been secured by this large body of women councillors, and every year sees an increasing number of women serving on the Committees and Boards.

It was owing to the rise of the demand for Home Rule between 1905 and 1915 that women began to wake from their position of exclusion by British rule and to share in representative government. The intervention of one of their own kind stimulated political activity and raised consciousness amongst women to a new extent. The moment for the expression of their feelings came when the question of State for India came to India and study Indian affairs at first.

During the Hon E S. Montagu's visit to India, one women's deputation waited on him and was representative of women from all parts of India, and it brought to his attention the reforms which women were recommending the Government to carry out.

The first claim for women suffrage for Indian women was made in the address presented to Mr Montagu at this historic All-India Women's Deputation which waited upon him in Madras on the 18th December 1917. The section referring to enfranchisement merits full quotation

"Our interests, as one half of the people, are directly affected by the demand in the united (Hindu-Muslim Reform) scheme (I 3) that 'the Members of the Council should be elected directly by the people on as broad a franchise as possible,' and in the Memorandum (3) that 'the franchise should be broadened and extended directly to the people.' We pray that, when such a franchise is being drawn up, women may be recognized as 'people,' and that it may be worded in such terms as will not disqualify our sex, but allow our women the same opportunities of representation as our men. In agreeing with the demand of the above mentioned Memorandum that 'a full measure of Local Self-Government should be immediately granted, we request that it shall include the representation of our women, a policy that has been admittedly successful for the past twenty years in Local Self-Government elsewhere in the British Empire. The precedent for including women in modern Indian political life has been a marked feature of the Indian National Congress, in which, since its inception, women have voted and been delegates and speakers, and which, this year finds its climax in the election of a woman as its President. Thus the voice of India approves of its women being considered responsible and acknowledged citizens, and we urgently claim that, in the drawing up of all provisions regarding representation, our sex shall not be made a disqualification for the exercise of the franchise or for service in public life."

The year 1918 was devoted to converting the Government forces to the justice and expediency of Indian Woman Suffrage, but this proved a more difficult matter. It was a disappointment first that though the Secretary of State had given a sympathetic reply to the All-India Women's Deputation, yet when the Scheme of Reforms, drawn up by him and Lord Chelmsford as the outcome of his visit to India was published, no mention of women was made though the widening of the electorate was one of the reforms suggested. When the South borough Franchise Committee was formed to investigate the suggestions regarding the franchise in this Scheme, the women suffragists took every means to bring to the notice of the Committee all the evidence which showed the need for, and the country's support of, the inclusion of women in the new franchise.

After the introduction of the Government of India Bill into Parliament in July 1919, a number of Indian deputations proceeded to London to give evidence before the Joint Select Committee of Members of both Houses of Parliament which had been appointed to place the Reforms on a workable basis. Mrs Annie Besant, Mrs Sarojini Naidu and Mrs and Miss Herabai Tata were the women who were heard by the Committee in support of the extension of the franchise to women in India.

The House of Commons decided that the question was one for Indians to answer for themselves,

and while retaining the sex disqualification in the Reform Bill they framed the Electoral Rules in such terms that if any Provincial Legislative Council should approve by a resolution in favour of women's franchise, women should be put on the electoral register of that Province. This was the only provision regarding franchise matters which might be changed before a 10 years' time limit. Until after that period women were ineligible for election as Legislative Councillors.

Reviewing the position about ten years later the Simon Commission showed the extremely limited extent to which women, enfranchised in the manner set out above, had become qualified as electors. Except in Burma, where it was comparatively high, the percentage of women electors to adult female population was less than one. In Madras it was one, in Bombay 8, in Bengal 3, in the United Provinces 4, in Bihar and Orissa 5 and in Assam 2—in Burma it was 4 6 per cent.

Madras led the way in the matter of women's franchise and under the operative provision of the Government of India Act, women became enfranchised. Other provinces followed suit, and at the time of the inquiry by the Simon Commission seven out of the nine provinces had acquired the right. Very soon women began to adorn the benches in legislative chambers, first by nomination and then by election. And they justified the confidence placed in them by sponsoring and successfully carrying through many measures of uplift and reform in regard to the status and influence of women. They had so much proved their worth that the Simon Commission remarked in their report "The women's movement in India holds the key of progress, and the results it may achieve are incalculably great. It is not too much to say that India cannot reach the position to which it aspires in the world until its women play their due part as educated citizens."

Basing their conclusion on these observations, the Simon Commission wished to bring about a substantial increase in the existing ratio of women to men voters. In exercising the option allowed to them of enfranchising women "on the same terms as men", the provincial legislatures did indeed make a significant gesture, but so long as the qualification to vote was almost entirely based on property, it remained a gesture, because India's women do not own property in their own right.

The Simon Commission affirmed that a further step in developing women's suffrage in India should be taken immediately and added, "It may perhaps be found possible to add to the present qualifications two others, namely, (i) being the wife, over 25 years of age, of a man who has a property qualification to vote and (ii) being a widow over that age, whose husband at the time of his death was so qualified. In addition, the educational qualifications should apply to women over 21 as well as to men." The Simon Commission maintained that women's suffrage should be a cardinal point of the "franchise system" and suggested "qualifications for the vote which will not confine it to the few women who have property qualifications."

During the last ten or fifteen years, the women of India have made enormous progress in several directions. A great awakening has dawned on them. The raising of the age of consent for marriage, the abolition of the practice of dedicating girls to temples, the demand for legal and property rights *vis-à-vis* men embodied in some of the reform measures—all have tended to raise the status of Indian women in their own eyes as well as in the eyes of the world. They have marched from reform to reform, and their outlook is for ever widening. The Gandhi movement evoked an unprecedented outburst of service and sacrifice among Indian women who were thrown into the thick of a political struggle from which they emerged fully conscious of their political rights and responsibilities. The part played by the two representatives of Indian womanhood at the India Round Table Conferences held in London brought them and their kind in the lime-light.

Small wonder, therefore, that the Government of India Act of 1935 gave Indian women political rights far in advance of those enjoyed by them before that date. In terms of number of seats, women have been allotted 8 seats out of a total of 150 reserved for British India in the Federal Council of State and 9 out of a total of 250 reserved in the Federal Assembly. In the Provincial Assemblies, women have reserved to them 8 seats in Madras, 6 in Bombay, 5 in Bengal, 6 in the United Provinces, 4 in the Punjab, 4 in Bihar, 3 in the Central Provinces and Berar, 1 in Assam, 2 in Orissa and 2 in Sind.

But by far the greatest improvement in women's political rights occurred in the liberalisation of the franchise qualifications affecting them. Women have been enfranchised who have the property qualification in their own right, or are wives or widows of men so qualified, or are wives of men with a service qualification, or are pensioned widows or mothers of members

of the military or police forces, or who possess a literacy qualification. Women not holding the requisite qualification in their own right are required to apply to be enrolled, stating their derived qualification, but this procedure has been waived in some provinces. By means of such enfranchisement, it is estimated more than six million women (against 315,000 under the Act of 1919) have been given the right to vote, compared to 29 million men.

It is noteworthy, too, that men and women can vote both in general constituencies and in special constituencies. Women can vote in and contest elections to the Upper House in provinces where bicameral legislatures have been set up.

Indian women have hailed this as a welcome improvement in their political status and the elections that were held early in 1937 to the various Provincial Legislatures showed that they were alive to their responsibility under the new franchise. Women were very much in evidence at the polls, even in purdah-ridden provinces.

Such is the advance made in recent years and such is the widespread recognition of women's claims that women candidates have successfully contested general seats in ten cases, one in Madras, one in Bombay and eight in the United Provinces. The significance of these successes lies in the fact that the women defeated men in constituencies in which men voters predominate.

Both evidence and result of the awakening among Indian women are to be found in more than one legislative measure sponsored in the past year or two by women legislators calculated to confer greater rights and freedom on women.

The following table shows the percentage of women voters who exercised their franchise in the first general elections held under the 1935 constitution.

Provinces	No Enrolled.	Number who voted.	Per cent
LOWER HOUSE			
Madras	1,523,248	470,278	31.5
Bombay	305,750	129,535	42.4
Bengal	806,588	46,758	5.2
United Provinces	494,752	95,553	19.3
Punjab	173,459	58,216	33.56
Bihar	215,490	17,037	7.9
Central Provinces and Berar	259,750	63,744	24.5
Assam	29,680	8,678	29.23
North-West Frontier Province	4,895	3,408	71.4
Orissa	70,526	4,670	6.62
Sind	27,940	9,705	34.7
UPPER HOUSE			
Madras	2,578	1,420	55.1
Bombay	1,636	923	56.4
Bengal	2,136	437	20.5
United Provinces	1,654	598	35.5
Bihar	882	594	67.34
Assam	559	512	91.57

In many cases the percentages given above do not compare unfavourably with those of men voters. The voting for the Lower House in the Frontier and that for the Upper House in Assam are flattering to the women and show what organisation can achieve.

Though the Women's Indian Association was the only Indian women's society which has woman suffrage as one of its specific objects, almost all other women's organisations have combined in special efforts for the securing of municipal and legislative rights.

All-India Women's Conference.

In the past 15 years Indian women's rights grievances and demands have been voiced principally by the All-India Women's Conference

The All-India Women's Conference came into existence, as a result of the initiative taken by Mrs Margaret Cousins, towards the end of 1926, the first session of the conference being held at Poona in the first week of January, 1927. In the beginning it was inclined to concentrate its attention on the basic question of women's education. The resolutions passed at the first conference were almost wholly devoted to the different aspects of women's education, the only exception being a resolution condemning child marriage and supporting Sir H S Gour's Age of Consent Bill. Even this subject was touched upon only because it was felt that early marriages were a very serious impediment in the progress of girls' education. Such a narrow programme could not, however, be expected to satisfy the leaders of the women's movement for a long time and it was not surprising that at the third session the scope of the conference was definitely widened to include social reform. Education of women, raising the age of marriage, removal of untouchability and caste restrictions, rural uplift, and reform of the laws of inheritance as affecting women are only the more important of the subjects in which the conference has interested itself. Year by year its activities have been expanding and they have shown that the educated women of India have become conscious of their rights as well as their duty and are prepared to contribute their share to the task of nation-building. Their attitude has also provided a reputation of the erroneous view so generally held that women are the custodians of orthodoxy and conservatism. It is all a question of education and given that prerequisite women are as capable of taking an enlightened and progressive view of things as men.

A satisfactory feature of the women's movement in India has been the spirit of unity and co-operation behind it. A mere glance at the list of presidents of the All-India Women's Conference—which includes the names of the Maharani of Baroda, the late Begum of Bhopal, the late Rani of Mandi, Mrs Sarojini Naidu, Mrs Muthulakshmi Reddi, Lady R Nilkanth, Lady Abdul Qadir, Mrs Faridoonji, the Maharani of Travancore, Mrs Cousins, Rajkumari Amrit Kaur and Mrs Rameshwari Nehru—should suffice to show to what extent the conference has succeeded in securing the co-operation of the awakened womanhood of India irrespective of the differences of caste and community, race and class.

This organisation, it may be noted, has latterly shown a tendency to transcend the requirements of sectional plea and strayed into wider political activity. It is not, however, difficult to explain this development. It has already been observed earlier in this chapter that the women's movement gained considerable impetus by the part played, and the status accorded to, women in the intensive political movement conducted by Mr Gandhi and the Congress since 1920. This association, while it has undoubtedly brought women to the forefront of public activity, has also served

to bring their outlook in line with that of the Congress. There are doubtless members of the fair sex who hold pronounced views on women's rights and yet do not share the extreme doctrines of Mr Gandhi or the Congress, but it can safely be said that they are in a minority in the All-India Women's Conference. This will explain the somewhat pro-Congress political views expressed at the annual session of this body.

Earlier in the year the Committee of the All-India Women's Conference expressed its opinions on the subjects referred to the Hindu Law Committee appointed by Government to codify the Hindu Law. The women's Conference Committee looked upon the practice and incidence of Hindu Law as most iniquitous to women. As daughter, wife, widow and mother the law treated women unjustly and gave them an inferior status in the family and in society, with the result that terrible sufferings and indignities were inflicted on women. Hindu Law was unjust both as regards marriage and inheritance, and evidently it did not meet the requirements of the present day. The Committee wanted all complicated diversities of the various schools of Hindu Law to be abolished, and deplored the fact that despite its repeated requests the Government of India had not extended the terms of reference of the Hindu Law Committee to cover the whole range of Hindu Law. All personal laws such as those relating to inheritance, succession, marriage, guardianship of children, etc., the Committee held, should be determined on the principle of the equality of the sexes, consistent with social well-being.

The president also sent a telegram to the chairman of the Hindu Law Committee pleading for the abolition of polygamy. It said: "Pending the revision of the Hindu law of marriage and the abolition of polygamy we desire that right to separate residence and maintenance be granted to the Hindu woman whose husband marries again."

The Hindu Law Committee's report was published late in the summer of 1941. It expressed the opinion that the only satisfactory way of removing the defects in the law relating to Hindu women's rights to property is to avoid piecemeal legislation and to take up as early as possible the codification of Hindu Law. "We do not suggest," the Committee continue "that all parts of the law should be taken in hand at once. The most urgent part, namely, the law of succession (including, of course, women's rights in that connection) may be taken up first, then the law of marriage, and so on. After the law relating to each part has thus been reduced to statutory form, the various Acts may be consolidated into a single code. We suggest this as a reasonable compromise between piecemeal legislation and wholesale codification." The Committee next discuss what should be done with the Acts now in force until a comprehensive law of succession can be prepared. Suggestions in the answer to the questionnaire that the Acts should be repealed are dismissed as "unthinkable," primarily on the ground that these Acts have established an important principle laid down 2500 years ago but that because they have conferred rights on the Hindu

"This conference reiterates its abhorrence of war and declares that if war is persisted in, it must inevitably lead to deterioration of moral values. It therefore, firmly believes that human progress is possible only in a world free from military domination and based on the acceptance of international disarmament."

The following resolution was passed urging the formation of a women's volunteer corps to help citizens at times of crisis —

"In view of the critical times and the danger of air attack such as Rangoon has experienced recently, in all parts of India, this Conference resolves that instructions be issued to all its branches to concentrate, in the immediate future, on training their members for humanitarian work. This Conference is emphatically of the opinion that the duty of the branches of the All-India Women's Organisation is to play their part in developing centres where their members will be trained to help citizens in moments of crisis. Towards this end it suggests the formation of an A I W C's Voluntary Corps independently of other organisations for (a) the purpose of allaying panic among the masses, (b) assisting in the evacuation of women and children from threatened areas, (c) arranging for first-aid and emergency nursing courses, (d) facilitating the distribution of food and other necessities in affected areas, (e) helping in protective measures after air attacks and (f) tackling internal disruption."

As the war situation deteriorated, British women made an appeal to Indian women to realise the gravity of the situation and to align themselves on the side of the forces of freedom and civilisation. To this prominent Indian women sent a lengthy reply in the course of which they said "It is scarcely necessary to tell you that we appreciate the sincerity of your appeal, but we are amazed at the ignorance betrayed in it of realities. Indeed, your Prime Minister, by contrast, shows a grasp of realities which is refreshing. However painful it may be he has no misgivings about the status that India occupies in the British mind. It is a dependency, which can be, and is being utilised at the British will. He knows that he does not need the consent or co-operation of India's thinking sons and daughters in anything that Britain wants for fighting her war. He takes care to pay tribute to the valour of Indian soldiers who are part of the army of occupation in India.

"These soldiers, you should know are wholly unconnected with the national life and activities. They may not freely see any nationalist without incurring heavy penalties. Nor has your Prime Minister any difficulty in raising either by taxation or so called voluntary contributions, the money he wants. We cannot complain of this helplessness but we must not be blind to facts. How can there be association in such a situation of India which is impudent of the foreign yoke, with the forcible aid we have adverted to.

"You say that the whole world is divided between human slavery and human freedom. The fact is that there is no such thing as human freedom for the Asiatic races certainly not for India nor is there any for the virile African-

The result, whatever it may be, of the war will not alter their condition for the better, save through their own efforts. As we see realities it is this. It is a war between the British Empire and the Nazis and Fascists for world domination, meaning in effect the exploitation of the non-European races.

"We cannot be in love with Nazism and Fascism, but we may not be expected to be in love with British Imperialism.

"Now, perhaps, you will understand why we, as women, are against all war. Women's part is just now to stand up for truth and non-violence as against the untruth and violence that surround us. We admire the self-sacrifice of British women, of which you write with just pride. How we wish you had taken a braver and prouder part by telling your men to wash their hands clean of human blood! You might not have succeeded all at once but you would have led the way to the establishment of a permanent peace. We take leave to doubt the wisdom of women aping men in the black art of human slaughter on a scale hitherto unknown.

"Lastly, let us point out the anomaly of British women asking India, though a slave nation, to help a slave owner in distress, instead of asking the slave owner to undo the wrong and cure himself of the initial sin and thus ensure the moral justness of his position."

As the war came nearer India, however, Indian women began to take a more realistic view of the position of India. They set about organising constructive work in order to protect the masses not only against external dangers but also against internal commotion in an emergency. A women workers' training camp was opened.

From the official side, too, a fillip was given to the enrolment of women in the national war effort. As India's expanding army needed every officer who could be spared for training and leading soldiers, it was decided to relieve officers from clerical duties and replace them by a Women's Auxiliary Corps for India. Among the duties for which women were enlisted are switchboard operators, telephone orderlies, wireless operators, clerks in offices and units, store-women in ordnance hospital and other units, dispensaries, plotters in observer corps, drivers of staff cars and ambulances, etc.

In a broadcast on the subject, Lady Linlithgow said "The corps will provide occupation for all women between the ages of 18 and fifty of any nationality who are British subjects. Women from Indian States who are willing to come to British India will be welcome. All women who join must be able to speak colloquial English. Indulgent is to be voluntary but service will be paid and will be for the duration of the war and limited to the confines of India.

The scheme gives every woman in India irrespective of race class or creed, the opportunity of serving her country. In ancient times you in India had your warrior women as we have had in Great Britain and many are the tales told of women's courage and endurance. The same blood still runs in the veins of the women of today and it must be feared that we are either unable or unwilling to equal the deeds of the past."

years till 1919 when it was transferred to the Department of Fisheries. Ever since its opening, being the first institution of its kind in Asia, it has been immensely popular with the public. A total of 118,363 persons visited the Aquarium during 1940-41 and the receipts amounted to Rs. 10,198-10-0 against an expenditure of Rs. 6,419-0-3.

Deep Sea Fishing and Research—The annual report of the Public Health Commissioner with the Government of India for 1933 states that the total land area of British India amounts to only 2.44 acre per head of the population but allowing for forests and uncultivated and fallow lands only 0.72 acre per head is under food-crop, quite insufficient for the present population and that the population is increasing at an alarming rate and by 1941 will probably reach 400 millions. The finding of the census of 1931 is that agriculture has reached its maximum production under present conditions and Fisheries therefore is the only prime source of food-supply to supplement agriculture, and the Department has been endeavouring to play its true and proper part in improving the catches and methods of sea-going fishermen to augment the fish supply of the Presidency.

The fisherman has a fairly exhaustive knowledge of the fisheries along the coast up to 7 fathoms. If the catches of fish are to be improved it is necessary to ascertain—

- (1) what kinds and quantities of fish are available beyond 7 fathoms, and
- (2) how to exploit these deep-sea fisheries economically.

The survey of deep-sea fisheries by the trawler 'Lady Godwin' was abruptly terminated in 1931-32 as a result of a technical report. But through the survey was disclosed the existence of important off-shore fisheries unsuspected before. The value of fish off Negapatam reported by the trawler was of sufficient importance to merit further investigation. Even then it was thought that if Madras was to benefit by the results of the survey, it was to be done by the local fisherman to exploit the off-shore fishing grounds. The Department of Fisheries, through its Fishery Section, has been working for the purpose of enabling the local fisherman to exploit the off-shore fishing grounds. A motor launch was acquired in 1931 for the purpose of enabling the local fisherman to exploit the off-shore fishing grounds. A motor launch was acquired in 1931 for the purpose of enabling the local fisherman to exploit the off-shore fishing grounds. A motor launch was acquired in 1931 for the purpose of enabling the local fisherman to exploit the off-shore fishing grounds.

Rural Pisciculture—As a result of the recommendation of the Royal Commission on Agriculture that practical measures should be adopted to improve the nutrition of the rural population, a scheme of rural pisciculture was inaugurated in 1930. An Assistant Director with necessary staff was appointed to take over the work in July 1930. The work, though begun in July 1930, lasted only for 13 months and had to be abruptly stopped as a measure of economy.

It was, however, possible to complete during this short period a survey of ponds in 98 villages, 2,172 wells and 264 ponds in these villages were examined. Though it has not been possible to give satisfactory help to the numerous enquirers for want of staff and funds, advice on matters regarding rearing of fish in ponds and wells is being given as far as possible. For a comprehensive and intensive research on the various problems relating to the occurrence, life history, breeding seasons, suitability for stocking waters, their food, conditions of growth, and the physical and chemical characters of the water suited for each, their enemies and diseases, etc., a scheme for a fresh water biological station was drawn up and sanctioned by the Imperial Council of Agricultural Research and the Government of Madras have sanctioned the employment of the necessary staff with effect from 1st Sept 1941 for work connected with the scheme. Arrangements are in progress for the construction of the necessary buildings.

Welfare Work—A remarkable feature in the work of the Madras Fisheries Department is the energy which it devotes to the improvement of the condition of the fisherfolk. On Sir Frederick Nicholson's initiative, the Department has always recognised the duty of spreading among them education and the habits of thrift, temperance and co-operation. The work has been specially successful on the West Coast. The number of fishermen's co-operative societies in 1940-41 on the west coast was 54.

The need for special efforts to promote co-operation among fisherfolk and to renew and stimulate co-operative societies to more efficient work has been recognised by Government for some years. The Committee on Fisheries recommended that all co-operative work among fishermen both on the West and East Coasts in the Presidency should be done by the Fisheries Department and that, on the analogy of the system in vogue in the Labour Department, the staff of Inspectors of Co-operative Societies should work under the Fisheries Department, the Co-operative Department supplying trained inspectors and auditing the books of the societies. The Government partially accepted the recommendations and sanctioned the deputation of 2 Inspectors of Co-operative Societies for exclusive work among fishermen under the department.

To promote the education of fishermen a training institution was opened in the middle of 1918 at Calicut to train teachers to work in elementary schools for the fisherfolk. The pupil teachers under training are familiar with the work carried on in the fishery station at Tanur. They are given practical instructions in fishing, a boat having been purchased for the purpose. But as a measure of economy the training institution was closed in July 1931. In some places the villagers themselves started the schools and then handed them over to the Department. In other places schools were started by the Department at the request of the fishermen. A comprehensive scheme for the establishment of a Fisheries Technical Institute has been drawn up and submitted to Government. The Government is now considering the opening of a Fisheries Technical Institute at Tuticorin. The Bharatha Vidyalaya provided a permanent building for the Institute and of course to Government.

Bengal & Bihar & Orissa.

The fishing value of this extensive deltaic region lies primarily in the enormous area occupied by inland waters—rivers, creeks, wheels, odd swamps,—to say nothing of paddy fields and tanks. These swarm with fish and, as the Hindu population are free to a large extent from the aversion to a fish-diet which is widely prevalent among the better castes in the south, the demand for fish is enormous. Rice and fish are indeed the principal mainstay of the population and not less than 80 per cent of the people consume fish as a regular item of diet. It is calculated that 1.6 per cent. of the population is engaged in fishing and its connected trades, a percentage that rises to 2.6 in the Presidency, Rajshahi, and Dacca Divisions. 490,865 persons in Bengal subsist by fishing with 272,579 maintained by the sale of fish. As a fresh-water fisherman the Bengali is most ingenious, his traps and other devices exceedingly clever and effective—in many cases too effective—so eager is he for immediate profit, however meagre this may be. The greatest inland fishery is that of the hilsa (*Hilsa hilsa*) which annually migrates from the sea in innumerable multitudes to seek spawning grounds in the Ganges and the other great rivers. Other valued and abundant fishes are the rohu (*Labeo rohita*) and the katla (*Catla catla*), mrigal (*Carrhina mrigala*), prawns and shrimps abound everywhere. Of important fishes taken in the lower reaches of the rivers and in the great network of creeks spread throughout the Sunderbans, the bekti or bethi (*Lates calcarifer*) and the mullets are the most esteemed, apart from these estuarine fishes the most valuable sea-fishes are the Mango-fish or Thread-fin or Indian Salmon (*Polynemus*) and pomfrets. The sea-fisheries are as yet little exploited, the fishermen of Orissa, where alone coastal fishing is of any local importance, having no sea craft save catamarans of inferior design and construction.

Following the inquiry begun in 1906 by Sir K. G. Gupta, an investigation of the steam trawl potentialities of the head of the Bay of Bengal was undertaken, the trawler *Golden Crown* being employed for the purpose. The results showed that there are extensive areas suitable for trawling and capable of yielding large quantities of high class fish. Much attention was devoted during these trawl cruises to the acquisition of increased knowledge of the marine fauna, the results being published in the Records and Memoirs of the Indian Museum. For various reasons, the chief perhaps being the hostility of vested interests, the lack of cold storage facilities and the loss of time involved by the trawler having to bring her catches to Calcutta instead of sending them by a swift tender, the experiment was financially a failure and was dropped. With ever-increasing demand for fish in Calcutta and the concurrent rise in prices, the prospects of remunerative steam-trawling are now much more, steam-trawling companies being floated in the immediate future. The trade is a difficult one to organise and without a rare combination of technical fishery knowledge and far-sighted

and comprehensive organisation the danger run by the investing public will be considerable. Originally one Fisheries Department served the needs of the two provinces of Bengal and Bihar and Orissa. Separation was effected in 1923 after which fisheries in Bengal were administered by the Director of Agriculture. The Bengal Fishery Department was abolished under retrenchment in 1923. In Bihar and Orissa Fisheries form a section of the Department of Industries.

The Bengal Fisheries Department has of necessity a more limited scope for its activities than in the case of Madras. Practically no coastal minor industries exist, neither do the natural conditions lead us to suppose that any can be created without much difficulty, and in the absence of a great trawl industry which alone might be able to call into existence factories devoted to the uplift of the general utilisation of fish by-products. Fresh water Fisheries, however, are vast and very important and these require to be developed scientifically. Apart from this, much can be done by its officers for the uplift of the general fishing population with a view to free them from the tyranny of the mahajans (fish contractors and middle men) and enable them to put more capital into their business and to conduct it co-operatively. This is necessarily extremely slow work, but a beginning has been made and a number of fishermen's co-operative societies have been formed. Their example is calculated to effectively serve the purpose of propaganda. The fishery wealth of Bengal is enormous.

During a lapse of 14 years after the closure of the Fisheries Department, the price of fish in Calcutta has been soaring high consequent on the rapidly increasing demand and the unhealthy monopoly exercised by the small group of vested interests. The economic condition of the actual fishermen was gradually becoming worse due to exploitation by the capitalists and the fisheries in general were getting depleted due to various causes at work. With the increase of distress the public naturally clamoured for the re-establishment of a Fisheries Department to protect the fisheries interests and to organise and develop the fishing industry on modern lines and to improve the general economic condition of the fisherfolk. The Bengal Government therefore appointed a Fisheries Expert to survey the existing condition of the fishing industry in the Province and to suggest schemes of development with a view to augment the fish food supply, to examine the ways and means of bringing about a reduction in the ruling prices of fish, and to stimulate commercial enterprise in speedier transport, better marketing arrangements, the establishment of Cold Storages and factories for fish by-products. The services of Dr. M. Ramaswami Naidu from the Madras Fisheries Department were requisitioned by the Bengal Government. He surveyed the industry and submitted a report to Government, which has been considered. Government have recently started a Department of Fisheries to organise the fish trade under the emergency conditions and to conserve the existing supplies and to control

investigations on tank fisheries with a view to increasing the food supply in the province. Now that a start has been made, it is hoped that after the war the Department will expand and assume its normal activities.

During recent years, as a result of fishery investigations carried out by the staff of the Zoological Survey of India and by the Zoology Department of the University of Calcutta, much progress has been made regarding the bionomics and life-histories of several species of commercial importance. Particular mention should here be made of the discoveries regarding the breeding grounds of *Hilsa* and the extensive trade in the

young of this valuable species. As a result of these studies, it may now be possible to take protective measures for the conservation of the *Hilsa* fishery.

Fresh-water mussels are used extensively at Dacca in the manufacture of cheap pearl buttons and in many cases pearls also are found in the mussels which the pearl dealers gather and sell in the various parts of India. The Dacca bangle factories carry on an important local industry of very ancient standing; their material is almost entirely obtained from the South Indian and Ceylon chank fisheries already referred to.

Bombay.

Whereas Bengal's fisheries are at present confined principally to inland waters, those of Bombay are concerned, save in Sind, almost entirely with the exploitation of the wealth of the sea. Bombay is favoured with a coast line abounding with excellent harbours for fishing craft, a fair-weather season lasting for some seven months, and a fishing population more alive to their opportunities and more daring than those of the sister Presidencies. Bombay fisheries are of very great importance financially as well as economically and there is ample scope for most useful work in improving curing methods, in introducing canning and in the development of minor marine industries, particularly those connected with the utilization of by-products.

The Director of Industries administered the subject of "Fisheries" from 1918 and had for a time two officers in the Department engaged upon fishery investigation and development. A steam trawler was bought for work in Bombay waters in 1920 and began work in May 1921 off Bombay. The experiment continued until February 1922, and the trawler was subsequently sold to the Government of Burma. At the outset the results seemed promising, but the experiment as a whole showed that the cost of maintaining a trawler of the type used could not be met by sale of fish at current market rates. Cold storage has since been installed at the principal fish market in Bombay, but for a trawler special facilities are needed also for rapid coaling, supplying ice and stores, and for unloading catches. More than this a chance is needed in the medieval conditions under which the local fish market is conducted and there is much to be done in popularising fish, such as the *hilsa*, *ambula* and particularly the *prawn* or *shrimp* which formed but which is so little esteemed locally that it sold on the average at the rate of 100 lbs for a rupee.

Great strides have been made in the Bombay fishing industry in the course of the past five years, the two latter years of which will always remain an eventful date in its history. This progress is in a large measure due to the awakening among the fishermen, who are traditionally a conservative people, and the introduction of reforms among them is a very gradual process as strongly ingrained prejudices and customs are to be overcome.

No survey of the fishing industry in the Bombay Presidency in recent years can be complete without a reference to Mr. H. T. Sorley's valuable report on the Marine Fisheries of the Bombay Presidency, published in 1933. The volume is a storehouse of information bearing on the Presidency's fishing industry and the fish trade in general, and contains numerous useful suggestions by the adoption of which the prospects of the fish trade of the Presidency may be improved.

Mr Sorley has observed that the industry is neither expanding nor declining and that the supply of fish discloses no signs of diminution. Elaborating this view he proceeds to point out that the fishermen are healthy and moderately prosperous in comparison with others belonging to a similar social stratum.

Mr Sorley's more important recommendations are —

- 1 The establishment of a marine aquarium in Bombay and Karachi, if they are able to pay their way as the Madras aquarium does.
- 2 The establishment of a bureau of fisheries information.
- 3 The advisability of the transfer of the fish curing yards to the control of the Local Government, and
- 4 The encouragement by the Bombay University of marine biological research.

Mr Sorley in the course of his report also referred to the value of employing fast motor launches to transport fish to the consuming centres in Bombay from the catching sites.

New Era Started — A move in the above direction was made towards the end of the year 1933, when the Government of Bombay launched an experiment implementing in some ways the above suggestions. The experiment was formally inaugurated by Sir Frederick Sykes, the then Governor of Bombay, at Danda, and was undertaken in co-operation with the head of the fishing community at Danda. For the purpose of the experiment a launch was obtained on loan from the Royal Indian Navy (then the R I N) and suitable alterations were made to adapt it to the purpose of a fishing launch. The results achieved by the working of this launch were very encouraging. The rapidity with which the fish was transported, a much fresher state than had till then been possible aroused the interest of the fishermen.

who realised the benefit to their trade of using fast motor transport to bring the fish to Bombay from the catching fields

Encouraged by the results, Government placed in 1934 an order for the construction of two launches the "Lady Sykes" and the "Sir Frederick Sykes" for the use of the fishermen at Danda. That the progress of this experiment has been encouraging is evident from the fact that every year since then has seen an addition to the number of vessels. The following four vessels were built by Government —

(1) The "Lady Sykes", (2) the "Sir Frederick Sykes", (3) the "Lady Brabourne" and (4) the "Lord Brabourne".

The last mentioned vessel was built at the Royal Indian Naval Dockyard and is a great improvement on her predecessors, both in point of design and engine equipment. The special feature of this vessel is its insulated fish hold and its comparatively large carrying capacity.

The launches have been operating between Bombay and the Kanara coast. The success which attended their working encouraged private individuals to invest in similar vessels to transport fish. The number of privately owned launches at present is nine. They transported during the fishing season of 1940-41 a total of 2,263,667 lb of fish.

Growth of Refrigerating Facilities — Larger supplies of fish made available by the launches have induced the flow of private capital into channels intimately bound up with the fishing trade. Several ice factories and cold storage plants have since been set up at Malwan on the Ratnagiri coast, and Chendia on the Karwar coast. In Bombay, quick freezing plant employing the Z-process has been installed by a Russian technician at the Kermani market at DeLisle Road and an ice factory and a cold storage plant have been constructed on the east side of the Crawford market (Bombay). A feature of the last plant is that it has a number of small chambers which are hired out at small fees either to one individual or to several collectively. This plant also provides for the quick freezing of fish.

During the current year an ice factory and a quick freezing and storage plant were set up at Sassoon Dock (Bombay), where all the launches, both Government and private, land their catches. This factory and cold storage plant have met a longfelt want and proved an undoubted boon both to fishermen and owners of launches and sailing craft. It has obviated the need of obtaining ice from remote centres in the city, thus saving a good deal of time and expenditure. The existence of the cold storage plant at the Dock is a welcome facility to the fishermen, who are now able to store catches at any hour of the day or night when retail vendors are not on the spot.

A unique feature of the Bombay Government's fisheries scheme is the provision made to train youths of the fishing community in the running and maintenance of motor launches with the ultimate object of enabling them to take charge of their own launches whenever they decide to go in for these on an extensive scale. The

benefit of fishermen is the paramount consideration kept in the forefront of the whole scheme, which aims at confining the entire fishing trade to the fishing community itself and eliminating the need of employing technical hands who are not fishermen by either caste or vocation.

Lastly, a fisheries information bureau has also been set up. The function of this bureau is to collate and supply information connected with the local and other fisheries. The information collected by the bureau will be useful to the fishing industry, as it will furnish information not available to them before.

The war has led to an investigation of the possibilities of the manufacture of oil from shark livers to replace the dearth of supplies occasioned by the stoppage of imports of Cod-Liver Oil from Norway.

A simple process of oil extraction, not involving the use of any complicated machinery was devised and demonstrated by the department to the local fishermen and to the fishermen at Ratnagiri, Jaitapur, Malwan and Shiroda. The demonstrations were largely attended and the fishermen were greatly impressed by the fact that a new occupation and a fresh source of income had been opened out to them. As a result of the demonstrations the fishermen earnestly took up the work of oil extraction and have regularly been sending to the Head Office oil extracted by them. This is refined by the department and later sold to chemists in Bombay. The department also supplied to the Stores Department 1,391 gallons of vitaminised Shark liver oil.

The superiority of the oil is unquestioned. Oils from certain varieties of Sharks, notably *Carcharias melanopterus* and *Pristis perrotetti* yielded a vitamin. A potency of 140,000 and 40,000 international units per gramme respectively. This is many times more potent than Cod liver oil which, according to the British Pharmacopoeia standard, is between 500 to 1,500 international units per gramme.

The control of the fish curing yards was transferred to the Department of Industries from July 1, 1936, prior to which these were administered by the Salt Department of the Government of India. There are 32 such yards, 18 in the Ratnagiri District and 14 in the Kanara District. At these yards duty-free salt is stored in salt *lothars* from where it is issued to fish curers for curing fish.

Since the transfer of the yards the Department of Industries is devoting special attention to effecting improvements in the methods of curing. Cement concrete platforms were constructed at the Karwar yard for curing fish. The fishermen have realised the advantages resulting from such platforms with the result that fishermen at other yards have approached this Department for similar platforms at their yards.

With a view to demonstrate improved methods of curing fish, the department also constructed model fish curing sheds at Malwan and Mijall. Experienced master curers have specially been recruited to demonstrate improved methods to the fishermen. It is also proposed to erect permanent curing sheds with cement concrete

doors and Mangalore tiled roofs which will replace the present thatched sheds and sandy floors. This step will ensure the curing of fish in accordance with sanitary principles and increase the food value of the cured fish.

The more important sea-fish are pomfrets, sole and sea perches, among which are included the valuable lew fishes (*Sciaenidae* spp.) often attaining a very large size and notable as the chief source of 'fish-maws' or 'sounds,' largely exported from Bombay for eventual manufacture into isinglass. The finest of Bombay fishing boats hail from the coast between Bassem and Surat. These boats are beautifully constructed and attain a considerable size, and are capable of keeping the sea for weeks together. In the season they fish principally off the Kutch and Kathiwar coasts and in the month of the Gulf of Cambay. Their main method of fishing is by means of huge anchored stow nets which are let down for several hours and hauled at the turn of the tide. The chief catches are Bombal (Bombay ducks) pomfrets and jaw fishes. The first named are dried in the sun after being strung through the mouth upon lines stretched between upright posts upon

South of Bombay the fishermen of Ratnagiri and Rajapur make use of another and lighter class of fishing boat, specially designed for use in drift-net fishing. Fine hauls of bonito seer (a large form of mackerel) and allied fishes are often made during the season from September to January and later of shark and ray fish. For the latter specially large and powerful nets are employed. For part of the fair season, when fishing is not usually remunerative, many of the larger Bombay fishing boats are employed as small coasters, a fact which shows how large they run in size.

Inland Fisheries.—Government at the beginning of 1936 approved of a scheme for the development of inland fisheries in the Presidency. A start in the first instance will be made at Bandra, a suburb of Bombay, where two tanks have been obtained on loan from the Bandra Municipality for the purposes of the experiment.

The experiment will be extended to other parts of the Presidency in the light of the experience gained at Bandra. Government have sanctioned a sum of Rs 10,000 for inland fisheries work.

Sind.

Taking into consideration the limited sea-board and the number of fishing villages Sind has a rich sea-fishery. During the year 1940-41 20,000 mounds of fresh fish were transported by rail to upcountry stations from Karachi and 62,800 mounds of dried fish were transported to distant markets like South Africa, Hongkong, Sumatra, Malaya and Colombo.

The principal rivers are located not only around Karachi but also in the north and south-east. Karachi is the main port for the export of fish. The fishery is carried out in the form of small boats, 10 to 20 fathoms long, with a crew of 10 to 20 men. The fish are caught in the creeks and rivers and are then transported to the market.

The fish are caught in the creeks and rivers and are then transported to the market. The fish are caught in the creeks and rivers and are then transported to the market.

product utilised. Oil was extracted from shark liver by a crude process which yielded reddish brown oil useful for seasoning wood (fishing boats and their fittings). Hygienic process of extracting the shark liver oil, by which its vitamin potency is comparatively unimpaired, is being introduced. Trial of one sample of this oil showed the unprecedented richness of 1,90,000 international units of vitamin 'A' per gramme whereas the cruder oil contained 1,300 I U of vitamin 'A' per gramme.

There are two distinct oyster-fisheries in Sind, both present in the creeks which constitute the mouth of the Indus and its net work, especially between Karachi and Keti Bandar. These are (1) Edible Oyster and (2) the window pane oyster which yields pearls. A fishery held in 1941-42 for the former, restricted to select beds, yielded only Rs 500. The last fishery for pearl oysters was held during 1926-28. The most popular fish in the Indus is the Phula or Palloh (the well known Indian Shad). This fishery is under the control of the Revenue Dept who lease out different stretches of the Indus. The Dumbra and other fresh water carps and prawns are other items in the Sind fisheries.

The Hub river which forms the west boundary from Sind and Baluchistan, contains the well known sporting fish Mahseer (Barbus). Aphanius dispar (Cyprinodon dispar) is a well known mosquito larvivorous fish present in fresh water pools around Karachi and is used to a certain extent to combat malaria.

The Punjab.

Generally speaking, catches of fishermen were poor except in Kangra District where they are satisfactory. 301 Angling Licences for trout fishing were issued in Kulu against 165 in the last year. Catches of trout were satisfactory on the whole. The largest Brown Trout catch

In the year 1940-41 the number of fish caught was 1,000 as against 800 in the previous year.

during the season weighed 6½ lbs and the largest Rainbow trout 1 lb

The result of trout ova planted in the Baspa River (Bashahr State) has been a success and the fish is quite healthy and multiplying well. Due to an abrupt flood in the Baspa river last year, many trout were killed. The largest seen was 18 inches in length and 4½ lbs in weight.

Trout Culture—The hatcheries at Mahuli (Kulu) produced, 136,015 fertile ova of Brown Trout as against 123,948 produced last year. Out of these 92,000 ova were planted in various streams in the Kulu and Kangra Valley and the remainder were hatched out at the hatcheries and the fry thereof planted in the river Beas and its tributaries in the Kulu Valley.

Food—Out of over 1,000 stomachs of Brown Trout examined only two contained fish, one of which was a barbet and the other trout fry. Cannibalism amongst trout is, therefore, not a common phenomenon in Kulu waters.

An examination of the fish food available in a 28 mile stretch of the river Beas showed that in each unit of 6 square feet of river surface the number of larvae of different kinds available for fish was much more than one trout could consume. This information is of value in connection with stocking waters to their full capacity consistent with the food supply.

Spawning—Carp spawned freely at Khorl on the 25th July, 1940, and the ponds and burrow pits in the vicinity were teeming with fry of Rohu Mori, Theila and Mullet and other species of fish. At Chenewan spawning did not take place due to insufficient rain.

Growth—Under favourable environments the growth of carp is very fast. Rohu (labeo

rohita) attained a weight of 3½ to 4 lbs in a village farm pond on British cotton Growing Association Estate, Khanewal, in less than 18 months.

Enemies of Carp—Mullet (Wallago attu), a Cat-fish, caught from Khorl pounds contained semi-digested fry of Mori (*cirrhina mrigala*), while one had a theila (*Catla catla*) and another a head of its own species. These cat fish were of the same age as the carp fry they had digested, but measured double the length of the latter. Obviously the presence of such predatory fish in a carp pond must be avoided.

Stocking—18,000 Carp fry were transported in oxygen carries from the spawning grounds at Khorl and Wazirabad to stock departmental and private tanks in Gurdaspur, Lyallpur, Montgomery and Multan districts. By using oxygen carries the mortality amongst the fry was reduced to 3 per cent against 20 per cent. in open carriers.

Gold fish as cottage industry—The fish started breeding towards the end of January and continued up to the end of June. There is an increasing demand for these fish by the public. It has now been fully demonstrated that with proper care the cultivation of these as cottage industry can easily be carried on and is a fairly paying concern.

Larvicidal fish—These fish have been bred successfully in tanks at Lyallpur and Chhenawan. Because of the speed with which they devour mosquito larvae there is an increasing demand from public bodies for these fish for stocking in tanks. 7,338 larvicidal fish were supplied during the year.

Travancore.

The Department of Fisheries of the State which was originally part of the Department of Agriculture, was separated and affiliated to the University of Travancore, and is now under the control of the Professor of Marine Biology and Fisheries who co-ordinate research and administration. The Professor is assisted by two senior officers, one of them trained in Japan and America and the other at Liverpool.

The coast line of Travancore is 172 miles long and is margined by a shallow water area, within the 100 fathom line, of nearly 3900 square miles. Though out of this vast expanse of fishable waters, only the fringe within a distance of 5-7 miles is exploited at present the Marine fisheries of Travancore is worth about Rs 1,20,00,000 per annum. The surf swept coast is singularly deficient in harbours and during the monsoon months the fury of the breakers is a source of great hindrance to fishing. From Cape Comorin to Trivandrum the unsinkable catamarans composed of logs tied side by side is the only possible easy going fishing craft. From Quilon to the northern most boundary of the State small country made canoes are used and from October to June, when weather conditions are favourable seine nets are extensively employed.

The esteemed table fish of the coast consists of pomfrets, seer fish, several species of horse-mackerel, tunny, Jen fish, whiting mackerel and

thread fins. In economic importance however, shoal fish and fish of inferior quality such as butter-fish, sardines, white bait and ribbon fish take precedence. Butter-fish, sardines and prawns are abundant in the northern half of the coast, white cat-fish, white bait and ribbon-fish are predominant in the southern half. This conspicuous difference in the distribution of shoal fish has been found to be mainly due to the differences in the nature of the sea bottom. During favourable seasons, butter fish, white bait, ribbon-fish and cat-fish are so greatly in excess of the local food requirements that large quantities are salted and dried both for inland consumption and for export. Travancore exports annually about Rs 23,00,000 worth of salted fish, the greater part of which is sold in the adjoining tamil districts, and Ceylon.

As the important shoal fish are seasonal in their appearance certain months are more favourable for fishing than others. During these favourable seasons large catches are landed daily along the coast and the only method of conservation of the large unsaleable surplus is salting and drying. But realizing that salted fish is devoid of some of the essential properties of fresh fish, the Government opened a refrigerating plant in the metropolis for the preservation and storage of fresh fish. In the department also perfected a cheap

The shell fish industry of the lakes is now confined mainly to the collection of lime shells from certain regions of two of the major lakes. These supply all the lime required for building purposes in the State and recently a scheme has been drawn up exploiting these extensive resources for the manufacture of cement.

Large beds of edible oysters are also found in three of the lakes. At present these are not very popular as an article of food. However, investigations are under progress for culturing them on the same principles as those followed in Europe and for finding out markets for live oysters outside the State.

While in the rest of India inland fisheries are very unfavourable since many of the rivers and tanks dry up in summer, in Travancore fresh water fisheries are a source of perennial fish supply, and some of the fresh water fish find preference to sea fish. There are about 120 varieties of fresh water fish some of which grow to very large size.

- 1 Propagation of useful food fishes and their distribution to suitable waters
- 2 Investigations relating to fish culture fish diseases, conservation of fishery resources and development of commercial fisheries
- 3 Study of methods of fishing, fishery industries, and utilization of Marine products
- 4 Dissemination of knowledge regarding fishery science among those engaged in the industry.

Copyright Act.

(copyright in India is governed by the Indian Copyright Act III of 1914 which made the Imperial Copyright Act of 1911 applicable to India with such modifications as appeared to be desirable for adapting its provisions to the circumstances of India. The portions of the Imperial Act made applicable to India form the First Schedule to the Indian Copyright Act III of 1914

Copyright subsists throughout the parts of His Majesty's dominions to which the Imperial Act extends. Registration is no longer necessary but the publisher of every book has to supply a copy thereof as provided in the Copyright Act and in the Press and Registration of Books Act XXV of 1867. The author of a work is the first owner of the copyright therein and may assign the right either wholly or parti-

Publication in relation to any work means the issue of copies of the work to the public but does not include the performance in public

ally (copyright being a bundle of different rights) and either generally or subject to limitations, or may grant any interest in the right by license to another person but no such assignment or grant is valid unless it is in writing signed by the owner of the right in respect of which the assignment or grant is made or by his duly authorised agent

Duration of Copyright.

Generally the term for which copyright subsists is the life of the author and a period of 50 years after his death but at any time after the expiration of 25 years or in the case of a work in which copyright subsisted at the time of the passing of the Imperial Act of 1911, 30 years from the death of the author of a published work, copyright in the work is not deemed to be infringed by the reproduction of the work for sale if the person reproducing the work proves that he has given the notice in writing prescribed by the Governor-General in Council of his intention to reproduce the work and that he has paid in the prescribed manner to or for the benefit of the owner of the copyright, royalties in respect of all copies of the work sold by him calculated at the rate of 10 per cent on the price at which he publishes the work

If, at any time after the death of the author of a literary, dramatic or musical work, which has been published or performed in public, a complaint is made to the Judicial Committee of the Privy Council that the owner of the copyright in the work has refused to re-publish or allow the re-publication of the work or has refused to allow the performance in public of the work and that by reason of such refusal the work is withheld from the public, the owner of the copyright may be ordered to grant a licence to reproduce the work or perform the work in public as the case may be on such terms and subject to such conditions as the Judicial Committee may think fit

Duration of Sole Ownership of Copyright.

In the case of works first published in British India copyright is subject to this limitation that the sole right to produce, reproduce, perform or publish a translation of the work subsists only for a period of 10 years from the date of the first publication of the work but if within the said period the author or any person to whom he has granted permission so to do publishes a translation of any such work in any language, copyright in such work as regards the sole right to produce, reproduce, perform or publish such translation in that language is not subject to the limitation above prescribed

Copyright of Photographs.

The term for which copyright subsists in photographs is 50 years from the making of the original negative from which the photograph was directly or indirectly derived and the person who was owner of such negative at the time when such negative was made is deemed to be the author of the work

Musical Instruments.

The provisions of the act as to mechanical instruments for producing musical sounds were found unsuitable to Indian conditions. "The majority of Indian melodies," it was explained in Council, have not been published, written in staff notation, except through the medium of the phonograph. It is impossible in many cases to identify the original composer or author, and the melodies are subject to great variety of notation and tune. To meet these conditions s 5 of the Indian Act follows the English Musical Copyright Act of 1902 by defining musical work as meaning any combination of melody and harmony, or either of them, which has been reduced to writing

The Copyright Act does not apply to designs capable of being registered under the Patents and Designs Act II of 1911 except designs which though capable of being so registered are not used or intended to be used as models or patterns to be multiplied by any industrial process

Infringement of Copyright.

Copyright in a work is considered to be infringed by any person who without the consent of the owner of the copyright does anything, the sole right to do which is conferred by the Copyright Act on the owner of the copyright. Where copyright in any work has been infringed, the owner is entitled to all remedies by way of injunction, damages and accounts. Every suit or other civil proceeding regarding infringement of copyright must be instituted and tried in the High Court or the Court of the District Judge. An action in respect of infringement of copyright cannot be commenced after the expiration of 3 years next after the infringement. No Court inferior to that of a Presidency Magistrate or a Magistrate of the First Class can try any offence against the Copyright Act. It is not an infringement of copyright to publish a report in a newspaper of an address of a political nature delivered at a public meeting

Where a married woman and her husband are joint authors of a work the interest of such married woman therein shall be her separate property

Types of Forest Most of the land under the total area of Private Forest is under the control of the Forest Department. These areas are classified as reserved, protected and unclassified State forests. In the reserved forests the rights of user in favour of individuals and public are carefully recorded and limited.

Throughout this vast forest area, scattered over the length and breadth of India, from the Himalayan snows to Cape Comorin, and from the arid Juniper tracts of Baluchistan to the Eastern limits of the Assam hills, there is an infinite variety in the types of forest vegetation, depending on climate, topography, soil and other local factors. Vegetationally, the greater part of India, including the Indo-Gangetic plain, must be considered as in the tropics, but wherever there are mountains, such as the Nilgiris in the south and the Himalayas and Assam-Burma hills in the north, subtropical, temperate and in the north, alpine zones must be distinguished, each supporting its own forest types. Next to the major altitudinal effects, rainfall is the most important factor in the determination of the nature of the forests, and within each of the main zones, tropical, subtropical, temperate and alpine, there can be distinguished wet moist and dry forest types. In addition, various edaphic and seral types occur, dependent on local conditions, such as littoral (berch), tidal, fresh water swamp, and riverain forests.

I—TROPICAL FORESTS.

2 **Tropical Semi-Evergreen Forests**—These form an intermediate type between the wet and the moist types. They are very extensive in Burma, and are fairly widely distributed in North Burma and the Andamans.

buted in the Northern region of India, occurring all over Upper Assam and in North and South Bengal (Buxa, Jalpaiguri, Kurseong, Kalimpong, Chittagong), and in Orissa (Puri, Angul and some of the adjoining States). In the South, however, the type is not extensive, owing to the steep rainfall gradient in the Western Ghats, and it is limited to narrow strips just north of Bombay, near Goa, South Cochin and part of Coorg. Forming a dense forest of several canopies, there are again numerous evergreen species, but mixed with them are many deciduous species, such as the *Terminalias*, and the general height is somewhat less than in the wet evergreen forests.

3 Tropical Moist Deciduous Forests.—In these forests the trees are leafless for part of the year, and although the canopy is complete, the forests are not so dense, nor are the trees so tall as in the preceding types. The height of the dominant trees varies from 100 to 150 feet. In the southern region, *Teak* is the chief tree, mixed with *Terminalias* and many other species. The type is widely distributed all over the centre and south of India, in the Central Provinces, Bombay, Madras, Mysore, Coorg, Cochin and Travancore. In the North, *Sal* (*Shorea robusta*) is the dominant species, and the type extends extensively through Bengal and Assam, Bihar and Orissa, and the United Provinces up to the eastern border of the Punjab.

4 Tropical Dry Deciduous Forests.—This type is found throughout the Peninsula, in Bombay, Central Provinces, Hyderabad, Mysore and Madras, and in the Indo-Gangetic plain, from Orissa, through Bihar and the United Provinces to the Punjab, wherever the annual rainfall is from about 30 to 50 inches. In the South, the most important tree is again *Teak*, but there are many associates, which often become the dominant species. In the North, the forest is typically mixed, with *Sal* occurring only locally.

5 Tropical Thorn Forest.—The dry tract throughout the Peninsula, to the lee of the Western Ghats, from the extreme south to Indore and Bhopal, with a rainfall of only 20 to 35 inches per year, is characterised by a low open forest of thorny trees, of which various species of *Acacia* are especially common. The corresponding area in the North has an even lower rainfall, 10 to 30 inches per year. It extends throughout the western side of Upper India (except for areas of actual desert), from the North-West Frontier Province, through the Punjab and Rajputana, to Sind and Baluchistan, with eastern extensions into the drier parts of the United Provinces, especially on unfavourable soils. *Acacias* are again characteristic, although less prominent than in the south and the related tree *Prosopis spicigera* is also generally distributed.

6. Tropical Dry Evergreen Forest.—A special type is met on the Carnatic coast, where the rainfall is 30 to 50 inches per year, but is largely from the retreating (north-east) monsoon in October and November. Here there is a low forest 30 to 40 feet high, consisting of small thick leaved evergreen trees, such as *Mimusops hexandra* and *Memecylon edule*.

II.—SOUTHERN SUBTROPICAL AND TEMPERATE FORESTS.

These are represented only by wet types on the higher hills, such as the Nilgiris and Palni hills, where the rainfall is relatively high. The subtropical zone, from about 3,000 feet to 5,500 feet, has a dense evergreen forest of medium height (60 feet) in which *Eugenia* is a characteristic genus, with *Lauraceae* and other families also well represented. Above this, in the temperate zone, rolling grassy downs are characteristic, as round Ootacamund, with patches of forest, known as *sholas*, occupying the sheltered folds in the hills. These forests, probably the relics of former much more extensive forests which have been reduced by burning, felling and grazing, are typically a relatively low but fairly dense evergreen type, 50 to 60 feet high, with a great variety of trees, among which *Ternstroemia*, *Eugenia* and *Meliosma* are typical genera.

III.—NORTHERN SUBTROPICAL FORESTS.

1. Subtropical Wet Hill Forests.—This type occurs on the lower slopes of the Eastern Himalayas and in the Assam-Burma hills, from a little under 3,000 feet to 6,000 feet. The forests are mostly of good height (up to 150 feet) and density, characterised by many species of evergreen *Oaks* and *Chestnuts*, with many other temperate trees, such as *Alder* and *Birch*, which are deciduous for short periods. *Pines* are typically absent, or are confined to drier sandy soils or well drained ridges, while *Dipterocarps* sometimes extend upwards from the tropical wet evergreen forests.

2 Subtropical Moist Hill Forests.—These extend the whole length of the Western and Central Himalayas, from the North-West Frontier Province to Bhutan, mostly between 3,000 and 6,000 feet, but descending in places to 2,000 feet, and ascending on southerly aspects to 7,500 feet.

The principal tree is the *Chir* or *Chil* pine (*Pinus longifolia*), which forms almost pure forests over extensive areas. *Oaks*, *Rhododendrons* and other trees mix with or replace the *Chir* at the higher levels and in damper situations.

The type extends eastwards into the Khasi, Naga, Manipur and Upper Burma hills, but instead of the *Chir* the dominant tree is the *Khasi pine* (*Pinus khasya*). This again is replaced by *Pinus merkusii* on the hills in the South Shan States and parts of Lower Burma.

3. Subtropical Dry Evergreen Forests.—These are open low scrub forests of evergreen trees and thorny shrubs, in which the chief species is the *Olive* (*Olea cuspidata*). They occur from about 1,500 feet to 5,000 feet in the Himalayan foothills, the Salt Range and the Kail Chitta hills in Punjab, Kashmir and Hazara, extending westwards into Baluchistan and other countries. The forests have mostly been considerably impoverished by grazing, lopping and felling and with protection the general density becomes much better.

IV.—NORTHERN TEMPERATE FORESTS

1. Wet Temperate Forests.—These are found in the Eastern Himalayas from Nepal eastwards, extending through Bengal into the hills of Assam and Burma, from about 6,000 to

to 4500 feet. They are typically fairly dense evergreen forests, in which several species of *Oaks* and *Chestnuts* predominate, but many other species are also present including typically deciduous trees such as *Maple*, *Elm* and *Prunus*.

2 Moist Temperate Forests.—Along the whole length of the Himalayas from the North West Frontier Province, through Kashmir, Punjab, United Provinces, Nepal and the Darjeeling district to Sikkim and Bhutan, at altitudes from 5,000 to 11,000 feet, and with a rainfall from 40 to 100 inches per year, are to be found extensive coniferous forests similar to the temperate forests of Europe and North America. The chief trees are Spruce, Silver Fir, Cedar (Deodar), Blue Pine (*Pinus excelsa*), and *Tsuga* (*cupress*) and *Larix* also occur to a less extent. Often these trees are mixed together, but pure crops of one or the other are almost more frequent, depending on the altitude, aspect and other conditions. Evergreen Oaks are also often present, particularly on southern aspects, while in the damp situations are often many broad leaved trees also typical of European forests, such as Maple, Hornbeam, Horse Chestnut, Birch, Elm, etc.

3 Dry Temperate Forests—In the inner ranges of the Himalayas where the South West monsoon is feeble and the rainfall is usually less than 40 inches a year and that is mostly in the form of winter snow is to be found extending from 5,000 to 10,000 feet a drier and more open type of temperate forest. It consists chiefly of the conifers *Deodar* (*Pinus deodardiana*) and *Juniperus* intermixed with some *Siber Fir* and *Blue Fir* at higher elevations. Broad leaved trees such as *Mango* and the *Holm Oak* occurs up to 4,000 feet while the *Alnus* spreads to 5,000 feet in the alpine zone. The type of soil is a light brown chumbu. Inner hills are covered with grass. Among the herbs and shrubs are *Salix* and *Chamaedaphne* and plants such as

ALPINE FORESTS

of the Himalayas from the west coast of a dense forest of large shrubs chiefly *Albizia* and dwarf *Juniper* with a few small trees in some places. The forest of high level hills is composed of rhododendrons, *Juniper* and *Albizia* with patches of grassy areas. The forest in some places is composed of a great variety of trees.

VI SPECIAL FOREST TYPES

Am. ... forest

1. **Beach Forests** - Along the coast wherever a forest occurs there is a fringe of beach forest originally introduced from the coast. The most characteristic is where small evergreen and to the forest a low but fairly dense fringe along the shore.

2 Tidal Forests—In the Sunderbans of the Ganges-Brahmaputra delta and along the mouths of other large rivers such as the Mahanadi, Godavari and Indus, are to be found Man-

grove (*Rhizophora*, *Brougniera*, etc) and *Sundri* (*Heritiera*) forests, typical of salt water swamps. Many of the trees have stilt roots for support, and "knees" or pneumatophores projecting upwards from the swamps to provide aeration for the roots.

3. **Fresh-water Swamp Forests.**—These are not very extensive, but are to be found above the salt water limit in the deltas of the large rivers, and also in depressions, often old river beds, in parts of Assam, Bengal, the United Provinces and Madras. They are subject to prolonged annual flooding and have various species according to the locality. The delta type in Bengal supports the best of the *Sundri* forests, often over 100 feet high.

4 Riverain Forests—Along all the larger rivers on the banks of new alluvium are to be found stretches of moisture-loving trees, such as *Lagerstromia flos-regina*, *Terminalia myriocarpa* and *Salix tetrasperma*. On recently deposited gravels and sand, extensive stretches of which occur along many river courses both in North and South India, are often to be found forests in various stages of succession, depending on how new or old is the deposit, on the rainfall and other local factors. Perhaps the most characteristic are the *Khair* (*Acacia catechu*), *Sissoo* (*Dalbergia sissoo*) and *Tamariz* forests found throughout Northern India from Assam to Punjab. These forests are usually characterised by heavy grass, and with protection they slowly change to a more miscellaneous type of forest by the gradual colonising of other species.

VII.—THE BAMBOOS.

No account of the forests of India would be complete without a reference to the Bamboos, of which there are very many species occurring in the tropical, subtropical and temperate zones. Tall bamboos, such as *Bambusa arundinacea* and *Dendrocalamus hamiltonii*, often form a very dense undergrowth in the tropical semi evergreen and moist deciduous forests, while *Dendrocalamus strictus* is locally abundant and economically important in the drier parts of the tropical moist deciduous forests and in some of the tropical dry deciduous forests. One of the important results of forest research is the utilisation of bamboos for the making of paper, but there are still extensive areas of forests with a dense undergrowth of bamboos which are not at present economically exploitable and which often greatly hinder other forest operation.

Forest Policy—The general policy of the Government of India in relation to forests was definitely laid down in 1861 by the classification of the areas under the control of the Department into four broad classes, namely —

(a) Forests the preservation of which is essential on climatic or physical grounds. These are usually situated in hilly country where the retention of forest growth is of vital importance on account of its influence on the storage of the rainfall and on the prevention of erosion and sudden floods.

(b) Forests which afford a supply of valuable timbers for commercial purposes, such, for example as the teak forests of Central and Southern India, the sal forests of Northern, Central and North Eastern India, and the deodar and pine forests of the North-Western Himalaya

(c) **Minor Forests**, containing somewhat inferior kinds of timber and managed for the production of wood, fodder, grazing and other produce for local consumption, these forests are of great importance in agricultural districts

(d) **Pasture lands**—These are not "forests" in the generally understood sense of the term but grazing grounds managed by the Forest Department merely as a matter of convenience

These four classes of forest are not always sharply divided from each other, and one and the same tract may to a certain extent be managed with more than one object

Administration—The forest business of the Government of India is carried out in the Department of Education, Health and Lands. The Inspector-General of Forests is also President of the Forest Research Institute at Dehra Dun and is the technical adviser to the Government of India in forest matters. Under the Constitution of 1919 Forests were made a transferred subject in Bombay and Burma, where they had long been administered by the Provincial Governments, and in 1924 the Reforms Inquiry Committee presided over by the late Sir Alexander Muddiman, Home Member of the Government of India, recommended that they be transferred in other provinces unless any local Government on examination of the position could make out a convincing case against the transfer in its own province. After the Constitution of 1935 Burma was separated from India and Forests were included in the schedule of Provincial subjects throughout India

Territorial Charges—The various provinces are divided into one or more Forest Circles, each in charge of a Conservator of Forests, usually provinces containing three or more circles also have a Chief Conservator who is the head of the Department for his province. Circles are divided into a number of Forest Divisions, in charge of members of the Imperial or Provincial Forest Service. Each Division contains a number of Ranges in charge of junior members of the Provincial Service or of Forest Rangers or Deputy Rangers, heavy Divisions are also sometimes divided into Sub-divisions. The Ranges are further sub-divided into a number of rounds and beats. These are protective as well as administrative sub-divisions held by Foresters and Forest Guards

Non-Territorial Charges—Apart from territorial charges there are various important posts of a non-territorial nature connected with Forest Research and Education, Silviculture, Utilisation and the preparation of Forest Working Plans

The Forest Service—The Forest Service comprises four branches.—

(1) **The Indian Forest Service**—This still contains 172 officers. Of these 159 were recruited direct to the service. Recruitment to this service ceased in 1932

(2) **The Indian Forest Engineering Service**—This service was created in 1919 but since 1922 no further recruitment has been made. Some of the Forest Engineers have been transferred to the Indian Forest Service or the Indian Service of Engineers and some have resigned or have retired. The present number of officers

in the Indian Forest Engineering Service is only 2, one in the Punjab and the other in Bombay

(3) **The Provincial Forest Service**—Till 1928, officers for the lower gazetted Forest Service were recruited for direct appointment as Extra Assistant Conservators of Forests, and were known as Provincial Forest Service Officers. They were trained at the Imperial Forest College, Dehra Dun. After the training of Indian officers for appointment to the Indian Forests Service was started at Dehra Dun, in 1926, the training of the Provincial Forest Service officers was stopped in 1928

With the advent of Provincial autonomy in 1935 and the consequent cessation of all further recruitment to the Indian Forest Service, Provincial Governments are now building up new Provincial Forest Services of their own to take the place of the Indian Forest Services. As a result the old Provincial Forest Services will disappear in due course

(4) **The Subordinate Forest Service**—These consist of Forest Rangers, Deputy Rangers, Foresters and Forest Guards

With the closing down of the Coimbatore College in 1930, the training of Forest Rangers is now concentrated at the Indian Forest Rangers College at Dehra Dun for the whole of India, except Bombay, the latter province making its own arrangements

The training of subordinates below the rank of Rangers is carried out in various local forest schools and training classes

Forest Education—Forest education in India first started with the founding in 1878 of a Forest School at Dehra Dun, for the training of forest rangers. The school owed its origin to a memorandum submitted in September, 1877, by Sir Dietrich Brandis, the first Inspector-General of Forests to the Government of India, in which he urged the desirability of creating a national Forest School in India, with the object of preparing students for the executive charge of a range, and of enabling Forest Rangers to qualify for promotion to the superior staff. Forestry, he said, must cease to be a subject of foreign introduction. It must become naturalised before it could be regarded as established on a safe and permanent basis

The hopes of Sir Dietrich have today been more than realised, for not only is the executive charge of ranges and even divisions now being held by ranger students of Dehra Dun or of the daughter college at Coimbatore, but with the establishment of the new Indian Forest College, probationers are now being trained directly for the Superior Forest Services of the various Provinces and States of India

The original Forest School, established in 1878, came directly under the Government of India in 1884, when it became known as the Imperial Forest College, and trained Rangers at first for all the provinces. In 1912 the Madras Forest College was opened at Coimbatore, serving Madras, Bombay, the Central Provinces, Bihar and Orissa, and the South and Central Indian States, the Imperial Forest College at Dehra Dun serving the rest of India. The Madras Forest College has now been closed, however with effect from the 1st July 1939, and its

students from all parts of India are again being trained at Dehra Dun. This College at Dehra Dun has now been renamed the *Indian Forest Ranger College*, to distinguish it from the new *Indian Forest College* for the training of officers for the Superior Forest Services, opened in 1938.

In 1912 a separate course was started for the Provincial Forest Services as then constituted. This course was closed in 1928 with the cessation of direct recruitment to the old Provincial Forest Services. From 1st November, 1928, the training of Indian probationers for the Indian Forest Service was commenced, a separate Indian Forest Service College being established in the old Forest Research Institute at Chandbagh, Dehra Dun. This College, however, had to be closed in November, 1932, owing to the cessation of recruitment to the Indian Forest Service.

Following the transfer of "Forests" to popular control, under the reformed constitution, the old Indian Forest Service is slowly disappearing, and in its place each province is building up its own Superior Forest Service. For the training of officers for these new Provincial Forest Services, and for the corresponding Forest Services of the Indian States, the *Indian Forest College* was established at New Forest in conjunction with the Forest Research Institute and was opened in May, 1938.

The Indian Forest College—The Indian Forest College is housed in the Forest Research Institute building at New Forest and is well equipped with lecture and common rooms, and biological and chemical laboratories. The museums, herbarium laboratories and workshops and the central library of the Forest Research Institute form an important part of the College, in so far as they are largely used for educational purposes by the Research Officers and College Staff. Hostel accommodation is provided in Class II Officers' bungalows and there is a common mess. A large playing field and a pavilion provides football and hockey and a cricket pitch and tennis courts.

The staff of the College consists nominally of two—the Principal and Professor of Forestry, and the Professor in Engineering and Surveying, under the general administrative control of the President, Forest Research Institute and Colleges. But in addition the Research Officers of all the branches of the Forest Research Institute act as lecturers in their respective subjects.

The course covers two years, and among other conditions. An honours degree not lower than second class, in science or mathematics or agriculture or its equivalent, is required as a qualification for entry and the combination of botany and mathematics is preferred. The fees are Rs. 3,000 per year, and the total cost, including stipend for living, expenses, cost of camp outfit and equipment, and travelling expenses for field training and tours comes to about Rs. 10,500 for the two years' course. Only those students are accepted who are deputed by their Provinces or States, or who have a guarantee of employment on their successfully completing the course.

The Indian Forest Ranger College—The Indian Forest Ranger College (formerly

known as the Forest School, and then as the Imperial Forest College) is housed in the original College buildings at Dehra Dun. These comprise a college building, with lecture and common rooms, drawing and engineering halls, biological laboratory and museum, and hostels for the students. The surrounding grounds, covering about 4 acres, constitute a small arboretum and include tennis courts, while there is a good playing field adjacent.

The staff of the College consists at present of the Director and the Assistant Instructor. Certain of the Research Officers of the Forest Research Institute also lecture in their special subjects.

The course covers two years. Among other conditions, the minimum qualification for admission to the College is a certificate of having passed the Intermediate Examination of any recognised Indian university with one or more of the following subjects—Mathematics, Physics, Chemistry, Botany, Zoology. A certificate of having passed any other examination of an equivalent or higher standard will be admissible. The fees are Rs. 1,500 per year, and the total cost, including stipend for living expenses, camp outfit and equipment, and travelling expenses for field training and tours comes to about Rs. 4,850 for the two years' course. Only those students are accepted who are deputed by their Provinces or States, or who have a guarantee of employment on their successfully completing the course.

Research—The Forest School founded at Dehra Dun in 1878 became also a recognised centre of Forest Research in 1906, when at the instance of Sir Sainthill Eardley-Wilmont, then Inspector-General of Forests, a staff was appointed to investigate problems connected both with the growing of forests and with the utilisation of forest produce.

In 1914 the first Forest Research Institute was opened on the Chandbagh Estate, Dehra Dun. Within a very few years the war demand for forest produce emphasised the scope and need for extensive research far beyond that for which accommodation had been provided. Plans were therefore made for a new Forest Research Institute on the Kanjgarh (New Forest) estate a few miles out of Dehra Dun, and it was opened on the 7th November, 1929. The old Institute was converted into the Indian Forest Service College, but with the closing of that college in 1932, the whole of the Chandbagh estate was given up, and with many additions and modifications now forms the Dehra School.

The Forest Research Institute is under the administrative control of the Inspector-General of Forests, who is also the President. There are five main branches of forest research, namely Silviculture, Forest Botany, Utilisation, Entomology and Chemistry. Silviculture, which deals with all the production side of forestry, is under the direction of the Silviculturist. Much of the actual research work is, however, decentralised and done by local provincial silviculturists in the provinces, but the Central Silviculturist co-ordinates their work, does all the statistical computing and acts as an information bureau on silvicultural matters for the whole of India and Burma. The Botanical

branch is chiefly concerned with the identification of species, but has a mycological section dealing with fungus diseases of trees and wood rotting fungi. The Utilisation branch has sections dealing respectively with timber testing, wood working, wood preservation, timber seasoning, paper making, wood technology and minor forest products. The sections are under the charge of specially trained Indian assistants and are equipped with up-to-date workshops, testing machines, seasoning kilns, antiseptic treatment plant, sawmill and a paper-making plant sufficiently large to enable paper-making tests to be carried out on a commercial scale. The Forest Entomologist is primarily concerned with research into the control of insect attacks in tree crops, and insect damage to timber. There is also a section dealing with the taxonomy of Indian insects under the Systematic Entomologist. The Chemist does research work into drugs, oils, and other minor forest products, and there is also a Soil Chemist who is engaged on silvicultural problems.

The Forest Research Institute is thus organised and equipped to deal with every aspect of Forest Research and the work it has done in the past and is doing has gone a long way towards improving the productivity of the forests of India, and had led to the fuller and better utilisation of their products, with correspondingly increased financial returns. Limited facilities also exist at the Forest Research Institute for training in research methods and for the conduct of research by private individuals.

Forests Products—Forest produce is divided into two main heads—(1) Major produce, that is timber and firewood, and (2) Minor produce, comprising all other products such as bamboos, leaves, fruits, fibres, grass, gums, resins, barks, animal and mineral products, etc. The average annual outturn of timber and fuel from all sources averages about 294 million cubic feet. This was undertaken a few years ago at the initiation and development of certain large exploitation schemes, especially in Madras, which had indifferent success. It was hoped in Madras, by utilising modern American methods, to extract and utilise very large quantities of valuable timbers, but the final result proved that this extensive exploitation was justified neither by the stand of timber in the forests nor by the possibilities of satisfying markets. The Provincial Government after this experience adopted a more cautious policy.

In the Andamans notable developments have taken place. In the past, extraction of timber was done by elephant dragging with the result that only a fringe of the forests could be touched. Attempts were made in employing American methods of mechanical logging, for which machinery was bought and an American expert employed to take charge of the work. The costs of extraction, however, by these means proved too high. Recently the problem has been solved by means of light railways, the trains of trucks being drawn by elephants which have been superannuated from ordinary work, and it has been found possible in this way to work large, hitherto inaccessible areas of forest

very cheaply. Elsewhere in India a great part of the trade in timber lies in the hands of contractors who are, on the whole, regarded trustworthy if sufficient control over their operations is exercised.

Forest Industries—The important role which the forests of a country play in its general commercial welfare and in providing employment for its population is not always fully recognised. If accurate estimates were available for India, they would no doubt show that apart from the jungle population which is directly dependent on the forests and the large numbers of wood-cutters, sawyers, carters, carriers, raftsmen and others working in and near them, employment on an enormous scale is provided to persons engaged in working up the raw products. Among these latter may be mentioned carpenters, wheelwrights, coopers, boat-builders, tanners, rope-makers, lac-manufacturers, basket-makers, and many other classes of skilled labourers. The Indian census shows over a million people and their dependents so employed in British India and nearly a further half million in Indian States, but these are probably below the actuals, as much forest labour is not whole-time labour, devoting seven or eight months in the year to forest work and the rest to agriculture. With the opening up of the forests, the extension of systematic working, the wider use of known products, and the possible discovery of new products, a steady and extensive development of industries dependent on the forests of India may be confidently anticipated in the future.

Financial Results—The growth of forest revenue, expenditure and surplus during the past 70 years has been steady. Gross revenue, before the late world-wide depression caused a temporary disorganisation of all trades, steadily increased until it amounted to some Rs 299 lakhs a year, surplus revenue amounting to upwards of 26 per cent of gross revenue. Most of the provinces ordinarily show a steady increase of surplus. Figures of Revenue, Expenditure and Surplus for the three years ending 1939-40 are as follows—

Year	Revenue	Expenditure	Surplus
1939-40	30,202,818	22,744,245	7,458,573
1938-39	30,097,367	23,130,435	6,966,932
1937-38	30,185,380	22,258,608	7,926,772

Agencies—The general practice of the Forest Department in the Government of India and the various Provinces is to conduct their own sales direct with timber dealers or large consumers though there are notable exceptions. Indian timber marketing in England (especially Andaman timbers) is now done under the direction of a Timber Adviser who is attached to the Office of the High Commissioner for India. Sales of Indian timbers and especially timbers from the Andamans are steadily increasing.

Bibliography—A large number of bulletins and other publications has been issued by the Forest Research Institute, and of these a list can be obtained from the President, Forest Research Institute and College, New Forest, Dehra Dun, U P.

WIRELESS TELEGRAPHY AND TELEPHONY.

Beam Stations—The year 1927 saw the commencement of Beam wireless services on the Marconi system between India and the United Kingdom. Powerful transmitting and receiving stations erected at Poona and Dhond respectively by the Indian Radio Telegraph Company are connected by land lines with the Central Telegraph Office in Bombay, whilst stations at Skegness and Grimsby are similarly connected with the General Post Office in London, and the circuits are so arranged that messages are exchanged between Bombay and London without intermediate handling at the Beam stations at either end. The huge aerial systems at Poona and Dhond each supported on five steel towers 287 feet in height, are landmarks over a distance of many miles. The service was inaugurated by His Excellency the Viceroy on 23rd July 1927.

For many years the Bombay station known as Bombay Radio was located on Butcher Island in the Harbour, but during 1927 a fine new station equipped with modern apparatus was erected and taken into service at Santa Cruz, just outside the limits of Bombay Municipality.

Radio telegrams exchanged with ships at sea by coast stations in India and Burma continue to increase in number, and total many thousands per annum. Telegrams are also passed by wireless between Madras and Colombo when the normal route is interrupted.

Wireless telephonic communication between pilot vessels, lighthouses and shore stations are maintained by the Port Trusts at Bombay and Rangoon.

Safety at Sea—A noticeable feature of wireless development during recent years has been the provision of direction finding apparatus at Bombay, Calcutta and Karachi and facilities at other coast stations whereby ships at sea equipped with direction-finding apparatus can obtain bearings on coast stations and thus determine their position with a remarkable degree of accuracy. The latest style of Marconi beacon was erected on Kennedy Island during 1931 to guide shipping approaching Bombay harbour. All ships equipped with wireless direction finders will now be able to obtain knowledge of their whereabouts at a considerable distance from the coast. Improved arrangements for broadcasting time signals, weather reports and navigational warnings from coast stations have also proved of value to ships at sea. An elaborate system of radio services in connection with civil aviation has been developed especially for the assistance of aeroplanes along the airmail routes.

Radio-Telephone Service—An event of considerable importance was the inauguration of the radio telephone service between India and England on May 1, 1933, when His Excellency Sir Frederick Sykes, the then Governor of Bombay, and Sir Samuel Hoare, the then Secretary of State for India, exchanged messages as a preliminary to the opening of the service to the public.

The service is based upon the beam wireless system which has been operated successfully for several years by the Indian Radio and Cable Communications Company. Initially, the radio telephone service was limited to Bombay and Poona at the Indian end and to the United Kingdom at the other, but facilities for conversation with other places were speedily arranged, until it was possible for people in Bombay to speak to the United States, Canada, Australia, South Africa and many other parts of the world. Similarly, there was a gradual extension of the area covered in India, and every important city in India can be placed in telephonic communication with England and the rest of the world.

Coast stations have been maintained at a high efficiency and many of the high speed circuits have proved extremely reliable. A large proportion of the traffic between India and Burma is transmitted by the direct route instead of being worked via the direct route to Calcutta. The service is interrupted occasionally by atmospheric interference, particularly during the hot weather, but the lines have been largely overhauled and are working during the worst periods.

In December 1933 a new service was opened between Bombay and Rangoon by means of which telegrams can be sent direct to the truck to place them in the hands of the places in Burma. This service has led to the construction of a large amount of new and up-to-date apparatus.

Many technical problems are involved in the perfection of the India-England wireless telephone, not the least of which is the ensuring of secrecy. When the service was first opened, reports from ordinary broadcast listeners in all parts of the country and as far afield as Ceylon indicated that conversations could be "tapped" with the greatest ease, but later "secrecy gear" was installed.

Any private telephone owner can use the service for an overseas call. Before doing so, however, he has to place a deposit with the Telegraph Authorities.

Liberal allowance is made at the discretion of the observing operator for periods during which speech is unsatisfactory owing to any defect in service, so that the time charged for is the period of effective speech only. (Allowance is made in charging for calls when atmospheric conditions prevent continuous effective conversation.)

Broadcasting—For several years, limited broadcasting services were maintained by Radio Clubs in Calcutta, Bombay, and Madras, and although the transmitting sets employed by them were of very low power, the broadcasts were popular. The clubs were assisted financially by a Government contribution based upon the revenue from licence fees, but this did not nearly suffice to cover the cost of the transmissions, and the greatest credit is due to the members of those clubs for the sporting manner in which they provided additional funds and undertook the entire responsibility for the programmes.

After negotiations extending over several years, an Indian Broadcasting Company was granted a licence to establish broadcasting services upon lines similar to those of the British Broadcasting Corporation, and transmitting stations were erected in Bombay and Calcutta, the services at the former being inaugurated by His Excellency the Viceroy in July 1927 and the latter by the Governor of Bengal a month later. These stations had each an aerial input of one and a half kilowatts, the same as that of the 2LO stations in London, of which they were practically duplicates. The programmes were so arranged that both Indian and European music were broadcast daily and the news bulletins and market and weather reports were read in two languages.

All India Radio—The Indian Broadcasting Company was wound up in 1930 and its operations have since been conducted by the Government of India. Government for this purpose formed an Indian State Broadcasting Service, now called All India Radio, and instituted a Central Broadcasting Advisory Committee, representative of the non-official public in association with the Departmental officials, to keep them in touch with public opinion. The Committee had as its chairman the Member of the Viceroy's Executive Council in charge of the subject.

Government, availing themselves of an improvement in their financial condition, in 1934-35 decided upon a large development of their broadcasting service and allocated sub-

stantial funds for the purpose. A special inducement for the expansion of broadcasting was the constant growth of revenue from Customs duties on imports of wireless material. This showed on the one hand a widespread desire on the part of the public for further broadcasting services and on the other hand a prospect of substantial profits to Government through the increase of imports of wireless apparatus.

The first important development ordered by Government was the opening of a 20 k w medium-wave broadcasting station at Delhi. This station was actually opened on 1st January 1936. Its wavelength is 338.6 metres (886 kc/s). The wavelength was somewhat inconveniently close to that of Bombay, but at the time when the station was erected it was believed to be the best length of medium-wave for transmissions in India. It was therefore appropriated for the first 20 k w station to be built. The Bombay wavelength has since been changed.

The Government of India decided to appoint a Controller of Broadcasting in India and secured from the British Broadcasting Corporation Mr. Lionel Fielden, who took up his duties in August 1935 and was largely instrumental in the initial organization of the new Delhi station.

Government, in announcing their determination to open a large broadcasting station in Delhi, intimated that they proposed to follow this by the installation of modern transmission equipments in place of the existing plants in Bombay and Calcutta and that a similar modern station would be opened in Madras. The thorough investigation of general broadcasting problems throughout India which followed the arrival of Mr. Fielden led to a revision of these plans, and through his instrumentality the British Broadcasting Corporation lent India in the early months of 1936 the services of Mr. H. L. Kirke.

A valuable report was presented by this official, and a plan for wide extension of broadcasting activities was elaborated. Government engaged Mr. C. W. Gwyder, one of the foremost wireless, and particularly short-wave, engineering experts in the world, to be their principal engineer for construction and research work. Orders for extensive new equipment for implementing plans for expansion prepared by these experts were placed in January 1937. It included new 10 k w short-wave transmitters for Bombay and Calcutta and one 10 k w and one 5 k w short-wave transmitters for broadcasting and experimental work in Delhi. It also included a 10 k w short-wave transmitter for Madras, for service throughout the Madras Presidency, and a 250 watt medium-wave transmitter for Madras City. All this apparatus is of the most modern type. This makes for economy in working and gives purity of rendering unexcelled in any other country. The short-wave plant is considered of great importance, as it provides a measure of service for the whole of India. The medium-wave transmitters are intended to give a first-grade service on inexpensive receivers in the large towns, but owing to atmospheric conditions in India during the greater part of the year cannot be

expected to provide a first-grade service at distances more than 30 to 50 miles from the special areas for which they are intended.

His Excellency the Marquess of Linlithgow, immediately after taking the oath of office as Viceroy in New Delhi on 18th April 1936, proceeded to deliver a broadcast address to the Princes and people of India. This remarkable innovation in procedure was regarded as indicating His Excellency's enthusiasm for broadcasting and to portend the interest he has shown in its development.

Licences—Broadcast receiver licences are issued at all head and sub post offices at a fee of ten rupees per year, and cover the use of receiving sets throughout British India except Baluchistan and the North-West Frontier Province. Licences for fixed stations for transmitting and experimental purposes are much sought after, and despite a careful scrutiny of the applicants, a considerable number have been issued (Most of these licences have now been withdrawn for the duration of the war). The number of traders in wireless apparatus who are required to take out special import licences has increased considerably during recent years.

BROADCASTING IN INDIA.

Headquarters of All India Radio No 5, Sikandra Road, New Delhi

Telegraphic address "CONBROADCAST"

Broadcasting in India is controlled by All India Radio, which is a department of the Government of India. The head of this department is the Controller of Broadcasting, who is assisted at headquarters by the Deputy Controller, the Chief Engineer, the Administrative Officer, the Assistant Chief Engineer, the Public Relations Officer, the Officer on Special Duty (Information), the Officer on Special Duty (Engineering) and the Programme Executive.

There are 9 stations and 15 transmitters at present in operation in India. 8 receiving centres are also in operation at the present moment at Bombay, Delhi, Calcutta, Madras, Trichy, Dacca, Lucknow and Peshawar. One more is under construction at Lahore.

Each station is under the control of a Station Director, who exercises supervision in respect of the programme technical (through the Station Engineer) and clerical staff under him. Other heads of offices are (i) News Editor, All India Radio, (ii) Editor, The Indian Listener, "Awaz" and "Sarang," (iii) Research Engineer and (iv) Installation Engineer. The total strength of All India Radio on the 1st January, 1942, was as follows—

	Headquarters	Other Offices
Office staff	9	312
Station staff	67	271
Total	76	583

Programmes—Programmes, both European and Indian, are planned by Station Directors with the assistance of their Directors of Programmes and Programme Assistants. These are drawn up well in advance of their scheduled dates and are published in the fortnightly journals of All India Radio.

Twenty-two News Bulletins a day in English and Indian languages are broadcast for the benefit of listeners at fixed times of the day from the Central News Organisation at Delhi. All India Radio has also undertaken schemes of rural broadcasting for the uplift of villagers at all its stations except Bombay where the scheme has been suspended, and School Broadcasting at the Delhi, Bombay, Calcutta, Madras and Trichy

poly stations. Public utility items include broadcast of SOS messages for the tracing of lost persons.

Each station of All India Radio generally has the following types of studios for the broadcasting of different kinds of programmes—Folk music, Indian music, Talks, News, Drama, Gramophone records and Feature programmes.

Public Relations—Contact between All India Radio and its listeners is established through the medium of

- (i) Periodical questionnaires issued from its stations to elicit reactions and tastes of listeners.
- (ii) Advisory Committees established at Delhi, Bombay, Calcutta, Madras, Lahore, Lucknow, Trichinopoly and Dacca in consultation with the Provincial Governments to keep the Controller in touch with local public opinion in the matter of programme construction and advise him on such matters.
- (iii) The five Radio Journals of All India Radio, viz The Indian Listener (English), Awaz (Urdu), Sarang (Hindi), Betar Jagat (Bengali) and Vanoli (Tamil).
- (iv) Correspondence with listeners from whom both appreciations and criticisms are received.

Growth of Broadcasting—The growth of Broadcast receiver licences at the end of March of each year beginning with 1933 is given below which will indicate the interest evinced in radio.

Year	Licences*
1933	9,275
1934	12,637
1935	17,891
1936	23,074
1937	42,152
1938	52,857
1939	72,252
1940	97,537
1941	1,25,747

Licences in force at the end of Jan 1942, 1,59,347.

Licences are issued on behalf of the Director General, Posts and Telegraphs, New Delhi, by all head and sub post offices, numbering 4,651 all over India.

Figures of Wireless Imports.

Indian States are taking up actively the installation of radio stations. Hyderabad State has one in operation, while Travancore, Mysore and Baroda are expected to have stations in operation in the near future.

Number of Receivers.—While the number of wireless receivers in India has increased, the total for All India of 1,50,387 at the end of January 1942 is negligible when one considers the vast population, about 388,800,000, and when one compares it with the progress in Europe, America or Japan where it has become an indispensable dynamic social institution.

Taking the figures of wireless licences, there was an increase of 11,000 between January 1933, and July 1935. The number in April 1937 was 43,351, in April 1938, 53,810, in April 1939, 73,698 and in April 1940, 100,388. At the end of 1940 there were 30,053 licence holders in Bombay Presidency, which has the largest number in India.

Radio Imports.—The imports of wireless apparatus into India has increased rapidly in recent years. Imports have increased in value from Rs 10 lakhs in 1932-33 to Rs 35 lakhs in 1936-37. The value for 1937-38 was Rs 47.7 lakhs, in 1938-39, 41 lakhs while in 1939-40 it rose to 59.8 lakhs. For the ten months, 1st April 1941 to 31st January 1942, the value of imports was Rs 44.1 lakhs, as compared

with Rs 38.6 and Rs 40.1 for the corresponding ten months of 1940-41 and 1939-40. Most of the imports are through Bombay.

A feature of the import statistics is the growth of importations from the United Kingdom, which now heads the list of countries supplying wireless apparatus to India. The United States come second.

During the year 1934-35, imports from the United Kingdom fell by over a lakh from Rs 5,71,971 to 4,66,316 while those from the United States of America increased by 6½ lakhs from Rs 1,78,944 to 8,30,348. In 1937-38 imports from the United Kingdom increased to Rs 15,54,884 and in 1938-39 to Rs 16,87,722. Imports from the U. S. A. in 1937-38 amounted to Rs 15,36,217 and in 1938-39 to Rs 12,63,011. In 1939-40 imports from the U. K. were valued at Rs. 17,35,318 whereas from the U. S. A. at Rs 15,95,349. In 1940-41 imports from the U. K. were valued at Rs 17,12,827 and those from the U. S. A. at Rs 22,19,771. For the ten months, 1st April 1941 to 31st January 1942, total imports from the United Kingdom were of the value of Rs 24,35,516 and from the U. S. A. Rs 15,93,066.

Below are given tables showing the value of the radio import trade, the value of principal imports into Bombay and the share of principal countries.

FIGURES OF WIRELESS IMPORTS.

The following tables give the position regarding wireless imports into British India —

ALL-INDIA IMPORTS

1940-41	Rs 44.3 lakhs
1939-40	49.8 "
1938-39	41.1 "
1937-38	47.7 "
1936-37	35.2 "
1935-36	28. "
1934-35	16. "
1933-34	11. "
1932-33	10. "

BOMBAY IMPORTS.

1940-41	Not available
1939-40	Rs 16.58 lakhs
1938-39	26.19 "
1937-38	18.06 "
1936-37	15.70 "
1935-36	8.77 "
1934-35	6.65 "
1933-34	7.03 "
1932-33	" "

The Press.

The newspaper Press in India is an essentially English institution and was introduced soon after the task of organising the administration was seriously taken in hand by the English in Bengal. In 1773 was passed the Regulating Act creating the Governor-Generalship and the Supreme Court in Bengal and within seven years at the end of the same decade, the first newspaper was started in Calcutta by an Englishman in January 1780. Exactly a century and a third has elapsed since, not a very long period certainly, a period almost measured by the life of a single newspaper, *The Times*, which came into existence only five years later in 1785; but then the period of British supremacy is not much longer, having commenced at Plassey, only twenty-three years earlier. Bombay followed Calcutta closely, and Madras did not lag much behind. In 1789 the first Bombay newspaper appeared, *The Bombay Herald*, followed next year by *The Bombay Courier*, a paper now represented by *The Times of India* with which it was amalgamated in 1861. In Bombay the advent of the press may be said to have followed the British occupation of the island much later than was the case in Calcutta. In Calcutta the English were on sufferance before Plassey, but in Bombay they were absolute masters after 1665, and it is somewhat strange that no Englishman should have thought of starting a newspaper during all those hundred and twenty-five years before the actual advent of *The Herald*.

The first newspaper was called *The Bengal Gazette* which is better known from the name of its founder as *Hicky's Gazette* or *Journal*. Hicky like most pioneers had to suffer for his enterprising spirit, though the fault was entirely his own, as he made his paper a medium of publishing gross scandal, and he and his journal disappeared from public view in 1782. Several journals rapidly followed Hicky's, though they did not fortunately copy its bad example. *The Indian Gazette* had a career of over half a

century, when in 1833 it was merged into the *Bengal Harikar*, which came into existence only a little later, and both are now represented by *The Indian Daily News* with which they were amalgamated in 1866. No fewer than five papers followed in as many years, the *Bengal Gazette* of 1780, and one of these, *The Calcutta Gazette*, started in February 1784, under the avowed patronage of Government, flourishes still as the official gazette of the Bengal Government.

In 1821 a syndicate of European merchants and officials commenced the publication of *John Bull in the East*, a daily paper which was intended to reflect Tory opinion in India and set an example to the Press generally in the matter of moderation and restraint. The name of this journal was altered to *The Englishman* by the famous Stocqueler in 1836.

From its commencement the press was jealously watched by the authorities who put serious restraints upon its independence and pursued a policy of discouragement and rigorous control. Government objected to news of apparently the most trivial character affecting its servants. From 1791 to 1799 several editors were deported to Europe without trial and on short notice, whilst several more were censured and had to apologise. At the commencement of the rule of Wellesley Government promulgated stringent rules for the public press and instituted an official censor to whom everything was to be submitted before publication, the penalty for offending against these rules to be immediate deportation. These regulations continued in force till the time of the Marquis of Hastings who in 1818 abolished the censorship and substituted milder rules.

This change proved beneficial to the status of the press, for henceforward self-respecting and able men began slowly but steadily to join the ranks of journalism, which had till then been considered a low profession. Sir Buckingham, one of the ablest and best known

of Anglo-Indian journalists of those days, availed himself of this comparative freedom to criticise the authorities, and under the short administration of Adam, a civilian who temporarily occupied Hastings' place, he was deported under rules specially passed. But Lord Amherst and still more Lord William Bentinck were persons of broad and liberal views, and under them the press was left practically free, though there existed certain regulations which were not enforced, though Lord Clare, who was Governor of Bombay from 1831 to 1835, once strongly but in vain urged the latter to enforce them. Metcalfe, who succeeded for a brief period Bentinck, removed even these regulations, and brought about what is called the emancipation of the press in India in 1835, which was the beginning of a new era in the history of the Indian press. Among papers that came into being, was the *Bombay Times* which was started towards the close of 1838 by the leading merchants of Bombay, and which in 1861 changed its name to the *Times of India*. The *Bombay Gazette* founded in 1791, ceased publication in 1914.

The liberal spirit in which Lord Hastings had begun to deal with the press led not only to the improvement in the tone and status of the Anglo-Indian press, but also to the rise of the Native or Indian Press. The first newspaper in any Indian language was the *Samachar Durpan* started by the famous Serampore Missionaries Ward, Carey and Marshman in 1818 in Bengali, and it received encouragement from Hastings who allowed it to circulate through the post office at one-fourth the usual rates. This was followed in 1822 by a purely native paper in Bombay called the *Bombay Samachar* which still exists, and thus was laid the foundation of the Native Indian

Press which at the present day is by far the largest part of the press in India, numbering over 650 papers.

From 1835 to the Mutiny the press spread to other cities like Delhi, Agra, Gwalior, and even Lahore, whereas formerly it was chiefly confined to the Presidency towns. During the Mutiny its freedom had to be temporarily controlled by the Gagging Act which Canning passed in June 1857 on account of the license of a very few papers, and owing still more to the fears of its circulating intelligence which might be prejudicial to public interest. The Act was passed only for a year at the end of which the press was once more free.

On India passing to the Crown in 1858, an era of prosperity and progress opened for the whole country in which the press participated. There were 19 Anglo-Indian papers at the beginning of this period in 1858 and 25 Native papers and the circulation of all was very small. The number of the former did not show a great rise in the next generation, but the rise in influence and also circulation was satisfactory. Famous journalists like Robert Knight, James Maclean and Hurris Mookerji flourished in this generation. The *Civil and Military Gazette* was originally published in Simla as a weekly paper, the first issue being dated June 22nd, 1872. Prior to and in the days of the Mutiny the most famous paper in Northern India was the *Mofussilite*, originally published at Meerut, but afterwards at Agra and then at Ambala. After a lively existence for a few years in Simla the *Civil and Military Gazette* acquired and incorporated the *Mofussilite*, and in 1876 the office of the paper was transferred from Simla to Lahore, and the *Gazette* began to be published daily.

INDIAN PRESS LAW.

Before 1835 all printing of books and paper was subject to licence by the Governor-General in Council, and the licences were issued or refused at the discretion of Government. Act XI of 1835 repealed the old Regulations and merely required registration of the printer and made a few minor requirements. That Act was replaced in 1867 by the present Press and Registration of Books Act, and, except for an Act which was in force for one year during the Mutiny, there was no further legislation directly affecting the Press until 1878 when the Vernacular Press Act was passed. That Act was repealed during the Viceroyalty of Lord Ripon in 1882. From that date until 1907 Government made no attempt to interfere directly with the liberty of the Press, the growth of sedition being dealt with in other ways by the passing in 1828 of section 124A of the Penal Code in its present form, which had been originally enacted in 1870, and by the introduction into the Penal Code of section 153A and into the Criminal Procedure Code of section 108. There were a certain number of prosecutions under those sections up to 1907, but the dissemination of sedition through the Press continued. In 1908 the Newspaper (Incitement to Offences) Act was passed which dealt with papers inciting

to murder or to acts of violence. This Act failed to have the desired effect.

The Indian Press Act, 1910, was a measure of wider scope, the main object of which was to ensure that the Indian press generally should be kept within the limits of legitimate discussion.

The Act deals, not only with incitement to murder and acts of violence, but also with other specified classes of published matter, including any words or signs tending to seduce soldiers or sailors from their allegiance or duty, to bring into hatred or contempt the British Government, any Native Prince, or any section of His Majesty's subjects in India, or to intimidate public servants or private individuals.

The different sections of the Act have in view (i) Control over presses and means of publication, (ii) control over publishers of newspapers, (iii) control over the importation into British India and the transmission by the post of objectionable matter; (iv) the suppression of seditious or objectionable newspapers, books, or other documents wherever found.

Repeal of Press Legislation—By the return of 1917 the Government of India had begun to consider the desirability of modifying at least one section of the Press Act to which great exception had been taken on account of the wide powers that it gave. Finally, after more than once consulting Local Government, a Committee was appointed in February 1921 after a debate in the Legislative Assembly, to examine the Press and Registration of Books Act, 1867, and the Indian Press Act, 1910, and report what modifications were required in the existing law. That Committee made an unanimous report in July 1921, recommending :—

(1) The Press Act should be repealed.

(2) The Newspapers Incitements to Offences Act should be repealed

(3) The Press and Registration of Books Act and the Post Office Act should be amended where necessary to meet the conclusion noted below : (a) The name of the editor should be inscribed on every issue of a newspaper and the editor should be subject to the same liabilities as the printer and publisher, as regards criminal and civil responsibilities; (b) any person registering under the Press and Registration of Books Act should be a major to be defined by the Indian Majority Act; (c) local Governments should retain the power of confiscating openly seditious leaflets, subject to the owner of the press or any other person aggrieved being able to protest before a court and challenge the seizure of such document, in which case the local Government ordering the confiscation should be called upon to prove the seditious character of the documents. The powers conferred by Sections 13 to 15 of the Press Act should be retained. Customs and Postal officers being empowered to seize seditious literature within the meaning of Section 124A of the I. P. O. subject to review on the part of the local Government and challenge by any persons interested in the courts, (e) any person challenging the orders of Government should do so in the local High Court, (f) the term of imprisonment prescribed in Sections 12, 13, 14 and 15 of the Press and Registration of Books Act should be reduced to six months, (g) the provisions of Section 16 of the Press Act should be reproduced in the Press and Registration of Books Act.

Effect was given to these recommendations during the year 1922

The Indian and Eastern Newspaper Society—An important development in connection with newspapers in India took place in 1939, when the Indian and Eastern Newspaper Society was formed. The Society's principal objects are as follows —(a) To act as a central

organisation of the Press of India, Burma and Ceylon, (b) To promote and safeguard the business interests of members as affected by the action of Legislatures, Governments, the Law Courts, municipal and local bodies and associations or organisations commercial or formed for any other purpose, (c) To collect information upon all topics having a practical interest for members and to communicate the same to them, (d) To promote co-operation in all matters affecting the common interests of members, (e) To hold periodical conferences of its members to discuss and determine action on matters of common interest, (f) To make rules to govern the conduct of its members in specified matters, to provide penalties for the infringement thereof, and to provide means of determining whether there has been such infringement, (g) To maintain a permanent secretariat in India which should watch over the interests of members and should permit of a constant interchange of information and views, (h) To do all such other things as may be conducive or incidental to the attainment of the aforesaid objects

Editors' Conference.—During 1940 a Conference of Editors was called by Mr K Srinivasan of *The Hindu* to consider the Government of India's restrictions on the Press under the Defence of India Act in connection with the Congress satyagraha movement. The Conference was held at Delhi and formed itself into a body representing the Editors of Indian newspapers. As a result of its representations the Government of India decided to withdraw the restrictions on the Press under the Defence of India Act and to set up in each province a Press Advisory Committee which Provincial Press Advisers should consult in connection with articles about which there was doubt. A Committee was also set up at Delhi to act in conjunction with the Chief Press Adviser. These Committees are intended to act as a sort of liaison between the Press and Government, and are appointed with the sanction of both Government and the President of the Editors' Conference

The All-India Newspaper Editors' Conference subsequently adopted a constitution with the following aims and objects —(a) To preserve the high traditions and standards of journalism. (b) To serve and safeguard the interests of the press in regard to the publication of news and fair comment. (c) To secure all facilities and privileges to the press for the due discharge of its responsibilities. (d) To represent the press in India in its relations with the public and public institutions and particularly in its relations to Government to set up Committees who would act as basin between the Government and the press as a whole. (e) To establish and develop contacts with Association with similar objects in other countries

Banking.

An event of great importance in the history of Indian banking was the formation on the 27th January 1921 of the Imperial Bank of India by amalgamation of the three Presidency Banks of Bengal, Bombay and Madras.

The idea of a Central Banking establishment for British India was mooted as early as 1836, and was the subject of a minute by Mr. James Wilson, when Finance Member, in 1859. Again, in 1867 Mr. Dickson, the well-known Secretary of the Bank of Bengal, submitted detailed proposals for an amalgamation of the three Presidency Banks. On various later occasions the matter was brought forward without result and it was discussed by the Chamberlain Commission on Indian Finance and Currency in 1913. The present scheme which has come to fruition was however the result of a *rapprochement* on the part of the Banks themselves as a result of the experience gained during the war and the realisation of the desirability of strengthening and extending the Banking system in India.

The Presidency Banks.—The history of the Presidency Banks in their relationship with Government falls into three well-defined stages. Prior to 1862 the Presidency Banks had the right of note issue, but were directly controlled by Government and the scope of their business was restricted by their charters. The second period was from 1862 to 1876. In 1862 the Banks were deprived of the right of note issue, though by their agreements of that year they were authorised to transact the paper currency business as agents of Government. As compensation for the loss of their right of issue, they were given the use of the Government balances and the management of the treasury work at the Presidency towns and at their branches. The old statutory limitations on their business were at the same time greatly relaxed, though the Government's power of control remained unchanged. In 1866 the agreements were revised and the paper currency business was removed from their control and placed under the direct management of Government. The third period dates from the Presidency Banks Act of 1876 by which nearly all the most important limitations of the earlier period were reimposed. But, very briefly, the principal restrictions imposed by this Act prohibited the Banks from conducting foreign exchange business, from borrowing or receiving deposits payable out of India, and from lending for a longer period than six months, or upon mortgage or on the security of immovable property or upon promissory notes bearing less than two independent names or upon goods, unless the goods of the title to them were deposited with the Bank as security. At the same time Government abandoned direct interference in the management, ceasing to appoint official directors and disposing of their shares in the Banks. The Banks no longer enjoyed the full use of the Government balances. Reserve Treasuries were constituted at the Presidency towns into which the surplus revenues were drawn and the balances left at the disposal of the Banks were strictly limited.

This system continued with only minor modifications until 1920. During the war,

however, the policy was deliberately adopted of reducing the amount of the balances held in the Reserve Treasuries and leaving much larger balances with the Headquarters of the Presidency Banks in order to assist the money market.

The Imperial Bank of India.—Under the Imperial Bank of India Act of 1920 as amended by the amendment Act of 1934 which came into force from 1st April 1935 the control of the Bank is entrusted to a Central Board of Directors with Local Boards at Calcutta, Bombay and Madras and such other places as the Central Board may determine. The Central Board of Directors shall consist of:—

- (a) the presidents, vice-presidents and the secretaries of the Local Boards;
- (b) one person elected from amongst the members by each Local Board;
- (c) a Managing Director and a Deputy Managing Director appointed by the Central Board,
- (d) not more than two non-officials, nominated by the Central Government

Representatives of any new Local Board, which may be constituted, may be added at the discretion of the Central Board.

The Deputy Managing Director and the Secretaries of the Local Boards are entitled to attend the meetings of the Central Board but not entitled to vote. The Deputy Managing Director is entitled to vote in the absence of the Managing Director.

The Central Government shall nominate an officer of the Crown to attend the meetings of the Central Board but he shall not be entitled to vote.

Under the Imperial Bank of India Act of 1920 provision was made for the increase of the capital of the bank. The capital of the three Presidency Banks consisted of 3½ crores of rupees in shares of Rs 500 each, fully subscribed. The additional capital authorised was 7½ crores in shares of Rs 500 each, of which Rs. 125 has been called up, making the present capital of the Bank Rs 11½ crores, of which Rs. 5,62,50,000 has been paid up. The Reserve Fund of the Bank is Rs 5,62,50,000 and the Balance Sheet of 31st December 1941 showed the deposits at Rs 1,08,91,89,667, and Cash Rs 15,20,84,877 with a percentage of cash to liabilities of 14 0/1.

Agreement with Reserve Bank of India.—The Bank has entered into an agreement with the Reserve Bank of India which will remain in force for 15 years and thereafter until terminated after five years' notice on either side. Provisions contained in the agreement between the Imperial Bank of India and the Reserve Bank of India are:—

The Imperial Bank of India shall be the sole agent of the Reserve Bank of India at all places in British India where there is a branch of the Imperial Bank of India which was in existence at the commencement of the Reserve Bank of India Act, 1934, and there is no branch of the Banking Department of the Reserve Bank of India.

In consideration of the performance of the Agency duties, the Reserve Bank of India shall pay to the Imperial Bank of India a remuneration a sum which shall be for the first ten years

during which this agreement is in force a commission calculated at 1/16 per cent on the first 250 crores and 1/32 per cent on the remainder of the total of the receipts and disbursements dealt with annually on account of Government. As for the remaining five years the remuneration to be paid to the Imperial Bank shall be determined on the basis of the actual cost to the Imperial Bank of India, as ascertained by expert accounting investigation.

In consideration of the maintenance by the Imperial Bank of India of branches not less in

number than those existing at the commencement of the Reserve Bank of India Act, the Reserve Bank of India shall, until the expiry of 15 years, make to the Imperial Bank the following payments.—

(a) during the first five years of this agreement Rs 9 lacs per annum,

(b) during the next five years of the agreement Rs 6 lacs per annum; and

(c) during the next five years of the agreement Rs 4 lacs per annum

Note—An Evacuation Branch has been established by the Imperial Bank of India at Lahore to deal with the affairs of the constituents of its Burma Branches now closed. All communications relating to the business of the Bank's former Branches at Akyab, Bassein, Mandalay, Moulmein, Myingyan and Rangoon should now be addressed to —

The Agent, Imperial Bank of India, Evacuation Branch, Masson Narsingdas Building, The Mall, Lahore

In Schedule 1, Part 1, of the Imperial Bank of India Act of 1920 as amended by the amendment Act of 1934, the various descriptions of business which the Bank may transact are laid down, and in Part 2 it is expressly provided that the Bank shall not transact any kind of banking business other than that sanctioned in Part 1

Briefly stated, the main classes of business sanctioned are —

(1) Advancing money upon the security of —

- (a) Stocks, etc., in which a trustee is authorised by act to invest trust moneys and shares of the Reserve Bank of India
- (b) Securities issued by State aided Railways, notified by the Central Government
- (c) Debentures, or other securities issued under Act, by, or on behalf of a district or municipal board or under the authority of any State in India
- (d) Debentures of companies with limited liability registered in India or elsewhere
- (e) Goods, or documents of title thereto, deposited with, or assigned to the Bank
- (f) Goods hypothecated to the Bank against advances
- (g) Accepted Bills of Exchange or Promissory Notes
- (h) Fully paid shares of Companies with limited liability or immovable property or documents of title relating thereto, as collateral security where the original security is one of those specified in 'a' to 'f' and, if authorised by the Central Board, in 'g'

(2) Selling of promissory notes, debentures, stock receipts, bonds, annuities, stock, shares, securities or goods or documents of title to goods deposited with or assigned to the Bank as security for advances

(3) With the sanction of the Provincial Government, advancing money to Courts of Wards upon security of estates in their charge for the period not exceeding nine months in the case of advances relating to the financing of seasonal agricultural operations or six months in other cases

(4) Drawing, accepting, discounting, buying and selling of bills of exchange and other negotiable securities.

(5) Investing the Bank's funds in the securities referred to in (1) a, b, c and d

(6) Making, issuing and circulating of bank post-bills and letters of credit to order or other wise than to the bearer on demand

(7) Buying and selling gold and silver.

(8) Receiving deposits

(9) Receiving securities for safe custody

(10) Selling and acquiring such properties as may come into the Bank's possession in satisfaction of claims

(11) Transacting agency business on commission and the entering into of contracts of indemnity, suretyship or guarantee

(12) Acting as Administrator, for winding up estates

(13) Drawing bills of exchange and granting letters of credit payable out of India

(14) Buying of bills of exchange payable out of India, at any usance not exceeding nine months in the case of bills relating to the financing of seasonal agricultural operations or six months in other cases

(15) Borrowing money upon security of assets of the Bank.

(16) Subsidizing the pension funds of the Presidency Banks, and

(17) Generally, the doing of the various kinds of business including foreign exchange business

The principal restrictions placed on the business of the Bank in Part 2 are as follows:—

(1) It shall not make any loan or advance —

(a) For a longer period than six months except as provided in clauses 3 and 14 above,

(b) upon the security of stock or shares of the Bank,

(c) save in the case of estates specified in Part 1 (Courts of Ward) upon mortgage or security of immovable property or documents of title thereof.

(2) The amount which may be advanced to any individual or partnership is limited.

(3) Discounts cannot be made or advances on personal security given, unless such discounts or advances carry with them the several responsibilities of at least two persons of firms connected with each other in general partnership

(4) Discounts cannot be made or advances given against any security not being a security in which a trustee may invest trust money under the Indian Trusts Act, 1852

The Balance Sheet of the Bank as at 31st December 1941 was as follows:—

* Govt Deposits were taken over by Reserve Bank as from 1st April 1935

Reserve Bank—The Reserve Bank of India Act was passed by the Legislative Assembly and received the assent of the Governor-General on 6th March 1934 and the Bank began to function from 1st April 1935. From this date, the Reserve Bank took over the management of the Currency Department of the Government of India by the creation of a special department known as the Issue Department. The assets of the Gold Standard Reserve were transferred to the Bank and were combined with the assets of the Currency Department. From July 1st the Banking Department was opened and the scheduled banks deposited the required percentage of their demand and time liabilities. The Clearing House was transferred from the Imperial Bank to the Reserve Bank as from this date.

The share capital of the Reserve Bank is 5 crores of Rupees in shares of Rs 100 each, fully paid up. The Reserve Fund of Rupees five crores is provided by Government to the Bank in the form of Government Rupee Securities.

The Bank maintains share registers at its offices at Bombay, Calcutta, Delhi, Madras and Rangoon.

Management—The general superintendence and direction of the affairs and business of the Bank is entrusted to a Central Board of Directors which exercises all powers and does all acts and things which may be exercised and done by the Bank. The Board is composed of—

(a) A Governor and two Deputy Governors appointed by the Central Government after consideration of the recommendations made by the Board.

(b) Four Directors nominated by the Central Government.

(c) Eight Directors elected on behalf of the shareholders on the various registers.

(d) One Government official nominated by the Central Government.

The Governor and Deputy Governors are the executive heads, and hold office for such term not exceeding five years as the Central Government may fix when appointing them, and are eligible for re-appointment. A Local Board is constituted for each of the five areas.

Business which the Bank may transact—The Bank is authorised to carry on and transact the following commercial business, viz.—The accepting of money on deposit without interest, the purchase, sale and rediscount of bills of exchange and promissory notes with certain restrictions, the making of loans and advances, repayable on demand but not exceeding 90 days, against the security of stocks, funds and securities (other than immovable property) against gold coin or bullion or documents of title to the same and such bills of exchange and

promissory notes as are eligible for purchase or rediscount by the Bank; the purchase from and sale to scheduled Banks of sterling in amounts of not less than the equivalent of Rs. 1 lac; the making of advances to the Central Government and to Provincial Governments repayable in each case not later than three months from the date of making the advance; the purchase and sale of Government securities of the United Kingdom maturing within ten years from the date of purchase, the purchase and sale of securities of the Government of India or of a Provincial Government of any maturity or of a local authority in British India or of certain States in India which may be specified.

The Bank is authorised to act as Agent for the Secretary of State in Council, the Central Government or any Provincial Government or State in India for the purchase and sale of gold and silver; for the purchase, sale, transfer and custody of bills of exchange, securities or shares, for the collection of the proceeds, whether principal, interest or dividends, of any securities or shares; for the remittance of such proceeds by bill of exchange payable either in India or elsewhere, and for the management of public debt.

Right to issue Bank Notes.—The sole right to issue bank notes in British India is vested in the Reserve Bank and at the commencement the Bank shall issue currency notes of the Government of India supplied to it by the Central Government and on and from the date of such transfer the Central Government shall not issue any currency notes. The issue of bank notes shall be conducted by the Bank in an Issue Department which shall be separated and kept wholly distinct from the Banking Department.

Obligation to Sell or Buy Sterling.—The Bank shall sell to or buy from any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon, sterling for immediate delivery in London at a rate not lower than 1s. 5 49-64d. and not higher than 1s. 6 3-16d. respectively; provided that no person shall be entitled to demand to buy or sell an amount of sterling less than ten thousand pounds.

Publication of the Bank Rate.—The Bank shall make public from time to time the standard rate at which it is prepared to buy or re-discount bills of exchange or other commercial paper eligible for purchase under the Act.

The Bank will publish the accounts of both the Issue and Banking Departments weekly in the *Gazette of India*.

The full text of the Reserve Bank Act is reproduced elsewhere in the Year Book.

THE EXCHANGE BANKS.

The Banks carrying on Exchange business in India are merely branch agencies of Banks having their head offices in London, on the continent, or in the Far East and the United States. Originally their business was confined almost exclusively to the financing of the external trade of India; but in recent years most of them, while continuing to finance this part of India's trade, have also taken an active part in the financing of the internal portion also at the places where their branches are situated.

At one time the Banks carried on their operations in India almost entirely with money borrowed elsewhere, principally in London—the home offices of the Banks attracting deposits for use in India by offering rates of interest much higher than the English Banks were able to quote. Within recent years however it has been discovered that it is possible to attract deposits in India on quite as favourable terms as can be done in London and a very large proportion of the financing done by the Exchange Banks is now carried through by means of money actually borrowed in India. No information is available as to how far each Bank has secured deposits in India, but the following statement published by the Director-General of Statistics in India shows how rapidly such deposits have grown in the aggregate within recent years.

Exchange Banks' Investments.

Turning now to the question of the investment of the Banks' resources, so far as it concerns India, this to a great extent consists of the purchase of bills drawn against imports and exports to and from India.

The financing of the import trade originated and is carried through however for the most part by Branches outside India, the Indian Branches' share in the business consisting principally in collecting the amount of the bills at maturity and in furnishing their other branches with information as to the means and standing of the drawers of the bills, and it is as regards the export business that the Indian Branches are more immediately concerned. The Exchange Banks have practically a monopoly of the export finance in India and in view of the dimensions of the trade which has to be dealt with the Banks would under ordinary circumstances require to utilise a very large proportion of their resources in carrying through the business. They are able, however, by a system of rediscount in London to limit the employment of their own resources to a comparatively small figure in relation to the business they actually put through. No definite information can be secured as to the extent to which rediscounting in London is carried on, but the following figures appearing in the Balance sheets latest available of the undischarged Banks will give some idea of this:—

LIST OF BILLS OF EXCHANGE REDISCOUNTED AND STILL CURRENT	
Chartered Bank of India, Australia and China	£ 577,000
Eastern Bank, Ltd.	48,000
India and Shanghai Banking Corporation	573,000
London and China Bank, Ltd.	1,113,000
London and India Bank, Ltd.	675,000
	£ 3,386,000

The above figures do not of course relate to re-discounts of Indian bills alone, as the Banks operate in other parts of the world also, but it may safely be inferred that bills drawn in India form a very large proportion of the whole.

The bills against exports are largely drawn at three months' sight and may either be "clean" or be accompanied by the documents relating to the goods in respect of which they are drawn. Most of them are drawn on well-known firms at home or against credits opened by Banks or financial houses in England and bearing as they do an Exchange Bank endorsement they are readily taken up by the discount houses and Banks in London. Any bills purchased in India are sent home by the first possible Mail so that presuming they are rediscounted as soon as they reach London the Exchange Banks are able to secure the return of their money in about 16 or 17 days instead of having to wait for three months which would be the case if they were unable to rediscount. It must not be assumed however that all bills are rediscounted as soon as they reach London as at times it suits the Banks to hold up the bills in anticipation of a fall in the London discount rate while on occasions also the Banks prefer to hold the bills on their own account as an investment until maturity.

The Banks place themselves in funds in India for the purpose of purchasing export bills in a variety of ways of which the following are the principal:—

- (1) Proceeds of import bills as they mature
- (2) Sale of drafts and telegraphic transfers payable in London and elsewhere out of India.
- (3) Purchase of Council Bills and Telegraphic Transfers payable in India from the Secretary of State.
- (4) Imports of bar gold and silver bullion
- (5) Imports of sovereigns from London, Egypt or Australia.

The remaining business transacted by the Banks in India is of the usual nature and need not be given in detail.

The following is a statement of the position of the various Exchange Banks carrying on business in India as it appears from the latest available Balance sheets:—

In Thousands of £

Name	Capital	Reserve	Deposits	Cash and Investments

JOINT STOCK BANKS.

Previous to 1906 there were few Banks of this description operating in India, and such as were then in existence were of comparatively small importance and had their business confined to a very restricted area. The rapid development of this class of Bank, which has been so marked a feature in Banking within recent years, really had its origin in Bombay and set in with the establishment of the Bank of India and the Indian Specie Bank in 1906. After that time there was a perfect stream of new flotations, and although many of the new Companies confined themselves to legitimate banking business, on the other hand a very large number engaged in other businesses in addition and can hardly be properly classed as Banks.

These Banks made very great strides during the first few years of their existence, but it was generally suspected in well informed circles that the business of many of the Banks was of a very speculative and unsafe character and it was a matter of no great surprise to many people when it became known that some of the Banks were in difficulties.

The first important failure to take place was that of the People's Bank of India and the loss of confidence caused by the failure of that Bank resulted in a very large number of other failures, the principal being that of the Indian Specie Bank.

The following shows the position of the better known existing Banks as it appears in the latest available Balance Sheets —

In Lakhs of Rupees

INDIAN PRIVATE BANKERS AND SHROFFS.

Indian private Bankers and Shroffs flourished in India long before Joint Stock Banks were ever thought of, and it seems likely that they will continue to thrive for some very considerable time to come. The use of the word "Shroff" is usually associated with a person who charges usurious rates of interest to impecunious people, but this is hardly fair to the people known as "shroffs" in banking circles; as there is no doubt that the latter are of very real service to the business community and of very great assistance to Banks in India. Under present conditions the Banks in India can never hope to be able to get into sufficiently close

touch with the affairs of the vast trading community in India to enable them to grant accommodation to more than a few of these traders direct and it is in his capacity as middleman that the shroff proves of such great service. In this capacity also he brings a very considerable volume of business within the scope of the Presidency Banks Act, and enables the Presidency Banks to give accommodation which, without his assistance, the Banks would not be permitted to give. The shroff's position as an intermediary between the trading community and the Banks usually arises in something after the following manner. A shopkeeper in the bazaar, with limited means of his own, finds that, after using all his own money, he still requires say Rs. 25,000 to stock his shop suitably. He thereupon approaches the shroff, and the latter after very careful inquiries as to the shopkeeper's position grants the accommodation, if he is satisfied that the business is safe. The business, as a rule, is arranged through a hoondee broker, and in the case referred to the latter may probably approach about ten shroffs and secure accommodation from them to the extent of Rs. 2,500 each. A hoondee usually drawn at a currency of about 2 months is almost invariably taken by the shroffs in respect of such advances.

A stage is reached however when the demands on the shroffs are greater than they are able to meet out of their own money; and it is at this point that the assistance of the Banks is called into requisition. The shroffs do this by taking a number of the bills they already hold to the Banks for discount under their endorsement, and the Banks accept such bills freely to an extent determined in each case by the standing of the shroff and the strength of the drawers.

The extent to which any one shroff may grant accommodation in the bazaar is therefore dependent on two factors, viz., (1) the limit which he himself may think it advisable to place on his transactions, and (2) the extent to which the Banks are prepared to discount bills bearing his endorsement. The shroffs keep in very close touch with all the traders to whom they grant accommodation, and past experience has shewn that the class of business above referred to is one of the safest the Banks can engage in.

The rates charged by the shroffs are usually based on the rates at which they in turn can discount the bills with the Banks and necessarily vary according to the standing of the borrower and with the season of the year. Generally speaking, however, a charge of two annas per cent. per mensem above the Bank's rate of discount, or 1½%, is a fair average rate charged in Bombay to a first class borrower. Rates in Calcutta and Madras are on a slightly higher scale due in a great measure to the fact that the competition among the shroffs for business is not so keen in these places as it is in Bombay.

The shroffs who engage in the class of business above described are principally Narwarries and Multanis having their Head Offices for the most part in Bikaner and Shikarpur, respectively, the business elsewhere than at the Head Offices being carried on by "Moonims" who have very wide powers.

It is not known to what extent native bankers and shroffs receive deposits and engage in exchange business throughout India, but there is no doubt that this is done to a very considerable extent.

THE BANK RATE.

Formerly each Presidency Bank fixed its own Bank Rate, and the rates were not uniform. After the amalgamation of the Presidency Banks the Imperial Bank fixed the rate for the whole of India until the 4th of July 1935 when the right to fix the official Bank rate was exercised by the Reserve Bank. The rate fixed represents the rate charged by the Banks on demand loans against Government securities only

and advances on other securities or discounts are granted as a rule at a slightly higher rate. Ordinarily such advances or discounts are granted at from one-half to one per cent. over the official rate, but this does not always apply and in the monsoon months, when the Bank rate is some times nominal, it often happens that such accommodation is granted at the official rate or even less.

The following statement shows the average Bank Rates during the last 14 years.—

Year.					1st Half-year	2nd Half-year	Yearly average
1928	6.945	5.456	6.2
1929	6.878	5.788	6.333

1937	3	3	3
1938	3	3	3
1939	3	3	3
1940	3	3	3
1941	3	3	3

BANKERS' CLEARING HOUSES.

The principal Clearing Houses in India are those of Calcutta, Bombay, Madras, Rangoon, Colombo and Karachi, and of these the first two are by far the most important. The members at these places consist of the Imperial Bank, Reserve Bank, most of the Exchange Banks and English Banking Agency firms, and a few of the better known of the local Joint Stock Banks. No Bank is entitled to claim to be a member as of right and any application for admission to a Clearing must be proposed and seconded by two members and be subject thereafter to ballot by the existing members.

The duties of settling Bank are undertaken by the Reserve Bank at Calcutta, Bombay, Madras, Karachi and Rangoon and by the Imperial Bank at Colombo and a representative of each member attends at the office of that Bank on each business day at the time fixed to deliver

all cheques he may have negotiated on other members and to receive in exchange all cheques drawn on him negotiated by the latter. After all the cheques have been received and delivered the representative of each Bank advises the settling Bank of the difference between his total receipts and deliveries and the settling Bank thereafter strikes a final balance to satisfy itself that the totals of the debtor balances agrees with the total of the creditor balances. The debtor Banks thereafter arrange to pay the amounts due by them to the settling Bank during the course of the day and the latter in turn arranges to pay on receipt of those amounts the balances due to the creditor Banks. In practice however all the members keep Bank accounts with the settling Bank so that the final balances are settled by cheques and book entries thus doing away with the necessity for cash in any form.

The figures for the Clearing Houses in India above referred to are given below.—

Total amount of Cheques Cleared Annually.

In Lakhs of Rupees.

tent of the main line's net earnings in supplement of their own net earnings, the total being limited to 3½ per cent on the capital outlay. Under these terms, a considerable number of feeder line companies was promoted, though in none were the conditions arbitrarily exacted. As these terms did not at first attain their purpose, they were further revised, and in lieu was substituted an increase in the rate of guarantee from 3 to 3½ per cent and of rebate from 3½ to 5 per cent, with equal division of surplus profits over 5 per cent in both cases. At last, the requirements of the market were met, and there was for a time a mild boom in feeder railway construction and the stock of all the sound companies promoted stood at a substantial premium. Conditions changed after the war and the Acworth Committee so far from approving of this system, considered that the aim of the Government should be to reduce by amalgamation the number of existing companies and that it should only be in cases where the State cannot or will not provide adequate funds that private enterprise in this direction should be encouraged.

The existing Branch Line Companies have ceased for some time to raise additional capital for capital requirements. They have either obtained overdrafts from various Banks for this purpose at heavy rates of interest or issued debentures at special rates of interest (usually about 7 per cent) or in several cases asked for money to be advanced to them by the Railway Board. So far, therefore, from reducing the amount that the Government of India have to raise in the open market, they were increasing the amount. For the above reasons, the Government of India have abolished this system and are now prepared themselves to find the capital required for the construction of extensions or branches to existing main line systems. They have also announced their readiness to consider the question of constructing branch or feeder lines which were not expected to be remunerative from the point of view of railway earnings upon a guarantee against loss from a Local Government or local authority which might desire to have such lines constructed for purely local reasons or on account of administrative advantages likely to accrue in particular areas. This proposal was put forward as affording a suitable method of reconciling the interests of the Central and the Local Governments and of providing for local bodies and for Local Governments a method of securing the construction of railways which may be required for purely local reasons and which, while not likely to prove remunerative on purely railway earnings, are likely to give such benefits to Local Governments and local bodies as will more than repay the amounts paid under the guarantee. Some such arrangements have already been made with Local Governments in Madras, Punjab, Assam and Bombay.

Railway Profits begin.

Meantime a much more important change was in progress. The gradual economic development of the country vastly increased the traffic, both passenger and goods. The falling in of the original contracts allowed Government to renew them on more favourable

terms. The development of irrigation in the Punjab and Sind transformed the North-Western State Railway. Owing to the burden of maintaining the unprofitable Frontier lines, this was the Cinderella Railway in India—the scapegoat of the critics who protested against the unwisdom of constructing railways from borrowed capital. But with the completion of the Chenab and Jhelum Canals, the North-Western became one of the great grain lines of the world, choked with traffic at certain seasons of the year and making a large profit for the State. In 1900 the railways for the first time showed a small gain to the State. In succeeding years the net receipts grew rapidly. In the four years ended 1907-08 they averaged close upon £2 millions a year. In the following year there was a relapse. Bad harvests in India, accompanied by the monetary panic caused by the American financial crisis, led to a great falling off in receipts just when working expenses were rising, owing to the general increase in prices. Instead of a profit, there was a deficit of £1,240,000 in the railway accounts for 1908-09. But in the following year there was a reversion to a profit, and the net Railway continued to increase steadily till it reached a figure of over £10 millions in 1918-19. This era of profits ended with the close of the year 1920-21 and in 1921-22 there was a loss of over £6 millions. These changes in the fortunes of the railways affected the Budget of the Central Government rather seriously and in 1924-25 the Railway finances were separated from the General Budget. The terms of the separation are referred to in a later paragraph while the profits of the railway in the years from 1924-25 onwards are given below.

Year	Contribution to General Revenues	Transferred to Railway Reserve Fund †	Total Gain or loss *
	Rs	Rs	Rs
1924-25	6,78,00,000	6,38,00,000	13,16,00,000
1925-26	5,49,00,000	3,79,00,000	9,28,00,000
1926-27	6,01,00,000	1,49,00,000	7,50,00,000
1927-28	6,28,00,000	4,57,00,000	10,85,00,000

* Figures preceded by a — indicate a loss

1933-34 is the first year to show some signs of recovery since the depression. The earnings of the State-owned lines increased from Rs 64 crores in 1932-33 to Rs 86 crores in 1933-34 and to Rs 95.48 crores in 1936-37, but the net result of the year's working showed a gain of Rs. 121 lakhs.

given the status of a Secretary to Government with the right of independent access to the Viceroy; he usually sat in the Imperial Legislative Council as the representative of the Railway interest. In 1912 in consequence of complaints of the excessive interference of the Board with the Companies, an informal mission was undertaken by Lord Inchcape to reconcile differences. Various changes were introduced during the years 1912-1920 such as the modification of the rule that the President and members of the Railway Board should all be men of large experience in the working of railways due to the importance of financial and commercial considerations in connection with the control of Indian Railway policy. This decision was, however, revised in 1920 and an additional appointment of Financial Adviser to the Railway Board created instead. The question of the most suitable organization was further fully examined by the Acworth Committee in 1921 and a revised organization which is described later was introduced from 1st April 1924.

Some of the difficulties involved in the constitution of a controlling authority for the railways of India may be realized from a study of the "Notes on the Relation of the Government to Railways in India" which was being printed as appendix 'B' to Volume I of the Annual Report by the Railway Board on Indian Railways upto the Report for the year 1938-39. These notes bring out the great diversity of conditions prevailing which involve the Railway Department in the exercise of the functions of—

(a) the directly controlling authority of the State-worked systems aggregating 10,852 miles on the 31st March 1941,

(b) the representative of the predominant owning partner in systems aggregating 24,199 miles,

(c) the guarantor of many of the smaller companies and

(d) the statutory authority over all railways in India.

Moreover in all questions relating to railways or extra municipal tramways in which Provincial Governments are concerned, the Railway Department is called upon to watch the interests of the Central Government and is frequently asked to advise the Local Governments. Its duties do not end there. The future development of railways depends largely on the Government of India and the Railway Department is therefore called upon to plan out schemes of development, to investigate and survey new lines and to arrange for financing their construction. The evolution of a satisfactory authority for the administration of these varied functions has proved extremely difficult and the question was one of those referred to the Railway Committee (1920-21) presided over by Sir William Acworth who recommended the early appointment of a Chief Commissioner of Railways whose first duty should be to prepare a definite scheme for the reorganization of the Railway Department and Mr. C. D. M. Hindley, formerly Agent of the East Indian Railway and Chairman of the Calcutta Port Trust, was appointed Chief Commissioner on November 1st, 1922.

The principal constitutional change involved in this appointment is that the Chief Commissioner who takes the place of the President of the

Railway Board is solely responsible—under the Government of India—for arriving at decisions on technical matters and for advising the Government of India on matters of railway policy and is not, as was the President, subject to be out-voted and over-ruled by his colleagues on the Board. The detailed re-organization of the Railway Board in accordance with the Chief Commissioner's proposals required careful consideration but one of the most important of his recommendations namely the appointment of a Financial Commissioner was considered of particular urgency and the Secretary of State's sanction was therefore obtained to the appointment with effect from 1st April 1923. The Railway Board as then reconstituted consisted of the Chief Commissioner, the Financial Commissioner and two members. The proposal of the Acworth Committee that the Indian Railways should be sub-divided into 3 territorial divisions with a Commissioner in-charge of each was not accepted and the work of the Members of the Board was divided on the basis of subjects.

The reorganization carried out in 1924 had for one of its principal objects the relief to the Chief Commissioner and the Members from all but important work so as to enable them to devote their attention to larger questions of railway policy and to enable them to keep in touch with Local Governments, railway administrations and public bodies by touring to a greater extent than they had been able to do in the past.

This object was effected by the following new posts which in some cases supplemented the existing ones and in other cases replaced them: Directors of Civil Engineering, Mechanical Engineering, Traffic, Establishment and Finance and seven Deputy Directors working under them.

The necessity of some central organisation to co-ordinate the publicity carried out on railways and to undertake work on the many forms of railway publicity which can be best organised by one central body led to the inauguration of the Central Publicity Bureau under a Chief Publicity Officer in 1927. The Bureau was a great success and the organisation was made permanent from January 1st 1929. In the slump of the 4th decade of the present century, however, it was found difficult to maintain this. Moreover when the war of 1939 came on, it had its own effects. The Central Publicity Bureau was ultimately shifted to Calcutta on the 1st July, 1940, and amalgamated with the Publicity Offices of the East Indian and Eastern Bengal Railways.

The growing importance of Labour questions necessitated the organisation of a new branch in the Railway Board's office and to the appointment in 1929 of a third member whose main duties are connected with the satisfactory solution of labour problems and the improvements of the conditions of service of the staff generally and of the lower paid employees in particular.

During the depression which began with the 'thirties it was decided to hold in eleven many superior posts including that of Member, Traffic, Member, Engineering, Director of Engineering and Director Mechanical Engineering. Some of these posts have since

revived and on the recommendations of the Indian Railway Enquiry Committee—presided over by Sir Ralph Wedgwood—the Central Accounts organisation of railways was taken over by the Railway Board. The present superior staff in the railway Board, therefore, consists of the Chief Commissioner, the Financial Commissioner, 2 Members, 5 Directors, a Controller of Railway Accounts, a Secretary and 11 deputies and assistants.

Under the Railway Board's policy of progressive standardisation, a Central Standardisation Office was established in 1930 under a Chief Controller of Standardisation to provide the means whereby such standardisation would be progressively effected in accordance with changing conditions and as the result of practical experience. The technical Officer under the Railway Board was transferred to this office as a Deputy Controller. This office was made permanent in 1935.

The question of transferring the supervision of railway accounts of State Railways from the Finance Department to the Railway Board was under consideration for some time and in accordance with a resolution adopted, by the Legislative Assembly in September 1925, a start was made with the transfer of the supervision of railway accounts on the East Indian Railway. At the same time a separate Audit Staff was appointed reporting directly to the Auditor-General. As it was found that the separation of Audit from Accounts led to greater efficiency, a similar organisation was introduced on other State-managed railways during 1929. The supervision of Accounts Officers was placed under a Controller of Railway Accounts reporting to the Financial Commissioner of Railways and that of Audit Officers under a Director of Railway Audit reporting to the Auditor-General. These two duties were previously combined under the Accountant-General, Railways, reporting to the Auditor-General. The Chief Accounts Officers on railways are now under the Agent and the Controller of Railway Accounts occupies the position of a Director under the Railway Board.

Management

There are two important systems of administration organisation on Indian Railways—the Divisional system and the Departmental system. In the divisional system the railway is divided into divisions, each under a Divisional Superintendent who in turn has officers of all departments like Civil Engineering, Transportation, Commercial, Accounts, Stores, the running and operation portion of Mechanical Engineering and on some railways even the Medical, working under him in his division. In the departmental system the railway is divided into smaller portions called districts by each department (and districts of the various departments need not be co-terminous) and each of these districts is under a District Officer reporting direct to the head of his department in the Headquarters Office.

Clearing Accounts Office.

A Clearing Accounts Office, with a Statutory Audit Office attached thereto, was opened in December 1926 to take over work relating to the check and apportionment of

traffic interchanged between State-managed Railways. The work of the different railways was gradually transferred to this office, the North Western Railway being taken over first on the 1st January 1927, the East Indian Railway following on the 1st April, the Eastern Bengal Railway on the 1st January 1928, and the Great Indian Peninsula Railway later.

At the request of the Bombay, Baroda and Central India Railway an exhaustive experiment was conducted to check the accuracy of the results obtained by the revised procedure, and as the experiment was completely successful, the Board of Directors of the Bombay, Baroda & Central India Railway have also agreed to the transfer of the check and apportionment of their foreign traffic to the Clearing Accounts Office.

During 1927-28 demonstrations explaining the Clearing Accounts Office procedure were given to the representatives of the Press as well as to the representatives of the various railways who visited the office to study the new procedure.

The Railway Conference.

In order to facilitate the adjustment of domestic questions, the Railway Conference was instituted in 1876. This Conference was consolidated into a permanent body in 1903 under the title of the Indian Railway Conference Association. It is under the direct control of the railways, it elects a President from amongst the members, and has done much useful work.

The Indian Gauges.

The standard gauge for India is five feet six inches. When construction was started the broad-gauge school was strong, and it was thought advisable to have a broad-gauge in order to resist the influence of cyclones. But in 1870, when the State system was adopted it was decided to find a more economical gauge, for the open lines had cost £17,000 a mile. After much deliberation, the metre-gauge of 3 feet 3½ inches was adopted, because at that time the idea of adopting the metric system for India was in the air. The original intention was to make the metre-gauge lines provisional; they were to be converted into broad-gauge as soon as the traffic justified it; consequently they were built very light. But the traffic expanded with surprising rapidity, and it was found cheaper to improve the carrying power of the metre-gauge lines than to convert them to the broad-gauge. So, except in the Indus Valley, where the strategic situation demanded an unbroken gauge, the metre-gauge lines were improved and they became a permanent feature in the railway system. Now there is a great metre-gauge system north of the Ganges connecting Assam with the Rajputana lines and Kathiawar and another system in Southern India serving large tracts of the Bombay and Madras presidencies and the States of Hyderabad, Mysore and Travancore. These two systems are not yet connected, but the necessary link from Khandwa by way of the Nizam's Hyderabad-Godavari Railway, cannot be long delayed. All the Burma lines are on the metre-gauge. Certain feeder and hill railways have been constructed on the 2'-6" and 2'-0" gauges.

and since the opening of the Barsi Light Railway which showed the possible capacity of the 2'-6" gauge, there has been a tendency to construct feeder lines on this rather than on the metre-gauge

State versus Company Management.—

The relative advantages and disadvantages of State and Company management of the railways owned by Government which comprise the great bulk of the railway mileage in India have been the subject of discussion in official circles and the public press for many years. In India the question is complicated by the fact that the more important companies have not in recent years been the owners of the railways which they manage and the headquarters of their Boards are in London. The subject was one, perhaps the most important, of the terms of reference of the Acworth Railway Committee. That Committee was unfortunately, unable to make a unanimous recommendation on this point, their members being equally divided in favour of State management and Company management. They were, however, unanimous in recommending that the present system of management by Boards of Directors in London should not be extended beyond the terms of the existing contracts and this recommendation has met with general public acceptance. During the year 1922-23, the question was again referred to certain Local Governments and public bodies and opinions collected and discussed.

The subject has also been discussed on many occasions in the Central Legislature. The Government of India have, however, been following a uniform policy of increasing the scope of direct State-management. The East Indian Railway was taken over for State-management from 1st January, 1925, and since then the policy has been continued, the latest additions to state-management being the B B & O I Railway which was taken over for this purpose from 1st January, 1942, and the Assam Bengal Railway which was taken over from the same date and amalgamated with the Eastern Bengal Railway to form the state-managed Bengal and Assam Railway.

At the end of 1929-30 the Nizam's Guaranteed State Railways system which was the property of the Company, was acquired and its management taken over by His Exalted Highness the Nizam's Government and is now known as His Exalted Highness the Nizam's State Railway.

Separation of the Railway from the General Finances.—The question of the separation of the railway from the general finances was under consideration for some time and as a result of the recommendations of the Acworth Committee in 1921, the question was further examined by the Railway Finance Committee and the Legislative Assembly but it was decided to postpone a definite decision for the present

The question was examined afresh in connection with the recommendation of the Retrenchment Committee in 1923, that the railways in India should be so worked as to yield an average return of at least 5½ per cent on the capital at charge and it was decided that a suitable time had arrived when this separation could be carried out. A resolution was accordingly introduced

in the Assembly on the 3rd March 1924, recommending to the Governor-General in Council—that in order to relieve the general budget from the violent fluctuations caused by the incorporation therein of the railway estimates and to enable the railway to carry out a continuous railway policy based on the necessity of making a definite return over a period of years to the State on the Capital expended on railways:—

(1) The railway finances shall be separated from the general finances of the country and the general revenues shall receive a definite annual contribution from railways which shall be the first charge on railway earnings.

(2) The contribution shall be a sum equal to five-sixths of 1 per cent on the capital at charge of the railways (excluding capital contributed by Companies and Indian States and Capital expenditure on strategic Railways) at the end of the penultimate financial year plus one-fifth of any surplus profits remaining after payment of this fixed return, subject to the condition that if any year railway revenues are insufficient to provide the percentage of five-sixths of 1 per cent on the capital at charges surplus profits in the next or subsequent years, will not be deemed to have accrued for purposes of division until such deficiency has been made good. From the contribution so fixed will be deducted the loss in working, and the interest on capital expenditure on strategic lines.

(3) Any surplus profits that exist after payment of these charges shall be available for the Railway administration to be utilised in—

(a) forming reserves for,

(i) equalising dividends, that is to say, of securing the payment of the percentage contribution to the general revenues in lean years,

(ii) depreciation,

(iii) writing down and writing off capital,

(b) the improvement of services rendered to the public,

(c) the reduction of rates

(4) The railway administration shall be entitled, subject to such conditions as may be described by the Government of India, to borrow temporarily from capital or from the reserves for the purpose of meeting expenditure for which there is no provision or insufficient provision in the revenue budget subject to the obligation to make repayment of borrowings out of the revenue budgets of subsequent years.

(5) In accordance with present practice the figures of gross receipts and expenditure of railways will be included in the Budget Statement. The proposed expenditure will, as at present, be placed before the Legislative Assembly in the form of a demand for grants and on a separate day or days among the days allotted for the discussion of the demands for grants the Member in charge of the Railways will make a general statement on railway accounts and working. Any reductions in the demand for grants for railways resulting from the votes of the Legislative Assembly will not encroach on general revenues, i.e., will not have the effect of increasing the fixed contribution for the year.

(6) The Railway Department will place the estimate of railway expenditure before the Central Advisory Council on some date prior to the date for the discussion of the demand for grants for railways."

This resolution was examined by the Standing Finance Committee in September and was introduced with certain modifications. The final resolution agreed to by the Assembly on September 20th, 1924, and accepted by Government differed from the original resolution in that the yearly contribution had been placed at 1 per cent instead of 5/6th per cent on the capital at charge and if the surplus remaining after this payment to General Revenues should exceed 3 crores, only 1/3rd of the excess over 3 crores were to be transferred to the Railway Reserve and the remaining 2/3rd was to accrue to General Revenues. At the same time a Standing Finance Committee for Railways was to be constituted to examine the estimate of railways expenditure and the demand for grants, the programme revenue expenditure being shown under a depreciation fund. This committee was to consist of one nominated official member of the Legislative Assembly as Chairman and 11 members elected by the Legislative Assembly from that body. This would be in addition to the Central Advisory Council which will include the Members of the Standing Finance Committee and certain other official and non-official members from the Legislative Assembly and Council of State. These arrangements were to be subject to periodic revision but to be provisionally tried for at least 3 years. They would, however, only hold good as long as the E I Railway and the G. I. P. Railway and existing State Managed Railways remain under State-management and if any contract for the transfer of any of the above to Company management was concluded against the advice of the Assembly, the Assembly would be at liberty to terminate the arrangements in this resolution.

The Assembly in an addendum recommended that the railway services and the Railway Board should be rapidly Indianised and that the stores for the State Managed Railways should be purchased through the organisation of the Indian Stores Department.

Re-organisation problems—The growing complexity of railway administration in India and the evolution of new methods of controlling traffic have given a stimulus to the efforts of various railways to revise their organisations. The general direction in which this re-organisation is being considered is that of consolidation into one department of the operating or transportation work of the railway, including the provision of power. This system is invariably in existence on those railways which have adopted the Divisional organisation. It is also being adopted by some railways where the general organisation is still on the Departmental basis.

The Pope Committee.

When the railway finances were in a bad way, a Committee under the chairmanship of Mr F. A. Pope, General Executive Assistant to the President of the L. M. S. Railway was formed to investigate and inaugurate a detailed analysis of every important achievement of

railway operation. The Committee started work during 1932-33 and among other things, perfected a system of detailed investigation into individual items of railway working which came to be known as 'Job Analysis'.

Mr. Pope returned to India in 1933-34 and prepared a second report based upon the progress of the work and on further possibilities of economy.

The most important recommendations of Mr Pope's second report related to —

- 1 Intensive use of locomotives.
- 2 Intensive use of coaching stock.
- 3 Intensive use of machinery and plant.
- 4 Disposal of Uneconomical wagons
- 5 Combining resources between railways.
- 6 Handling and transport of smalls traffic and of traffic to be transhipped at break of gauge stations.
- 7 Ticketless travel
- 8 Methods of increasing earnings.

As a result of the 1st report of the Pope Committee, special 'Job Analysis' Organisations, were set up on most of the important Indian Railways. Their main purpose was to investigate in detail by special methods individual aspects of railway working and suggest means whereby economies may be achieved or the efficiency of operation increased.

Having overhauled the methods of working on the railways by stages, these organisations have since been abolished.

Indian Railway Enquiry Committee.

As a result of the recommendation of the public Accounts Committee the Indian Railway Enquiry Committee was appointed in October 1936. This Committee was under the Chairmanship of Sir Ralph L. Wedgewood, O.B., C.M.B., Chief General Manager of the London North Eastern Railway. Its terms of reference were —

To examine the position of Indian State owned railways and to suggest such measures as may, otherwise than at the expense of the general budget,

- (i) to secure an improvement in net earnings' due regard being paid to the question of establishing such effective co-ordination between road and rail transport as will safeguard public investment in railways, while providing adequate services by both means of transport, and
- (ii) at a reasonably early date, place railway finances on a sound and remunerative basis.

The report was submitted in June 1937 and duly considered by the Railway Board. Early action was taken to implement such of the recommendations as could be accepted without further examination. Where special investigation was considered necessary this was arranged for.

Rates Advisory Committee.

The Railway Rates Advisory Committee continued under the Presidency of Sir Madhavan Nair.

The functions of the Committee are to investigate and make recommendations on —

- (1) Complaints of "undue preference"—Section 42(A) of the Indian Railway Act,
- (2) Complaints that rates are unreasonable in themselves,
- (3) Complaints of disputes in respect of terminals—Section 46 of the Indian Railways Act,
- (4) Complaints in respect of conditions as to packing of articles specially liable to damage in transit or liable to cause damage to other merchandise,
- (5) Complaints in respect of conditions as to packing attached to a rate, and
- (6) Complaints that railways do not fulfil their obligations to provide reasonable facilities under Section 42(3) of the Indian Railways Act

Closer Contact with the Public.

The closest possible contact between the Railways and the business community was maintained by means of the central and Local Advisory Committees, which were first introduced in 1923, meetings with Chambers of Commerce, Trade Associations and personal contact by railway officers with business firms

Inauguration of the Main Line Electric Service, G. I. P. Railway.

The inauguration of the electrified main line section of the G I P Railway from Kalyan to Poona took place on the 5th November 1929, and constituted the first entirely main line of track to be electrified in India. This scheme involved the elimination of the Bore Ghat Reversing Station.

Open Mileage—The total route mileage on 31st March 1941, was made up of—

Broad-gauge.. ..	21,028 71 miles
Metre-gauge.. ..	16,042 58 "
Narrow-gauge	3,980 64 "

Under the classification adopted for statistical purposes, this mileage is divided between the three classes of railways as follows —

Class I	36,393 25 miles
Class II	2,564 44 "
Class III	1,094 24 "

During the year 1940-41 no new line was under construction,

Class I Railways	Number of seats in passenger carriages.			
	1st	2nd	Inter	3rd
5'-6" ..	22,407	44,487	57,985	6,29,310
3'-3½" ..	9,527	11,705	16,305	3,16,191

Financial Results of Working—The gross traffic receipts of the state owned railways amounted to Rs 111 94 crores in 1940 41 or an increase of Rs 14 23 crores over the previous year.

(Based on actuals, 1939-40.)

(In thousands of rupees)
Rs. Rs.

1.	1 per cent on capital of Rs 6,95,90,74 at charge—commercial lines..								6,95,91

India		

Output of Railway-owned Collieries—The output of Railway-owned collieries during 1930-31 was—

2,926,812 tons for a total of 6,629,014 tons.

Consumed for 1931-32 the figures are 2,484,891 tons for a total of 5,759,398 tons.

For 1933-34 the figures are

2,470,020 tons for a total of 5,935,826 tons.

Total output of coal from Railway-owned collieries during 1935-36 was 2,725,400 tons and

1936-37, 2,840,271 tons and 1937-38, 3,850,987 tons. During 1938-39 3,582,604 tons During 1939-40, 3,589,563 tons. During 1940-41, 3,475,005 tons

Number of Staff—The total number of employees on Indian Railways at the end of the year 1940-41 was 730,436 as compared with 692,071 at the end of 1937-38. The following table shows the number of employees by communities on 31st March 1936, 1937, 1938, 1939, 1940 and 1941 —

Date.	Europeans	Statutory Indians.					
		Hindus	Muham- madans.	Anglo- Indians	Sikhs.	Indian Christians.	Other Communi- ties.
31st March 1936	3,219	504,977	155,439	13,423	8,740	16,824	9,742

Indianisation—Superior Services, following the recommendations of the Lee Commission that recruitment in India be advanced as soon as practicable up to 75 per cent of the total number of vacancies in the Superior Services of the Railways the various Railway Companies Managing

State and other railway lines followed the government lead. As far as concerns State-managed Railways, the direct recruitments during the year amounted to 40 0 per cent. Europeans and 60 0 per cent Indians

Accidents—The following table shows the number of passengers, railway servants and other persons killed and injured in accidents on Indian Railways, excluding casualties in railway workshops, during the year 1940-41 as compared with the previous year —

Cause.	Killed		Injured.	
	1939-40.	1940-41.	1939-40.	1940-41.
A —Passengers				
In accidents to trains, rolling-stock, permanent-way, etc	44	62	184	142
In accidents caused by movements of trains and railway vehicles exclusive of train accidents	183	244	1,132	1,091
In accidents on railway premises in which the movement of trains, vehicles, etc, was not concerned	2	2	32	86
Total	229	308	1,298	1,319
B —Railway servants.				
In accidents to trains, rolling-stock, permanent-way, etc	13	14	93	141
In accidents caused by movements of trains and railway vehicles exclusive of train accidents	152	192	3,871	4,864
In accidents on railway premises in which the movement of trains, vehicles, etc, was not concerned	18	37	11,918	12,868
Total	178	243	15,882	17,373
C —Other than passengers and railway servants				
In accidents to trains, rolling-stock, permanent-way, etc	39	27	73	53
In accidents caused by movements of trains and railway vehicles exclusive of train accidents	3,069	3,148	908	954
In accidents on railway premises in which the movement of trains, vehicles, etc, was not concerned	22	26	121	134
Total	3,130	3,201	1,102	1,141
GRAND TOTAL	3,537	3,752	18,282	19,833

Of 3,752 persons killed, 3,201 or 85 per cent were other than passengers and railway servants and of this number 2,396 were 'trespassers' and 634 'suicides'. Of the 3,752 65 persons were killed on railway premises due to causes other than the movement of trains, vehicles, etc

The number of persons other than passengers and railway servants killed rose by 71 as compared with the previous year. This was due principally to increases under 'trespassers' (69) and 'suicides' (11). There was an increase in the number of fatal accidents to passengers' and 'railway servants,' the increase being 79 and 65 respectively.

Damage by floods, fires and other causes.—

Brief particulars of the more serious floods or other calamities which effected railways during the year under review are given below —

During May, 1940, the Chittagong-Nizirhat Branch of the Assam Bengal Railway experienced the heaviest floods for some years past. The local records of rainfall registered about 15" of rain on the 24th May. Four sections of the line were seriously affected and at one place the villagers cut the railway bank. The Nigunimora and the Gauhati Branches also experienced heavy floods.

Certain sections of the Assam Bengal Railway experienced cyclones and storms but fortunately the damage done to railway property was nowhere of a serious nature.

On account of heavy rains during August and September breaches occurred on some sections of the Bombay, Baroda & Central India Railway. Due to severe cyclonic storm and heavy rain on the 16th October, considerable damage was done to the permanent way and other works for a distance of 110 miles between Virar and Navsari. Numerous trees and signal and telegraph posts were uprooted, causing obstruction on the main line at various places. Communication at a restricted speed was restored on the next day and normal working was resumed six days later.

On the Bengal and North Western Railway the section between Mansi and Koparia on the Mansi Division was closed for the period of the monsoon from 15th June to 1st November. There were several minor breaches and wash-outs on other sections of the Mansi Division but there were only short interruptions to traffic and the damage caused was not serious. On the other divisions of this railway no floods of a serious nature occurred.

On the Bengal Nagpur Railway due to heavy rains in June, certain parts of the East Coast Section were flooded. This resulted in the through running of trains being suspended for some time till the floods subsided and the line was put in running order.

On the same railway train services between Bilaspur and Dadhapara and Ganjam and Chitrapur had to be suspended due to the lines being flooded during the latter half of the month of August.

As in the previous year, the broad-gauge sections of the Eastern Bengal Railway experienced only minor floods and the extent of damage to railway property was slight. On the metre gauge sections, however, a sum of about Rs 1,04,000 was spent on repairs to flood damages during the year. Protection works to several bridges had also to be carried out at an estimated cost of Rs 3,52,000 approximately.

On the Great Indian Peninsula Railway as a result of torrential rainfall amounting to 61 inches in four hours, the track formation between Tapona and Lasina was washed away. The approximate cost of filling up the breach and restoring the track was Rs 15,000.

Floods were responsible for several breaches on the Jodhpur Railway. Immediate steps were taken by the Railway in repairing these breaches and restoring through communication.

The Madras and Southern Mahratta Railway also experienced some floods and breaches during the year under review. Cyclonic conditions prevailed in the Guntakal District in May and affected some bridges.

On the North Western Railway exceptionally heavy rainfall took place over the area served by the Jullundur-Mukerian Section. Breaches were caused in several places and two piers of a bridge were washed away. Due to the serious nature of the damage it took several days before normal train service on the section could be restored.

On the South Indian Railway a heavy cyclone was experienced on the metre gauge coastal section on the 28th May, resulting in serious accident. There were also some breaches on this railway due to heavy rains.

Amenities for Passengers.—Railway administrations are constantly endeavouring to make railway travel, especially in the lower classes, more attractive and the amenities afforded necessarily cover a large and varied ground. Improved booking facilities by setting up additional booking offices and out-agencies, provision of clean and adequate accommodation in trains, avoidance of overcrowding, arrangements for the vending of wholesome refreshments at reasonable rates in railway premises and trains, amenities to the public waiting at stations in the shape of waiting rooms and covered platforms and measures for ensuring the security of women passengers are some of the main directions in which progress continues to be made from year to year. But both by the size and scale of arrangements required and its primary necessity to the passenger, the most important of all is the adequate supply of wholesome drinking water to the travelling public, particularly in the hot weather season, for which, in addition to the existing permanent arrangements, a hot weather (special) establishment is drafted every year.

THE CHIEF RAILWAYS IN INDIA.

The Assam-Bengal Railway, which is constructed on the metre-gauge, starts from Chittagong and runs through Surma Valley across the North Cachar Hills into Assam. It is worked under a limited guarantee by a company.

This line has been amalgamated with the E B Railway with effect from 1st January, 1942 and the combined system is named as Bengal and Assam Railway

Mileage open	1,308 12
--------------	-------	----------

Bengal and North-Western.

The Bengal and North-Western Railway was constructed on the metre-gauge system by a company without any Government assistance other than free land and was opened to traffic in 1885. The system was begun in 1874 as the Tirhut State Railway. In 1890 this line was leased by Government to the Bengal and North-Western Railway. Since then extensive additions have been made in both sections. It is connected with the Rajputana metre-gauge system at Cawnpore and with the Eastern Bengal State Railway at Katihar and the East Indian Railway at Benares and Mokameh Ghat,

--------------	-------	----------

Bengal-Nagpur.

The Bengal-Nagpur Railway was commenced as a metre-gauge from Nagpur to Chhatia-garh in the Central Provinces in 1887. A company was formed under a guarantee which took over the line, converted it to the broad-gauge and extended it to Howrah, Cuttack and Katni. In 1901 a part of the East Coast State Railway from Cuttack to Vizagapatam was transferred to it and in the same year sanction was given for an extension to the coal-fields and for a connection with the Branch of the East Indian Railway at Hariharpur.

Bombay Baroda.

The Bombay Baroda and Central India Railway is one of the original guaranteed railways. It was commenced from Surat via Baroda to Ahmedabad, but was subsequently extended to Bombay. The original contract was terminable in 1880, but the period was extended to 1905; and then renewed under revised conditions. In 1885 the Rajputana-Malwa metre-gauge system of State railways was leased to the Company and has since been incorporated in it. On the opening of the Nagda-Muttra, giving broad-gauge connection through Eastern Rajputana with Delhi the working was entrusted to this Company. On the acquisition of the Company in April 1907 the purchase price was fixed at £11,685,581,

The state has taken over the management with effect from January 1st, 1942

Eastern Bengal.

The Eastern Bengal State Railway was promoted under the original form of guarantee and was constructed on the broad-gauge. The first portion of the line running to Calcutta over the Ganges was opened in 1862. In 1874 sanction was granted for the construction on the metre-gauge of the Northern Bengal State Railway, which ran from the north bank of the Ganges to the foot of the Himalayas on the way to Darjeeling. These two portions of the line were amalgamated in 1884 into one State Railway.

East Indian.

The East Indian Railway is one of the three railways sanctioned for construction as experimental lines under the old form of guarantee. The first section from Howrah to Pandua was opened in 1854 and at the time of the Mutiny ran as far as Raniganj. It gives the only direct access to the port of Calcutta from Northern India and is consequently fed by all the large railway systems connected with it. In 1880 the Government purchased the line, paying the shareholder by annuities, but leased it again to the company to work under a contract which was terminable in 1919.

The contract was not terminated until January 1st, 1925, when the State took over the management. From July 1st, 1925, the Oudh & Rohilkhand railway was amalgamated with it.

(Mileages are route mileages.)

Great Indian Peninsula.

The Great Indian Peninsula Railway is the earliest line undertaken in India. It was promoted by a Company under a guarantee of 5 per cent. and the first section from Bombay to Thana was open for traffic in 1853. Sanction was given for the extension of this line via Poona to Raichur, where it connects with the Madras Railway, and to Jubbulpore where it meets the East Indian Railway. The feature of the line is the passage of the Western Ghats, these sections being 15½ miles on the Bhor Ghat and 9½ miles on the Thul Ghat which rise 1,131 and 972 feet. In 1900, the contract

with the Government terminated and under an arrangement with the Indian Midland Railway that line was amalgamated and leased to a Company to work.

The contract was terminated on June 30th, 1925, when the State took over the management

Madras and Southern Mahratta Railway

The Madras Railway was the third of the original railways constructed as experimental lines under the old form of guarantee. It was projected to run in a north-westerly direction in connection with the Great Indian Peninsula Railway and in a south-westerly direction to Calcutt. On the expiry of the contract in 1907 the line was amalgamated with the Southern Mahratta Railway Company, a system on the metre-gauge built to meet the famine conditions in the Southern Mahratta Country and re-leased to a large Company called the Madras and Southern Mahratta Railway Company.

The North-Western.

The North-Western State Railway began its existence at the Sind-Punjab-Delhi Railway, which was promoted by a Company under the original form of guarantee and extended to Delhi, Multan and Lahore and from Karachi to Kotri. The interval between Kotri and Multan was unbridged and the railway traffic was exchanged by a ferry service. In 1871-72 sanction was given for the connection of this by the Indus Valley State Railways and at the same time the Punjab Northern State Rail-

way from Lahore towards Peshawar was begun. In 1886 the Sind-Punjab-Delhi Railway was acquired by the State and amalgamated with these two railways under the name of the North-Western State Railway. It is the longest railway in India under one administration.

Mileage open	6,941.43

The South Indian.

The South Indian Railway was one of the original guaranteed railways. It was begun by the Great Southern India Railway Company as a broad-gauge line; but was converted after the seventies to the metre-gauge. This line has been extended and now serves the whole of the Southern India, south of the south-west line of the Madras Railway. Between Tuticorin and Ceylon a ferry service was formerly maintained, but a new and more direct route to Ceylon via Rameshwaram was opened at the beginning of 1914. As the original contract ended in 1907, a new contract was entered upon with the Company on the 1st of January 1908

The Indian States.

The principal Indian State Railways are the Nizam's, constructed by a company under a guarantee from the Hyderabad State; the Kathiawar system of railways, constructed by subscription, among the several Chiefs in Kathiawar; the Jodhpur and Bikaner Railways, constructed by the Jodhpur and Bikaner Chiefs; the system of railways in the Punjab, constructed by the Patiala, Jind, Maler Kotla, and Kashmir Chiefs; and the railways in Mysore, constructed by the Mysore State

INDIA AND CEYLON.

The possibility of connecting India and Ceylon by a railway across the bank of sand extending the whole way from Rameswaram to Mannar has been reported on from time to time, and since 1895 various schemes have been suggested.

The South Indian Railway having been extended to Dhanushkodi, the southernmost point of Rameswaram Island, and the Ceylon Government Railway to Talaimannar, on Mannar Island, two points distant from each other about 21 miles across a narrow and shallow strait, the possibility of connecting these two terminal stations by a railway constructed on a solid embankment raised on the sand bank known as "Adam's Bridge," to supersede the ferry steamer service which has been established between these two points, is one of the schemes that has been investigated.

In 1913, a detailed survey was made by the South Indian Railway Company, and the project contemplates the construction of a causeway from Dhanushkodi Point on the Indian side to Talaimannar Point on the Ceylon side, a length of 20.05 miles of which 7.19 will be upon the dry land of the various lands, and 12.86 will be in water. The sections on dry land will consist of low banks of sand pitched with coral and present no difficulty. The section through the sea will be carried on a causeway which it is proposed to construct in the following way. A double row of reinforced concrete piles, pitched at 10 feet centres and having their inner faces 14 feet apart, will first be driven into the sand. These piles will then be braced together longitudinally with light concrete arches and chains and transversely with concrete ties, struts and chains. Behind the piles slabs of reinforced concrete will be slipped into position, the bottom slabs being sunk well into the sand of the sea bottom. Lastly, the space enclosed by the slabs will be filled in with sand.

The top of the concrete work will be carried to six feet above high water level, and the rails will be laid at that level. The sinking of the piles and slabs will be done by means of water jets. This causeway, it is expected, will cause the suspended sand brought up by the currents, to settle on either side bringing about rapid accretion and eventually making one big island of Rameswaram Island and Mannar Island.

Indo-Burma Connection.

The raids of the Emden in the Bay of Bengal in 1914, and the temporary interruption of communications between India and Burma, stimulated the demand for a direct railway connection between India and Burma. Government accepted the position and appointed Mr. Richards, M. Inst. C.E., to be the engineer-in-charge of the surveys to determine the best route for a railway from India to Burma. The

coast route appears to be the best one but at present would not be remunerative. This would start from Chittagong, which is the terminus and headquarters of the Assam-Bengal Railway and a seaport for the produce of Assam. The route runs southwards through the Chittagong district, a land of fertile rice fields intersected by big rivers and tidal creeks and it crosses the Indo-Burma frontier, 94 miles from the town of Chittagong. For about 160 miles further it chiefly runs through the fertile rice lands of Arrakan and crosses all the big tidal rivers of the Akyab delta. These include the Kalidan river which drains 4,700 miles of country and even at a distance of about 30 miles from its mouth is more than half a mile wide. About 260 miles from Chittagong the railway would run into the region of mangrove swamps which fringe the seacoast north and south of the harbour of Kaukphu stretching out into the mangrove swamps like ribs from the backbone. Innumerable spurs of the Arrakan Yoma have to be crossed. Yoma is a mountain ridge which extends from Cape Negrais northwards until it loses itself in a mass of tangled hills east of Akyab and Chittagong. At its southern end the height of the ridge is insignificant but it has peaks as high as 4,000 feet before it reaches the altitude of Sandway and further north it rises much higher. It is a formidable obstacle to railway communication between India and Burma. This route is estimated to cost about £7,000,000 and would have to be supplemented by branch lines to Akyab where there is at present a considerable rice traffic and the cost of this would have to be added to the £7,000,000 already referred to.

The other routes examined have been the Hukong Valley route and the Manipur route which were surveyed by the late Mr. E. A. Way many years ago. The Manipur route was estimated to cost about £5,000,000 as it has to cross three main ranges of hills with summit levels of 2,650, 3,600 and 8,900 feet long. Altogether there would be about four miles of tunnelling through the three main ridges and through other hills and more than 100 miles of expensive undulating railway with grades as steep as 1 in 50 and 11,000 feet of aggregate rise and fall. The Hukong Valley route is only about 284 miles long and it presents fewer engineering difficulties than either the Coast or the Manipur route. One hundred and fifty miles of this route lie in open country capable of cultivation though at present it is only very thinly populated. Only one range of hills has to be crossed and this can be negotiated with a summit tunnel 5,000 feet long at a height of 2,500 feet. There are less than fifty miles of very heavy work and only about 4,500 ft. aggregate of rise and fall. The Hukong Valley route although cheaper than the Manipur route is not a practical financial proposition.

In 1938 the total production of Indian Coal rose to 28,342,906 tons or 3,306,622 tons (13 2 per cent) increase on the output of the previous year and is thus the highest figure yet recorded. In the years 1931, 1932 and 1933 there was a continuous decrease in production of coal from the peak figure of 23,863,048 tons in 1930. In 1934 the direction of change was reversed and production increased by 2,263,284 tons (or 11 4 per cent) from 19,789,163 tons in 1933 to 22,057,447 tons in 1934. In 1935 the increase continued but at a less rate by 959,248 tons (or 4 3 per cent) to 23,016,695 tons. In 1936 there was again a decrease by 405,874 tons (1 8 per cent) to 22,610,821 tons, followed in 1937 by an increase of 2,427,563 tons (10 7 per cent) to 25,036,386 the highest output till then, but which has now been greatly exceeded. This increase was shared by all provinces except Orissa, which showed a slight decrease.

The increased output of 13 2 per cent in 1938 was accompanied by an increase of 36 2 per cent in the total value of the coal produced in India to Rs 10,64,23,835 (£7,942,077) in 1938, from Rs 7,81,02,439 (£5,872,364) in 1937.

There was also an increase of 10 annas 2 pies in the pit's month value per ton of coal for India as a whole, namely from Rs 3-1-11 to Rs 3-12-1. This increase in value was recorded from all provinces without any exceptions. In opposition

to the trend of 1934, 1935 and 1936, the exports of coal from India in 1937 have more than doubled as compared with 1936, deducting Burma's share. Since the separation of Burma on the 1st April, 1937, it appears in these statistics as a foreign country, and in 9 months has taken a little more than Ceylon did in the year.

The average number of persons employed in the coalfields during the year showed an increase of 16 5 per cent. The average output per person employed showed a decrease from the high figure of 130 2 tons in 1934, which is practically the same as the figure for 1929, namely 130 4 tons, the highest figure recorded, to 124 02 tons in 1938 which is less than the figure 128 59 for 1937. The figures for the last nine years average higher than those previously recorded; these higher figures are partly due to an increased use of mechanical coal-cutters, and partly to concentration of work. During recent years a large number of collieries have been shut down and the labour absorbed in the remainder; this concentration permits of a proportional reduction of the supervising staff, resulting in a larger tonnage per head. The fall in output per person employed in 1938 is of course due to increased employment.

There was a decrease in the number of deaths by accident from 274 in 1935, 435 in 1936, to 213 in 1937 but the number increased to 333

due to accidents in Bengal, Bihar and Hyderabad in 1938. In 1935 there were three major accidents, at Loyabad and Bagdigi collieries in the Jharia coalfield and at Kurhurbaree colliery in the Giridih coalfield, in which 11, 19 and 62 lives, respectively, were lost; in 1936 there were two, at Poidih in the Raniganj field, and Loyabad in the Jharia field, which accounted for 209 and 35 deaths respectively. These figures may be compared

with the annual average for the quinquennium 1919-1923, which was 274, the annual average for the quinquennium 1924-1928, which was 218, and the annual average for 1929-1933, which was 186. The death rate was 1.09 per thousand persons employed in 1937 and 1.49 per thousand in 1938 the average figure for the period 1919-1923 was 1.36 for the period 1924-1928 was 1.16, and for the period 1929-1933 was 1.08

IRON ORE.

Bengal and Bihar and Orissa are the only provinces in India in which iron ore is mined for smelting by European methods. Iron smelting, however, was at one time a widespread industry in India and there is hardly a district away from the great alluvial tracts of the Indus, Ganges and Brahmaputra in which slag heaps are not found. The primitive iron smelter finds no difficulty in obtaining sufficient supplies of ore from deposit that no European Ironmaster would regard as worth his serious consideration. Early attempts to introduce European processes for the manufacture of pig-iron and steel were recorded in 1830 in the South Arcot District. Since that date various other attempts have been made but none proved a success before that now in operation near Barakar in Bengal. The site of the Barakar Iron-Works was originally chosen on account of the proximity of both coal and ore supplies. The outcrop of iron stone shales between the coal-bearing Barakar and Raniganj stages stretches east and west from the works, and for many years the clay ironstone nodules obtainable from this formation formed the only supply of ore used in the blast furnaces. Recently magnetite and hematite have been obtained from the Manbhum and Singhbhum districts, and the production from the last named district has largely replaced the supplies of ore hitherto obtained near the iron-works. The Bengal Iron and Steel Company, Limited, have now given up the use of ores obtained from the neighbourhood of Barakar and Raniganj and are now obtaining most of their ores from the Kolhan Estate, Singhbhum. Some years ago the Bengal Iron and Steel Co., Ltd., secured two deposits of iron-ore in Saranda (Singhbhum) forming parts of two large hill masses known as Notu Burn and Buda Burn respectively. Recent prospecting in this part of Singhbhum has led to the discovery of numerous additional deposits of iron-ore, the extension of which has been traced into Keonjhar and Bonal States in Orissa, a total distance of some 40 miles in a S S W direction. At Pansira Burn, a portion of Notu Burn, the deposit has been opened up, and now feeds the Barakar Ironwork. Pansira Burn rises to over 2,500 feet above sea level, the low ground on the west side being at about 1,100 feet above sea-level. The uppermost 400 to 450 feet of this hill has now been opened up, and the workings indicate the existence of a deposit about a quarter of a mile long, perhaps 400 feet thick and proved on the dip for about 500 feet. The ore body appears to be interbedded with the Dharwar slates, from which it is separated by banded hematite-jaspers. The ore itself is high-grade micaceous hematite often lateritised at the outcrop. Cross-cuts into the interior of the deposit show that the hematite becomes very friable not far below the

outcrop. In fact the characteristics of this ore, including the surface lateritisation, are almost exactly reproduced in the iron-ore deposits of Goa and Ratnagiri. The Tata Iron and Steel Company at Sakchi possesses slightly richer and purer ore-bodies in the Raipur district, supplies of ore are at present drawn from the deposits in Mayurbhanj. The ore-deposits have all been found to take the form of roughly lenticular leads or bodies of hematite, with small proportions of magnetite, in close association with granite on the one hand and granitic rocks on the other.

For some years up to and including 1929 the production of iron-ore in India had been steadily increasing, India is now, in fact, the second largest producer in the British Empire, and yields place only to the United Kingdom. Her output is of course still completely dwarfed by the production in the United States (30½ million tons in 1935 and 48½ million tons in 1936) and France (32.3 million tons in both 1935 and 1936); but her reserves of ore are not much less than three-quarters of the estimated total in the United States and there is every hope that India will eventually take a much more important place among the world's producers of iron-ore. From 2,430,136 tons in 1929 the output of iron-ore in India fell to 1,228,625 tons in 1933. In 1934, however, there was a turn of the tide and the production recovered sharply to 1,916,918 tons and in 1935 rose still further to 2,364,297 tons, in 1936 to 2,553,247 tons, in 1937, to 2,870,832 tons valued at Rs 45,86,378 (£344,840), but in 1938 the production fell slightly to 2,743,675 tons valued at Rs 45,56,974 (£340,073). These figures exclude the output of about 25,000 tons, by the Burma Corporation, which is used as a flux in lead-smelting.

The Steel Industry (Production) Act 1924 (Act No XIV of 1924)—authorised, to companies employing Indians, bounties upon rails and fishplates wholly manufactured in British India from materials wholly or mainly produced from Indian iron-ore and complying with specifications approved by the Railway Board, and upon iron or steel railway wagons, a substantial portion of the component parts of which had been manufactured in British India. This Act was repealed by the Act No. III of 1927 and the payment of bounties consequently ceased on the 31st March, 1927, the industry is, however, protected to a certain extent by the varying tariffs on different classes of imported steel. As a result of a new Act, No. XXXI of 1934, provision has been made for an increase of tariffs by about half over the 1927 rates, or about Rs 10 per ton *ad valorem* in most cases, or about Rs 40 per ton in the case of articles not of British manufacture.

GOLD.

The Statistics given below are the latest available.

The greater part of the total output of gold in India is derived from the Kolar gold field in Mysore. During the last decade the production of this mine reached its highest point in 1905 when 616,758 ounces were raised. In 1906 the quantity won was 565,208 ounces and this figure fell to 535,085 ounces in 1907. The figures for the latter years reveal a small improvement. The Nizam's mine at Hutti in Hyderabad comes next, but at a respectable distance, to the Kolar gold field. This mine was opened in 1903. The only other mines from which gold was raised were those in the Dharwar district of Bombay and the Anantapur district of Madras. The Dharwar mines gave an output of 2,993 ounces in 1911 but work there ceased in 1912. The Anantapur mines gave their first output of gold during the year 1910, the amount being 2,532 ounces, valued at Rs. 1,51,800. Gold mining was carried on in the North Arcot district of Madras from 1893 till 1900, the highest yield (2,854 ounces) being obtained in the year 1898. The Kyaukpazat mine in Upper Burma was worked until 1903, when the pay chute was lost and the mine closed down. In 1902 dredging operations were started on the Irrawaddy river near Myitkyina, and 216 ounces of gold were obtained in 1904, the amount steadily increased from year to year and reached 8,445 ounces in 1909, but fell in subsequent years until in 1922 it was no more than 24 oz. The small

quantity of gold produced in the Punjab, the Central Provinces, and the United Provinces is obtained by washing. Gold washing is carried on in a great many districts in India, but there is no complete record of the amount obtained in this way.

In 1931 the gradual secular decline in the total Indian gold production was temporarily arrested with an output of 330,488 8 ozs valued at Rs 2,08,01,943 (£1,540,885), followed by a trivial fall again in 1932, when the output was 329,681 7 ozs valued at Rs 2,53,51,438 (£1,906,123). In 1933 there was an increase to 336,108 3 ozs valued at Rs. 2,76,40,071 (£2,078,201). In 1934 the output fell to 322,142 9 ozs, but the value increased to Rs 2,92,71,130 (£2,200,836), being the highest in terms of sterling since 1920. It is interesting to note that the output of 1921, which was valued at £2,050,575 a figure very close to that of the 1933 production, was 432,722 6 ozs. In 1935 the output rose again to 327,652 5 ozs valued at Rs 3,04,01,775 (£2,285,848), and in 1936 to 333,385 6 ozs valued at Rs 3,06,02,413 (£2,300,933). In 1937 the output fell slightly to 331,748 2 ozs, valued at Rs 3,04,80,105 (£2,291,737). In 1938 the output decreased slightly to 321,137 8 ozs valued at Rs 3,04,75,397 (£2,274,283) from 330,743 9 ozs valued at Rs 3,03,95,871 (£2,285,404). All fields shared in this decrease, except the United Provinces

SALT. *

There was a moderate increase in the production of salt in India in 1938, made up of increase in the production in Northern India and Madras, with decreases in the production in Sind and Bombay.

The production in Aden was less in 1938 than in 1937, the production in Burma showed a large decrease.

There was a decrease in the imports of salt into India in 1938.

Stock Exchanges.

There are about 475 Share and Stock Brokers in Bombay. They carry on business in the Brokers' Hall, bought in 1887 from the funds of the Share and Stock Brokers' Association formed to facilitate the negotiations and the sale and purchase of Joint Stock securities promoted throughout the Province of Bombay. Their powers are defined by rules and regulations framed by the Governing Board and approved by the Government of Bombay. The Board has power to stop business in times of emergencies for 24 hours only and for any further period with the previous sanction of Government. The official address of the Secretary is Dalal Street, Fort, Bombay.

At first the admittance fee for a broker was Rs. 5 which was gradually raised to Rs. 7,000. The fee for the Broker's card has increased. In 1921 a number of cards were sold at Rs. 40,000 each and the proceeds were employed to purchase an adjoining building for the extension of the business. The present value of the card is about Rs. 20,000.

In November, 1917, a second Stock Exchange was opened in Bombay, with its headquarters in Apollo Street known as the Bombay Stock Exchange, Ltd. This separate Exchange no longer functions. It was revived in 1922 but has again ceased to function. A new Stock Exchange was opened in Bombay with its headquarters in Sir Phirozeshah Mehta Road in February, 1938, known as the Indian Stock Exchange, Ltd.

For many years the Calcutta Share Market met in the open air in business quarters and was under no control except that of market custom. In 1908 the Calcutta Stock Exchange Association was formed, a Representative Committee came into existence, and the existing customs were focussed into rules drawn up for the conduct of business. Public confidence grew rapidly and the rules regarding membership and business underwent drastic changes to suit advancing conditions. The Great War, having given an impetus to Indian industries, was responsible for an astoundingly large volume of business in the market which culminated in a boom.

In June, 1923, the Association was incorporated into a Limited Company under the Indian Companies' Acts 1913-1920 with an authorised capital of Rs. 3 lakhs divided into 300 fully paid-up shares of 1,000 each. Accounts are made up annually up to 30th September. At the present moment, the number of shares subscribed is 223, each firm owning, and being entitled to own, only one share.

The Committee has restricted the further sale of new shares until it deems it necessary to revise its decision, exception being made in the case of a partner dissociating from an existing firm. Anyone to become a member is required to purchase a share from a member and seek election and on being elected the admission fee charged by the Association is Rs. 5,000. The conduct of members and of business is con-

trolled by bye-laws, customs and usages being fully honoured. The market customs differ from those of the Stock Exchanges, since there are no settlement days, delivery is due the second day after the contract is passed, and sales of securities are effected for most part under blank transfers. It has not got jobbers like the London Stock Exchange, but the brokers mostly combine the function of dealers. The principal business transacted is connected with the shares in Jute Mills, Coal Companies, Tea Companies registered in India, miscellaneous industrial concerns (such as paper, flour, etc.) Railway Companies and Debentures, the latter representing those of industrial concerns and Trustees Investment Securities, namely, Municipal, Port Trust and Improvement Trust Debentures. The Association issues a *Year Book* which contains official information relating to all stocks and shares dealt in on the Stock Exchange.

A general meeting of the shareholders annually elects a Committee of 16, which elects several Sub-Committees and Honorary Office-Bearers—the President and two Joint Honorary Treasurers. The Committee is empowered to do all work on behalf of the Association, which in its turn delegates powers to the Sub-Committees and the Honorary Office-Bearers. The Committee also adjudicates in disputes between members thus enabling the members to avoid Law Courts in most cases.

Editor, Year Book —A. K. Sur, M.A.

The Stock Exchange has its own building at 7, Lyons Range. This building—one of the finest specimen of its kind—was opened on 6th July, 1928, by Sir Stanley Jackson, then Governor of Bengal. The ground floor is utilised for the Association Hall where members meet between 12 noon and 5 p.m. The Mezzanine floor contains the offices of the Association, a well-equipped library and several retiring places for the benefit of the members. The upper three floors are tenanted by members' offices.

The Madras Stock Exchange Association, Limited—The only Registered Institution in Southern India of brokers dealing in Shares, Stocks and Government Securities. Promoted and Registered on 12th August 1937. It has two kinds of members—viz., Founder and Ordinary. The Founder members have to pay an admission fee of Rs. 500 whilst Ordinary members pay Rs. 1,000. Deposit from each member is Rs. 5,000 or such higher amount as the Executive Committee may decide. Each member further has to pay a monthly subscription of Rs. 25. Working hours of the Exchange are between 11-30 a.m. and 12-30 p.m. Dealings in about 18 shares of Companies are allowed on Forward monthly basis. Other shares are quoted on cash basis. Government Securities are also quoted on cash basis, i.e., delivery within seven days.

President—W. L. Knopp; *Vice-President*—S. Narayanaswami, *Hon. Treasurer*—H. Hadow; *Joint Hon. Secretaries*—D. G. Kothari and B. N. Viswanathan. Registered Office, Madras. Telephone No 4075.

Chambers of Commerce.

Modern commerce in India was built up by merchants from the west and was for a long time entirely in their hands. Chambers of Commerce and numerous kindred Associations were formed by them for its protection and assistance. But Indians have in recent years, taken a large and growing part in this commercial life. The extent of their participation varies greatly in different parts of India, according to the natural proclivities and genius of different races. Bombay, for instance, has led the way in the industrial and commercial regeneration of the new India, while Bengal, very keen in other fields of activity, lags behind in this one. Arising from these circumstances we find Chambers of Commerce in Bombay, Karachi, Calcutta, Madras and other important centres, with a membership both European and Indian; but alongside these have sprung up in recent years certain Associations, such as the Bombay Indian Merchants' Chamber and Bureau, of which the membership is exclusively Indian. These different classes of bodies are in no sense hostile to one another but constantly work in association.

In 1921, the London Chamber of Commerce, realising the increasing attention demanded by the economic development of India, took steps to form an "East India Section" of their organisation. The Indian Chambers work harmoniously with this body, but are in no sense affiliated to it, nor is there at present any inclination on their part to enter into such close relationship, because it is generally felt that the Indian Chambers can themselves achieve their objects better and more effectively than a London body could do for them, and on various occasions the London Chamber, or the East India Section of it, have shown themselves out of touch with what seemed locally to be immediate requirements in particular matters.

A new movement was started in 1913 by Sir Fazulbhoy Currimbhoy Ibrahim, a leading millowner and public citizen of Bombay, which aims at effecting great improvement in strengthening Indian commercial organisation. Sir Fazulbhoy's original plan was for the formation of an Indian Commercial Congress. The proposal met with approval in all parts of India. The scheme was delayed by the outbreak of war but afterwards received an impetus from the same cause and the first Congress was held in the 1915 Christmas holiday season, in the Town Hall, Bombay. The list of members of the Reception Committee showed that all the important commercial associations of Bombay were prepared to co-operate actively.

The Congress was attended by several hundred delegates from all parts of India. The late Sir Dinshaw Wacha, the then President of the Bombay Indian Merchants' Chamber, presided as Chairman of the Reception Committee, at the opening of the proceedings and the first business was the election of Sir Fazulbhoy Currimbhoy as the first President. The Con-

gress resolved upon the establishment of an Associated Indian Chamber of Commerce, and elected a Provincial Committee empowered to take the necessary steps to get the Association registered and to enrol members and carry on work. The Congress also approved of the draft constitution.

The organisation languished for lack of support for some years until a number of merchants specially interested in currency and exchange questions revived it in 1926 at Delhi and in 1927 at Calcutta, the initiative in the new activities having, like the first movement, from Bombay. The Commercial Congress held in Calcutta on 31st December, 1926, and 1st and 2nd January 1927, decided upon the formation of a "Federation of Indian Chambers of Commerce" and agreed to the registered office of this body being "at the place where the President for the year has his headquarters or where he directs it to be located."

Among the objects for which the Federation is established are the following —

- (a) To promote Indian businesses in matters of inland and foreign trade, transport, industry and manufactures, finance and all other economic subjects.
- (b) To encourage friendly feeling and unanimity among the business community and association on all subjects connected with the common good of Indian business.
- (c) To enter into any arrangement with any Government or authority supreme, municipal, local or otherwise, that may seem conducive to the Federation's objects or any of them, and to obtain from any such Government or authority all rights, concessions, and privileges which the Federation may think desirable to obtain and to carry out, exercise and comply with any such arrangements, rights, privileges and concessions.
- (d) To sell or dispose of the undertaking of the Federation or any part thereof for such consideration as the Federation may think and in particular for shares, debentures or securities of any other company having objects altogether or in part similar to those of the Federation.
- (e) To take or otherwise acquire and hold shares in any other company having objects altogether or in part similar to those of the Federation.
- (f) To undertake and execute any trusts the undertaking of which may seem to the Federation desirable either gratuitously or otherwise.
- (g) To draw, make, accept, discount, execute and issue bills of exchange, promissory notes, bills of lading, warrants, debentures and other negotiable or transferable instruments or securities.

tion, Calcutta Insurance Association, Calcutta Import Trade Association, The Wine, Spirit and Beer Association of India, Indian Mining Association, Calcutta Baled Jute Association, Indian Paper Makers' Association, Indian Engineering Association, Calcutta Jute Fabrics Shippers' Association, Calcutta Hydraulic Press Association, Jute Fabric Brokers' Association, Calcutta Baled Jute Shippers' Association, Calcutta Jute Dealers' Association, Calcutta Hides and Skins Shippers' Association, Calcutta Flour Mills' Association, Calcutta River Transport Association, the Masters' Stevedores' Association and the Association of Paint, Colour & Varnish, Manufacturers in India, Calcutta Freight Brokers' Association and European Mofussil Jute Balers Association.

The Chamber maintains a Tribunal of Arbitration for the determination, settlement and adjustment of disputes and differences relating to trade, business, manufactures, and to customs of trade, between parties, all or any of whom reside or carry on business personally or by agent or otherwise in Calcutta, or elsewhere in India or Burma, by whomsoever of such parties the said disputes and differences

be submitted. The Secretary of the Chamber acts as the Registrar of the Tribunal, which consists of such members or assistants to members as may from time to time, annually or otherwise be selected by the Registrar and willing to serve on the Tribunal. The Registrar from time to time makes a list of such members and assistants.

The Chamber also maintains a Licensed Measures' Department controlled by a special committee. It includes a Superintendent (G C Gee Smyth), Head Office Manager (Mr F W Kendall) and Assistant Superintendents (Messrs J B F Henfrey, B Perry and S J Warwick) and the staff at the time of the last official returns consisted of 115 officers. The usual system of work for the benefit of the trade of the port is followed. The Department has its own provident fund and compassionate funds and Measures' Club. The Chamber does not assist in the preparation of official statistical returns. It publishes weekly the *Calcutta Prices Current*, and also publishes a large number of statistical circulars of various descriptions in addition to a monthly abstract of proceedings and many other circulars on matters under discussion.

BENGAL NATIONAL CHAMBER OF COMMERCE.

The Bengal National Chamber of Commerce, the premier institution of the Indian Commercial Community in Bengal, was founded in 1887. The objects of the Chamber are to aid and stimulate the development of commercial, agricultural and industrial enterprises in Bengal and Assam and to protect the commercial interest of all persons trading therein; to promote unanimity and uniformity of practice amongst the members of the commercial community, to represent their views and requirements to the Government, railway and port authorities, to arrange for organized action on all matters involving the interests of members including conditions of employment of industrial labour, to arbitrate when occasion occurs between parties willing to submit their differences to the Association, and generally to do all such things as may be conducive to the interests of the commercial classes of Bengal and Assam.

The constitution of the Chamber extends the facilities of Associate and Honorary Membership to the entire trading community in Bengal. The number of Ordinary members on the roll is about 400. Almost all the leading Indian commercial and industrial firms and persons in every branch of the inland and foreign trade in Bengal are members of the Chamber. A considerable portion of the joint stock capital invested in Bengal in banking, insurance, steamer services, cotton mills, etc., is also represented. The constitution of the Chamber provides for a close association as between the Chamber and various sectional organizations of trades and industries in Bengal.

List of Associations affiliated to the Bengal National Chamber of Commerce—All-India Soap Makers' Association, All India Tea Growers' Federation, Association of Engineers, Barisal Mahajan Samity, Bengal Banks' Association, Bengal Cotton Association Ltd, Bengal Building Material Traders' Association Ltd, Bengal Galvanized Sheet Merchants' Association, Bengal Hosiery Manufacturers' Association, Bengal Industries Association, Calcutta Iron Merchants' Association, Calcutta Jute Exchange Ltd, Calcutta Wine Association, East India Jute Association Ltd, Faridpur District Merchants' Association, Indian Colliery Owners' Association, Indian Insurance Institute, Indian Planters' Association, Metropolitan Banking Association, Murshidabad Silk Association, Oil Mills Association, Paddy Merchants' Association, Tipperah Chamber of Commerce, Tipperah Traders Association, Tipperah Tea Association.

The Chamber enjoys the privilege of electing representatives to the Bengal Legislative Assembly, the Calcutta Port Trust, the Calcutta Improvement Trust, Bengal Industries Board, Economic Enquiry Board, Bengal, and other important bodies.

The headquarters of the Chamber are at Calcutta and its affairs are administered by a committee of 32 members in addition to the President, two Vice Presidents, and the Honorary Treasurer, with the help of the Secretary and a number of Departmental committees.

MARWARI ASSOCIATION.

160A, CHITTARANJAN AVENUE, CALCUTTA.

The Marwari Association was established in the year 1898

Its chief objects are

To promote and advance the moral, intellectual, commercial, economic, political and social interests of the Marwari community and to protect its rights and status

To arbitrate in the settlement of disputes arising out of commercial transactions between parties either one or both of which are members of the Marwari community, provided the parties are willing to abide by the judgment and decision of the Association

To adjust controversies between members of the Association

To communicate with Chambers of Commerce and other mercantile and public bodies within or outside India and to concert and promote measures for the protection of trade, commerce and industries in which Indians, in particular Marwaris, are engaged

To found and support establishments and institutions for disseminating commercial, technical and general education in different branches of Art and Science in the Marwari community

To take all necessary steps for promoting, supporting or opposing legislation or other action, affecting the interests of the Commercial communities in general and of the Marwari community in particular either by Government or any department thereof or by any local body or bodies

To take such action as may be necessary or securing the redress of grievances of any branch of trade, commerce and industry in which the Marwari community is interested as also such other action as may be conducive to the deve-

lopment and growth of such trade, commerce and industry

The constituents of the Association are the leading industrialists, exporters and importers of the province of Bengal

The Association issues certificates of origin to exporters of indigenous goods

The Association is a member of the Federation of Indian Chambers of Commerce and Industry

The following are the Office-bearers—

President—Rajendra Singh Singhi

Vice-Presidents—Madanlal Chamarla, Rameshwar Ganeriwala, Babu Iqbal Shroff, Ratanlal Goukha

Special Work.

One of the most important functions performed by the Chamber is that of arbitration in commercial disputes. Rules for this have been in existence for many years and have worked most satisfactorily. The decisions

are in all cases given by competent arbitrators appointed by the General Committee of the Chamber and the system avoids the great expense of resort to the Law Courts.

A special department of the Bombay Chamber is its Statistical Department, which prepares a large amount of statistical returns connected with the trade of the port and of great importance to the conduct of commerce. The department consists of fourteen Indian clerks who, by the authority of Government, work in the Customs House and have every facility placed at their disposal by the Customs authorities. They compile all the statistical information in connection with the trade of the port, in both export and import divisions, which it is desirable to record. No other Chamber in India does similar work to the same extent.

The Bombay Chamber publishes a Daily Arrivals Return which shows the receipts into Bombay of cotton, wheat and seeds, and a Daily Trade Return, which deals with trade by sea and shows in great detail imports of various kinds of merchandise and of treasure while the same return contains particulars of the movements of merchant vessels.

The Chamber publishes twice a week detailed reports known as Import and Export manifests, which give particulars of the cargo carried by each steamer to and from Bombay.

Four statements are issued once a month. One shows the quantity of exports of cotton seeds and wheat from the principal ports of the whole of British India. The second gives in detail imports from Europe, more particularly in regard to grey cloths, bleached cloths, Turkey red and scarlet cloths, printed and dyed goods, fancy cloth of various descriptions, woollens, yarns, metals, kerosene oil, coal, aniline dyes, sugar, matches, wines and other sundry goods. The third shows classified, the number of packages of piece goods and yarns imported by individual merchants. The fourth gives the number of bales of cotton exported by each firm to each country during the month with a running total of the number of bales exported during the year.

Another "Monthly Return" issued by the Chamber shows clearances of a large number of important designations of merchandise. A return of "Current Quotations" is issued every Saturday and shows the rates of exchange for Bank and Mercantile Bills on London and Paris, and a large quantity of general banking and trade information.

The Chamber has also a Measurement Department with a staff of 16, whose business is that of actual measurement of exports in the docks before loading in steamers. Certificates are issued by these officers with the authority of the Chamber to shippers and ship agents as to the measurement of cotton and other goods in bales or packages. From the measurement given in these certificates the freight payable to the Shippers of goods is calculated. The measurement is also used for the purpose of settling the dues on the quay wharves and during the busy seasons.

Associated Chambers of Commerce of India.

HEAD OFFICE LOCATED IN CALCUTTA FOR 1942.

President. The Hon'ble Mr R R Haddow

Millowners' Association, Bombay.

Established in the year 1875, the Millowners' Association, Bombay, is one of the oldest and most important organisations of industrial employers in the country. Membership of the Association is mainly confined to cotton spinning and weaving concerns drawn from every part of India including the Indian States. The great work done by the Association ever since its inception has been generally recognised, and the important roll which it fills in the economic life of the country is perhaps nowhere better illustrated than in the representation accorded to it in the Central and Provincial Legislatures, in local authorities such as the Bombay Municipal Corporation, and on public bodies such as the Bombay Port Trust. The Association is also represented on all important all-India bodies constituted by the Central Government connected in one way or another with the interests of the textile industry.

Among the constructive activities of the Association may be mentioned the system of private registration of industrial property marks. By virtue of a special set of rules, the Association has, for now well over 50 years, protected against infringement the tickets, labels and stamps habitually used by members on goods manufactured by them. The success of the scheme of registration ensured its subsequent extension to trade numbers and later on to trade names. By special arrangement with the Department of Commercial Intelligence and Statistics, the Association compiles every month special statistics relating to the import, re-export and export trade in cotton yarn and piece-goods and artificial silk goods of British India and the Province of Bombay. The annual Cotton Mill Statement published by the Association is well-known as a comprehensive and authoritative directory of cotton mills in India.

By a system of market correspondents stationed in important piece goods consuming markets in India, the Association keeps its members regularly informed of the trend of prices and tendencies in the principal trading centres in the country. The Association also publishes every fortnight detailed lists of the average ex-mill quotations for the principal lines of cotton yarn and piece goods produced by Bombay mills and the wholesale bazaar prices of the chief lines of goods imported into the principal ports in India.

As large employers of Labour, the Association has always adopted a forward policy in regard to labour problems, and a very large number of recommendations have been made to member mills during the last few years for the amelioration of the conditions of labour employed by constituent members. That some of these recommendations have subsequently been adopted by other large employers of labour and the country is at once a tribute to the excellent spade work done by the Association in the field of social and labour work.

The Association has on its rolls 118 members, including 4 woollen mills, 2 silk mills, 2 cotton spinning and pressing factories and 4 Dye and Bleach Houses.

The following is the Managing Committee of the Association for the year 1942.—
 Krishnaraj M D Thackersey (*Chairman*);
 Sir Vitthal Chandavarkar, M L A (*Dy. Chairman*), Sir Ness Wadia, K B E, C I E,
 Sir Chumal V Mehta, K O S I, Sir Sorab Saklatvala, M L A, Sir Frederick Stones, O B E, M L O, T V Baddeley, W B Bryden, Dharamsey Mulraj Khatau, H G H Everett, A Geddis, L F H Goodwin, Hurgovandas Jamnadas Ramji, J C Lancashire, H F Milne, A Pether; Ramnivas Ramnarain, G D Somani, Camar S Tyabje, and Neville N Wadia; N S V. Aiyer (*Ag. Secretary*), R G Gokhale (*Labour Officer*).

The Office of the Association is located at 2nd Floor, Patel House, Churchgate Street, Fort, Bombay, and the Telephone Nos. are 31041 and 31042. Tel. Address—Millomutua.

The following are the Association's Representatives on public bodies—

Royal Institute of Science Sir Vitthal Chandavarkar.

Millowners' Mutual Insurance Association, Ltd.

The Millowners' Mutual Insurance Association, Ltd., was registered on 30th June, 1924, as a Company limited by guarantee. The registered office of the Association is located in Patel House, Churchgate Street, Fort, Bombay.

The objects of the Association are—

(a) The mutual insurance of members of the Company against liability to pay compensation or damages to workmen employed by them or their dependants for injuries or accidents, fatal or otherwise, arising out of and in the course of their employment; (b) the insurance of members of the Company against loss or damage by or incidental to fire, lightning, etc.; and

(c) to reinsure or in any way provide for or against the liability of the Company upon any assurances granted or entered into by the Company and generally to effect and obtain re-insurances, counter-insurances and counter guarantees, etc, etc

All members of the Millowners' Association are eligible for admission to the Mutual Company. Non-members are also eligible for membership of the Mutual, provided their application is approved of by the Committee of the Millowners' Association.

The affairs of the Mutual Insurance Association are under the control of a Board of Directors.

The present Directors are —

Sir Frederick Stones, Kt, O B E, M L C
(Chairman)

Sir Ness Wadia, K B E, O I E, Sir Joseph Kay, Kt, Sir Sorab Saklatvala, Kt, H J Ramji, D M Khatau, A Pether, A Geddis, and A C M Cursetjee, M A, L L B, Secretary of the Association.

Indian Merchants' Chamber.

The Indian Merchants' Chamber was established in the year 1907. Its objects are —

- (a) To encourage friendly feeling and unanimity among the business community on all subjects connected with the common good of Indian merchants.
- (b) To secure organised action on all subjects relating to the interests of the Indian business community directly and indirectly.
- (c) To promote the objects of the Indian business community in matters of inland and foreign trade, shipping and transport, industry and manufacture, banking and insurance.
- (d) To collect and disseminate statistical and other information securing the promotion of the objects of the Chamber, and to make efforts for the spread of commercial and economic knowledge.
- (e) To take all steps which may be necessary for promoting, supporting or opposing legislation or other action affecting the aforesaid interests by the Government or any Department thereof or by any local body or bodies, and in general to take the initiative to secure the welfare of the business community in all respects.
- (f) To make representations to Local, Central or Imperial authorities, Executive or Legislative, on any matter affecting trade, commerce, manufacture or shipping, banking or insurance.
- (g) To undertake by arbitration the settlement of commercial disputes between merchants and businessmen and also to provide for arbitration in respect of disputes arising in the course of trade, industry or transport, and to secure the services of expert technical and other men to that end if necessary or desirable.
- (h) To advance and promote commercial and technical education and to found and support establishments and institutions for such purposes.

(i) To undertake special enquiries and action for securing redress for legitimate grievances of any branch of trade or industry as also all such other action as may be conducive to the extension of trade, commerce or manufacture or incidental to the attainment of the above objects.

(j) To secure the interests and well-being of the Indian business communities abroad.

(k) To secure, wherever possible, organised and/or concerted action on all subjects involving the interests of members including 'regulating conditions of employment of industrial labour' in various industries represented by the members of the Organisation.

(li) To nominate delegates and advisers, etc, to represent the employers of India at the Annual International Labour Conference of the League of Nations.

(lii) To take up, consider and formulate ideas on the subjects which are on the Agenda of each International Labour Conference.

(liv) To take all steps which may be necessary for promoting, supporting or opposing recommendations or conventions of the International Labour Conference.

(l) And generally to do all that may be necessary in the interests of the realisation of the above objects of the Chamber directly or indirectly.

Under the Montagu-Chelmsford Reforms the Chamber has the right of electing one representative on the Central Legislative Assembly and under the Government of India Act 1935 it has the right of electing one representative on the Bombay Legislative Assembly. The Chamber also has the right to elect five representatives on the Bombay Port Trust, and one representative on the Bombay Municipal Corporation.

President for 1942 — T C Setalvad

Vice-President — Haridas Madhavdas

Representatives of the Chamber on various public bodies —

Central Legislative Assembly — Manu Subedar, M L A

Bombay Legislative Assembly — M C Ghis

Bombay Port Trust — Sir Purshotamdas Thakurdas, Kt, O I E, M B E (Cotton), Behram N Karanjia (Piece goods), Ramdas Khandand (Grain and seeds), M A Master (General), Santalchand G Shah (General)

Bombay Municipal Corporation — Bhawanji A Khimji, M L A

Advisory Committee of the Bombay Development Department — Manu Subedar

Indian Central Cotton Committee — Chundil B Mehta

Advisory Committee of the Royal Institute of Science in Bombay — Kapilram H Vakil

Legislative Assembly, four representatives to the Karachi Port Trust, two to the Karachi Municipal Corporation and two to the North-Western Railway Advisory Committee, Karachi. There were 52 members of the Chamber in April, 1942. The following are the officers for 1942-43 —

Chairman — A T Orr Deas, M C

Vice-Chairman — J Humphrey, O B E, J P

Members of Committee — J H Blackwell, O B E, M C, J P, W J Cullen, H K C Hare, J W Henderson, H A Henry, Lt-Col W B Hossack, M L A, R H Martin and S E White

Ag Secretary — H M Gomes

Representative on the Sind Legislative Assembly — Lt-Col W B Hossack

Representatives on the Karachi Port Trust — J H Blackwell, O B E, M C, H K C Hare, A T Orr Deas, M C and R H Martin

Representatives on the Karachi Municipality — W F Enever and Sorab K H Katrak

Representatives on the North-Western Railway Local Advisory Committee, Karachi — B R Graham and R H Martin

Public Measurer G B Potts

The following are the principal ways in which the Chamber gives special assistance to members:—The Committee take into consideration and give an opinion upon questions submitted to them regarding the custom of the trade or of the Port of Karachi. The Committee undertake to nominate arbitrators and surveyors for the settlements of disputes. When two members of the Chamber or when one member and a party who is not a member have agreed to refer disputes to the arbitration of the Chamber or of an arbitrator or arbitrators nominated by the Chamber, the Committee will undertake to nominate an arbitrator or arbitrators, under certain regulations. Similarly, the Chamber, under certain regulations, will undertake to appoint an arbitrator or arbitrators for the settlement of disputes in which neither of the parties are members of the Chamber. A public measurer is appointed under the authority of the Chamber to measure pressed bales of cotton, wool, hides and other merchandise arriving at or leaving the port.

MADRAS.

* The Madras Chamber of Commerce was founded in 1836. Any person or firm, interested in the general trade, commerce, or manufactures of the Madras Presidency is eligible for Chamber membership. Distinguished persons, members of kindred associations, and officials interested in trade, commerce or industry in the Madras Province may be elected Honorary Members of the Chamber. Honorary Members do not have to pay any subscription and are not entitled to exercise the privileges of Ordinary Members except to speak at any ordinary meeting of the Chamber. Other Chambers of Commerce may be Affiliated Members. Election for membership is by ballot. Every member other than an Honorary Member pays an entrance fee of Rs 100, provided that banks, corporate bodies and mercantile firms may be represented on the Chamber by one or more members and are liable for an entrance fee of Rs 100 once in every 10 years. The subscription shall not exceed Rs 300 per annum payable quarterly in advance. Each Affiliated Member shall pay an annual subscription of Rs 50 payable at the beginning of the calendar year.

The Chamber undertakes arbitrations and surveys, the granting of certificates of origin and the registration of trade marks.

There are 50 firms, who are Members of the Chamber and there are 5 Affiliated Members and 7 Honorary Members of the Chamber in 1942. The officers and the committee of the Chamber for the year are as follows —

Chairman — J Nuttall

Vice-Chairman — Sir Robert Denniston

Committee — H F Carter, C G W Cordon, G H Hodgson, M L C, I A Adlard, W T Williams

Secretary — W Tife

The following were the Chamber's representatives on various public bodies during 1942 —

Corporation of Madras — J R Galloway, R W Theobald, and H I Woufor

Madras Port Trust — Sir Robert Denniston, Th A Lykiardopulo, C Liphunston and H S Town

Madras and Southern Mahratta Railway Advisory Committee — L R Rose

South Indian Railway Advisory Committee — G B Gourlay

Board of Communications — C P Johnston

Senate of the University of Madras — J Nuttall and P Howard Oakley

Senate of the Annamalai University — I H Oakley

State Technical Scholarship Board — I H Oakley

Board of State Aid to Industries — F H Oakley

South Indian Nursing Association — F H Oakley

Government General Hospital Advisory Committee — I H Oakley

Madras Provincial Cotton Commission — D V Bulloch

Madras City Export Licensing Council — D V Bulloch

SOUTHERN INDIA.

The Southern India Chamber of Commerce established in 1909 has its Registered Office in Madras. The objects of the Chamber are those usual for such bodies, concerning the promotion of trade, especially in the Madras Presidency, and the interests of members. Special objects are stated to be —

“To maintain a Library of books and publications of commercial interest, so as to diffuse commercial information and knowledge amongst its members

“To establish Museums of commercial products or organise exhibitions, either on behalf of the Chamber or in co-operation with others.”

There are three classes of members, Affiliated, Resident and non-Resident. The usual conditions as to eligibility for election prevail.

The Chamber is a member of the Federation of Indian Chambers of Commerce, the Indian Chamber of Commerce in Great Britain, and the Indian National Committee of the International Chamber of Commerce, Paris.

The Chamber holds survey and arbitration, issues certificates of origin and certificates of invoices, certificates of sampling, analysis and weights

The right of electing three representatives to the Madras Port Trust was accorded to the Chamber by the Madras Port Trust Amendment Act, 1941. Members of the Chamber hold seats in the Madras Legislative Assembly and the Chamber has also been accorded the right of electing a representative to that body. Co jointly with the Nattukottai Nagarethar Association the Chamber has the right of elect-

ing a representative to the Federal Assembly. Under the Madras City Municipal Amending Act, 1936, the Chamber has the right of electing one Councillor to the Madras Corporation. Under the State Aid to Industries Act, 1923, the Chamber has the right to elect one member to the Board of Industries

The Chamber also sends its representatives to the Board of Communications, the Provincial Cotton Committee, the Advisory Committees of the South Indian and Madras and Southern Mahratta Railways, the Madras University, the Social Hygiene Council (Madras Branch), the Annamalai University, State Technical Scholarship Board, Advisory Committees of the Government, Rajapuram and Ophthalmic Hospitals, Income-tax Board of Referees, Excess profits Tax Board of Referees, the Madras Marketing Board, the Madras City Excise Licensing Board, the Indian Tea Marketing Expansion Board, The Madras Port Committee, Madras War Supply Committee, etc

The Chamber has about 450 members on the rolls and has its own building. Several Associations in the City of Madras and Chambers of Commerce in the mofussil have been affiliated to this Chamber.

President—Rao Bahadur C Gopal Menon

Vice-Presidents—Dewan Bahadur V. Shunmuga Mudaliar and Khan Bahadur Adam Hajee Mohamed Salt

Secretary—P. Raghavan Nair, B.A., B.Com.

NORTHERN INDIA

“COMMERCE HOUSE,” 14, LAWRENCE ROAD, LAHORE

The Northern India Chamber of Commerce was founded in 1923 and has its headquarters at Lahore. The business of the Chamber is conducted by the Chairman, and a Committee consisting of a minimum of eight but not more than 11 elected members, and a maximum of 3 co-opted members and ex-officio members

The Chamber is represented on the Communications Board, Punjab, and Joint Development Board, Punjab, the North Western Railway Advisory Committee, Lahore Branch, the Managing Committee of the Hailley College of Commerce, Lahore, Board of Economic Enquiry, Punjab, Punjab College of Engineering and Technology Advisory Council Lahore, Board of Industries, Punjab, Electricity Board, Punjab, Industrial Survey Advisory Committee, Punjab, Board to deal with trade and prices in the Punjab, Provincial Advisory Committee of Supplies, Punjab, Punjab Legislative Assembly, Price Control Advisory Committee—Wheat Reconstruction Committee—Labour and Demobilisation, Punjab Board of Film Censors, and also nominates a panel for the Railway Rates Advisory Committee and Excess Profits Tax (Board of Referees)

The Chamber is affiliated with the Associated Chambers of Commerce of India, and with the Federation of Chambers of Commerce of the British Empire, London.

A Tribunal of Arbitration has been set up under the Rules of which arbitration relating to commercial disputes are carried out on behalf of members and non-members. Surveys of merchandise are also frequently held. Certificates of origins are issued for goods manufactured in India. A set of tested weights is kept for testing weights of members and non-members

The aim of the Chamber is to protect and further commercial, industrial and agricultural interests in Northern India by every possible means, and it is the constant endeavour of the Chamber to achieve as much as possible for the good of the common interest of members—the business prosperity of Northern India

Chairman —R C Osborn

Secretary —V J Ross

UPPER INDIA.

The Upper India Chamber of Commerce is concerned with trade, commerce and manufactures in the United Provinces and has its registered office at Cawnpore. Members are elected by the Committee, subject to confirmation by the next general meeting of the Chamber. Gentlemen distinguished for public service, or eminent in commerce or manufactures, may be elected honorary members of the Chamber by the members in a General Meeting and such shall be exempted from paying any subscription to the Chamber. There is no entrance fee for membership, but subscriptions are payable as follows—A firm, company or association having its place of business in Cawnpore, Rs 300 a year, an individual member resident or carrying on business in Cawnpore, Rs. 300, firms or individuals having their places of business or residence outside Cawnpore pay half the above rates but the maintenance of a branch office in Cawnpore necessitates payment of full rates.

The affairs and funds of the Chamber are managed by a Committee of ten members,

which has power to constitute Local Committees of from four to seven members each at trade centres where membership is sufficiently numerous to justify the step. Such Local Committees have power to communicate only with the Central Committee.

The Chamber appoints Arbitration Tribunals for the settlement and adjustment of disputes, when invited to do so, members of the Tribunals being selected from a regular printed list of arbitrators.

The Chamber has in the present year 102 members, 2 honorary members and 12 affiliated members.

The following are the officers—

President—Sir Tracy Gavin Jones, Kt

Vice President—A C Inskip, C.B.I.

Members—B L Gray, H G Mitra, E J W Plumber, K J D Price, Rai Bahadur Babu Ram Narain, Lala Hari Shanker Bagla, Sardar Inder Singh and W R Watt, C.B.I.

Representative on the United Provinces Legislative Assembly—Sir Jwala Prasad Srivastava, Kt

Secretary—H W Morgan

MERCHANTS' CHAMBER OF UNITED PROVINCES, CAWNPORE.

The Merchants' Chamber of United Provinces was established in November, 1932, with the object of safeguarding the interests of trade and industry in the United Provinces, providing regular and efficient statistical and intelligence service to the business firms of the province and generally helping the promotion of trade and business in the United Provinces through proper organisation of commercial opinion. The Chamber represents almost entirely Indian capital and has affiliated to its membership, Cotton Mills, Sugar Mills, Jute Mills, Silk weaving and Hosiery works, Banks and Firms engaged in extensive dealings in Piece-goods country produced Hide and Leather. The Chamber maintains a ceaseless channel of correspondence with the Central and Provincial Governments and the various Railways on all points of commercial grievances, whether of general or of specific interest. It issues every month an English and Hindi Bulletin to

its members who are scattered over the entire province. The report of the activities of the Chamber is a regular feature of the daily press of the province. The Chamber is represented on the U P Legislative Assembly, U P Board of Traffic and Communication, Court of the Lucknow University, Rly Advisory Committees, and about 16 other spheres of public service. The constitution of the Chamber which is registered under the Indian Companies Act 1913, with a licence under Section 26, provides for an Executive consisting of 1 President, 2 Vice-Presidents and 18 ordinary Members of the Council. A whole time Secretary is attached to the organisation.

President—Lala Guna Prasad Kapoor

Senior Vice-President—H G Mitra, C.B.I.

Junior Vice-President—Uma Shanker Mehrotra

Secretary—J V Krishnan

UNITED PROVINCES CHAMBER OF COMMERCE, CAWNPORE.

The United Provinces Chamber of Commerce was established in 1914, and represents all the important commercial and industrial interests of the Province. The Chamber is recognised both by the Provincial and Central Governments and jointly returns a representative to the United Provinces Legislative Assembly. It is represented on the Cawnpore Municipal Board, the Local Advisory Committee of the East Indian Railway, Great Indian Peninsula Railway, Rohilkhand Kumaon Railway, Bengal and North Western Railway and on the Informal Committee of the East Indian Railway. The Chamber's representatives also sit on the Provincial Boards of Industries, Economic Enquiry and Agriculture, High School and Intermediate Education and Governing bodies of Government Textile and Dyeing and Printing Schools, Agricultural College, Sir H B Technological Institute, Cawnpore, Board of Traffic and Communications, Senate of the Lucknow University,

and Employment Board, U P and various other public bodies in the Province. The Chamber is affiliated to the Federation of Indian Chambers of Commerce and Industry as also to the National Committee of the International Chamber of Commerce.

Membership—Any firm, individual, company, corporation or association engaged or interested in trade, commerce or industry is eligible for membership of the Chamber.

The number of members on register is 180.

The following are the office bearers of the Chamber for the current year.

President—Rai Bahadur Ram Chhwar Prasad Bagla

Vice Presidents—Rajbans Bahadur and D P Singh

Secretary—Lala Ram Chandra

Joint Secretary—Rai Bahadur Tribhuvan Gupta

COCANADA.

The Cocanada Chamber of Commerce was established on 29th October 1868.

The following are the members of the Chamber, which has its headquarters at Cocanada, the chief port on the Coromandel Coast north of Madras —

Members.—The Coromandel Co, Ltd, Ripley & Co, Gordon, Woodroffe & Co, (Madras) Ltd, Wilson & Co, Best & Co, Ltd, Burmah-Shell Oil Storage and Distributing Co of India Ltd, The Agent, Imperial Bank of India, The Deccan Sugar and Abkhari Co, Ltd, Samalkot & Parry & Co, Ltd, Vizagapatam.

Members of the Committee—S A Cheesman (Chairman), G Donald, G G Hastings, G M Lake (Secretary)

The rules of the Chamber provide that by the term 'member' be understood a mercantile firm or establishment, or the permanent agency of a mercantile firm or establishment, or a society of merchants carrying on business in Cocanada or other place in the Districts of Kistna, Godavari, Vizagapatam, and Ganjam, and duly elected according to the Rules of the Chamber, and that all such be eligible but only members resident in Cocanada can hold office. Members are elected by

ballot. The Committee, when called upon by disputing members or non-members of the Chamber, give their decision upon all questions of mercantile usage and arbitrate upon any commercial matter referred to them for final judgment. In either case a minimum fee of Rs 16 must accompany the reference with Rs 5 from a non-member and Re 1 from a member as payment for the Chamber's Sealed Certificate.

The Committee consisting of 3 members, including the Chairman, is elected by ballot at the general meeting in January in each year for a term of 12 months. The entrance fee for each member, whose place of business is in Cocanada, is Rs. 100 and for each member whose place of business is elsewhere is Rs 50. Subscription for members whose place of business is in Cocanada, Rs 120 per annum, payable quarterly, for others Rs. 60 per annum, payable in advance. The Committee usually meets once a month on the penultimate Thursday and the general body meets on the last Thursday.

A Fortnightly Circular of current rates of produce, freights, and exchange is drawn up by the Committee.

DEPARTMENT OF COMMERCIAL INTELLIGENCE AND STATISTICS.

The Department of Statistics was reabsorbed into the Department of Commercial Intelligence with effect from the 1st December 1922. The joint department has its office at No 1, Council House Street, Calcutta, and is administered by the Director-General of Commercial Intelligence and Statistics assisted by two Deputy Directors and an Assistant Director. It embraces two distinct classes of work (a) the collection and dissemination of information connected with overseas trade which may be use to Indian firms and (b) the compilation and publication of All-India statistics.

Among the important publications for which the Director-General is responsible are the following annual volumes—Statement of the Foreign Seaborne Trade and Navigation of British India, Statistical Abstract for British India, Agricultural Statistics, Estimates of Area and Yield of Principal Crops and Indian Customs Tariff. The department also publishes a weekly journal—"The Indian Trade Journal"—the principal features of which are (a) information as to tariff changes in foreign countries which affect Indian interests, (b) notices of tenders called for and contracts placed by Government departments and public bodies, (c) crop reports and forecasts, (d) Government orders, communiques and other notifications affecting trade, (e) analysis of Indian trade statistics, (f) market reports, price and trade movements of the staple exports and imports, (g) trade enquiries for securing trade introductions, and (h) monthly, quarterly and annual reports of the Indian Trade Commissioners

abroad and summaries of the leading features of consular and other trade reports.

The Department also administers the COMMERCIAL LIBRARY AND READING ROOM located at No 1, Council House Street, Calcutta. This was at first a small departmental library used for the purpose of answering enquiries, but in 1919 the Government of India agreed to the formation of a combined technological library of reference in Calcutta in place of the separate libraries attached to the Departments of Commercial Intelligence and Statistics, and Patents and Designs, and the resultant Commercial Library and Reading Room was placed under the administrative control of the Director-General. It has now been expanded into a first-class technical library containing over 20,377 volumes on different subjects of commercial, economic and industrial interest as well as Indian and foreign statistical publications, and over 361 technical and commercial journals and market reports. Ordinarily books are consulted in the Library, but they are also available on loan upon deposit of value throughout India.

The Department works in close co-operation with the Directors of Industries and other Government Departments in India, with the Indian Trade Commissioners in London, Toronto (Canada), Bombay (East Africa), New York, Alexandria and Sydney (Australia) and the Indian Trade Agent, Kabul, with His Majesty's Trade Commissioners in India and the Dominions, and with Consular Officers in various parts of the world.

TRADE COMMISSIONER SERVICE IN INDIA.

BRITISH TRADE COMMISSIONER SERVICE

The British Trade Commissioners in India are part of the world-wide Commercial Intelligence Organisation of the Imperial Government. The Department of Overseas Trade, London, which is the headquarters of this organisation, is a joint department of the Board of Trade and the Foreign Office and was created in 1917 with the specific object of stimulating the overseas trade of the United Kingdom by securing commercial information from all parts of the world, by disseminating it to British manufacturers and exporters; by undertaking such special constructive activities as may be found possible, and by assisting traders in the removal of their difficulties. The Department has nothing to do with the regulation of trade. It passes no measures and makes no restrictive or regulative orders. Briefly, the policy on which it is based is a policy of assistance without interference.

The Department of Overseas Trade maintains a network of trained and experienced Commercial Intelligence Officers throughout the world, who forward a constant supply of commercial information to London and provide local assistance in the promotion of British economic interests. Those overseas officers who are stationed in the British Empire are members of the Trade Commissioner Service while Foreign countries are served by the Commercial Diplomatic Service forming part of the British Diplomatic Missions and by the Consular Service.

Function of Commissioner.—The primary duty of the British Trade Commissioner comprises the collection of information in regard to opportunities that may arise within his territory for securing and developing trade by British manufacturers and merchants both in the United Kingdom and other parts of the British Empire. He is, therefore, enjoined carefully to watch and report from time to time to the Board of Trade and the Governments of the Dominions concerned on all matters affecting the trade, industry and commerce of his area. His general functions are to maintain cordial relations with the governing authorities of his area, to enter into personal relations with the Chambers of Commerce, Trade Associations, and similar bodies, and with the principal representative importers and local manufacturers, to visit the principal commercial centres, to report upon foreign competition, on financial and trade conditions, and new legislation affecting trade, to make an annual general report on the conditions and prospects of trade in his area, and to furnish special reports and monographs on particular questions which are likely to be of interest to British manufacturers and exporters. He is also expected to supply a regular flow of commercial information of all kinds to his department, to maintain an active correspondence with firms in the United Kingdom or the Dominions who wish to extend their trade with his area; and to give all possible assistance to the representatives of British firms who may visit his territory.

Every effort is made by His Majesty's Trade Commissioners to keep in touch with British representatives and agents in India. The offices are equipped with a complete range of directories and reference books of all kinds and information is available with regard to such matters as tariff conditions, port dues and charges throughout the world, etc. A library consisting of over 1,000 catalogues of the leading British manufacturers is maintained in Calcutta and Bombay, and firms desiring information with regard to specific manufacturers of particular machinery or processes are invited either to call personally or to communicate their requirements in writing. It is hoped that local importers and buyers will co-operate by making a more extended use of the information available in the offices and by bringing to the attention of the British Trade Commissioners any cases where the interests of exporters from the United Kingdom or the Dominions may be adversely affected by foreign competition or otherwise.

H M'S TRADE COMMISSIONERS IN INDIA

Calcutta—

Sir Thomas M Ainscough, C B E., -

His Majesty's Senior Trade Commissioner in India, Burma and Ceylon.

A Schofield,

His Majesty's Trade Commissioner at Calcutta

Post Box No 683, Fairlie House, Fairlie Place

Telegraphic Address—"Tradcom, Calcutta"

Telephone No—"Calcutta 1042"

Bombay—

W D M Clarke,

His Majesty's Trade Commissioner at Bombay

Post Box No 815, 3, Wittet Road, Ballard Estate

Telegraphic Address—"Tradcom, Bombay."

Telephone No.—"Bombay 23095"

Burma—

Imperial Trade Correspondent, Collector of Customs, Rangoon

Ceylon—

Imperial Trade Correspondent,
Director of Commerce and Industries,
Colombo,

THE CANADIAN COMMERCIAL INTELLIGENCE SERVICE.

The Canadian Department of Trade and Commerce comprises, as one of its principal divisions, the Commercial Intelligence Service. This Service had its beginnings prior to the establishment of the Department in 1892 and has since undergone considerable expansion. Before the war it included a headquarters staff in Ottawa and thirty-four Trade Commissioner offices abroad, seventeen of these being in British and an equal number in foreign countries. Offices in enemy countries have since been closed.

The office of the Canadian Trade Commissioner for India, Burma and Ceylon was established in Calcutta in 1922 and was transferred to Bombay on April 1, 1940. Its services are at the

disposal of Canadian firms interested in the export of their goods to the Indian market and to others who may be interested in the purchase of Indian products. It is also in regular touch with import houses in India and is prepared to co-operate as well with exporters seeking a market in Canada for any Indian commodities.

Canadian Government Trade Commissioner in India, Burma and Ceylon—Paul Sykes, Gresham Assurance House, Mint Road, Bombay, P. O. Box 886 Telephone—20672, Tel. Address—"Canadian, Bombay."

THE AUSTRALIAN GOVERNMENT TRADE COMMISSIONER SERVICE IN INDIA.

The Australian Government Trade Commissioner is located in Calcutta and covers the territory of India, Burma and Ceylon.

The Trade Commissioner deals with enquiries received from India, Burma and Ceylon and places Indian Merchants and Firms in touch with manufacturers in his country. He maintains a flow of trade information to the Department of Commerce, Australia, for dissemination to Australian exporters and information on specific openings for trade, including Government contracts and tenders for which Australian products might be suitable. He watches the demand for specific goods and gives information concerning competition to be met in their supply. An important function is to provide details of credit conditions and terms of payment. Market surveys on specific commodities are prepared and sent for the information of trade interests in Australia.

The Australian Government Trade Commissioner acts on behalf of the Government of Australia in all matters necessitating direct approach to the Government of India and maintains liaison with all foreign consular and trade officials. His monthly and annual reports on trade conditions in India, Burma and Ceylon are circulated among Chambers of Commerce and Chambers of Manufactures in Australia.

The office also acts for the Australian National publicity association.

Information and literature is available on all aspects of trade, travel or settlement in Australia.

Australian Government Trade Commissioner in India—H. R. Gollan, D.S.O., M.C. Address, 2, Fairlie Place, Calcutta. Telegraphic Address, "Austrade," Calcutta. Telephone Number Calcutta 3431.

CEYLON TRADE COMMISSIONER FOR INDIA.

In 1937 the Government of Ceylon decided to send over to India a Trade Commissioner for the purpose of stimulating trade between Ceylon and India. "Ceylon House in Bombay" was thus inaugurated in June, 1937, and was to continue operation for a period of three years as an initial experiment. At the expiration of the first period of three years, it has been decided by the Ceylon Government to continue Ceylon House for a further period. The purpose of Ceylon House is not actually to enter into trade directly but to put Ceylon producers in direct touch with Indian importers and to see that all Ceylon products get a fair deal in the

Indian markets or find outlets where they are not much known. In pursuance of this policy, the Commissioner helps all local inquiries in obtaining the necessary trade contacts. Information and literature relating to Ceylon and Ceylon produce are being supplied by the Commissioner and free advice is given to intending tourists.

Trade Commissioner—M. H. Karthikeyan, M.A. (Canton), Barr-at-Law, Ceylon Civil Service. *Secretary*—A. B. A. Mediwala, B.A. (London). Address: Ceylon House, Fifth Floor, Hornby Road, Bombay. Telephone—Lal Bahar, Tel. 31252.

THE INDIAN CENTRAL COTTON COMMITTEE.

Office—Nicol Road, Ballard Estate, Bombay.

Secretary—D N. Mahta, B A (Oxon).

Asst Secretary—C J. Bocarro, M B E, M A.

Director, Technological Laboratory—Dr. Nazir Ahmad, O B E, J P, M Sc, Ph D., F Inst P

The Indian Central Cotton Committee was constituted by the Government of India in March 1921, as a result of the recommendation of the Indian Cotton Committee of 1917-18. Originally the Committee was purely an advisory body but with its incorporation under the Indian Cotton Cess Act in 1923, it became an administrative body having at its disposal funds for the improvement and development of the growing, marketing and manufacture of cotton in India. The funds of the Committee are derived from the Cotton Cess of two annas per bale (four annas for the first three years) which was imposed in 1923. Having complete control over its funds, the Committee has been able to build up a satisfactory reserve and is at present spending over Rs 10 lakhs per annum on cotton improvement, mainly on agricultural and technological research and seed distribution and marketing schemes.

The activities of the Committee now extend to all branches of cotton improvement in India, and, as an authoritative body to advise the Central and Provincial Governments on important matters of cotton policy, it has attained an outstanding position. The Committee provides funds for research into cotton problems of all-India importance and for the development, tension and marketing of improved varieties of cotton. The aim, however, has always been to supplement and not supplant the work of the Agricultural Departments in the cotton growing provinces and Indian States. Including as it does representatives of growers, agricultural officers, traders, spinners and manufacturers, it has been an invaluable forum for the discussion of many problems of general concern. A list of the members constituting the Committee and the various interests they represent as on 31st December 1941 is given below—

MEMBERS OF THE COMMITTEE.

President—P. M. Kharegat, C I E, I O S
Vice-Chairman, Imperial Council of Agricultural Research, *ex-officio*

(a) Dr W. Burns, C I E, Agricultural Commissioner with the Government of India, *ex-officio*

REPRESENTATIVES OF AGRICULTURAL DEPARTMENTS

Madras—P. H. Rama Reddi, I A S, Director of Agriculture

Bombay—W. J. Jenkins, C I E, I A S, Director of Agriculture

United Provinces—C. Maya Das, I A S, Director of Agriculture

Punjab—H. R. Stewart, C I E, I A S, Director of Agriculture

Central Provinces & Berar—J. C. McDougall, C I E, I A S, Director of Agriculture

Sind—Rao Bahadur K. I. Thadani, Director of Agriculture

The Director-General of Commercial Intelligence and Statistics, *ex-officio*

REPRESENTATIVES OF CHAMBERS OF COMMERCE AND ASSOCIATIONS

The East India Cotton Association, Sir Purshotamdas Thakurdas, C I E, M B E

The Bombay Millowners' Association, Sir Sorab D. Saklatvala, M L A

The Bombay Chamber of Commerce, L. F. H. Goodwin.

The Indian Merchants' Chamber, Sir Chunilal B. Mehta

The Karachi Chamber of Commerce, A. P. Darlow.

The Ahmedabad Millowners' Association, Chandulal P. Parikh, M L A

The Tuticorin Chamber of Commerce, J. Vonesch

The Upper India Chamber of Commerce, Captain S. R. Pocock, M C, M L A

The Empire Cotton Growing Corporation, Sir William Roberts, C I E, M L A

COMMERCIAL REPRESENTATIVES NOMINATED BY CENTRAL GOVERNMENT.

Central Provinces and Berar—Rao Saheb P. V. Deshmukh; Y. G. Deshpande

Madras—J. M. Doak

Punjab—Kanwar Raj Nath

Bengal representative—Suryya Kumar Basu

CO-OPERATIVE BANKING REPRESENTATIVE

Sir Chunilal V. Mehta, K C S I (Vice-President)

REPRESENTATIVES OF COTTON-GROWING INDUSTRY

Madras—Rao Bahadur R. V. Ramasundaram Pillai, L. Madhava Reddi

Bombay—Sardar Rao Bahadur Bhimabhai R. Naik, Mangesh Babhuta Patel, M L A

United Provinces—Khan Bahadur M. Ahmad Husain Khan, Rai Bahadur Kunwar Lakshmi Raj Singh, M L C

Punjab—Sardar Bahadur Gurbachan Singh M L A, Rai Saheb Chaudhary Suraj Mal, M L A

Central Provinces and Berar—Rao Bahadur Sir Madhavarao Deshpande, K B E, Suganchand Tapadia

Sind—Roger Thomas, C I R

REPRESENTATIVES OF INDIAN STATES

Hyderabad State —Rai Saheb Kaldas Sawhney, Director, Agricultural Research

Baroda State —R G Allan, CIE, Commissioner of Agriculture

Gwalior State —Lt Sardar D K. Jadhav, Director of Agriculture

Rajputana and Central India States —Rao Bahadur V A Tamhane

ADDITIONAL MEMBERS NOMINATED BY THE CENTRAL GOVERNMENT

Rao Bahadur S S Salimath, Deputy Director of Agriculture, Northern Division, Surat, T G Rama Iyer, Director of Agriculture in Mysore, Bangalore, Rao Bahadur V Ramanatha Ayyar, Cotton Specialist, Coimbatore, Musahib-i-Khas Bahadur, M A Rashid Khan, Home Minister, Holkar State, Representative of the Holkar State, Dr Chellaram Shewaram, Representative of the Karachi Indian Merchants' Association, Dr B L Sethi, Deputy Director of Agriculture, Western Circle, U P Aligarh The Hon'ble Mr V Ramadas Pantulu, President, Madras Provincial Co-operative Bank, Madras, Sir Shri Ram, Representative of the Cotton Mill-owners' of Delhi, Jivandas Ladhahbhai, Representative of the Karachi Cotton Association Ltd, Dewan Bahadur Sir T Vijayaraghavacharya, KBE, S A Jamalullah, Deputy Director of Agriculture, Parbhani, Dr T E Gregory, Economic Adviser to the Government of India, Dr P J Gregory, Second Economic Botanist, Bengal

Amongst the research schemes of the Committee, plant breeding schemes for the improvement of quality naturally take pride of place. The agencies employed by the Committee for its research work have varied little in character since 1923, though they have grown in number. It continues to maintain a Technological Laboratory at Bombay which includes a complete experimental spinning plant and a scientific laboratory for research on the cotton fibre and a Testing House which is recognised by the BISFA. The Committee also provides a large proportion of the funds for the Indore Institute of Plant Industry.

For a considerable period the Committee restricted its grants to agricultural research, but in 1930 it was decided that the time had come to add its support to the efforts already being made to bridge the gap between the experiment station and the cultivator and to supplement the funds which the Agricultural Departments were devoting to the introduction of improvements into agricultural practice. Special attention from that time began to be devoted to seed distribution schemes.

The Committee has not stopped at the production of better cotton, but from its inception has devoted special attention to better marketing, to the prevention of adulteration and other abuses and to many other problems connected with the cotton trade of the country. Regulated Cotton Markets existed in Berar before the establishment of the Committee, and that system which had stood the test of time was commended with certain modifications for general adoption. Regulated Cotton Markets have now been established in Bombay, Central Provinces, Madras, Hyderabad, Baroda and Indore. Similarly, on the recommendation of the Committee, the Cotton Transport Act was passed in 1923 by which Provincial Governments are empowered to exclude from any specified area cotton, *lapas* or seed from outside unless required for a special purpose and covered by a licence. Prior to the passing of this Act, inferior cottons used to be imported in large quantities into the staple cotton tracts for purposes of adulteration, to the detriment of the reputation of several valuable cottons. The Act is now in force in almost all the important staple cotton areas of Bombay, Madras and the Central Provinces as well as in Baroda, Rayppla, Chhota Udepur, Hyderabad and Indore, etc. In 1925, on the recommendation of the Committee, the Cotton Ginning and Pressing Factories Act was passed. This provides for a certain measure of control of ginning and pressing factories and especially for the marking of all bales of cotton pressed with a press mark and serial number which enables them to be traced to their origin. Recently the Act has been used for the prevention of watering and for the mixing of non-cotton articles with cotton. The Committee has also taken steps to bring to the notice of the trade, both in India and abroad, those improved varieties which have now reached a commercial scale.

It may be stated without hesitation that, as a result of the efforts of the Committee, the last eighteen years have seen a marked change in the character of the Indian crop, particularly in the percentage of short and medium staple. Equally important is the result of agricultural research and its application to the yield of cotton per acre. The average yield per acre in the quinquennium 1932-37 for the whole country was 108 lbs. This is 14 per cent higher than for the quinquennium 1927-32, despite the fact that in two years of the second quinquennium the cotton crop in some important areas was seriously damaged by abnormal weather conditions. The average yield per acre in 1940-41 is 121 lbs against 110 lbs in the previous season. The ascertained area under improved cotton during 1940-41 is about 28 per cent of the total. The ultimate ideal is to encourage the establishment of single variety tracts wherever agricultural conditions and the limitations of irrigation supply and soil make this possible.

THE EAST INDIA COTTON ASSOCIATION, LIMITED.

Bombay.—The Association is the outcome of the findings of the Indian Cotton Committee which was appointed by the Governor-General in Council under a resolution dated September 27th, 1917. Until the end of 1917 the Cotton Trade of Bombay was in the hands of seven distinct bodies, viz: The Bombay Cotton Trade Association, Ltd., The Bombay Cotton Exchange, Ltd., The Bombay Millowners' Association, The Bombay Cotton Brokers' Association, Ltd., The Marwari Chamber of Commerce, The Bombay Cotton Merchants' and Muccadams' Association, Ltd., and The Japanese Cotton Shippers' Association. None of these bodies were representative of the trade as a whole and their interests often came into conflict with each other. The necessity of a system of periodical settlements, such as existed in Liverpool, was badly felt, especially when speculation was rife in futures which was so excessive in 1918 that the Trade had to invoke the aid of Government to prevent a financial crisis.

The Cotton Contracts Committee was created under the Defence of India Act in June 1918 as a temporary measure under the Chairmanship of G. Wiles, I.C.S. This body was replaced by the Cotton Contracts Board in 1919, which continued to function until May 1922, when the Act, under which the Board worked, was repealed, and its functions were carried on by the East India Cotton Association under Bombay Act No XIV of 1922.

The Association continued to function under the above Act until 31st October, 1932. With effect from 1st November 1932, the Association has been regulating transactions in cotton under Bombay Act No IV of 1932 under which it has been declared to be a recognised Cotton Association.

The present constitution of the Board is as follows:—

Sir Purshotandas Bhakurdas Kt. (I.E., M.B.E.), (*President*), Ramdeo A. Podar (*Vice-President*) (Brokers' Panel), J. R. Kay, C. Shuttleworth, Ramdas Kulachand, J. P. Patel (Buyers' Panel), Bansidhar B. Chokhani, Hansraj Jivandas, Chhannalal B. Parikh, Purshotandas Harkisondas, (Sellers' Panel), Madanlal Paltram Jagjivandas Dossabhai Banarsidass Basantilal Sekaria, Premchand Kediti Chuntlal Krishnadas Saxta, (Brokers' Panel), Sardar Rao Bahadur Bhimabhai R. Nank, Sardar Bahadur Gurbachan Singh, M.L.A. Rao Bahadur Sir Madhwarao G. Deshpande K.B.I. (Cotton Growers Representatives) nominated by the Indian Central Cotton Committee, Dr. A. H. Pithi M.Sc., The Rao Sahib I. B. Laxmishwar Kurkoti (Cotton Growers Representatives) nominated by the Government of Bombay.

Officers.

C. M. Parikh B.Com. *Secretary*, A. R. Menezes, J.P., *Deputy Secretary and Manager, Clearing House* and S. A. P. Aliyar, *Assistant Secretary*.

Some of the objects for which the Association is established are—To provide and maintain suitable buildings or rooms for a Cotton

Exchange in the City of Bombay and elsewhere in India and to regulate admission to and prohibition of the use thereof, and the nature and times of such user, whether in the case of the general body or particular classes or any individual or firm or company using the Exchange; to provide forms of contracts compulsory or permissive and regulate the making, carrying out and enforcement or cancellation of contracts; to adjust by arbitration or otherwise controversies between persons engaged in the cotton trade; to establish just and equitable principles in the trade and to maintain uniformity of control, to fix or adopt standards of classification of cotton; to acquire, preserve and disseminate useful information connected with the cotton interest throughout all markets, to decrease or insure the local risk attendant upon business; and generally to control, promote and regulate the cotton trade in the Presidency of Bombay and elsewhere in India, improve its stability and augment the facilities with which it may be conducted, to establish and maintain a Clearing House for the purpose of dealing with cotton transactions, and to regulate admission to and prohibition of the user thereof and the nature and times of such use whether in the case of the general body or particular classes or any individual or firm or company using the Clearing House, to regulate the handling and exportation of cotton from India and the importation of cotton into India in so far as it may be imported, to bring, prosecute, or defend, or aid in bringing, prosecuting, or defending, any suits, actions, proceedings, applications, or arbitrations on behalf of Members or Associate Members or Special Associate Members or otherwise as the Directors of the Association may think proper or conducive to the objects of the Association and to prescribe the principle of framing of contracts with a view to eliminate the temptation and possibility of speculative manipulation.

The Association has a fine Building at Sewri Cotton Depot, containing 121 Buyers' Rooms and 84 Sellers' Rooms, a large Trading Hall on the lines of Liverpool and New York Exchanges, Survey Rooms, Appeal Rooms, etc.

The Association has another fine Building, "The Cotton Exchange" at the corner of Sheikh Memon Street and Kalbadevi Road, wherein trading in "forward" contracts is conducted. It comprises of a basement, a ground floor (Trading Hall) with two galleries and six other upper floors. There are 114 telephone cabins for members on the ground floor and the galleries. The top floor accommodates the administrative offices of the Association and the Clearing House, and the remaining five floors contain 113 rooms for members' offices.

The Association has a membership of 465.

The Bombay Cotton Annual containing matters relating to every branch of the trade is published annually in December and statistics are issued twice weekly.

The Textile Industry.

India has been the home of the cotton trade from the earliest times. Its cotton, known as white wool, was well-known to the ancients and its cloth was familiar to the West in the days of the overland route. The name Calico comes from the fine woven goods of Calicut, and the products of the Dacca handlooms are still remarkable as the finest muslins human skill can produce.

Indian Cotton—The exports of Indian cotton began to assume importance with the opening of the sea route. They received an immense stimulus during the American Civil War, when the close blockade of the Confederate ports produced a cotton famine in Lancashire, and threw the English spinners back on India for their supply of raw material. When the war broke out the shipments of Indian cotton were 528,000 bales but during the last year of the war they averaged 973,000 bales. Most of this cotton was sold at an enormously inflated price, and induced a flow of wealth into Bombay, the great centre of the trade, for which there was no outlet. The consequence was an unprecedented outburst of speculation known as the "Share-Mania," and when the surrender of Lee reopened the Southern Ports widespread ruin followed. It is estimated that the surplus wealth brought into the country by the American Civil War aggregated £92 millions. Since then the cultivation of Indian cotton, although interrupted by famine, has steadily increased. For the last season for which returns are available, 1939-40, the total area in all territories reported on was computed at 21,350,000 acres and the total estimated outturn was 4,942,000 bales of 400 lbs. as compared with 23,482,000 acres and 5,076,000 bales in 1938-39. Bombay, Punjab, the Central Provinces and Hyderabad are the chief producing areas.

Cotton Trade—Bombay is the great centre of the cotton trade. The principal varieties are Dhollera, Broach, Oomras (from the Beas), Dharwar and Coomtas. Broach is the best cotton grown in Western India. Hinganghat cotton, from the Central Provinces, has a good reputation. Bengals is the name given to the cotton of the Gangetic valley, and generally to the cottons of Northern India. The Madras cottons are known as Westerns, Coconadas, Colmbatores and Tinnevellys. The best of these is Tinnevely. Cambodia cotton has been grown with success in Southern India, but it shows a tendency to revert. The high prices of cotton realised of recent years have given a great impetus to cultivation. Government have also been active in improving the class of cotton produced, by seed selection, hybridization and the importation of exotic cottons. Although these measures have met with a considerable measure of success, they have not proceeded far enough to lighten the whole outturn, which still consists for the most part of a short staple early maturing variety suitable to soils where the rainy season is brief.

Reference has been made to the popularity of the Indian handloom cloths in the earliest days of which we have record. This trade grew so large that it excited alarm in England, and it was killed by a series of enactments, commencing in 1701, prohibiting the use of sale of Indian

calicoes in England. The invention of the spinning jenny and the power loom and their development in England converted India from an exporting into an importing country, and made her dependent on the United Kingdom for the bulk of her piecegoods.

Indian Cotton Mill Industry—The foundations of the Indian Cotton Mill Industry were laid in the middle of the last century. Bombay saw its first mill in the year 1854 owing to the enterprise of a Parsee Merchant, Mr. Cowasjee Nanabhooy Davar. Other mills followed later, and the following table shows how, by successive stages, the Industry's productive capacity has grown—

Year	Number of Mills	Number of Spindles	Number of Looms.
1870	47	1,100,112	9,139
1880	50	1,401,500	13,502
1890	137	3,274,106	23,412
1900	193	4,945,783	40,121
1905	197	5,163,486	50,130
1910	263	6,195,071	82,725
1915	272	6,848,744	108,009
1920	253	6,763,076	119,012
1925	337	8,510,833	154,202
1930	348	9,124,708	179,250
1935	365	9,686,175	198,867
1940	388	10,005,785	200,070
1941	390	9,961,178	198,674

It may be noted that the rate of development has not been uniform in all centres of the Industry in India, and although in the initial stages, the Industry was concentrated in Bombay owing to its advantageous geographical and climatic situation, this pre-eminence of Bombay was not maintained in subsequent years. The Industry's development in later years has been more rapid in other Provinces in India and particularly in the Indian States.

From 1860 to 1865, progress was materially assisted by the accession of wealth which accrued to Bombay commercial interests owing to the high prices at which Indian cotton was sold during the American Civil War. Another factor which contributed to the rapid growth of the Industry was the establishment of a profitable export yarn trade with China. In the years 1865 to 1871, the Industry suffered a severe setback to its prosperity owing to the financial crash which followed the American Civil War. In the early 'seventies, after the restoration of credit, the industry made rapid progress, though in the initial stages, the development of the weaving side of the industry was comparatively slow. The profitable yarn trade with China enabled the Bombay mills to make further progress in the 'seventies and 'eighties of the last century.

Cotton Excise Duty—The growth of the industry in India during the early years was regarded with a jealous eye by the Lancashire manufacturing interests whose agitation resulted in the Government of India exempting from import duty coarse yarn and cloth in 1878. This resulted in the substitution of the exempted classes of goods for the medium and fine goods

previously imported from England, to the detriment of the growing indigenous industry. In 1893, the Indian mints were closed to the free coinage of silver. This step had a disastrous and almost immediate effect on the industry. With the precision of an automatic machine, business with China and Japan came to a standstill as the exchange dropped by about 12 to 15 per cent to the detriment of India. This measure was followed three years later by the imposition of an excise duty of $3\frac{1}{2}$ per cent on cloth manufactured in Indian mills for the purpose of countervailing the import duties which had been re-imposed at the end of 1894. From the date of its imposition, until it was finally abolished in the year 1926 this excise duty was condemned by all shades of public opinion in India as an inequitable and unjust burden on the indigenous industry. The closing years of the last century also witnessed the beginnings of the growth of a Mill Industry in China and Japan, which contributed greatly to the cutting off of the Indian yarn trade with the Far East in the following years. Japan later proved to be a very formidable rival to India in the China Market, and eventually threatened the very existence of the Indian industry even in its home market. The loss of the export trade with China and Japan, with whom Indian mills were doing a profitable business in yarn, was a serious matter, and was the main reason for the development of the weaving side of the Indian industry, which had previously been relatively neglected.

The first Swadeshi Movement afforded a temporary lull to the Indian industry in the years 1905 to 1907. The intensification of the movement during these years gave a considerable impetus to the cotton manufacturing industry, and as the yarn trade with China was not then profitable, attention was naturally turned to the installation of more looms in the mills, so that the yarn spun in the mills might be turned into piece goods instead of being exported to China. In 1907 there were large failures of commercial houses particularly in Bombay consequent on the heavy fall in the prices realised for yarn in China, the fall in demand from that country following a famine and violent fluctuations in the silver exchange. The next three years saw the industry passing through a difficult period accentuated by the enhancement of the duty on silver. The adverse conditions persisted with brief spells of partial recovery until 1917 when the boom arising from the Great War set in, which lasted up to the year 1922.

Abolition of Excise Duty—This boom was followed by a period of severe depression, especially in Bombay. This depression, combined with the growing severity of Japanese competition in the home market, assisted as it was by inferior labour conditions led in the years following 1923 to a renewed agitation for the repeal of the cotton excise duty. In August 1925, a deputation from the Bombay and Ahmedabad Millowners Associations waited on His Excellency the Viceroy. The situation worsened in the following months, and in December 1925, the excise duty was suspended, and it was finally abolished in March 1926.

Tariff Board Enquiry—A special Tariff Board was appointed soon after to enquire into

the position of the industry, the causes of the depression, the extent to which it was due to foreign competition and the necessity or desirability of protection. The Board found that the difficulties of the industry were mainly due to the unfair advantage which Japan enjoyed owing to the adoption of the double shift system and the employment of women and children at night. The Board, however, presented a majority and a minority report. Government were unable to accept the recommendations made, but as a measure of partial relief, they removed the import duties on mill stores and textile machinery.

The general disappointment felt at Government's decisions on the Tariff Board's recommendations and the grave crisis which then faced the industry were brought to the notice of His Excellency the Viceroy by a deputation of millowners from all parts of the country which waited on His Excellency on 12th July 1927. As a result of this deputation, Government revised their original decisions and imposed a minimum specific duty of $1\frac{1}{2}$ annas per pound on imported yarns with effect from September 1927, for a period of three years. By the end of this period, although labour conditions in Japan had improved, a new danger had arisen in the shape of a large import trade from China where labour conditions were far inferior to those in India. The protective duty was, therefore, extended for a further period of three years ending on the 31st March 1933.

Protection to Cotton Industry—The utter inadequacy of the protection extended to the industry by the Yarn Protection Act of 1927 was abundantly evidenced by the increasing imports of piecegoods from Japan in the following years. On 22nd July 1929, on the suggestion of the Bombay Millowners' Association, Mr G S Hardy was appointed by Government to examine the possibility of substituting a system of specific duties for the then existing system of *ad valorem* assessment. Mr Hardy's conclusions, which revealed that Japanese competition was extremely severe in certain classes of goods manufactured in India, were discussed at a conference of millowners convened by the Government of India towards the end of 1929, and in February 1930, Government introduced in the Legislative Assembly the Cotton Industry (Protection) Bill, which, as finally passed, provided for a change in the then existing revenue duty of 11 per cent to a protective duty of 15 per cent in the case of British cotton piecegoods and of 20 per cent in the case of foreign goods, with an alternative minimum specific duty in either case of $3\frac{1}{2}$ annas per pound on plain grey goods. For revenue reasons, these *ad valorem* rates were raised by 5 per cent in March 1931, and a surcharge of 25 per cent of the enhanced duties was imposed in October of the same year, bringing the rate of duties to 25 per cent (British) and $31\frac{1}{2}$ per cent (foreign) with a minimum specific duty of $4\frac{1}{2}$ annas per pound on plain greys. At the same time, an import duty of 6 pices per pound on all raw cotton and of 10 per cent on machinery and dyes used by the industry was also levied. The duty on raw cotton was raised in 1939, again for reasons of revenue, to one anna per pound.

Early in 1932 Government directed the Tariff Board to enquire into the question of the grant

of substantive protection to the industry In the meantime the depreciation of the Japanese exchange, consequent on Japan's going off the Gold Standard in 1932, enabled her to place her piece-goods on the Indian Market at abnormally low prices, and offset to a very great extent the protection conferred on the Indian Industry by the 1930 Act Government, therefore, directed the Board to hold a special enquiry into this question, and in accordance with the recommendations of the Board, the duties on foreign piece-goods were raised from August 1932, to 50 per cent or 5½ annas per pound, whichever was higher, but in view of the continued severity of the Japanese competition, Government once again found it necessary in June 1933 to raise the level of the duty on foreign piece-goods to 75 per cent *ad valorem* or 6½ annas per pound At the same time notice was also given of Government's intention to abrogate the Indo-Japanese Trade Convention of 1904

British & Japanese Trade Delegations — This was followed by the arrival in India of an official Delegation from Japan and an unofficial Trade Delegation from the United Kingdom The United Kingdom unofficial Delegates' deliberations with Indian millowners culminated in what has been termed the Mody-Lees Pact of 1933, an understanding which was to be in force until the end of 1935 Similar discussions between certain unofficial delegates from Japan and Indian millowners proved abortive, but the efforts of the Japanese official delegates resulted in a fresh Convention and Protocol being agreed to early in 1934, under which a link was established between the exports of Indian raw cotton to Japan and the imports of cotton piece-goods from Japan Japan agreed to take one million bales of Indian raw cotton in return for the right to export 325 million yards of cotton piece-goods to this country, with a maximum limit of 400 million yards for an aggregate offtake of 1½ million bales of Indian raw cotton Japan was also accorded most-favoured-nation treatment in respect of her miscellaneous trade In virtue of the terms of the Protocol, the duties on Japanese cotton piece-goods were reduced, with effect from 8th January 1934, to 50 per cent *ad valorem* with a minimum specific duty of 5½ annas per pound on plain grey goods

The protective duties on cotton yarn and piece goods imposed by the Cotton Textile Industry (Protection) Act, 1930, were due to expire on 31st March 1933, but as Government were not able to complete their consideration of the report of the Tariff Board of 1932 (which had recommended the institution of specific duties based on weight subject to their being combined with alternative *ad valorem* duties to prevent a loss of revenue and the imposition of a duty of one anna per pound in the case of yarns below 50s count) before that date, they extended the provisions of the Act for another year

Textile Protection Bill —The Cotton Industry (Textile Protection) Bill of 1934 sought to give effect to the recommendations of the Tariff Boards on the cotton and sericultural industries in the light of the Indo-Japanese Protocol and the unofficial agreement entered

into between Indian and Lancashire millowners So far as yarn was concerned, the Act, as passed, fixed the rates of duties at 5 per cent (British) and 6½ per cent (non-British) with a corresponding alternative minimum specific duty of 1½ annas and 1½ annas per pound on counts up to and including 50s In the case of piece-goods, the levels of the duties were fixed at 25 per cent and 50 per cent on British and non-British goods respectively, with a minimum specific duty of 4½ annas and 5½ annas per pound on plain grey goods The Act also guaranteed protection to the Industry for a period of five years ending March 1939, but recognized the need for an examination of the scale of duties on two occasions firstly on the expiry of the Mody-Lees Pact at the end of 1935, and secondly, at the end of the Indo-Japanese Protocol in March 1937 Accordingly, at the end of 1935, Government directed the Tariff Board to examine the adequacy of the then existing levels of duty on British goods Accepting the recommendations of the Board, Government reduced, with effect from June 25, 1936, the duty on all United Kingdom cotton piece-goods, with the exception of prints, to 20 per cent *ad valorem* with a minimum specific duty of 3½ annas per pound on plain grey goods

Textile Trade Agreement —The Indo-Japanese Trade Protocol was subsequently renewed for a further period of three years ending March 1940, without any material modification in the rates of duties applicable to Japanese cotton piece-goods With the separation of Burma from India in April 1937, however, the basic quota of cotton piece-goods for India was reduced to 283 million yards, rising to a maximum of 358 million yards, leaving a margin of 42 million yards for Burma

The negotiations between the Government of India and His Majesty's Government in the United Kingdom for the conclusion of a new Trade Agreement in replacement of that entered into at Ottawa in 1932 were brought to a conclusion early in 1939, and the new Agreement specifically provided for a reduction of the basic rates of duties on United Kingdom cotton piece-goods as under —

Printed goods	17½% <i>ad valorem</i>
Grey goods	15 % <i>ad valorem</i> or As 2-7½ ps per lb, whichever is higher
Others	15 %

The basic rates were subject to a reduction of 2½ per cent if imports from the United Kingdom in any year were less than 350 million yards and to an increase to the same extent in the event of United Kingdom imports exceeding 500 million yards The new rates of duty came into force on April 1, 1939 In the year 1939-40, the European War affected imports from the United Kingdom, and as her sendings of piece-goods did not exceed 350 million yards, the duties on all classes of British piece-goods were reduced by 2½ per cent with effect from April 17, 1940

The following table shows at a glance the progress made by the Indian Cotton Mill Industry during the last forty years

Progress of Cotton Mills in British India and Indian States since 1900

Years ending 30th June	Number of Mills	Number of Spindles installed	Number of Looms installed	Average No of Hands employed daily	Approximate quantity of Cotton consumed	
					Cwts.	Bales of 392 lbs.
1900	193	49,45,783	40,124	1,61,189	50,86,782	14,53,352
1901	193	50,08,936	41,180	1,72,888	47,81,090	13,51,740

† Excludes Burma and Ceylon

It may be mentioned here that there has latterly been much greater expansion of the Industry in the Indian States than in the British Indian Provinces owing to certain advantages possessed by the former, e.g., lower taxation, less rigorous labour laws and other facilities granted by the State Governments.

The following statement shows the quantity (in pounds) of yarn of various counts produced in Indian mills during the last five years —

Statement of the Quantity (in pounds) of Yarn spun by Indian Mills according to counts

	1936-37	1937-38	1938-39	1939-40	1940-41
1s to 10s	111,692,937	114,200,042	136,570,938	123,063,838	125,771,036
11s to 20s	476,966,877	494,882,986	551,458,811	545,895	616,000,576
21s to 30s	268,078,211	302,870,270	341,309,542	311,928,563	311,928,563
31s to 40s	123,007,542	152,455,137	167,740,437	157,308,536	159,204,770
Above 40s	61,851,698	85,112,656	91,613,206	81,754,657	88,456,603
Wastes, etc	8,403,461	11,194,840	14,548,968	15,457,663	16,987,224
Grand Total	1,050,600,726	1,160,715,937	1,303,245,902	1,234,873,374	1,349,038,771

Fine Count Yarn—Substantial progress has been made in the last few years in the direction of spinning fine count yarn. Much however, remains to be accomplished, but the duty of one anna per pound which Indian mills have now to pay for long staple cotton imported from abroad is a factor which is likely to hamper more rapid progress.

The statement below shows the total quantities of woven goods manufactured in Indian mills during the same years —

	1938-39	1939-40.	1940-41.
	Yds	Yds	Yds
Grey & Bleached goods	3,337,129,086	3,086,318,074	3,165,419,508
Coloured Piece-goods	932,140,413	926,210,951	1,104,055,490
Grand Total	4,269,269,499	4,012,529,025	4,269,475,002

Here again, it may be pointed out that Indian mills are now turning out increasingly larger quantities of fine Dhooties, Cambrics and fine Longcloth on the lines recommended by the first Tariff Board (1927)

Textile Industry and the War—After a continuous period of almost unrelieved gloom extending over a period of nearly two decades, culminating in measures being actively explored with a view to bringing about an organized curtailment of production throughout the country, the war in Europe which commenced in September 1939 opened up the prospect of a spell of comparative prosperity for the industry. Many of the Empire and neutral markets, which used to receive their supplies of textiles from the belligerent countries, were cut off from their previous sources of supply, with the result that these countries were increasingly forced to

look to India for the satisfaction of their textile requirements. The war also made increased demands on the Indian industry for the clothing needs of the Defence Forces of the Empire and its Allies. Reference may, in this connection, be made to the deliberations of the Eastern Group Conference held in Delhi in October/November 1940, for the purpose of concerting measures for making the countries of the Eastern Group of the British Empire as far as possible self-supporting for war supply purposes, and to the outstanding position occupied by the Cotton Mill Industry of India for the satisfaction of the textile requirements not only of the defence services but also of the civil markets of the participating countries.

The table below sets out the exports of cotton twist and yarn from India to her chief export markets in the two immediate pre-war years and in the first year affected by the present conflict —

Exports of Cotton Twist and Yarn from British India

	1938-39	1939-40	1940-41.
	lbs	lbs	lbs.
To United Kingdom	182,238	2,660,462	
Burma	12,442,644	15,236,664	
Strait Settlements	5,537,768	3,189,755	
Hongkong	8,168,448	5,265,902	
Syria	3,400,400	2,213,400	
Others	8,228,101	8,376,600	
Grand Total	37,950,599	36,942,783	77,723,173

In relation to the world cotton textile industry, the Indian Industry ranks second from the point of view of the volume of cotton consumed, and fifth in point of spindles and looms installed. The position of the Mill Industry in the national economy of India will be evident from the fact that, at the present time, it consumes more than 50 per cent of the total Indian cotton crop, directly gives employment to about 600,000 workers, and affords subsidiary employment to large numbers of persons who are engaged in various trades which directly depend for their existence upon the Cotton Mill Industry.

Hand Weaving Industry—It has been estimated that there are about 2½ million handlooms spread throughout the whole of the country and that the number of dependents who rely in some measure upon this industry for their support is somewhere near ten millions, a number greatly in excess of any other industry except the production of cotton.

estimated at nearly 2,000 million yards. The economic position of the cottage handloom weaver in India has, for a number of years, been receiving the attention of the Government of India and Provincial Governments. For some years, financial assistance has been granted to Provincial Governments from central revenues for the purpose of improving the cottage industry's organisation and producing and marketing methods. Despite this assistance, the industry is reported to be in a depressed condition, and various suggestions have been made from time to time from various quarters to remedy the situation. All these proposals were carefully examined at a conference convened by the Central Government in December 1940 at which it was decided to set up a Fact Finding Committee for the purpose of ascertaining the complete facts concerning the handloom industry and its preliminary to considering the question of assisting the cottage industry.

Considering its present dimensions, the jute industry of Bengal is of very recent origin. The first jute mill in Bengal was started at Rishra in 1855, and the first power-loom was introduced in 1859. The original outturn was 8 tons per day. In 1900 it had grown to 2,500 tons per day, it is now about 5,500 tons a day of 10 working hours, and it shows every indication of growing and expanding year by year. Another interesting thing about the jute industry of Bengal is that, although it is practically a monopoly of Scotsmen from Dundee, the industry itself owes its inception to an Englishman. The founder of the industry was George Acland, an Englishman, who began life as a midshipman in the navy, and was for some years in the East India Marine Service. He quitted this service while still a young man, and engaged in commercial pursuits on Ceylon, where he was successful. Later on he turned his attention to Bengal, and arriving in Calcutta about 1853 he got into touch with the management of the paper works, then at Serampore, where experiments were being tried with country grasses and fibre plants to improve the quality or cheapen the manufacture of paper. This seems to have suggested to Acland the manufacture of rhea, and in 1854 he proceeded to England, with a view to obtaining machinery and capital in order to manufacture goods from that material. During this trip he visited Dundee, and while there Mr. John Kerr, of Douglas Foundry, suggested to him the importing of machinery into Bengal "where the jute comes from and spin it there." This suggestion bore fruit, for shortly afterwards Acland placed orders with Kerr for a few systems of preparing and spinning machinery, and returned to India the same year accompanied by his two sons and a few Dundee mechanics who were to assist him in erecting and operating the first jute mill in Bengal. This, as has been stated, was at Rishra, the site of the present Wellington mills, near Serampore, and here, in 1855, the first machine spun jute yarns were made. As not infrequently happens the pioneer got very little out of his venture. After several ups and downs the Acland interest in the Rishra mill ceased in 1867, and the company which Acland had formed in 1854 was wound up in 1868.

Power-loom.—The pioneer's example was followed by Mr. George Henderson of that silk firm, and in 1859 the Borneo Jute Co. was launched under his auspices. To this company is due the credit of introducing the power-loom for jute cloth. Unhampered by the financial difficulties which had burdened the Aclands, the Borneo Jute Co. made rapid progress, doubling their works in 1864, and clearing their capital twice over. In 1872 the mills were turned into a limited liability company, the present "Barnagore Jute Factory Co., Ltd." Four other mills followed in succession—Gouripore, Serajunge, and India Jute Mills.

"From 1868 to 1873," writes Mr. David Wallace in "The Romance of Jute," "the five mills excepting the Rishra mill simply coined money and brought the total of their coms up to 1,250." To illustrate the prosperity of the industry at this period we may take the dividends paid by the Barnagore

Company. On the working of their first half year, a 15 per cent. interim dividend was declared, which seemed to justify the enormous capital at which the company was taken over from the Borneo Company, and shares touched 68 per cent. premium. The dividend for the first year, ending August 1873, was 25 per cent., for 1874, 20 per cent., and for 1875, 10 per cent. Then came a change. The investing public had forgotten the effect of the Port Canning bubble, and the condition of the jute industry in 1872-73 seeming to offer a better return than coal or tea, both of which had just enjoyed a boom, it was only necessary to issue a prospectus of a jute mill to have all the shares snapped up in the course of an afternoon.

In 1872-73 three new companies were floated locally—the Fort Gloster, Budge and Sibpore, and two Home companies, the Champdany and Samnugger, all of which commenced operations in 1874. In 1874-5 eight other mills were launched—the Howrah, Oriental (now Union), Asiatic (now Soorah), Clive, Bengal Pressing and Manufacturing Co. (now the Bellaghatta-Barnagore branch mill), Rustomjee (now the Central), Ganges (registered in England), and Hastings, owned by Messrs Birkmyre Bros. of Greenock fame—in all thirteen new companies, coming on all of a heap and swelling the total looms from 1,250 up to 3,500. This was too much of a strain for the new industry, and for the next ten years all the mills had a severe struggle. The older ones all survived the ordeal, but four of the new concerns—the Oriental, the Asiatic, the Bengal Pressing and Manufacturing Co. and the Rustomjee—became moribund, to appear again later on under new names and management. Fort Gloster also suffered badly.

Between 1875 and 1882 only one new mill was put up. This was Kamarhaty, promoted by Messrs Jardine, Skinner & Co., which came into being in 1877, as the result of Dr. Barry's visit to Calcutta in 1876, when he transferred the agency of the Gouripore Co. from Messrs. Jardine, Skinner & Co. to his own firm. This mill together with additions made by some of the other mills, brought the total looms up to 5,150 in 1882. By the end of 1885 the total was further augmented by the Hooghly, Titaghur, Victoria and Kankannab mills, bringing the number of looms at work up to 6,700. From this period on to 1894 no new mills came into existence except the Calcutta Twist Mill, with 2,460 spindles, since merged into the Wellington branch of the Champdany Co. Between 1896 and 1900 the following new mills were started—The Gordon Twist Mill with 1,800 spindles (now acquired by Anglo-India), Khardah, Gondolpara (French owned), Alliance, Arathoon, Anglo-India, Standard, National, Delta (which absorbed the Serajunge), and the Kinnison. A full of four years witnessed large extensions to the existing mills, after which came the following series of new mills, besides further heavy extensions.—Dalhousie, Alexandra, Naihati, Lawrence, Reliance, Belvedere, Auckland, Kelvin and Northbrook. The last decade has seen the construction of Hukumchand, Birla, Shree Hanuman, Gagalbhai, Premchand and Agarpara Mills, which—with the exception of the last-named—are under Indian ownership.

Progress of the Industry.

The record of the jute industry may well be said to be one of uninterrupted progress. The following statement shows the number of Mills, capital invested, number of looms and spindles employed in the industry in the various Provinces from 1929-30 to 1938-39 —

Province	No of Mills	Authorised Capital Rs, £ and \$	Paid-up Capital Rs, £ and \$	Number of	
				Looms	Spindles
Bihar	3	Rs 62,00,000‡	Rs 39,00,000	455	11,025
Bengal	98(b) {	25,31,56,000(a) £3,175,000 \$3,750,000	19,38,01,125(a) £2,250,000 \$3,750,000	65,720	1,296,501

‡ Capital of one mill not stated

(a) Capital of two mills not stated

(b) Includes one mill in French Settlements

(c) The mill is situated in Raigarh State

(d) Capital of one mill not stated as it has other branches of business for which capital cannot be distinguished

Jute and Jute Manufactures.—(Rs. 53,28 lakhs)—The total exports of raw and manufactured jute during the year 1940-41 amounted to 1,169,000 tons as compared with 1,651,000 tons in 1939-40, showing a decrease of 482,000 tons or about 30 per cent. The decrease in value was from Rs 6,855 lacs to 5,326 lacs or 22 per cent. Average prices during 1940-41 were lower than those for 1939-40. The fall was heavy in case of raw jute but the only slight in case of jute manufactures. The following table shows the exports of raw jute and manufactured goods during the past five years—

Year (April-March)	Exports of raw jute	Exports of sacking bags and cloth	Exports of hessian bags and cloth.
	Tons (000)	Tons (000)	Tons (000)
1936-37	821	519	488
1937-38	747	523	478
1938-39	690	488	450
1939-40	568	510	546
1940-41	244	911*	911*

* Estimated

Exports of raw jute declined in value from Rs 1,983 lacs in 1939-40 to Rs 785 lacs in 1940-41 or a decrease of more than 60 per cent. Shipping difficulties coupled with other factors brought about by the present war stood in the way of more jute being exported from India during 1940-41. As regards countries to which jute was exported details are not now available but the following percentages will give some idea as to the quantities of raw jute exported from India during the years 1929-30 to 1938-39—U K, 22.3, Germany, 4, France, 11.0, U.S.A., 8.7, Italy, 8.1, Belgium, 7.2, Spain, 4.4, Brazil 2.7, Netherlands, 2.0, Japan, 2.4. Average percentages of the quantities of jute manufactures exported from India during 1929-30 to 1938-39 were as follows—Near East including Africa—12.7, Middle East—5.9, Far East including Australia and New Zealand—24.5, America—45.4, Europe—11.5.

India generally consumes only 20-25 per cent of the goods manufactured by the local jute mills, the rest being exported. As in the case of raw jute, shipping difficulties was mainly responsible for the fall in the exports of manufactured jute also and Indian mills' consumption of jute decreased by nearly 23 per cent in 1940-41 as compared with the previous year. The following table shows the exports and Indian consumption of raw jute during the last five seasons, July to June—

Year (July-June)	Exports of raw jute	Consumption in India*	Excess of consumption over exports (%)
	Tons (000)	Tons (000)	
1936-37	872	1,082	+24
1937-38	660	1,194	+79
1938-39	693	1,112	+60
1939-40	528	1,274	+141
1940-41	238	934	+313

* Figures refer to mills in the membership of the Indian Jute Mills Association

Exports of jute bags and cloth in the past three years were as under—

Year (July-June)	Bags (millions)	Cloth (million yards)
1938-39	598	1,550
1939-40	1,210	1,660
1940-41 ..	728	1,564

The Indian Jute Mills Association now one of the most important, if not the most important, of the bodies affiliated to the Bengal Chamber of Commerce, was started under the following circumstances:—In 1886 the existing mills, finding that, in spite of the constant opening up of new marks, working results were not favourable, came to an agreement, with the late S. E. J. Clarke, Secretary to the Chamber of Commerce as trustees, to work short time. The only mills which stood out of this arrangement were the Hooghly and Serajgunge. The first agreement, for six months dating from 15th February 1886, was subsequently renewed at intervals without a break for five years up to February 15, 1891. The state of the market at the time of the renewals dictated the extent of the short time, which varied—throughout the five years between 4 days a week, 9 days a fortnight and 5 days a week. Besides short time, 10 per cent. of the sacking looms were shut down for a short period in 1890. An important feature of this agreement was a mutual undertaking by the parties not to increase their spinning power during the currency of the agreement, only a few exceptions being made in the case of a few incomplete new mills.

Working days—With the introduction of the electric light into the mills in 1898, the working day was increased to 15 hours, Saturdays included, which involved an additional amount of cleaning and repairing work on Sundays. In order to minimise this Sunday work and give them a free Sunday, an agitation was got up in 1897 by the Mill European assistants to have the engines stopped at 2 or 3 p.m. on Saturdays. The local Government took the matter up, but their action went no further than applying moral suasion backed by a somewhat half-hearted threat. The Mill Association held meetings to consider the question and the members were practically agreed as to the utility of early closing on Saturdays, but, *more suo*, could not trust themselves to carry it out without legislation. Unfortunately the Government of India refused to sanction the passing of a Resolution by the provincial Government under the Factory Act and the matter was dropped. It is about 20 years now that the Jute Mills Association in despair brought out an American business expert, Mr. J. H. Parks, to advise them on the possibility of forming a jute trust with a view to exercising some control over the production and price of jute. Mr. Parks came, and wrote a report which the Association promptly pigeon-holed because the slump was over and the demand was so prodigious that there was no need to worry about the price of jute.

The working agreements referred to above have been followed by others, differing in points of detail, but with the same object in view namely the restriction of production. By an agreement operating from October 1931 the mills in the membership of the Association, comprising some 95 per cent of the trade, worked during 1932, 1933 and the greater part of 1934 for 40 hours per week, with 15 per cent of the total complement of looms sealed; and the agreement incorporated a clause which provided that the mills would not instal any extra productive machinery (or relative buildings during the currency of the agreement. The agreement also provided machinery whereby production could be gradually increased by reducing the percentage of looms required to be kept sealed. The process of increasing production in this way was begun on 1st November 1934, when 2½ per cent of the total complement of looms were unsealed, and was continued throughout 1935, a further 2½ per cent. of looms being unsealed on 1st May 1935, 2½ per cent on 5th August and 2½ per cent. on 11th November. The remaining 5 per cent of looms were unsealed on the 17th February 1936. Throughout this time the mills, with five exceptions, continued to restrict their working hours to 40 per week. The five exceptions, namely, Promchand, Craig, Waverley, Megna and Nuddea had, by the terms of the agreement, been granted the privilege of working 54 hours per week with a full complement of machinery and all five worked in accordance with the special terms allowed to them. This working agreement between the Association mills, however, in accordance with the requisite notice given in December 1935, terminated on the 31st March 1936 and was superseded by an agreement, operating from the 1st April 1936, under which the mills were permitted to work up to but not exceeding 54 hours per week on single shift, with no night work. As in the old agreement, this new agreement incorporated a clause which restricted the mills from installing any extra productive machinery or relative buildings during the currency of the agreement.

Under this agreement the mills' working hours were increased by successive stages until with effect from the beginning of August 1936 all mills in the membership of the Association were working 54 hours per week on single shift. With effect from the 1st March 1937, however, the agreement was suspended indefinitely and mills were at liberty to work whatever hours and install, whatever machinery they desired, in 1938 the position was reviewed and a new short time working agreement was proposed to take effect from the 15th March 1939, whereby member mills agreed to hours of work which would not be less than 40 nor greater than 54 per week. A supplementary agreement was entered into with effect from the 31st July 1939, by which the mills worked 45 hours per week with 20% Hessian and 7½% Sacking looms sealed. This was the position at the outbreak of the present war, after which large government orders for sandbags and a heavy overseas demand necessitated increased production the restriction on working hours was withdrawn and all mills went into full production at 60 hours per week. This was an emergency arrangement that came into effect from

middle of November 1939 to cope with the British Government orders, for which provisions in the Factories Act regarding working hours had to be relaxed. After a few months however, it was realised that as a result of the small offtake of sand bags and difficulties in obtaining shipping facilities, the mills were producing more goods than there was demand for. To meet this situation the working hours of the mills were reduced to 54 per week from the 8th April 1940. This arrangement continued up to August, but the mounting of stocks made it clear that this could not continue after the sand bag orders were completed. From 19th August 1940, mill working hours were further curtailed to 45 per week. This too did not have the desired effect on the stock position and the Indian Jute Mills Association decided to close their mills for one week in each month from September 1940 up to the end of the year. With new orders for sandbags the working hours had to be reviewed again and the mills were working 60 hours per week towards the close of 1941.

In addition to the above working agreements which applied only to the mills in the membership of the Association, an agreement was entered into, with effect from 1st August 1932, with the five principal mills outside the Association, namely, Adamjee, Agarpura, Gagalbhai, Ludlow and Shree Hanuman, whereby these mills undertook to restrict their working hours to 54 per week up to 30 June 1933. With certain modifications this agreement was extended and became a continuing agreement subject to six months' notice of termination being given by either party, which notice of termination could not be given before 1st July 1934. On the 30th September 1935 the Association gave the required notice and the agreement terminated on the 31st March 1936.

Indian Central Jute Committee—A Central Jute Committee has been constituted by the Government of India with 26 members. Representation has been found in the Committee for trade and agricultural interests and for the Provincial Governments most concerned, namely, Bengal, Bihar and Assam.

The formation of the Committee is the result of a recommendation made by the Royal Commission on Agriculture, which suggested that there should be a committee on the lines of the Indian Central Cotton Committee to watch over the interests of all branches of the jute trade from the field to the factory.

The functions of the Committee include agricultural, technological and economic research; the improvement of crop forecasting, of production, of testing, and of distribution of improved seed, enquiries and recommendations relating to banking and transport facilities and transport routes. Improvement of marketing in the interests of the jute industry and collection and distribution of all relevant information on Jute.

The Committee will also advise the Local Governments concerned on any points relating to its functions which may be referred to it.

The Offices of the Committee are situated at 4, Hastings Street, Calcutta *President (Ex-officio)* P M Khareghat, OIF, ICS (Vice-Chairman, Imperial Council of Agricultural Research), *Secretary* B Das Gupta, MA

Agricultural Research—The Agricultural Research Laboratories have been built on the Manipur Farm of the Director of Agriculture, Bengal, at Dacca, and have been in full working order since June 1930. The staff there have completed a survey of previous work on jute in the agricultural field and have made satisfactory progress with their research programme. An important part of this work is the study of fungal and insect pests, including the comparative resistance of various strains of jute and the effect of various manurial treatment on resistance.

The analysis of retting water from various districts is also in progress with the object of ascertaining which types of water yield the best results. A microscopic study of the formation of the fibre, its structure and development, stage by stage, has also been carried out.

Technological Research—The Technological Research Laboratories at Tollygunge have made considerable progress with spinning tests under standard conditions of temperature and humidity and when sufficient data have been collected, it will be possible to judge very accurately the value of the fibre and its suitability for use in various types of yarn. A study is being made of the various measurable chemical and physical characters of the fibre and their relation to spinning quality, which will lead towards the establishment of scientific methods of grading.

In co-operation with the Indian Jute Mills association experiments have been made to find out the moisture content of various types of jute in equilibrium with atmospheres of various relative humidities. The result of this combined effort will, it is hoped, give the information required for specifying acceptable standard figures for moisture regain.

Estimates are under consideration for the necessary extra equipment and accommodation to carry out experiments on the spinning of fine jute yarns and yarns of jute blended with other fibres, such as flax, and also on weaving, in the hope of discovering new and extended uses for jute goods.

The programme of work to be carried out in the laboratories includes examination of typical samples representing the various physical and chemical characters and trade classifications. In the spinning laboratories an attempt has been made to determine the minimum size of sample which will give reliable information regarding spinning behaviour and yarn quality. It is also proposed to have an investigation at an early date of the influence of certain valuable factors (machine speeds, etc.), on yarn quality in order that the degrees of control necessary in the various operations of a

standard process may be determined. When this has been done, a standard process suitable for comparing the quality of small samples of fibre will be available, and it will be possible to proceed with the work of correlating spinning quality with measurable characters and the testing of new strains, etc.

One of the main functions of the technological research scheme is the testing of strains of jute produced by the agricultural research staff of the Committee and samples received from other sources.

Marketing and Transport—The Committee's marketing section has collected extensive information regarding the marketing and transport of jute. Two reports containing these informations have been published and well received.

Jute Forecast—Work on the Jute Census have been completed. The results of the random sampling survey have been considered to be satisfactory and the method has been recommended to the Government of Bengal, for forecasting the jute acreage.

Experiments are being conducted to find out a cheap and accurate method for the determination of the yield of the crop.

Economic Research and Publicity—The Indian Central Jute Committee has concluded an arrangement by which the newly appointed Indian Trade Commissioner to the United States of America supplies the Committee with periodical reports on all points bearing on the consumption of jute and jute goods in the North American Continent. Similar arrangements, when the war situation improves, are likely to be made to obtain information from Europe, South Africa, Australia, and the Far East. A correspondent has already been appointed in the Argentine for this purpose.

The purpose of the Committee's scheme for the collection and distribution of statistics and information regarding jute is to collect and make available to the various interests concerned as much reliable information as possible on the production and consumption of jute and its products. A bulletin on the World Consumption of Jute has been issued by this section.

A monthly Bulletin, the annual subscription of which is Rs 5-8 or 10s (including postage), is published monthly containing figures on the production, consumption, prices, stocks, imports and exports of jute and jute manufactures, and also information regarding the prices and utilisation of jute substitutes. It also includes items relating to export and import restrictions imposed on various countries and other information regarding the economics of jute and its competitors, as well as general information of interest to the trade. The Committee also disseminate information to the grower to assist him towards improved methods of growing and retting, and getting better prices for his crop.

Indian Iron and Steel Industry.

Less than thirty years ago the iron and steel industry on a modern scale was non-existent in India. To-day India has practically reached self-sufficiency in the more widely used forms of steel. It is now a vital, national, basic and defence industry. The last war proved its usefulness, the present war has confirmed its indispensability.

History of Iron and Steel in India—India has known iron and its uses since some four to five thousand years before the Christian era. In 1836 Josiah Heath stated that India's claim to the discovery and uses of this metal was beyond doubt. The famous 'Iron Pillar' of India, well known to all visitors to Delhi, is estimated to be about 1,500 years old. Considerable skill must have been exercised in welding and shaping this Pillar which is over 23 ft in length, weighs approximately 6 tons and varies from 12½ to 16½ inches in diameter.

The manufacture of steel has been known in India for over 1,000 years. Damascus or Wootz sword or dagger blades of genuine Indian manufacture can still be obtained in Northern India. These weapons or the metal from which they were produced were obtained by Persian traders centuries ago and exported to and via Damascus. It happened, however, that the Indian steel makers never overcame certain difficulties and did not progress with the times.

The first recorded efforts to found an iron and steel industry on modern lines were those of Mottee and Farquhar in 1779. In 1825 Josiah Heath of the Indian Civil Service, Madras, resigned his appointment in order to establish an iron and steel works in that province. The charcoal furnaces installed by him at Porto Novo resulted in complete failure owing to financial difficulties and lack of practical experience, and the East India Company, who acquired his derelict works and formed a new Company in 1853, did not achieve any commercial success and ceased operations in 1874.

The next undertaking was started by Messrs Jessop & Co. which finally resulted in the erection of the Barakar Iron Co. at Kulti in 1875. After passing through several vicissitudes, it passed into the hands of the Barakar Iron & Steel Co. in 1887. In 1889, the plant was modernized and it became known as the Bengal Iron & Steel Co. A steel plant started in 1905 closed within a year as the orders received could not be supplied at economic rates. Since 1919, this company has been known as the Bengal Iron Co.

The credit for the first successful attempt to manufacture steel in India on a commercial scale goes to The Tata Iron & Steel Co. Ltd., and it is to the genius, perseverance and foresight of Jamshedji Tata, the great pioneer of Indian industry, and his sons, that The Tata Iron and Steel Co. owes its origin and development. It owns valuable iron ore concessions, manganese ore deposits, limestone, dolomite, coal, magnesite and chromite, scattered over India.

Other important steel companies were subsequently started in Bengal and Bhadravati in Mysore. The first production of pig iron was made in 1811, and of steel in 1912. There has been continuous development and The Tata Company now produces more iron and steel than any single firm in the British Commonwealth.

Owing to the restrictions imposed by Government, it is not possible to give particulars about the plant at the various steel works, their capacity, the output of the different kinds of steel, or any other detail as those would be of use to the enemy.

Raw Materials—Of the raw materials required by the iron and steel industry, the three most important are iron ore, coking coal and limestone and dolomite for fluxing purposes.

Iron Ore—On account of the high ash of Indian metallurgical coke, it is usual in estimating the Indian iron ore reserves to accept only ores with an iron content of 60% and above. Ores below this iron content are used only in very small quantities in Indian blast furnaces. Large deposits of high grade ores are limited to a few areas of which only three field-require special mention.

(i) **Mysore**—There are big deposits of quartz—magnetite ore in Mysore but they are of low-grade and would require concentration before using them. The ores used in the Bhadravati Iron Works can be compared to Singhbhum ores containing about 60% Fe and the quantity available may be put at 30 million tons.

(ii) **Goa**—Large quantities of ores are available near Goa. Though the grade is good, the ores are soft and require either sintering or briquetting and bagging before despatch.

(iii) **Singhbhum and Orissa**—In what is known as the Singhbhum Iron Belt, consisting of the Singhbhum District, in which the Tata Iron & Steel Company's Steel Works are situated, and the neighbouring Orissa Feudatory States, there exists some of the richest iron ore deposits in the world. The iron ore content is nearly 60%, and these deposits are estimated to contain about 3,000 million tons, which are sufficient for the iron and steel requirements of India for nearly 1,000 years. In other parts of the world equally rich iron ore may be found but it cannot always be landed at the iron works at anything like the same cost. The advantage India possesses in the shape of iron ore is, therefore, very great.

Coal—Nature has not been so bountiful to India in respect of its coal resources. The most important coal measures in India are (i) the Gondwana (Permian) coalfields of the Peninsula, such as Raniganj, Jharia, etc., and (ii) the Tertiary coalfields of Assam, the Punjab and Baluchistan. Taking only seams with a thickness of more than 4 feet and ash content below 20%, and those occurring within a depth of 2,000 feet only, the Indian coal resources have been estimated to be of the order of 24,000 million tons. Out of this, good quality coal, with less than 18 per cent ash content, is estimated to amount to only 6,000 million tons and coal capable of yielding coke of metallurgical quality to only about 1,400 million tons, which is found in the Gondwana (Permian) coalfields of the Damodar basin.

More than 1,000 million tons of strongly coking coal with less than 8% ash, but high in sulphur, occur in the Tertiary coalfields of Assam, but these are not at present considered useful for metallurgical purposes.

The manufacturers of hard coke in India rely on the Jharia coalfields to an overwhelming

extent to meet their requirements. With the present wasteful means of extracting coal and the use of metallurgical coal for non-metallurgical purposes, some experts consider that the coking coal resources of the Jharia field will not last for more than 30 years. The Indian Coal Mining Committee reported in 1937 that these reserves would last for about 57 years.

If the Government and the coal industry co-operate and adopt adequate measures for improved methods of mining coal and conserving and economising the use of metallurgical quality coal, the life of these reserves will be extended beyond the gloomy prognostications referred to above.

In addition, it might become possible in the future, as the result of technical research, for the iron and steel industry to use coals not regarded as coking coals at present, by blending them with strong coking coals.

While the reserves of coking coal in India are not adequate for melting the huge quantity of iron ore available, frequent repetition of this statement has produced an impression abroad that adequate raw materials are not available in India for a large scale iron and steel industry, which is entirely a mistaken view. The metallurgical industry has taken its own precautions to prevent the speedy exhaustion of its coking coal reserves. It is unfortunate that so much of India's best coking coal is still being used for steam raising purposes but we can confidently hope that this practice will tend to diminish in the near future.

The coal fields and the iron ore deposits are situated within a short distance of one another and there are ample supplies of limestone and dolomite within a reasonable distance of other raw materials.

The Paper Making Industry.

Paper making in India is of some antiquity. The manufacture by hand had been practised from quite early times. The first paper-making machine in India was erected and operated by a famous missionary, Dr William Carey, over a century ago at Serampore on the Hooghly River near Calcutta, but the establishment of paper making as a modern industry may be said to date from 1867. In that year the Royal Paper mill was established at Bally, only a few miles away, using in the first instance Dr Carey's original plant and machinery. About 15 years later the Upper India Couper Paper Mill at Lucknow and the Titagur Paper Mills at Titagur, near Calcutta, were started. Other mills at Ranegunge and Kankinara, in Bengal and other Provinces soon followed. Production began to increase, so that by about 1900 the total made annually in India amounted to approximately 20,000 tons.

To-day the quality of paper produced by Indian mills is accepted as equal to that of most imported paper of the same class, and the range of qualities has been extended to include coloured banks and bonds, tub sized rag papers, embossed covers and writings, supercalendered tinted printings, and imitation art and kraft.

Raw Materials.—In its early days the Indian industry considered the manufacture of high class white paper rather beyond its capacity, and this was to some extent due to its depen-

Importance of the Industry in the National Economy.—The total capital invested in the iron and steel industry in India is estimated to be about Rs 25 crores. Roughly 150,000 men and women are employed directly and indirectly in the Indian iron and steel industry, the re-rolling mills and the auxiliary enterprises. Including their dependents, the total number of people dependent on the industry in India is about 600,000. The industry is contributing to the Government and the public revenues between Rs 6 to 7 crores per annum by way of excise and customs duties, income and super taxes.

Development.—The last decade has seen a great expansion of the iron and steel industry in India accompanied by improvement in the various processes and the application of scientific methods of control. The successful development on a commercial scale of the rapid de-phosphorising process and the making of acid steel out of Indian basic pig iron, for both of which full credit is due to the Tata Iron & Steel Company Ltd., may be regarded as the most important advance in steel making practice that the young Indian steel industry has made. It is likely to have far reaching effects on the establishment of several new industries in India such as locomotive manufacture, and the manufacture of railway wheels, tyres and axles for which acid steel is specified. The development and manufacture of a low alloy high tensile steel containing copper and chromium known as Tiscrom is another instance. The steel is being employed for the construction of the New Howrah Bridge.

Besides metallurgical research, fuel research, chemical research and research in refractories are being pursued in India.

dence upon rags and waste paper for its raw material. But this crude practice was soon to change. Routledge in 1860 proved the virtues of esparto—a semi-tropical grass—and in 1875 and 1879 reported upon the possibilities of Indian bamboo which served to draw attention to other Indian fibres. There are only incomplete records of the early experiments with Indian fibres, but it is known that two mills made use of Moonj (*Saccharum Moonja*) and Sabai (*Ischaemum Angustifolium*) in their first years. Moonj seems to have held the field in the beginning, for it made a very good paper. Sabai, however, presented less difficulty as regards treatment, and, therefore, soon came into universal favour among Indian mills. Having found in Moonj and Sabai ample resources of plant fibre it was perhaps natural that the Indian mills then in operation should at that time have made no effort to follow up Routledge's researches in bamboo—a much more difficult problem. Possibly India might have come to the front as one of the world's most important producers of pulp and paper. What actually happened was that the industry based on Sabai grass, while relatively still in its infancy, was almost put out of business by the competition of wood pulp. Nevertheless in bamboo it later found a new raw material of great value.

The Bamboo Paper Industry (Protection) Act of 1925 not only gave Indian mills an opportunity of repairing the damage to their plant

and machinery caused by the incessant and intensive work required by India's war demands, and of overcoming the difficulties of getting stores and machinery replacements, but also encouraged and enabled them to develop bamboo pulp as their main fibre. The protective tariff on paper was renewed by the Government of India on the recommendation of the Tariff Board in 1932, and imported wood-pulp was also made subject to a duty of Rs 45, or approximately £3 a ton. Thus pulp duty naturally had the direct effect of preventing the establishment of new paper mills designed to work only on imported wood-pulp. The mills, therefore, immediately began to develop and increase the production of bamboo pulp, which had already been proved to be eminently suitable for all the usual classes of fine writing and printing papers, banks, ledgers, &c. Sabal grass, which is the Indian equivalent of esparto, having its own special characteristics, is also used by some of the mills, but bamboo pulp is now the main material. Incidentally the manufacture of pulp from bamboo is at present practically exclusive to India.

The protective tariff attracted others to a profitable field of industry, and there are at present 13 paper mills operating 28 machines with a total production of nearly 90,000 tons. Another one-machine mill in Hyderabad Deccan, is nearing completion.

Experimental work—For many years the paper pulp section of the Forest Research Institute at Dehra Dun has been carrying out experimental work in connection with the development of new fibres for paper-making, and it has been reported that considerable success has been obtained in making kraft paper from bamboo pulp. Two paper Mills in India have been successfully manufacturing, for over a year, kraft papers from bamboo.

Newsprint—With the assistance and encouragement of the Commerce Department of the Government of India, Newspapers have now come to an arrangement to ration supplies of imported newsprint and to charge certain agreed prices for various sizes of newspapers. Imports of newsprint from U.S.A. and Canada are permitted up to certain limits by a system of licenses.

Indian Mills are not in a position to meet any part of the newspapers requirements of newsprint.

The whole of India's newsprint requirements (nearly 45,000 tons yearly) is imported. It being not possible so far to produce it in the country on an economical basis owing to the lack of the necessary raw materials. Recent enquiries show that the Kashmir and Tehri Garhwal States can supply fir and spruce in quantities sufficient for the establishment of a newsprint mill in each of the two states. The two species of woods are well known raw materials for the production of mechanical pulp for use in newsprint manufacture and the suitability of both the species from the two States has recently been tested at the Forest Research Institute, Dehra Dun. Enquiries are in progress in connection with the maturing of projects for the manufacture of newsprint from the two species of woods available in the two states. The abnormal rise in the costs of machinery and the

difficulties of importing these from abroad, however, appear to be serious handicaps in the early materialisation of the projects.

The Institute has also been investigating the possibility of finding a substitute for the 50,000 odd tons of "overissued" newspapers imported from abroad for use as wrapping paper for articles in the bazar, and even here it has so far been difficult to produce at a cost relatively near that of the latter.

Experiments have been carried out at the Forest Research Institute on the production of wrapping papers from *ulla* grass (*Anthistria gigantea*). This grass is available in large quantities in the United Provinces. The quality of the *ulla* grass wrapping papers, produced at the Institute, was far superior to that of the "overissued" newspapers and of the brown wrappings, made in India or imported from abroad. The difficulties of importing machinery from abroad at prices which the industry can bear have, however, stood in the way of the materialisation of any project for the manufacture in the United Provinces of wrapping papers from *ulla* grass.

The industry has made such headway in recent years that the outbreak of the present war found it ready to take up the vastly increased demand for Indian paper brought about by the difficulty of importing from abroad. At the present time imports of fine papers have practically stopped and Indian mills are working to full capacity. The emergency has undoubtedly given the newer mills an excellent opportunity of establishing themselves.

The full effects of the war on Indian conditions and particularly on production have not yet been felt, because the outbreak of hostilities found most of the mills carrying large stocks which provided an alternative supply of paper to consumers who found themselves cut off from the sources from which they usually obtained their requirements. These stocks have, however, been worked off by now. Consumption has not only increased but it shows in addition a tendency to concentrate on more expensive kinds of paper, because those who formerly relied on cheap qualities of paper containing mechanical pulp, finding themselves unable to obtain supplies at a reasonable price, are using instead paper of the type manufactured by the Indian mills. A recent trade forecast says there is thus likely to be a real shortage of paper in India, but the situation will not be so serious as in markets where mills for pulp and paper production do not exist.

As it has been definitely established that there is a serious shortage of the ordinary qualities of writing and printing paper in India, no export is possible or advisable now. The increased activities of the Central Government Provincial Governments and the Army, demand ever increasing quantities of paper and the tonnage available for the general public is therefore on a much reduced scale.

At a conference with the Commerce Member, Government of India, in December 1941 paper Mills fixed maximum prices on an all-India basis for the main qualities of paper. The shortage of paper is being felt by industry and commerce and the general public and it is expected that steps to economise in the use of paper in every direction must be taken immediately.

THE WOOL INDUSTRY.

Wool exported from India consists not only of wool grown in India itself, but of imports from foreign sources, these latter coming into India both by land and by sea. Imports by sea come chiefly from the Commonwealth of Australia, but a certain quantity from Iran also comes by land, while the main imports are from Afghanistan, Central Asia, Tibet and Nepal. Quetta, Shikarpur, Amritsar, Multan, Kulu, Fazilka, Lahore and Panipat are the main collecting centres for wool received by land from Afghanistan and Iran, whence it is almost invariably railed to Karachi for subsequent export overseas.

Imports—There was a sharp increase in the imports of wool and woollens which were valued at Rs 4,29 lakhs in 1940-41 as compared with Rs 2,16 lakhs in the preceding year. Almost whole of the increase was attributable to the heavy imports of raw wool for consumption in Indian mills the resources of which were fully mobilised to meet the growing demand for clothing India's ever increasing army. Imports of raw wool shot up from Rs 75 lakhs to Rs 279 lakhs representing a gain of as much as 272 per cent over the preceding year's. Australia was the main supplier of raw wool. On the other hand, woollen manufactures recorded a modest gain of about six per cent from Rs 1,41 lakhs to Rs 1,50 lakhs. Yarn and knitting wool recorded further drop during the year.

The imports of woollen piecegoods showed an increase from Rs 35 lakhs to Rs 57 lakhs in value but the quantity was from 52.8 million lbs in 1939-40 to 30.8 million lbs in 1940-41. Arrivals of shawls and lohls from abroad dropped further from Rs 4 lakhs in 1939-40 to Rs 3 lakhs in 1940-41 as compared with Rs 14 lakhs in 1938-39 and were mostly from Japan which enjoyed the virtual monopoly of this trade in the absence of Germany which was at one time India's main supplier of these varieties.

Exports—The year 1940-41 saw a sharp setback to India's export trade in raw wool which amounted to Rs 1,64 lakhs as against Rs 3,23 lakhs in the preceding year and Rs 2,99 lakhs in 1938-39. The drop in quantity should be probably more than that in value since the prices of raw wool were on the upgrade throughout the year. The United Kingdom was by far the most important customer of Indian wool. Following the negotiations between the Government of India and the Wool Controller

of His Majesty's Government, and agreement for purchasing raw wool from India during the war period was reached in June 1940. The agreement stipulated an increase of 12 per cent in the price level then prevailing and later based the purchase price at 30 per cent more than the pre-war rates plus the increase in freight and other charges. Exports of raw wool to the United Kingdom declined from 33.3 million lbs in 1939-40 to 26.5 million lbs in 1940-41.

The Indian carpet wools continued to be popular in the United States because compared with other carpet wools, they shrink less, have a fairly long staple and unusually good colours and are, therefore, desirable for manufacturing better grade carpets. But the demand could not be fully satisfied owing to shipping difficulties and the restrictions on trade. From October 1940, however, a limited quantity was allowed to be shipped to the United States on a quota basis under the licensing system and a supplementary quota for the year was later given. Shipments to the U.S.A. were reduced from 18.8 million lbs to 4.3 million lbs.

Mill Manufacture—The number of Mills in India, including Indian States, in 1937 the latest year for which details are available, was 39, with a total paid-up capital of Rs 1,00,80,739. The total number of looms and spindles were 1,958 and 68,107 respectively.

The bulk of the wool used by the Indian mills is Indian wool, although it is supplemented to some extent by the importation of merinos and cross-breeds from Australia for the manufacture of the finer classes of goods. Their market for manufactured goods is almost entirely in India itself.

Cottage and Small Scale Industries are carried on in various parts of the country notably in the Punjab and the United Provinces. Woollen pile carpets are made in many of the jails. Amritsar had a considerable trade at one time in weaving shawls from *pashm*, the fine under fleece of the Tibetan goat, but its place has been taken to some degree by the manufacture of shawls from imported worsted yarns, but more generally by the manufacture of carpets of a fine quality which find a ready sale in the world market. This work is done entirely on handlooms and the carpets fetch a high price.

Silk.

Sericulture has been practised in India for the last two thousand years and a lot of silk used to be exported in days long gone by. Now, however, India has lost her export market and imports annually Rs 13,000,000 worth of silks from Italy, Japan, China, Switzerland and the United Kingdom. The world demand for silk and silk waste has shrunk and there is increasing competition from foreign silk goods and mixtures and artificial silk substitutes. In Assam, eri, mulberry and muga silk worms are being reared and about Rs 1,70,000 worth of silk is annually produced there. Bengal produces Rs 20,00,000 worth of mulberry silk, Bihar and Orissa produce Rs 32 lakhs worth of tasar and a little eri silk. The Central Provinces produce Rs 14 lakhs worth of tasar silk.

Mysore, Kashmir, Jammu, Madras and the Punjab produce Rs 38,00,000, Rs 10,00,000,

Rs 2,00,000, Rs 5,00,000, Rs 16,000 worth of silk respectively.

Bombay and the United Provinces are investigating whether sericulture can be introduced. The new eri industry in Baroda is spreading. Some of the native States, Madras and the Punjab are trying to introduce eri silkworm rearing.

The industry has been declining in almost all parts of India. China is exporting more silk in India than Japan in spite of the tariff wall. It is progressing in Mysore and Kashmir only. It is believed that the moribund industry will be resuscitated if sufficient duty is imposed on the foreign silks.

The price of indigenous raw silk has been increased by about 75 per cent on account of stopping of the import of raw silk from China and Japan due to the war.

Indigo.

Indigo dyes are obtained from the Indigofera, a genus of Leguminosae which comprises some 300 species, distributed throughout the tropical and warm temperate regions of the globe, India having about 40. Western India may be described as the headquarters of the species, so far as India is concerned, 25 being peculiar to that Presidency. On the eastern side of India, in Bihar, Bengal, Assam and Burma, there is a marked decrease in the number of species but a visible increase in the prevalence of those that are met with.

There is evidence that when Europeans first began to export the dye from India, it was procured from the Western Presidency and shipped from Surat. It was carried by the Portuguese to Lisbon and sold by them to the dyers of Holland, and it was the desire to obtain a more ample supply of dyestuff that led to the formation of the Dutch East India Company and so to the overthrow of the Portuguese supremacy in the East. Opposition to indigo in 17th century Europe was keen owing to its interference with the wood industry, but it was competition to obtain indigo from other sources than India that led to the first decline of the Indian indigo industry. In the middle of the eighteenth century, when the cultivation of indigo in the West Indies had been given up—partly on account of the high duties imposed upon it and partly because sugar and coffee were found to be more profitable—the industry was revived in India and, as one of the many surprises of the industry, the province of Bengal was selected for this revival. It had no sooner been organised, however, than

troubles next arose in Bengal itself through misunderstandings between the planters, their cultivators and the Government, which may be said to have culminated in Lord Macaulay's famous *Memorandum* of 1837. This led to another migration of the industry from Lower and Eastern Bengal to Tirhut and the United Provinces. Here the troubles of the industry did not end, for the researches of the chemical laboratories of Germany threatened the very existence of any natural vegetable dye. They first killed the madder dye of Europe, then the safflower, the lac and the *ai* dyes of India, and are now advancing rapidly with synthetic indigo, intent on the complete annihilation of the natural dye. With what success may be judged by the present state of affairs. Actually there was a revival of the industry in India during the last War and for a few years after, but after the war with many countries producing synthetic indigo, among them being Germany, Switzerland, Great Britain and America, the natural indigo industry was almost killed. There has been a mild revival since the commencement of the present war but unless protected the industry cannot survive. There are many advantages to India in the revival of the natural indigo industry, as besides keeping a large sum of money in the country that now goes abroad, it gives considerable employment, and the crop itself has a great value to the peasant grower as a change crop. It is a leguminous plant that brings down nitrogen from the heavens into Indian soil, and it has peculiar value as an organic manure in a country where animal manure is not available.

OILS AND OIL CAKES.

The statistical publications, issued by the Commercial Intelligence Department of the Government of India, show that the export of all oil seeds from India is steadily going down except groundnuts on account of keen international competition.

It is economically as well as industrially unsound for India to export her oil seeds instead of manufacturing oils, oil cakes and other allied products in India. The present practice allows the other countries to derive the manufacturing profits and at the same time deprives Indian agriculture of the great potential wealth of oil cakes as cattle feed and manure.

In India there are about 500 oil mills registered under the Factories Act and over 1,000 medium size power driven oil mills. An immense quantity of oil is, as a matter of fact, already manufactured in this country by crude as well as up-to-date processes.

Village Oil Mills worked by bullocks and handpresses exist in all parts of the country and supply most of the local demand for oil and oil cakes. The big mills supply the requirements of the towns and export trade. These mills treat all kinds of oil seeds available in the country.

The industry has made good progress in the production of mustard oil, castor oil, groundnut oil and linseed oil and as a result the export of these oils and oil cakes to foreign countries has steadily improved during the last ten years. The progress in the case of groundnut and castor is very satisfactory.

The development of oil milling industry in India has to face the under-mentioned difficulties. There are high protective tariffs in European countries which encourage the export from India of raw materials rather than the manufactured products. Secondly there is a better

market for the oil cake in Europe and Indian oil cake, on account of want of standard specifications, is sold at a discount. The freight on oil seeds is less than that on oils and oil cakes, hence it is easy and economical to transport oil seeds by sea than oils or oil cakes. The development in the export trade in oils demands special consideration of shipping companies to provide tanks for bulk transport of oils as arranged by the railway companies.

The standardisation of oils and oil cakes will help the industry in finding markets in foreign countries where a better price can be obtained for the articles.

It is necessary to educate the Indian Cultivator in the use of oil cakes for seeding and manurial purposes and it should be impressed on him that the value of the article does not depend on the oil content but on oil and albuminoid content of the article. The lower oil content in the cake means a higher percentage of albuminous matter which is very essential for the cattle.

Effect of War on the Oil Industry of India—During the War of 1914-18, the average export of linseed oil, groundnut oil and castor oil had increased by 443%, 150% and 60% respectively over the last pre-war average of 1912-13 and 1913-14, but the export of cake had, however, no marked change during that period. The oil crushing industry of India will have a good prospect of development during the present war period.

The prices of oils and oil cakes at the commencement of War in September were lower than half the prices of these articles during last pre-war, war and early post-war periods on account of general low price levels since 1931-34. The present War will have effect in increasing the price level and brisk trade in oils provided freight facilities are available.

Tea.

Among plantation crops in India tea is the most important. The indigenous tea plant, growing in a wild condition, was first discovered in Assam about 1820. It soon drew the attention of the East India Company, which after some enquiries started an experimental garden in 1835. After working for five years, the plantations of the Government were sold in 1840 to the Assam Company, the first tea concern, and to this day the largest company in India. It was anything but prosperous during the first ten years of its existence. But about 1852, its condition began to improve and its success made the prospects of the industry appear so promis-

ing and attractive that speculators eagerly rushed into it. The discovery of the indigenous tea in Sylhet and Cachar gave the impetus for an expansion of the industry into the Surma valley, and in a few years thereafter the whole of the upper portions of the province of Assam (both Brahmaputra and Surma valley) was converted into a huge tea plantation. Thus the foundations of the present tea industry were laid during the fifties of the last century. Since that period the growth of the industry has been phenomenal and "in less than a hundred years the British Empire has become the tea garden and tea-shop of the world."

The following table shows the growth of the industry since 1900 —

Progress of the Industry

Year	Area under tea in '000 acres	Production in '000,000 lbs	Year	Area under tea in '000 acres	Production in '000,000 lbs
1900-1904 (average)	523	201	1930	804	391
1905-1909 "	539	242	1931	807	394
1910-1914 "	591	290	1932	809	434
1915-1919 "	662	374	1933	818	384
1920-1924 "	709	336	1934	826	399
1925	728	364	1935	832	394
1926	739	303	1936	834	395
1927	756	391	1937	834	430
1928	776	404	1938	833	452
1929	788	433	1939	833	453

It will be seen from the above table that since the beginning of the present century, while the area under tea has risen by nearly 60 per cent, the production has more than doubled.

Assam and Bengal are the two most important centres of the tea industry in India, Assam alone accounting for more than half the total production.

The following table shows the relative importance in 1939 of the various provinces from the point of view of the tea industry —

Province	Area under crop '000 acres	Production '000 lbs	Average daily working strength (permanent and temporary)
Assam	438	252,728	538,974
Bengal	201	112,290	201,081
Madras	79	38,572	70,421
Punjab	9	2,807	11,785
United Provinces	7	1,721	5,666
Bihar	4	1,555	2,909
Coorg	1	110	182
Total British India	768	409,883	812,879
Indian States	95	12,715	92,578
Total India	863	422,598	905,457

1 Less than 500 acres

The average production of tea per acre and the lowest in Coorg and the highest in the different districts, namely 41 lbs. The average production in the year was in production in the whole of India was 482 lbs per acre plucked. The highest production in the year was in Durrani (Assam), namely, 725 lbs per acre.

The total number of persons employed in the industry in 1939 was 925,237 as against 895,507 during the previous year. Of these 866,539 were permanently employed and 58,693 temporarily employed. Their average monthly wages, excluding non-cash payments, in 1938-39 were as follows —

Men			Women			Children		
Rs	a	p	Rs	a	p	Rs	a	p
7	7	11(a)	5	13	11(a)	4	1	3(a)
5	0	5(b)	4	15	2(b)	3	3	4(b)

(a) Settled labourers (b) Faltu or Basti labourers

Although India produces large quantities of tea its consumption of tea is comparatively very little, the quantity available for consumption being about 82 million lbs in 1939-40. The low domestic consumption, however, enables India to export large quantities to other countries, the principal among which is the United Kingdom. In 1939-40, 79 per cent of the total quantity of tea produced in India was exported abroad. Of the total exports of 359* million lbs, the United Kingdom alone took 290* million lbs during the year.

The year 1932-33 was one of the worst for the tea industry. In addition to the world-wide depression, there was considerable over-production with the result that producers of tea all over the world were faced with declining prices and accumulation of stocks. The preference granted to Empire teas did not prove sufficiently effective to check the consumption of cheap Java teas. Besides this there was only a small difference in the price of medium and common teas and there was thus no inducement to grow the

former. To check over-production a scheme was therefore introduced to restrict production and to limit exports. A Bill giving legislative effect to the scheme was passed at the autumn session of the Legislative Assembly in 1933. The industry has consequently been able to enjoy more stable conditions than would otherwise have been possible in the circumstances of the last six years. The export quota which was fixed at 82½ per cent of the standard exports in 1935-36 rose steadily to 92½ per cent in 1938-39. Due to accumulation of stocks and decline in prices the quota for the following year was fixed at 90 per cent, but the restriction of supply and an increase in demand had the effect of placing the industry again in a favourable position in the world market even before the outbreak of the war.

The outbreak of war gave rise to entirely new conditions. In the United Kingdom, the entire tea trade passed under the control of the Government. A Tea Controller for India was appointed to administer the emergency tea control scheme. Owing to the suspension of re-exports from London, the need for replenishing their stocks by America and the Colonies and the transfer of their demand by some of the markets supplied by Java to Indian tea there was a strong demand for practically all kinds of tea and the export quota was, therefore, raised to 95 per cent in October 1939 and was kept unchanged at 95 per cent for the next season. In June 1940, however, the International Tea Committee reduced the quota for 1940-41 to 90 per cent for all participating countries. An Ordinance amending the Indian Tea Control Act, 1938, was passed in August 1940 giving effect to the reduced export allotment.

The following table explains briefly the position as regards the export of tea by sea from India:—

Year		Amount exported (million of lbs.)	Value in lakhs of rupees
1	2	3	
1926-27	349	29.04
1927-28	362	32.48
1928-29	360	26.60
1929-30	377	26.01

The following figures show the proportion of exports of tea from India sent to different parts of the world to the total exports from India by sea —

	1934-39 per cent	1939-40 per cent
To United Kingdom	87.7	80.6
To Rest of Europe	1.6	1.1
To Asia ..	3.4	1.9
To America ..	6.9	11.4
To Australasia ..	0.5	1.2
To Africa ..	0.3	0.8
	100	100

* Revised figure.

A considerable quantity of Indian tea imported into the United Kingdom is normally re-exported to other foreign countries.

From 1923 to 1927 the prices obtained for tea were good; but in 1928 a decline set in, and in 1929 and 1930 prices fell further still. The price of Indian common tea particularly fell more than that of others. While as compared to 1923, 'all tea' fluctuated in the London market within a range of 25 per cent., Indian common tea fell by about 50 per cent.

In 1932-33 the fall in tea prices was almost catastrophic. The average price of tea per

† Subject to revision

lb realised at the Calcutta auction sales during 1932-33 was 5 as 2 p as against 6 as 5 p in 1931-32 and 9 as 4 p in 1930-31. The position, however, has improved considerably since then. After the outbreak of the war the prices of tea assumed a marked rising trend. The demand for practically all kinds of tea was strong and the prices advanced steadily till they reached their peak at the beginning of December. By the middle of January, however, they began

to decline and by the end of the season had reached the pre-war levels. Nevertheless, the average auction price for the season (11 as 5 p per lb) was higher than in any season since 1929-30. The internal market fluctuated widely during the year, the closing quotation of the season being 3 as 6 p as against 5 as 3 p in December and 4 as 4 p in August 1939 but the average price for the season was higher than for the previous season.

The following table shows the variations in the average prices of Indian tea sold at auction sales in Calcutta and the index numbers of these prices with base 1901-02 to 1910-11 = 100 —

	Average price at auction sales			Average price at auction sales	
	Price per lb. As p	Index Number		Price per lb. As p	Index Number.

(a) For teas sold with export rights

(b) For teas for internal consumption

The rate of duty under the Indian Tea Cess Act of 1903 was raised to Rs 1-6-0 per 100 lbs with effect from March 1939. The total amount of duty collected in 1939-40 was Rs 47,04,000. The Indian Tea Cess Act was due

to expire on 31st March 1938, but at the request made by the producers through the Indian Tea Market Expansion Board, the Government of India agreed to extend the life of the Act for a period of ten years.

Coffee.

Such historical evidence as is available on the subject shows that coffee was first introduced into India from Mecca as early as the 16th century. The first coffee garden was planted by a European about 1840 but the industry thus started did not flourish till 1860.

The production of coffee in India is mostly confined to the South. The total area under coffee in 1939-40 (including plantations of less than 10 acres) was 181,289 acres, as against 181,247 acres during the previous year. Of this Mysore accounted for 53 per cent, Madras 25 per cent and Coorg 21 per cent. The total production of cured coffee during the year was 35 million lbs as compared with 40 million lbs during the previous year. The major portion of this, as usual, came from Mysore (17 million lbs), Madras (9.6 million lbs) and Coorg (7.7 million lbs).

The daily average number of persons employed in the plantations during 1939-40 was returned at 98,570 of whom 67,800 were permanently employed (namely, garden labour 47,595 and outside labour 24,304) and 30,671 temporarily employed (outside labour), as compared with 101,251 persons (40,426 garden and 25,201 outside labour permanently employed and 35,624 temporary outside labour) in 1938-39.

The total exports of coffee in 1926-27 were 150,000 cwts. In 1927-28 they rose to 277,000 cwts. In 1928-29 and 1929-30, however, the shipments declined and amounted to 105,000 cwts and 184,000 cwts respectively but exports again rose in 1930-31 and amounted to 293,000 cwts. In 1931-32 the shipments declined to 156,000 cwts but in 1932-33 exports again rose and amounted to 173,000 cwts. There was a further rise during 1933-34, the total exports amounting to 186,000 cwts. In 1934-35 the exports again declined to 141,000 cwts, but in 1935-36 there was a pronounced rise in the quantity exported which amounted to 216,000 cwts. It, however, again declined to 211,000 cwts in 1936-37. There was a further fall in the following year when the exports dropped to 135,000 cwts, but the demand for Indian coffee in the markets abroad was on the whole satisfactory during 1938-39 and the exports again rose 185,000 cwts during the year. In 1939-40 however they again fell to 108,000 cwts. The principal customers were the United Kingdom, Norway, France, Iraq and Belgium. Shipments to the United Kingdom amounted to 46,000 cwts or 23,000 cwts less than in 1938-39. Exports to France, Belgium and the Netherlands also declined, but those to Norway and Iraq increased.

* Revised figure

Not only does India export coffee in large quantities, but till a few years ago it also used to import it, chiefly from Java, Ceylon and the Straits Settlements which it used to re-export to Mascot Territory, Iraq and the Bahrain Islands. During 1936-37, however, there were no imports of coffee into India. The quantity of coffee imported in 1937-38 was 1,195 cwts., the major portion of which came from Burma. Very little coffee was imported during 1938-39, the total imports amounting to only 30 cwts. In 1939-40 however, they increased to 424 cwts all of which came from Burma.

The following table gives the figures of the production and exports of Indian coffee:—
Production and Export of Indian Coffee in thousands cwts.

12 Months ending June 30th	Production	Export	Surplus available for Home consumption
1927	305.1	241.3	64.8
1928	317.5	261.5	56.0
1929	247.9	138.3	109.6
1930	352.0	279.4	72.6
1931	294.4	208.4	86.0
1932	300.1	162.0	138.1
1933	295.0	168.7	126.3
1934	308.8	186.6	122.2
1935	292.6	147.5	145.1
1936	367.6	230.0	137.6
1937	303.6	162.4	141.2
1938	290.3	146.5	152.8
1939	578.1	206.7	151.4
1940	310.0	118.9	192.0

The general trade depression did not fail to affect the coffee industry but in addition to the general slump in trade there was an additional factor which depressed coffee prices and this was the exceptionally heavy crops of Brazilian coffee. The average whole-sale price of Indian coffee in London which was 140s. in 1923 and 127s. in 1929 fell to 85s. in 1930. The declared value per cwt. of coffee was Rs. 11.9 in 1931, Rs. 6.58 in 1932, Rs. 6.7 in 1933, Rs. 6.14 in 1934, Rs. 6.4 in 1935, Rs. 6.1 in 1936, Rs. 6.1 in 1937, Rs. 6.1 in 1938, Rs. 6.1 in 1939, Rs. 6.1 in 1940.

The general trade depression did not fail to affect the coffee industry but in addition to the general slump in trade there was an additional factor which depressed coffee prices and this was the exceptionally heavy crops of Brazilian coffee. The average whole-sale price of Indian coffee in London which was 140s. in 1923 and 127s. in 1929 fell to 85s. in 1930. The declared value per cwt. of coffee was Rs. 11.9 in 1931, Rs. 6.58 in 1932, Rs. 6.7 in 1933, Rs. 6.14 in 1934, Rs. 6.4 in 1935, Rs. 6.1 in 1936, Rs. 6.1 in 1937, Rs. 6.1 in 1938, Rs. 6.1 in 1939, Rs. 6.1 in 1940.

British India or to Burma at a rate, not exceeding one rupee per cwt., fixed by the Governor-General in Council on the recommendation of the Coffee Cess Committee. The rate originally fixed was 8 as per cwt. But from 1st June, 1935 it was raised to Re 1 per cwt.

Consequent upon the loss of a considerable portion of its export market as a result of the war it became necessary to devise a scheme to bring control of the coffee industry in order to secure a fair price for the grower and to open export markets for the surplus coffee.

An export home was drawn up and came into force on 21st December 1940 with the promulgation of the Coffee Market Expansion Ordinance. It was to remain in force up to 1st August 1941 and during this period the Indian Coffee Cess Act was to be deemed to be repealed without prejudice, however, to the continuing validity of any action taken by the Indian Coffee Cess Committee which was not inconsistent with the provisions of the Ordinance.

Sugar.

The sugar industry in India has been protected since 1902 by a protective duty of 25 per cent (amounting to Re 1-13 per cwt) which was imposed in September, 1931. In accordance with the Tariff Board's recommendations, Government issued a *communique* on January 30, 1932, fixing the protective duty at the rate of Rs. 7-4 per cwt. of all classes of sugar until March 1, 1935. The total import duty along with the surcharge was Rs. 9-1-0 per cwt. till 31st March, 1934. From 1st April, 1934, the protective duty was enhanced to Rs. 7-12, but the surcharge was reduced to Re 1-5-0 and made equivalent to the excise duty of Rs. 1-5-0 imposed on internal production. Thus the total import duty remained the same, viz., Rs. 9-1-0 per cwt. From the 28th February, 1937, the protective duty was decreased to Rs. 7-4-0 and a surcharge was imposed at the rate of

An important landmark in the history of the sugar industry was the year 1902 when the question of protection was referred to the Tariff Board by Government. Pending consideration of the Tariff Board's report the revenue duty was enhanced to Rs. 7-4 per cwt. in March, 1931.

In addition, a revenue surcharge of 25 per cent (amounting to Re 1-13 per cwt) was imposed in September, 1931. In accordance with the Tariff Board's recommendations, Government issued a *communique* on January 30, 1932, fixing the protective duty at the rate of Rs. 7-4 per cwt. of all classes of sugar until March 1, 1935. The total import duty along with the surcharge was Rs. 9-1-0 per cwt. till 31st March, 1934. From 1st April, 1934, the protective duty was enhanced to Rs. 7-12, but the surcharge was reduced to Re 1-5-0 and made equivalent to the excise duty of Rs. 1-5-0 imposed on internal production. Thus the total import duty remained the same, viz., Rs. 9-1-0 per cwt. From the 28th February, 1937, the protective duty was decreased to Rs. 7-4-0 and a surcharge was imposed at the rate of

Rs 2-0-0 per cwt, equivalent to the increased excise duty of Rs 2 per cwt on internal production from the same date. The total import duty from 28th February, 1937, was Rs 9-4-0 per cwt. With effect from 1st April, 1939, the protective duty was reduced to Rs 8-12-0 per cwt and it was raised to Rs 9-12-0 from 1st March, 1940, as a result of the increase in the excise duty from Rs 2 to Rs 3 per cwt. As a result of the imposition of a general surcharge of 20 per cent on all customs duties, with the exception of cotton salt and petrol, the import duty on sugar is now higher at Rs 11-11½ As per cwt (the excise duty remaining Rs 3 per cwt) with effect from 1st March 1942.

A Tariff Board Enquiry was instituted in March 1937, for determining the extent of protection to be conferred on the industry for the remainder of the period of 8 years. The Tariff Board submitted its Report in December, 1937, but as the Government of India could not complete their examination of the Report before March, 1938, they continued the existing import duty on sugar up to 31st March, 1939. On the 30th March, 1939, the Government of India published the Tariff Board's Report—after a period of 15 months. The Tariff Board had recommended continuance of the protection at the existing rate, viz., Rs 9-4-0 per cwt up to 31st March, 1940, but the Government not agreeing with this recommendation, announced their decision to decrease the protection by Rs 0-8-0 per cwt pending a further Tariff Board Enquiry in 1940, and passed an Act giving protection to the industry at the rate of

Rs 8-12-0 per cwt for a period of two years, ending 31st March, 1941. The existing protective duty has been continued up to 31st March 1943. It is believed that for the duration of the war the existing measure of protection to the industry will be continued from year to year.

Due to an increase in the excise duty on sugar from Rs 2-0-0 per cwt to Rs 3-0-0 per cwt from 1st March, 1940, the import duty was increased to Rs 9-12-0 per cwt from 1st March, 1940.

With a view to check a too rapid growth of the industry under artificial stimuli and in order to replace losses of revenue from this source, an excise duty of Re 1-5 per cwt on factory produced sugar was imposed during the financial year 1934-35. Besides, it was proposed to set aside from the proceeds of the excise duty an amount equivalent to one anna per cwt to be distributed among the provinces "for the purpose of assisting the organisation and operation of co-operative societies among the cane-growers so as to help them in securing "fair prices". The excise duty was enhanced to Rs 2-0-0 per cwt from 28th February, 1937, and to Rs 3-0-0 per cwt with effect from the 1st March, 1940.

Due to the outbreak of the European war, the Central Government announced in September, 1940, that no tariff board would be appointed, as was announced by them in March, 1939. In the Delhi sessions of the Legislatures in 1941 the Government of India passed an Act, whereby the existing duties were continued for a period of one year more, i.e., up to March 31, 1943.

Statistics given below, show the progress of the industry in recent years:—

Year.	No of Factories	Quantity of sugar manufactured from cane Tons	Quantity of sugar refined from gur Tons	Quantity of Khandasari production Tons, (Est.)	Total quantity of sugar Tons
1929-30	27	89,768	21,160	200,000	310,918
1930-31	29	119,589	31,791	200,000	351,650
1931-32	32	158,581	69,539	250,000	478,110
1932-33	57	290,177	80,106	275,000	645,283
1933-34	112	453,065	61,094	200,000	715,059
1934-35	130	678,115	30,103	150,000	757,218
1935-36	137	932,000	50,037	125,000	1,107,167
1936-37*	137	1,111,400	19,500	100,000	1,230,900
1937-38	136	930,700	16,500	125,000	1,072,200
1938-39	139	650,800	14,200	107,000	765,000
1939-40	145	1,241,700	31,700	125,000	1,373,400
1940-41	148	1,095,400	49,600	200,000	1,345,000

* Factories in Burma and production in Burma, excluded after 1936-37.

The area under cultivation of sugar-cane has kept pace with increased production, from 2,677,000 acres in 1929-30, it increased to 4,440,000 acres in 1936-37 but fell to 3,869,000 acres in 1937-38 and to 3,103,000 acres in 1938-39. Again it increased to 3,731,000 acres in 1939-40 and to 4,244,000 acres in 1941-42. Owing to the restriction of production in the 1941-42 season also there has been a reduction in the area under the crop to 3,540,000 acres. Prior to 1932-33 there were only 31 cane factories, 25 new factories were added in 1932-33, while another 65 new factories were started in the following years— an increase of 400 per cent in two years. Since 1933-34 about 34 new factories of large cane crushing capacity have

been established, and in 1940-41, no less than 115 factories were working. Production of sugar in India may be classified under three main heads— by modern factories working with cane, by modern refineries working with raw sugar (gur) and by indigenous open pan concerns. Sugar production in India a few years ago amounted approximately to half the estimated total consumption within the country. Since 1931-32 the volume of factory produced sugar has increased by approximately 700 per cent. During 1936-37, India produced over 1,200,000 tons of sugar i.e. slightly more than her estimated consumption of about 1,150,000 tons in 1936-37, and after two lean years, again produced over 1,300,000 tons in 1940-41.

Along with a rapid increase in internal production, there has been a sharp decline in imports. For instance, from an average of approximately one million tons in the years up till 1930-31, imports fell by about 45 per cent in the following year and dropped to about 250,000 tons in 1933-34 and decreased further to 221,000 tons in 1934-35. During 1935-36, imports fell further to 193,888 tons, and in 1936-37, the net import was only 11,960 tons. As a result of dwindling imports Government are losing revenue from this source. The import during 1937-38 was only 9,410 tons but the import in 1938-39 was over 254,000 tons, in view of the deficit in indigenous production. In 1939-40, due to the greatly increased internal production and the outbreak of the European War, the imports dwindled to about 35,000 tons. The yield from this source diminished from over Rs 10 crores in 1930-31, to about Rs 3.81 crores for the financial year ended March 31, 1935 to Rs 3.24 crores for the year ended March 31, 1936, to Rs 50 lakhs in 1936-37, to Rs 25 lakhs in 1937-38, and to Rs 45 lakhs in 1938-39. In 1939-40, however, it went up to about Rs 3,90,00,000 due to increase in imports, necessitated by the small cane-crop, diseased cane, etc., in 1938-39, in India. The imposition of the excise duty at the rate of Re 1-5-0 per cwt on factory sugar, and Re 0-10-0 on khandsari sugar, from April 1st, 1934, has yielded a revenue to the Gov-

ernment of Rs 97,22,000 in 1934-35, and Rs 1,58,24,000 in 1935-36, and Rs 2,52,02,000 in 1936-37. With the increase in excise duty on factory sugar to Rs 2 per cwt, and Re 1 per cwt on Khandsari sugar the yield during 1937-38 was Rs 3,30,97,000 in 1937-38, and Rs 4,22,44,000 in 1938-39 and Rs 2,47,19,000 in 1939-40. With a further increase in the excise duty from March 1, 1940, the yield was about Rs 3,00,00,000 in 1940-41. In the ten months ended January, 1942, the revenue from excise duty was very much higher at Rs 5.41 crores.

Since the imposition of the excise duty it is noteworthy, that the Khandsari production has gone down considerably. From 1st March, 1939, the duty on Khandsari sugar was decreased to Re. 0-8-0 per cwt, but the definition of "factory" in the Sugar Excise Duty Act, 1934, was amended, so as to omit the reference to the number of workers employed with a view to enable duty being charged even in premises where less than 20 workers are employed. The Government of India expected that with the definition of 'factory' thus amended even with the reduced duty on Khandsari of Re 0-8-0 per cwt there would be a revenue of about Rs 6,00,000 during 1939-40. But this hope was not fulfilled. The yield was only about Rs 135,000 in 1939-40. There is no excise duty on Palmyra sugar.

In view of the astounding growth of the industry within such a short time, the following table showing the total production (factory as well as khandsari and refined from *gur*) of sugar in India, the estimated consumption, and the import of sugar will be of interest —

Year	1935-36 Tons	1936-37 Tons	1937-38 Tons	1938-39 Tons	1939-40 Tons	1940-41 Tons	1941-42 Tons
Total Production	1,107,167	1,230,900	1,072,300	765,400	1,373,400	1,345,000	1,250,000*
Estimated Annual Consumption	1,074,000	1,167,000	1,159,000	1,085,000	1,050,000	1,150,000	..
Total Import	86,962	11,960	9,410	254,400	36,000	30,000

* Estimated

During the year 1937, there was a precipitate fall in the price of sugar and in order to avert internal unrestrained competition a Sugar Syndicate was brought into existence, comprising over 90 mills. Later in the year, the industry approached the Government for legislative interference with a view to avoid over-production of sugar and to overcome internal unrestrained competition, which brought down the price of sugar to an uneconomically low level. The Governments of the U.P. and Bihar, to whom these representations were made passed Sugar Factory Control Acts, and made it compulsory for every mill to obtain a licence for working sugar factories from the Government. One of the conditions of the grant of licence to a factory has been membership of the Indian Sugar Syndicate. The Indian Sugar Syndicate has thus been given legislative recognition by the Governments of the U.P. and Bihar, and all mills working in the provinces of the U.P. and Bihar are compelled to sell their sugar through the Syndicate. The Governments

of the U.P. and Bihar have also appointed a Joint Control Board consisting of the representatives of the U.P. and Bihar Governments, the representatives of the industry, and of cultivators and consumers. In 1940, the life of the Sugar Control Act was extended by Bihar and U.P. Governments up to June 30, 1944, and a Sugar Commission was also appointed by them to be "a final authority, subject to Government control, on all matters connected with the production and sale of sugar, as well as other matters regarding cane-prices, etc."

There was a very large carry-over of sugar approximating over 4 lakhs tons, at the beginning of the 1940-41 season and as a consequence the U. P. & Bihar Governments restricted, by means of quota, the production of sugar in factories in U.P. and Bihar. There was no check, however, to the production of sugar in Province outside U.P. & Bihar and in Indian States. I was apprehended at one time that the carry over at the end of 1940-41 season would be as much

as 6 lakhs tons. But thanks to certain fortunate developments and the sharp increase in the offtake of sugar, stocks in factories' godowns at the end of November, 1941 was estimated at 2.65 lakhs tons. With the further decline in production and the possibility of an increased demand, stocks are expected to be normal at the end of 1941-42 season. The industry in U P & Bihar is under rigid control of the Government and is handicapped in various ways, e.g., fixation of high minimum prices of cane-levy of cane-cess, etc.

During the year 1937 the Government of India imposed a ban on the export of sugar from India, by sea, to any country except to Burma, for a period of five years.

The International Sugar Agreement is due to expire in August, 1942, when it is expected it will not be renewed. In view of the opportunities afforded in the export sugar markets, for Indian sugar on account of the loss of Java, Philippines and other important producing centres, certain concession to India are expected, and India will have opportunity for export of sugar to various countries in 1942-43.

During 1940 and 1941, permission was secured to export 2 lakhs tons to the U K but it did not materialise.

It is also of interest to note the production of *gur* for direct consumption since 1931-32

	<i>gur</i> (Tons)
1931-32	2,758,000
1932-33	3,240,000
1933-34	3,486,000
1934-35	3,701,000
1935-36	4,101,000
1936-37	4,268,000
1937-38	3,364,000
1938-39	2,131,000
1939-40	2,411,000
1940-41	1,110,000

It may be noted also as a matter of interest that India is the largest producer of sugar among all the countries in the world, the total yield of raw sugar (*gur*) being 5,152,000 tons (*vide* The Indian Sugar Industry Annual, for 1940, and 1941, by M P Gandhi).

The total value of *gur* and sugar produced in India is estimated at Rs. 750,000,000 in 1939-40.

The Indian Sugar Industry is now the second largest industry, next in importance to only the Cotton Textile Industry, giving employment to over 120,000 workers, in addition to about 3,000 graduates and technical men and 20 million cultivators.

INDIAN TOBACCO.

History—The Portuguese are credited with having conveyed the tobacco plant and the knowledge of its properties to India about the year 1508. Though there are many species in the Genus *Nicotiana*, the tobacco of commerce comes only from the two species *Nicotiana tabacum* and *Nicotiana rustica*. Of the two, the former is more common and commercially important.

Importance—India is one of the principal tobacco producing countries of the world. It occupied the first rank, but since the separation of Burma its position is second only to the United States of America. In 1938-39, the area under tobacco was, 1,290,000 acres, or about 28 per cent of the world's acreage. The production during the same period was estimated to be 1,093 million lbs.

The chief tobacco growing Provinces are Madras (83,000 acres) as compared with 1936-37, the area under tobacco in several Provinces and States shows an around increase. In Madras, particularly, the area increased by about 26 per cent mainly due to the increased cultivation of cigarette and pipe tobacco grown for export. The annual value of the crop in India is about Rs. 18 crores and constitutes, therefore, an important source of ready cash to the growers.

Research—A great deal of research work has been done in India during the last 30 years both by the Government and by private agencies. The Imperial Agricultural Research Institute, Pusa, (now at New Delhi) isolated Pusa T 28 and T 63 among *N. tabacum* varieties and Pusa T 18 among *N. rustica* for chewing and *hooka* purposes respectively. Details of the methods of flue-curing of Virginia tobacco were worked out in 1928.

On the Tobacco Research Station at Nadiad the Bombay Department of Agriculture, isolated

Gandhi 6, Pillu 45, and Kellu 49, heavy yielding bidi and chewing tobacco strains. Attempts are also being made to improve the Nipania tobacco on the Tobacco Research Station, Nipani.

In Bengal, trials are being carried out on the Government Agricultural Farm at Burihat (Rangpur), to find out the possibility of growing superior varieties of cigar tobacco from Sumatra, Havana, Manila and Pennsylvania.

The Madras Department of Agriculture on the Agricultural Research Station at Guntur isolated the high yielding strain T 20 in *N. glauca* country tobacco for cheroot and pipe purposes and early maturing strain (H 8 & 9) of Harrison special, the cigarette tobacco variety popular in India.

The Imperial Council of Agricultural Research, New Delhi, started in 1946 a Tobacco Research sub-station at Guntur for the improvement of the quality of cigarette tobacco. It was found that jowar (*Andropogon Sorghum*) as a preceding crop to tobacco helped to improve the quality of cigarette tobacco better than Madia and Varaha (*Panicum Ubiaceum*).

The India Leaf Tobacco Development Company, the largest buyers of tobacco in India have been experimenting since 1920, chiefly in the Guntur area (Madras) and also in S. & S. Rangpur (United Provinces) and Whitefield (Mysore State), on the commercial possibilities of Virginia tobacco production and have helped to build up the Virginia tobacco industry to the present position.

The cultivation of Virginia tobacco in Mysore State has increased up to 1941. In recent years due to the high prices given for Mysore Tobacco Company.

Improvement in Marketing—The marketing survey of tobacco conducted by the Agricultural Marketing Adviser to the Government of India revealed the urgent need for standardising the methods of grading and preparing tobacco before putting it on the market. With a view to assisting the trade in the above direction, the Indian Tobacco Association which consists of representatives of growers, dealers and manufacturers was formed at Guntur. Under the Agricultural Produce (Grading and Marking) Act, rules were framed in 1937, laying down grade designations, definitions of quality, methods of marking and packing for un-manufactured flue-cured and sun-cured Virginia and sun-cured *Natu* (Country) tobacco. Samples of these grades are furnished every year to the Trade Commissioner for India in London, for purposes of arbitration. In 1940 tobacco was graded at eleven centres in Madras, Bihar and Bengal. Over two million lbs of tobacco valued at Rs 3½ lakhs were graded at these centres.

In 1939, the provisions of the Madras Commercial Crops Markets Act were applied to tobacco in Guntur District and Bezwada taluk of Kistna District. This provides for regulating the market practices regarding weighing, trade allowances and methods of sale. A number of market yards has been opened where the growers and dealers are given facilities for transacting their business in tobacco.

Production—More than half the Indian production is concentrated in 5 clearly defined zones, viz —

(1) **THE NORTH BENGAL AREA** comprises the districts of Rangpur, Jalpaiguri and Dinajpur of Bengal including the Cooch Behar State. About three-fourths of the crop in this area is under *N. tabacum* which includes the varieties locally known as *Jati*, *Bhengi*, *Naokhol* and *Hughli*. The remaining one-fourth is under *N. rustica* which includes the local *Idahi* and *Motihari* varieties. *N. tabacum* varieties are mainly used for cigar and cheroot making and *N. rustica* varieties for *Hooka* and chewing purposes.

The soils are grey ash coloured loams rich in potash. Tobacco is sown in the nurseries from August to September and transplanting of seedlings is done from October to December. The crop is irrigated from temporary wells and is harvested from January to March. The leaf is cured by air curing and sun-curing methods. The produce is marketed from March to October. The finer qualities of *Bhengi* are shipped to Burma, while the poorer qualities are sold in India for cigarette manufacture. *Hughli* and part of *Motihari* are sold for making snuff.

(2) **THE GUNTUR AREA** comprises the districts of Guntur, Kistna and adjoining portions of Hyderabad State. Varieties of *N. tabacum* are exclusively grown in this area. Prior to the introduction of flue-curing of Virginia tobacco in 1928, all the tobacco was sun-cured. The tobacco produced in this area is grouped into (i) Virginia—(a), Flue-cured (b), Sun-cured, (ii) Country or *Natu* tobacco, invariably sun-cured. In the first group, Harrison Special and in the second group *Thoka Adu*, *Kara Adu* varieties are important. Flue cured tobacco is exported to the United Kingdom to the extent of about 30 million lbs

for manufacture of cigarette and pipe tobacco. The sun-cured Virginia, and *Natu* tobaccos are exported to the United Kingdom, Japan and other countries for making cheaper cigarettes, etc. The soils are deep, heavy black cotton soils and rich in lime. Tobacco seed is sown in August and seedlings are transplanted from October to November. The crop is grown invariably without the help of irrigation and is harvested from January to March. The flue-cured Virginia tobacco is marketed from January to April while the sun-cured Country and Virginia tobaccos are marketed from March to June. There are nearly 6,000 flue-curing barns and the Virginia tobacco is cured by means of artificial heat radiated from hot iron pipes arranged on the floor of the barn. The sun-curing is done by stringing the leaf to jute twine and curing them on racks pitched on the open field for drying in sun. To the Indian Leaf Tobacco Development Company Ltd goes the credit for establishing the industry of Virginia tobacco production and for assisting the growers in seed and seedling distribution, research and propaganda in manurial requirements, proper methods of curing and ensuring a market for the tobacco by buying the major portion (nearly 70 per cent) of the production.

(3) **THE NORTH BIHAR AREA** comprises the districts of Muzaffarpur, Darbhanga and Purnea. In this area both the *N. tabacum* and *N. rustica* varieties are grown in the proportion of two thirds to one-third. A major portion of the production of *N. tabacum* is utilised for chewing, while a fairly large quantity is bought by the Cigarette manufacturers in India. The production from *N. rustica* is utilised for *hooka* purposes.

The soils are light, ash-coloured, deep, and of Gangetic alluvium, rich in lime generally and in potash in isolated areas. The raising of seedlings is commenced in August and transplanting in October-November. The crop is generally not irrigated. Harvesting begins in February-March and the produce is ground-cured. It is marketed from April to middle of June.

(4) **THE CHAROTAR (GUJERAT) AREA** comprises Anand, Borsad and Nadiad talukas of Kaira district and Petlad and Bhadrak talukas of Baroda State. This area is grown wholly with varieties of *N. tabacum*, chief among which are (i) *Gandui*, (ii) *Pihu*, (iii) *Kelu*, (iv) *Katu*, (v) *Saypuri*. Of late, attempts are being made to grow a few acres under *Calcutta* variety of *N. rustica*. The first three varieties of *N. tabacum* provide the *bid* tobacco, while *Katu*, being irrigated with well water rich in salts (Nitrates), is eminently suited for *hooka* and snuff purposes. *Saypuri* is used extensively for chewing. Besides, the Bombay Department of Agriculture and the Baroda State have been doing work for the introduction of Virginia tobacco cultivation in the area. The Virginia tobacco was successfully cultivated and cured over about 100 acres and serious attempts are being made to extend the area under this type.

The soils are light sandy loams to dark coloured heavy clays. Sowing is done in July and planting of seedlings in August. *Pihu* and *Kelu* are grown without irrigation, while

Gandhi is grown dry or irrigated. *Kahu* and *sajjari* are irrigated. The crop is harvested in December-January. The leaf is either air or ground cured. The tobacco is sold from the latter half of December to end of June with the peak period in March and April.

(5) THE NIPANI AREA includes Belgaum and Satara districts of Bombay along with Kolhapur, Sangli and Miraj States. In this area varieties of *N. tabacum*, viz. *Mirji*, *Sangli*, *Nipani*, *Jawari*, *Kare Baglam* and *Surti* are mainly grown. Of the varieties of *N. rustica*, *Pandharipuri* is very largely grown. Except the tobacco produced on the riverine soil, which is used as *Hathpan* for chewing, all the tobacco is converted into *Jarda* for *bidi*s. The *Pandharipuri* tobacco is very strong, while the *Nipani* tobacco is very mild and sweet.

The soils are of trap and alluvial slate origin, black and deep heavy clays, though tobacco is grown on a small area on the red loams. The nurseries are sown in the middle of June and planting is done in the first week of August. The crop is harvested in January and is ground-cured. Supply of tobacco to the market is greatest in February and March and drops by June.

Most of the tobacco exported from India to Aden and Dependencies is from the Charotar and Nipani areas. Apart from these five important areas, each province and State grows a fairly large quantity of tobacco mostly consumed in the respective areas themselves, and attempts

are in progress, through *ad hoc* committees established for the development of tobacco, to grow the several types e.g. cigarette *bidi*, *koola* chewing and snuff tobaccos upto the limit of their requirements in the first instance. The Imperial Council of Agricultural Research, New Delhi has been rendering great help in this direction.

Manufactured Products—Tobacco is manufactured into many different forms for different purposes. The importance of the manufactured products can be gauged by the ex-factory value of other various products mentioned below. The figures in brackets show the value of the product in Crores of rupees.

(i) *Hoola* (9.60), (ii) *Cheroots* (9.20) (iii) *Bidi*s (7.52), (iv) *Cigarettes* (5.86), (v) *Chewing* (3.02), (vi) *Snuff* (1.63), (vii) *Cigars* (0.15) (Total=36.88)

Apart from cigarettes, the other tobacco products are prepared with little of standard machinery, leaving room for mushroom manufacturers and thus leading to a great variation in the quality of products, standardisation of which is engaging attention.

Import and Export—In 1940-41, India imported tobacco worth Rs. 131 lakhs representing an increase of 28 per cent over the value of imports in 1938-39. The total value of exports of tobacco in 1940-41 was Rs. 288 lakhs as against Rs. 276 lakhs in 1938-39.

THE LAC INDUSTRY.

Lac is a resinous substance secreted by an insect which lives on the twigs of certain trees. The insects are extensively cultured, especially in Northern India. Lac is an important constituent for numerous industrial processes. The annual production of raw lac in India is 40,000—50,000 tons.

The chief use of lac in India is in polishing furniture. But this can obviously absorb only a limited quantity of the produce. Another use is in "hot" lacquering of wooden toys, pen-holders, etc., but here again the consumption, though increasing, is still very small. About 300 tons of lac are used every year for the manufacture of gramophone records in India. Refuse lac is sometimes used in the manufacture of bangles and for filling hollow gold and silver articles. But all the above uses together probably do not account for more than 2-3 per cent of the total lac produced. Thus 97-98% of the production of lac is exported abroad, the United States of America being the largest consumer.

In foreign countries lac is used in the manufacture of gramophone records, French polish, floor varnishes, insulating varnishes and cement, grinding wheels, hats, leather dressings, paper linings, etc., etc.

Shellac moulding appears to be confined in India only to the manufacture of gramophone records. Shellac was only one of many other materials for the moulding trade till the rise of

the gramophone industry gave shellac the unique place which it now occupies in this industry, no synthetic resin having yet been able to replace it as among high class gramophone records, those with a shellac lac are undoubtedly the best.

The steady improvement in the lac industry since 1900 has been largely due to the growth of the gramophone industry. At present 40 to 45 per cent of the total world output of lac is consumed in the manufacture of gramophone records. There is yet a large potential market for gramophones in the East.

With improvements in heat resistance and mechanical strength brought about by chemical modifications, a wide field of application which the synthetic resins have opened up can still be exploited by shellac. The Indian Lac Research Institute at Nankum in Bihar and its fellow research organisation in London are engaged in investigating these openings, together with the possibilities of improvements in cultivation, pest control, etc., which will lead to the production of a better grade of raw material. Recent developments in increasing the uses for lac include new moulding powders for both compression and injection moulding, laminated boards of paper, jute, etc., bakelite changes from resin lac, oil varnishes, transparent resins, etc., etc. Improved methods of lac culture are taught to the villagers through extension demon-

INDIAN FILM INDUSTRY.

The Indian Film Industry at the present time claims to occupy eighth place among the industries of India. It is 28 years old and celebrated its Silver Jubilee in 1939 by holding a Congress and Exhibition in Bombay.

The first Indian film "Harischandra" was produced by Mr D G Phalke in the year 1913, and since then the development of the industry has been both extensive and rapid. With

the coming of talkies the pace of progress substantially increased. Early development took place in Bombay, which today is the "Hollywood of India", for no less than 66 per cent, or two thirds the total annual production of Indian films comes from Bombay studios. From Bombay the industry spread to other provinces, and it is now well established in Bengal as also in Madras, in which it has made remarkable progress in recent years.

NUMBER OF STUDIOS.

There are about 50 film studios in India, and about 150 concerns engaged in producing films. The principal film producing studios are located at Bombay, Poona, Kolhapur, Calcutta, Madras and Lahore.

Although exact figures are not available in certain cases, it is roughly estimated that about Rs 8-37 crores are invested in the Production, Distribution and Exhibition branches of the Indian film industry, in which some 15,000 persons are it is estimated employed. Investment in Production and Distribution amounts

to about Rs 3 crores, Investment in the construction and equipment of Studios about Rs 1 crore, and investment in the Construction, Equipment and Cinemas about Rs 4-37 crores.

Of the 15,000 who are employed in the industry, there are some 4,000, mainly artists and technicians engaged in the Production, some 4,500, mainly clerical, in the Distribution, and some 6,500 in the Exhibition of films. The total salaries paid out in a year is estimated to come to about Rs 50 lakhs.

FEATURES AND SHORTS.

The total production of feature films, of an average length of 13,000 ft., comes on an average to about 200, at an average cost of about, Rs 1,00,000 per film. It is thus estimated that about Rs 2,00,00,000 are spent annually in the production of pictures, out of which Rs 40 lakhs is the expenditure on Raw Films.

The following table gives the number of short and feature films exhibited in India. The table has been compiled from reports of censored films published by the Boards of Film Censors at Bombay, Calcutta, Madras and Lahore. The figures show that while in feature films the production of the Indian industry has considerably increased, there has not been as great an increase in the production of shorts —

Year.	FEATURES		SHORTS		GRAND TOTAL	
	Indian	Foreign	Indian	Foreign	Indian	Foreign
1920 (figures not available)		
1922 (figures not available)		
1924	59	405	26	903	85	1308

Total	641	613	644	628	575	355	370	363

LANGUAGE OF INDIAN FEATURE FILMS

The following table gives an analysis of Indian feature films according to Languages —

Language	1936	1937	1938	1939	1940
Hindustani	142	102	96	76	77
Marathi	6	11	12	7	10
Tamil	38	35	42	24	15
Telugu	12	9	11	15	12
Bengali	19	18	19	13	18
Punjabi	1		1	7	8
Malayalam			1		1

DISTRIBUTORS.

There are about 150 distributors in all, of whom 9 are distributors of foreign films. The majority of the distributors of foreign films represent American, and the rest English producers. These distributors import on an average about 250 Feature Films and 800

Shorts every year. The distributors are mainly centred in Bombay, Calcutta, Delhi, Madras, Lahore, Bangalore, Karachi and Ilahabad to supply cinemas throughout the country with pictures for exhibition.

CINEMAS IN INDIA.

The number of cinemas has been rapidly increasing and there are about 1,265 permanent cinemas, of which 1,000 show Indian films while 265 show foreign films. In addition there are about 500 touring cinemas.

The gross annual income of cinemas showing Indian films amounts to about Rs. 2.40 crores. Although there is a source of income from abroad for Indian films this does not amount to much. It is estimated that about 5 per cent only of the total income from Indian films comes from abroad while 95 per cent comes from India itself. The gross annual income of cinemas showing foreign films is estimated about Rs. 60 lakhs.

Following are the principal Circuits with Population, Number of Stations and Number of Cinemas —

Western Circuit—Comprising Bombay (Pop.) 17,992,054, Baroda States 2,447,007, Bombay States 4,468,396, Western India States Agency 3,999,250, Aden 51,478. Total Pop. 28,954,184, No. of Stations 100, No. of Cinemas 230.

Central Circuit—Comprising Central India States (Pop.) 6,632,790, Central Provinces States 2,481,214, Gwalior 3,721,070, Rajputana 11,225,712, C. P. and Berar 15,507,721, Ajmer-Merwara 569,292. Total Pop. 40,052,891, No. of Stations 65, No. of Cinemas 118.

North West Frontier Circuit—Comprising North West Frontier Province (Pop.) 2,421,076, Sind 1,887,070, Baluchistan 463,508, Baluchistan States 405,109, North West Frontier (Agency and Tribal Areas) 2,279,288. Total Pop. 9,440,051, No. of Stations 36, No. of Cinemas 76.

Northern Circuit—Comprising Punjab (Pop.) 23,580,552, U. P. 48,408,761, Kashmir and Jammu 3,646,241, Delhi 656,246, Sikkim State 107,808, Punjab States 4,77,787, Punjab States Agency 4,472,218, U. P. States 1,208,070. Total (Pop.) 82,497,987, No. of Stations 120, No. of Cinemas 268.

Eastern Circuit—Comprising Bengal (Pop.) 50,114,002, Bengal States 97,000,000, Orissa 37,677,576, Bihar 30,000,000, Assam 4,652,007, Assam 8,622,231, A. N. S. 625,606. Total Pop. 102,004,777, No. of Stations 111, No. of Cinemas 231.

Southern Circuit—Comprising Madras
(Pop) 46,740,107, Madras States 6,754,484,
Mysore 6,557,302, Coorg 163,327, Hyderabad
State 14,436,148 Total (Pop) 74,651,368,
No of Stations 199, No of Cinemas 372

Grand total of Population of all Circuits	above 328,311,169
Total No of Stations	637
Total No of Permanent Cinemas	1,265
(excluding Touring Cinemas)	
Total No of Touring Cinemas	500

TAXATION.

It is claimed that the industry pays in taxes to Central and Provincial Governments and Local Bodies Rs 1.21 crores yearly. The amount paid in Railway freights is about Rs 11.25 yearly.

The collections from Entertainments tax in British India come to about Rs 40 lakhs yearly. The approximate collections in the various Provinces is as follows: Bombay Rs 9 lakhs, Bengal Rs 7 75 lakhs, Madras Rs 10 5 lakhs, U P Rs 4 75 lakhs, Punjab Rs 2 8 lakhs, Sind Rs 1 8 lakhs, Bihar Rs 1 04 lakhs, N W Frontier Province Rs 55 lakhs, Assam Rs 45 lakhs, Central Provinces Rs 37 lakhs, in addition there is the revenue from the Pro-

vinces of Delhi and Coorg, which are administered by Chief Commissioner, bringing the total collection to Rs 10 lakhs a year

The direct annual taxation of the Production branch of the Indian film industry is estimated to be Rs 11 lakhs, the direct annual taxation of the Exhibition branch of the industry is estimated at Rs 53½ lakhs, while the indirect annual taxation of both these branches is estimated at about Rs 40 lakhs.

The rate of Customs Duty is 25 per cent of the invoice value on Raw Film. On Exposed Film the duty is 37½ per cent on a valuation of 7 Annas per foot for long films and 3 Annas per foot for short films.

IMPORTS OF FILMS.

The following table giving in footage and value the totals of raw and exposed films imported into India and of the import duty paid to Government —

Year	Footage	Value	Total Import Duty
1922-23	73,10,420	13,23,398	2,55,935
1923-24	72,01,655	14,10,637	2,25,407
1924-25	94,44,760	15,02,823	2,00,700
1925-26	130,17,199	21,05,533	3,54,265
1926-27	174,82,004	28,21,508	4,22,854

	Raw Films		Exposed Films		
	Footage	Value	Footage	Value

The Cocaine Traffic.

The form of cocaine chiefly used in India is Cocaine Hydrochloride. This salt forms light shining crystals, with a bitterish taste, and is soluble in half its weight of water. The alkaloid cocaine—of which this is a salt—is obtained from the dried leaves of the *Erythroxylon* Cocaine which grows in Bolivia, Peru, Java, Brazil and other parts of South America. The leaves are most active when freshly dried and are much used by the Natives as a stimulant. Tea made from them has a taste similar to green tea and is said to be very effectual in keeping people awake.

Spread of the habit.—The cocaine traffic in India which seems to be reaching in alarming proportion in spite of legislation and strict preventive measures is of comparatively recent growth, though it is impossible to estimate how widespread it was in 1903 when the Bombay High-Court for the first time decided that cocaine was a drug included within the definition of an intoxicating drug in the Bombay Abkari Act. Since that date the illegal sale of cocaine in India has largely increased and the various provincial Excise Reports bear witness to the spread of the "Cocaine habit." The consumers of the drug, which is notoriously harmful, are to be found in all classes of society. In India as in Paris the drug is mostly used by prostitutes or by men as an aphrodisiac. The habit has spread chiefly to those classes which are prohibited by religion or caste rules from partaking of liquor and the well-known Indian intoxicating drugs.

Smuggling—So far as the cases that have been detected show, the persons who smuggle the drug by sea from Europe and places outside India, into India, are chiefly sailors, stewards, firemen and sometimes engineers and officers of foreign ships. The ports through which cocaine enters India are Bombay, Karachi, Calcutta, Madras, Mormugao and Pondicherry. The main inland distributing centres are Delhi, Lucknow, Meerut, Lahore, Multan, Surat and Ahmedabad. Delhi especially is notorious for the cocaine trade. Great ingenuity is employed in smuggling cocaine through the Custom houses. It is packed in parcels of newspapers, books, toys and piece-goods and

in trunks which have secret compartments. The retail trade in the towns is very cunningly organised and controlled. In addition to the actual retailers, there is a whole army of watchmen and patrols whose duty is to shadow the Excise and Police officials and give the alarm when a raid is contemplated. During the Great War no fewer than several cases of importation of Japanese cocaine were detected, the importers being Japanese and Chinese sailors. The original marks on the packets and phials are usually destroyed so that the name of the manufacturing firm may not be found out.

It is no longer possible to buy cocaine from any betelnut seller as it was ten years ago, but scores of cases in the Police Courts show that the retail trade thrives, though to a diminished extent, in Bombay. High profits ensure the continuance of the trade.

The Law in regard to Cocaine—This varies in different provinces. A summary of the law in Bombay is as follows. No cocaine can be imported except by a licensed dealer and importation by means of the post is entirely prohibited. The sale, possession, transport and export of cocaine are prohibited except under a license or permit from the Collector of the District. A duly qualified and licensed medical practitioner is allowed to transport or remove 20 grains in the exercise of his profession, and as far as 6 grains may be possessed by any person if covered by a *bona fide* prescription from a duly qualified medical practitioner. The maximum punishment for illegal sale, possession, transport, etc., under Act V of 1875 as amended by Act XII of 1912 is as follows. Imprisonment for a term which may extend to one year or fine which may extend to Rs 2,000 or both and on any subsequent conviction imprisonment for a term which may extend to 2 years or fine which may extend to Rs 4,000 or both. The law in Bombay has been further amended so as to enable security to be taken from persons who have been convicted of certain offences. The amended Act also contains a section for the punishment of persons who let their houses to persons who sell

The Opium Trade.

Mention opium and half the Western world directs its thought to India, as though India were a most unscrupulous producer of the most noxious drug on earth. Refer to the League of Nations' proceedings in regard to opium and again, mainly under the leadership of American representatives, one finds India and the Government of India held up to humanity as traffickers in opium and as thereby obstacles to making the world a better place to live in. In fact, neither India nor the Government of India has anything to be ashamed of in its opium history. Whatever may be the case in other countries centuries of inherited experience have taught the people of India discretion in the use of the drug and its misuse is a negligible feature in Indian life. Abuse of its properties is rarer in India than the abuse of alcohol in Western countries.

The record as regards exports is equally clean. India has never driven hard bargains to secure the sale of the product overseas. Where it has been bought the reason is its superiority over other supplies because of the stringent regulations by which its manufacture has always, under the British authorities, been regulated in India, in order to secure the purity and cleanliness of the finished product. Directly any importing country has expressed a desire to have the trade reduced, the Government of India have responded by stiffening their restrictions on export. There have, in recent years, mainly at the instance of America, been numerous International conferences with a view to making opium and drugs derived from it more difficult to obtain and in every case it has been found that India had already given the lead in the special regulations which it was proposed to lay down.

The China Trade — The classic case of Indian restriction of her export opium trade is provided by China. There is a long history of Indo-Chinese negotiations on the subject, but it is unnecessary to go further back into these than 1911. On 8th May of that year, there was drawn up between India and China an agreement under which the Government of India assented to (1) the payment of an import duty three times the existing amount in return for the promised abolition of provincial taxes, (2) the partial closure of China to Indian opium by provinces, including not only stoppage of transit passes, but also treaty port closure, Shanghai and Canton excepted, (3) the total extinction of trade before 1917 on proof of total cessation of opium production in China, and (4) revision of the agreement on due notice by either party. This agreement, as its terms indicate, was on the side of China the outcome of a professed desire to stamp out the opium trade and opium consumption in her midst. And on her side China, in the agreement, undertook, among other things, to reduce production in China *pari passu* with the reduction of exports from India.

In addition to the limit to the China trade imposed by the agreement, the Government

of India undertook in order to lessen the danger of smuggling into China, and as an earnest of their desire to assist that country, strictly to confine the remainder of Indian opium export to the legitimate demands of the non-China markets. A figure was elaborately calculated for these markets and India drastically cut her non-China exports down to it in 1911. In subsequent years, she progressively reduced the permissible export limit and in 1913 she stopped exports to China altogether.

The financial sacrifice thereby undertaken by India in order to help the Chinese in their professed desire for reform amounted to many millions sterling a year. China never carried out her side of the bargain. She is still demonstrably the greatest opium producing country in the world and the only effect of the reduction, and eventual abolition, of imports from India is better trade for Chinese opium producers and merchants and largely increased imports of opium into China from Iran and Turkey.

Agreements observed by India — The Government of India have carried out to the letter their side of the 1911 agreement. They have gone further. Not only were exports to China stopped and exports to non-China countries in the East limited in accordance with the agreement with China, but exports to non-China countries have, on the voluntary initiative of India, been subjected to successive restraining agreements with the countries concerned. The Government of India introduced, with effect from 1st January 1923, a certificate system recommended by the League of Nations, whereby all exports of opium must be covered by certificates from the Government of the importing country that its consignment is approved and is required for legitimate purposes. The pressure exerted by the League of Nations in this regard was not pressure upon the Government of India but upon the Governments of the importing countries and, so far as India was concerned, the new system was welcomed because it removed from the shoulders of the Government of India all responsibility in regard to opium consumption in the importing countries and laid it upon their own respective Governments. In 1926, in order to fulfil the spirit of her international agreements, India decided, though she was in no way bound to do so, to reduce her exports to Far Eastern countries for other than medical and scientific purposes by 10 per cent yearly, so as to extinguish them altogether by December 1935, and effect has been given to that policy at considerable financial sacrifice.

Indian Uses of Opium — There is a fundamental difference between the problem in India and that in foreign countries, particularly in America and Europe. America and Europe are principally concerned with the problem of the vicious consumption of cocaine and morphia and it is on the experience of the abuse of these drugs in those countries that much of the condemnation of Indian policy is based. It is accepted that the consumption of opium

in America and Europe is in effect hardly less disastrous than that of morphia and cocaine. And the reason is that to Americans and Europeans opium is an unaccustomed drug. The habit of its use being both new and strange to them, it is never used to moderation but always abused, and the results have no relation to the result of moderate opium eating in India. The fact appears to be that peoples acquire a tolerance to drugs to the use of which they are long habituated. Opium has been used in India since the 16th century at least. The method of use is eating and in India, generally speaking, eating seems to do little, if any, harm. Smoking, which is the habit of the Far Eastern races, rather than of the Indian races, seems to do much more harm in India than eating, while on the other hand where smoking is in ordinary use competent authorities (e.g., the Royal Commission on opium in Malaya) think eating to be more harmful than smoking.

The Government of India have fully participated in the different International Conferences on the drug question and responded to the obligations which her assent to their conclusions has placed upon her in regard to home consumption. But the principal effect upon India to these International discussions has been to draw the fresh attention of her Government and people to the opium situation in her midst, to cause consultations on the subject between the Government of India and the Indian Legislature and to produce what may be described as considerable intelligent progress in the development of those regulations upon the use of opium which are time-honoured.

Old Policy.—Ever since 1915, the aim of the Government of India had been to sell opium, as far as possible, direct to the Governments of the countries to which it was sent. These Governments were responsible under international conventions to ensure that it was only used for legitimate purposes within their own territories and did not pass into illicit traffic. For this purpose, the Government of India entered into direct agreements with such Governments as were willing to conclude them. No Government was bound by these agreements to take any specific quantity of opium, or, in fact, any opium at all. On the other hand the Government of India considered that the responsibility for deciding the amount of its own legitimate needs rested on each purchasing Government, and that it was not reasonable that the Government of India should be expected to undertake the invidious task of rationing each Government.

At no time, however, did the Government disclaim ultimate responsibility in this matter or let itself be a party to anything in the nature of excessive exports of opium to the markets of the Far East—even at the request of the Governments of the territories concerned.

After some years of the working of this system it was realised that the purchasing Governments were not all equally alive to their obligations, and that some change would have to be introduced to avoid the unpleasant necessity of criticising the demands received or the introduction of a rationing of supplies. If this were not done the Government of India

would not have been fulfilling obligations undertaken at Geneva.

Present Policy.—The current attitude and policy of the Government of India were explained on their behalf to the League of Nations at Geneva. Their representative declared that any genuine measure of reform initiated by a Provincial Minister in connection with it would receive encouragement and support from the Central Government and showed that the policy of that Government is, and has been, one of non-interference with the moderate use of raw opium, whether the object of the consumer be some real or supposed physical benefit or merely the indulgence of the almost universal desire of human beings, particularly those whose occupations involve exposure or severe bodily exertion, for a stimulant or narcotic. It is, and always has been, the desire of Government to suppress excessive indulgence.

Under the Government of India Act of 1919, opium was a provincial transferred subject. Nevertheless, owing to the jealous watching and criticism by observers in every continent, the Government of India called an official All-India Conference, which was opened at Simla by Lord Irwin, on 5th May 1930, to consider the question of certain areas where opium consumption was alleged to be unduly high. This was followed by the prosecution of special provincial inquiries by committees set up by the Local Governments at the special instance of His Majesty's Government. The Conference, after an exhaustive discussion of the phenomena presented by the various areas selected for investigation, and in the light of the personal knowledge of the representatives of the different Provinces and of the reports of the local committees, concluded that it appeared that certain parts of Assam and Calcutta might correctly be regarded as having excessive consumption and that Orissa and the Ferozepore District of the Punjab might be held to provide cases for further inquiry. In other cases the Conference considered that there was no evidence of prevalent excess. But they gave a series of examples to show that there were simple explanations showing harmless causes for what appeared to be excessive consumption in many places.

Opium policy has on several occasions during the past few years come under discussion in the Central Indian Legislature and in regard to it the Government of India and the non-official members of the Legislature have been in accord. Cultivation of the poppy in British India is confined, except for a few wild and inaccessible regions, to the area that supplies the Government of India Factory at Ghazipur in the United Provinces where it can only be cultivated under license. Importation into British India from the Indian States is controlled by prohibition of imports except on Government account and by agreement with the States concerned that they will not allow exports to British India except by arrangement. Cultivation in British India is progressively and rapidly being reduced. The process of reduction was stayed in 1931-1932 because it was found that the rate before 1931 had been too rapid so that stocks were brought to a dangerously low level. Progressive and rapid

reduction was resumed in 1933, the total area of cultivation of Benares opium from 1932-33 being as under :

1932-33	=	27,228 Acres.
1933-34	=	13,702 "
1934-35	=	6,806 "
1935-36	=	7,167 "
1936-37	=	6,366 "
1937-38	=	6,564 "
1938-39	=	4,812 "
1939-40	=	4,899 "
1940-41	=	4,810 "

The per capita consumption of Opium in British India during 1939 was 7.7 grams

Gradual Extinction Of Exports—Lord Reading, as Viceroy, made the position clear in a statement in February, 1926, when he explained that to avoid complications that would arise in attempting to sit in judgment on the internal policy of other Governments the Government of India had decided to reduce exports to all countries in the Far East by a fixed proportion annually with a view ultimately to discontinuing them altogether.

In June, 1926, it was announced that extinction of these exports would take place in ten years.

Since the beginning of 1936, exports of opium from India have ceased except for exceedingly small quantities (for medicinal or scientific purposes) sent to the French and Portuguese settlements in India, Nepal, Zanzibar and Malaya.

Exports to these places are allowed in accordance with long-standing practice and are subject to arrangements (prescribed by the League of Nations) which confine the amount of such exports to the quantities approved by the Governments of these territories. Besides these places, opium is exported to Burma and Aden. Before separation they formed an integral part of India and it has been decided to continue to allow them to draw their supplies of opium from India at cost price as long as they require it. The quantities exported to Burma and Aden during the year 1939 were 22,113 kgs and 42 kgs respectively.

The steady decrease in the average annual net receipts (after deducting expenditure) from the opium export trade is shown by the following table:

1910-11 to 1912-13	Rs 801.62 lakhs
1920-21 to 1922-23	Rs 183.41 "
1922-23 to 1924-25	Rs 167.51 "
1932-33 to 1933-34	Rs 55.22 "
1934-35	Rs 19.35 "

In making this sacrifice, the Government of India had gone further than the requirements of the provisions of international conventions. India's voluntary relinquishment of crops in

revenue has not, however, contributed to the reduction of consumption in the Far Eastern countries, which are now obtaining their supplies of opium from various other sources.

Total Prohibition In Assam—The control of policy about internal consumption rests with Provincial Governments, who are adopting several measures to curtail supply to the public.

Since 1919 various restrictive measures had been adopted by the Government of Assam in their efforts to eradicate the opium habit, such as the raising of the retail price, the rationing of shops, the issue of passes, introduction of prohibition in selected areas, and accelerated reduction of rations.

The Government of Assam embarked upon a policy of total prohibition in the included areas of the Province from March 1, 1911. A system of quarterly accelerated reduction of opium rations by which rations of all consumers were reduced at the rate of one-eighth of a tola—according to the prescribed scale—was enforced from September 1, 1939, in the partially excluded areas of the Province with a view to eradicating this pernicious habit of opium consumption in these areas within a period of two years.

On November 27, last year, it was announced that, from December 1, total prohibition in opium would be enforced in the partially excluded areas of the Mikir Hills in the districts of Subasagar and Nowgong, though all possible steps would be taken to alleviate the physical distress of those persons who would be deprived of their opium rations as a result of this prohibition. H. E. Sir Robert Niel Reid, Governor of Assam, in an appeal to the Province, stated:

"In pursuing this policy Government have had to face both sacrifices of revenue and heavy expenditure. To what extent the revenue has suffered will be evident from the fact that, taking the Province as a whole, the income from this source has gone down from Rs 39 lakhs in 1928-29 to Rs 2 lakhs and odd in 1940-41, a sum which will now be subject to further diminution.

"There is much to be done in educating and mobilising public opinion, propaganda is essential and close vigilance will have to be exercised if the success of the policy is to be ensured. I sincerely hope that the efforts of the Government will not go in vain for I feel sure that, if a determined and sustained effort is made, the success of the policy will be assured, to the great benefit of the people of Assam."

Close supervision is maintained over the licensed vendors in all parts of British India; the conditions of their licenses require that the shops shall always be open to inspection, that no opium shall be sold to children or bad characters, that sales shall only be made on the licensed premises and during the prescribed hours, that only unadulterated Government opium shall be sold, that credit shall not be allowed, that no consumption shall be permitted on the premises, that full accounts shall be maintained and that the names and addresses of purchasers of more than one or two tolas shall be recorded. These conditions are effectively enforced by the excise departments of the various provinces.

GLASS AND GLASSWARE.

Glass was manufactured in India centuries before Christ. Pliny mentions "Indian glass" as being of superior quality.

As a result of recent archaeological excavations a number of small crude glass vessels, indicative of the very primitive stage of the industry at the time, have been discovered.

The first Indian references to glass are in the Mahavamsa, the Chronicles of the Sinhalese Kings (300 B.C.), when glass mirrors were carried in processions.

It is certain, according to Sir Alfred Chatterton, that by the sixteenth century, glass was an established industry in India, producing mainly bangles and small bottles. The quality of the materials was bad and the articles turned out were rough.

Manufacture of glass in India on modern European lines dates from the nineties of the last century, when some pioneer efforts were made in this direction. Since then, a number of concerns have started. They devote themselves to the manufacture of bangles and lampware, while bottlemaking and production of table articles increase steadily.

In its present stage, the industry takes two well-defined forms—(1) Indigenous Cottage Industry and (2) the modern Factory Industry. The former, which is represented in several parts of the country, has its chief centres in the Firozabad area in the United Provinces. It is mainly concerned with the manufacture of cheap bangles made from glass blocks manufactured in large quantities. With the coming of the factory-scale manufacture of bangles, the Cottage Industry is struggling hard for existence. The Factory Industry is turning out much better quality bangles and has also successfully eliminated Japanese imports. Firozabad is in full control of the bangle market since the outbreak of the War, experiencing a period of great prosperity.

In other fields the Factory Industry is mainly concerned with the manufacture of lamp chimneys and globes, tumblers, jars, bottles, etc. the chief centres of production being the United Provinces, Calcutta and Bombay. A few factories specialise in quality glass blocks for the Cottage Industry. One factory in the United Provinces has been manufacturing sheet glass with modern equipment since 1920.

Records of the earlier ventures have shown that failure in some cases was due, in part at least to preventable causes. Foremost among these, were lack of enlightened management, lack of expert attention and, in many cases,

small attention to choice of site. Specialisation, too, has been lacking, some factories in their initial stages trying to manufacture three or four different kinds of glassware simultaneously, like lampware, bottles and bangles. Prudence of sufficient fluid capital for initial expenses has also been another contributory factor in bringing such ventures to grief.

As a result of an inquiry held in 1931, the Government of India decided to assist the glass industry by way of a rebate of customs duty on imported Soda Ash.

In 1938 special action towards development of this industry was taken by the Government in the United Provinces. A glass Technology Section was established in Benares, under the direction of Dr. A. Nadel, Glass Technologist to Govt. U.P. Since then modern recuperative furnaces have been introduced, and the largest scale industry as a whole changed over from pot-furnaces to tank furnaces, which are more economic and better suited for mass production. Numerous glass shaping, refining and decorating machines of a modern type have been installed in factories, in some cases at Government expense, according to development plans implemented by the Section. The production of laboratory ware was initiated and also the manufacture of glass beads was introduced, as an entirely new cottage industry, following a process hitherto unknown in India. The glass Section tends to improve working conditions in Firozabad and other centres and evolves new types of decorative glasses for the bangle and bead industry. In large factories the first 3 fresh air blowing plants for the benefit of workmen have been built. A gas plant is being built in Firozabad for the use of cottage workers. As a result of the advisory activity of the Section three new factories have been built in the United Provinces. They are equipped on modern scale, adapted to Indian conditions, and are situated in Benares, Firozabad and Ghaziabad. The products are bottles, bangles, and table ware respectively.

Due to technical improvements of a fundamental nature on the other hand due to favourable economic conditions connected with the war, the glass industry in the United Provinces has taken the lead, both in quality and quantity, and supplies the bulk of glass consumed in India successfully replacing foreign imports. Various new lines, never before made in India, like boiler grates, steamware, hospital ware, technical articles required by the Defence Departments, etc. have been evolved in the Laboratory of the Section and handed over to the industry for regular production.

HIDES, SKINS AND LEATHER

Supply of raw hides and skins—India is regarded as a surplus country in respect of her resources of raw hides and skins. It is estimated that normally she produces 20 million cattle hides, 3.5 million buffalo hides, 22 million goat and 3.5 million sheep skins a year. Only a portion of the cattle and buffalo hides is obtained from slaughtered animals and the

bulk, about 75 to 80 per cent, is derived from animals that die a natural death. On account of this reason the output of these hides increases when famine, flood, cattle epidemics, etc., take an undue toll on livestock. Goat and sheep skins are, however, derived from animals slaughtered for meat and their production remains more or

Trade in raw hides and skins.—Of the total output of India's raw hides and skins it is estimated that from 50 to 75 per cent of cattle hides and about 45 per cent of goat and sheep skins are now locally tanned and the balance exported in the raw condition. Previous to the European war of 1914-1918, about 56 per cent of the total export of cattle hides used to go to Germany and Austria and the balance to the other European countries and United States, while 80 per cent of the exported goat skins used to go to United States. The Germans brought the collections, curing and grading of the Indian cattle hides and the Americans those of goat skins to a fairly high standard. The war disorganised this export trade and during post-war years the Government of India levied an export duty of 15 per cent on hides and skins with a rebate of 10 per cent for those which were exported to and tanned in Empire countries. The object of this measure was to foster in the first place India's leather industry and in the next encourage tanning of Indian hides within the British Empire and reduce their export to Germany and other non-Empire countries. Later on, the duty was abolished. The measure did not succeed in stopping export to Germany which continued to revive until the outbreak of the present war in 1939. The repeal of the duty helped the revival, and export to Germany rose to about 28 per cent of the total export in 1935-36. The post-war measures, however, increased tanning in India. There was a change in the direction of goat skins export also during the post-war period. After the war the United Kingdom developed the manufacture of glaze kid and considerable quantities of Indian goat skins are being now exported to that country and the S. A.'s share is proportionately reduced. Still the U. S. A. takes about 3 times as much as the United Kingdom and about 70 per cent of the total export from India. India is responsible for the supply of about one-third of the total goat skins used in the world's tanning industry and some of her goat skins, especially those of Bengal and Bihar, are regarded to be the best raw materials for high class glaze kid.

Cattle hides are cured for the export trade by air drying and dry salting. The better grades of the former are dried out, being stretched lengthwise on frames, and are called "Framed" hides, and the inferior ones are dried by spreading on the ground and are known as "Crumpled" hides. Air dried hides are treated with a solution of arsenic to ward off insect damage before export. Dry salt curing is done mostly in Bengal with a saline earth known as "Khari Salt" which consists principally of sodium sulphate mixed with varying proportions of sodium chloride and earthy matter. Goat skins are mostly dry salted and to a lesser extent air dried. The total export of raw hides and skins amounted to Rs 3,84,66,560 in 1938-39.

Recently the Agricultural Marketing Adviser to the Government of India has been attempting to grade slaughtered cattle hides. Hide-grading stations have been started at slaughter houses at Delhi, Agra, Bandra (Bombay), Bareilly, Karachi and Rampur, and specifications for grades have been formulated. Hides and skins are included in the Schedule to the Agricultural Produce (Marketing and Grading) Act of 1937.

An attempt is being made by the Board to improve flaying in the slaughter houses where grading stations have been started by giving a bonus to flayers.

Tanning in India.—The tanning industry in India has made great strides since the last European war. It may be divided into two categories, indigenous and modern.

Indigenous tanning.—This is carried out principally by the people of the tanning caste which is a depressed Hindu community known as the Chamar. They tan according to indigenous methods and their products may be divided into a number of typical groups, (1) the miscellaneous crude leather produced in the villages to meet local needs, (2) the bag tanned buffalo sole leather produced in the Punjab and Calcutta which is extensively used for making shoes, (3) tanned sheep skins of the Punjab known as "Kabuli Bheris" used as a cheap book binding leather throughout India, (4) half-tanned leather of Madras and Bombay. The first three varieties are all consumed in India while the better grades of the fourth are exported chiefly to the United Kingdom and from there to other countries. The half-tanned cattle hides and calf skins are known in the International trade as East India tanned Kips and Calf skins. These are retanned and finished in the importing countries for making shoe upper and other varieties of dressing leather. The cattle hides used to be tanned formerly with avaram or turwar bark (*Cassia auriculata*) which occurs in South and Western India. But since the last war they are being tanned in Madras with wattle bark, large quantities of which are imported from South Africa. The goat and sheep skins in Madras and these as well as cattle hides in Bombay are still tanned with avaram bark. The present annual export of half-tanned leather is valued at about six crores of rupees.

Modern tanning.—Leather for Harness and Saddlery for military equipment has long been manufactured at Cawnpore by Western processes of vegetable tanning from buffalo and heavy cow hides using the local tanstuffs, babul bark (*Acacia arabica*) and myrobalans (*Terminalia Chebula*). At present large quantities of South African wattle bark and its extract (Mimosin Extract) are also being used as the supply of babul bark is getting inadequate. Since the last war sole leather has also been manufactured in Cawnpore, Agra, Calcutta and Madras from buffalo hides according to modern process for use in ammunition boots and better types of civilian footwear. Its output is now quite considerable in the country and is increasing. The present war has greatly stimulated the production of vegetable tanned harness and sole leather and all the big and medium sized tanneries in India capable of producing these leathers are engaged in their manufacture. Most of them have had to extend their plants to cope with the war demand for leather and all are supplying practically the whole of their outputs to the Government.

Chrome tanning.—The outstanding feature in the field of modern tanning in India since the last war is the phenomenal development of chrome tanning, especially for the manufacture of the shoe upper leather, Box and Willow sides from cattle hides and Box and Willow

calf from calf skins. A number of tanneries in Cawnpore, Calcutta and Madras are engaged in the production of these leathers. Some of the tanneries are quite big and equipped with the latest chrome tanning machinery while there are large numbers in Calcutta which are small. Indian Box and Willow sides have been regularly exported to Burma, the Straits Settlements, Iraq, Persia and Africa since the last war. But after the Ottawa Trade Pact of 1933 Indian Box and Willow sides and Calf have been exported in increasing quantities to the United Kingdom, being helped by a preferential tariff in favour of India. The export of these leathers to the United Kingdom rose to Rs 51,15,500 worth in 1937. The Ottawa Trade Pact has also helped the development of the manufacture of glace kid in India and its export from the country. The export of glace kid rose to the value of 9.3 lakhs of rupees in 1938. Fairly large quantities of embossed stout chrome upper leather are being manufactured now by a num-

ber of Chrome tanneries in India for ammunition boots.

Other items of modern tanning which have made some progress in India are belting leather, chamols leather, improved type of case leather, picking bands, roller skins, chromelace leather, etc.

Training centres for leather industry.—There are a few training centres among which the Bengal Tanning Institute in Calcutta and Jullundar Tanning Institute, Jullundar City, Government Leather Working School, Bombay, maintained respectively by the Governments of Bengal, Punjab and Bombay may be mentioned. Particulars of the courses of training may be obtained from the institutes. There are also peripatetic tanning demonstration parties under the Industries Departments of the Governments of the Punjab, U.P., Bihar, Orissa and Bengal which hold instructional classes in rural areas to introduce improved processes of tanning.

COIR.

Coir is the trade name given to the fibre obtained from the husk of the coconut fruit. India and Ceylon have a virtual monopoly in the production of this by-product of the coconut industry and its development in these countries has been rendered possible by the fact that these coconuts are usually harvested when the husk of the fruit is still green, though the coconut within is ripe. Good quality coir can only be produced from the fresh green husk of the ripe fruit. If the nut is not fully ripe the fibre in the husk has not developed its full strength, and if the fruit has dried out the fibre is weak, dark coloured and difficult to extract.

In Ceylon, the extraction is done by mechanical means on a factory scale after the husks have been retted in water for two or three weeks, and under such methods it is not possible to obtain either the colour or cleanliness of the fully retted Indian coir. The process consists of holding the husk against a revolving spiked drum which combs and extracts the fibre. The shorter fibres collect in the drum and after cleaning are classed as "mattress fibre". The longer fibres are retained in the hand of the operator and are classed as "bristle fibre" which is exported and used in the manufacture of brushes, etc. About 75 per cent of the Ceylon produce is exported as raw fibre, and only 25 per cent as yarn or manufactured coir.

The Indian industry, as far as the export trade is concerned, is confined to the backwater regions of the Malabar coast, Cochin, Travancore, and to the Laccadive and Divi Islands, which are administered by the Madras Government. The extraction of the fibre and the manufacture of coir yarn forms a well organized cottage industry. The freshly harvested nuts are purchased by merchants who convey them down the backwaters to suitable places for retting. Such places are situated along the tidal reaches of the backwaters, and sites for retting are selected in places where the ground contains a considerable admixture of sand. Here, pits are

dug, either in the backwater itself or on the banks and after lining these with palm leaves they are filled with the husks. When filled they are covered with plaited coconut leaves and weighed down with soil or mud. The husks are left to rot in these pits for a period of about eight months, the tidal rise and fall of the water and the porous nature of the ground ensuring constant water movement through the mass of retting husks and thus supplying aeration for the necessary bacterial action. At the end of this period, the husks are removed from the retting pit, washed in clean water and distributed among the local people who extract the fibre. This is usually spare time work done by the women of the house. Firstly, the outer skin of the husk is removed and the husk is then beaten with a wooden mallet on a block of wood or stone. This separates the fibre from the decaying pithy matter in which it is embedded in the husk. The fibre thus extracted is dried in the shade and then beaten or willoved with thin bamboo canes. The fibre is then returned to the merchant who further cleans this in a revolving drum furnished with projecting spikes resembling thin saw blades made of iron. The fibre is sorted out into colour grades and distributed among the local people who spin this into yarn. The fibre is first made into "slivers" and is then either spun by hand or on a wheel. This is again returned to the merchant who again grades this for colour and splices the short lengths into a continuous length of 450 yards. It is then tied into bundles and is disposed of to the factories where it is either baled up for export or is manufactured into matting, door mats, braid, ship's fenders, rope, etc.

The yarn is very carefully graded, both for manufacture and for export, according to its colour, which is, in reality, a gauge of proper retting. The best quality of coir is a golden yellow colour and the lowest grade is a grey colour which shows that the husks have either been over-retted or that the coir has not been properly retted.

Properly retted coir is of the highest quality. It is much more easily spun than machine made coir, because the fibres are clean and free from adhering pith and a much more even yarn is obtained. It is much stronger than machine-made coir because none of the long or "bristle" fibres have been removed in the process of extraction. The colour is not only attractive, but is an indication that retting has been carried through to the correct stage.

Coir fibre, when made into ropes, is extremely elastic and thus yields to heavy strains, and it therefore has special uses. It does not rot easily when exposed to atmospheric conditions, or to salt or fresh water, and in manufacture it is found to take dyes readily.

The value of the Indian trade is considerable. The imports into Great Britain alone which represent less than 20 per cent of the Indian exports, are shown in the Board of Trade returns to amount in value to more than one million

pounds per annum. It is an industry which provides a profitable occupation to the densely populated back water tracts of Western India and it provides the raw material in the shape of yarn and fibre for a considerable industry in Europe. More than 80 per cent of the manufactured coir products imported into the United Kingdom are produced in India and more than 90 per cent of the coir yarn. The imports of coir fibre from India are inconsiderable and amount to only 25 per cent of the quantity imported. The export of coir fibre from India represents in value only 0.35 per cent of that of the total Indian exports of coir and coir products.

The Government of Madras are conducting a coir demonstration school at Beypore near Calicut under the control of the Director of Industries and Commerce, where students are trained in improved methods of cleaning fibre, of spinning of coir yarn on the wheel, of producing ropes, belts, mats, rugs, etc.

PATENTS, DESIGNS AND TRADE MARKS.

'Patents,' 'Designs' and 'Trade Marks' constitute certain forms of personal rights which are collectively referred to as rights of industrial property. In India the rights in Patents and Designs are regulated by the Indian Patents and Designs Act, 1911, as amended from time to time, and the procedure under the Act is regulated by the Indian Patents and Designs Rules 1933 and the Indian Secret Patent Rules, 1933. The Act and the Rules are contained in the *Patent Office Handbook*, which is available from the Manager of Publications Civil Lines, Delhi. The Handbook contains in addition detailed instructions for those interested in Patents and Designs. The broad features of the Patents and Designs Act may be described as follows—

PATENTS.

A patent is a legal document which confers upon the patentee the exclusive privilege of making, selling and using the patented invention and of authorising others so to do. Patents granted under the Indian Patents and Designs Act are operative throughout British India. The normal term of a patent in British India is 16 years. But in exceptional cases, this term can be extended by a maximum of ten years. The continuance of the right conferred by a patent after the first four years of its term is subject to the payment of an annual renewal fee.

What may be patented.—A patent may be granted for an 'invention,' which is defined as 'any manner of new manufacture including an improvement or an alleged invention.' In other words, to be patentable an invention must be a *manufacture*, it must be new, it must be useful and it must not be such as may be said to be obvious to a person skilled in the art to which the invention relates and acquainted with the common knowledge in that art at the time of applying for the patent. The word 'manufacture' includes any process, apparatus, device, machine, article, or composition of matter.

Illustrations of patentable inventions are new textile machines, power plants, agricultural

implements, domestic appliances, drying and moistening apparatus and processes and sanitary appliances.

In the field of chemical industry new processes and apparatuses for manufacturing synthetic products, foodstuffs, dyes, tallow substitutes, starchy raw materials, soda ash, caustic soda, bleaching powder, toilet preparations, and processes for the treatment of oil seeds, by-products and waste materials, are all patentable inventions.

A plan of campaign in warfare or business, or the discovery of a hitherto unknown natural law is not patentable. Similarly, a game of chance or skill which does not require new means for playing it, or a method of calculation or a new notation for writing music, a new method of curing diseases, natural substances suitable for food, cannot be classed as 'manufactures,' and are therefore not patentable.

What are commonly called "patent medicines" are medicines prepared by secret formulae, and are not usually covered by the grant of patents. The proprietors of such medicines may in most cases possess trade mark rights in the names by which the medicines are known.

New methods of using well-known apparatus may also be patented, provided the new methods result in unforeseen technical advantages. New compositions of matter may also be patented if their properties would not be deducible from known properties of their constituent substances.

In the case of chemical inventions, it should be noted that the article or substance which is produced may be old, but if the mode of producing it is new, the process will be patentable.

Who may obtain a patent and how.—Any person in possession of an invention may obtain a patent. Application for a patent should be made to the Controller of Patents and Designs and filed at the Patent Office at 1, Council House Street, Calcutta. The applicant himself may not be the inventor, but the name of the inventor

has to be disclosed. The application has to be accompanied by a fee of Rs 10 and by a specification containing a full description of the invention and its mode of operation. All applications for patents and the specifications accompanying them are examined by the Patent Office and are advertised in the Gazette of India, Part II, so as to enable interested parties to oppose the grant of patents.

Other features—Inventors of instruments or munitions of war may assign their inventions to the Central Government and obtain 'secret' patents therefor. Improvements in existing patents may be protected by 'patents of addition,' for which no renewal fee need be paid, but which would ordinarily remain in force only so long as the main patent is in force.

After a patent is obtained, the patentee may either sell the patent outright or may grant licences for its exploitation. He may work the patent himself.

If, during the continuance of a patent, any person makes, sells, or uses the invention without obtaining a license from the patentee, or counterfeits it or imitates it, the patentee may institute a suit for infringement against the said person.

The defendant in an infringement suit may counterclaim revocation of the patent. A patent worked wholly outside British India may also be revoked by the Central Government.

DESIGNS.

For the purpose of the Indian Patents and Designs Act, 1911, a 'design' means the features of shape, configuration, pattern or ornament applied to any article by any industrial process, which in the finished article appeal to and are judged solely by the eye. A model or principle of construction, or anything which is in substance a mere mechanical device, or a trade mark, is not a design for the purpose of the Indian Patents and Designs Act. Literary or artistic creations such as books, pictures, and music, which fall under the Indian Copyright Act (Act III of 1914) do not also come within the scope of the Indian Patents and Designs Act.

A design to be registrable must be *new or original* and must be applicable to an *article*. The original registration remains in force for five years, but the period can be extended upto fifteen years in all.

During the existence of copyright in a registered design the unauthorised application of the design to the article in question for purpose of sale is prohibited. The penalty for each infringement is a sum not exceeding five hundred rupees recoverable as a contract debt, the proprietor may, in the alternative, elect to bring a suit for the recovery of damages and for an injunction against the repetition of the infringement, in which case the infringer is liable to pay such damages as may be awarded. By a recent amendment of section 18 of the Indian Sea Customs Act, the importation into British India of goods bearing a pirated design can be stopped.

GENERAL.

On the whole, Indian Law and practice for the protection of inventions and the registration of designs closely follow the law and practice of the

United Kingdom. The existing Indian Patents and Designs Act extends to the whole of British India including British Baluchistan and the Santhal Parganas. Although Burma is no longer a part of British India, the Indian Patents and Designs Act, 1911 was, by a special Act of the Burma legislature, made operative in Burma up to the 31st of March 1940. It is anticipated that this arrangement will be continued up to such time as the Burma Legislature enacts a separate Patents and Designs legislation for Burma. A draft Bill for this purpose was published in Part III of the Burma Gazette dated the 3rd February 1940.

The Indian States also do not come within the scope of the Indian Patents and Designs Act, but Baroda, Cochin, Hyderabad (Deccan), Jodhpur, Jammu and Kashmir, Mysore and Travancore have patent laws of their own, and particulars of the same may be obtained from the Patent offices of the respective States.

A patent granted in British India does not extend to the United Kingdom or to any other British possession. But, under a reciprocal arrangement, an applicant for an Indian patent may, under certain conditions, claim a 12 months priority in Australia, Baroda, Canada, Ceylon, Eire, Mysore, New Zealand, the Union of South Africa, and the United Kingdom for the corresponding patents that may be granted to him in those countries.

With the separation of Aden from India and its constitution into a Crown Colony on the 1st of April 1937, the Indian Patents and Designs Act so far as it was applicable to Aden was repealed by the Government of Aden, but by an ordinance issued in that Colony, it is provided that all British Indian Patents and registered designs bearing dates prior to the 1st April 1937 and in force at that date, shall continue to be in force in Aden also so long as they remain in force in British India.

TRADE MARKS.

Trade Marks are to some extent protected in British India by section 3 of the Merchandise Marks Act (IV of 1889), which enacts sections 478-480 of Chapter XVIII of the Indian Penal Code and by the law of Commercial goodwill.

An Act, namely the Trade Marks Act 1910, for the registration and more effective protection of trade marks, was however passed by the Indian Legislature in March, 1910. Certain provisions of this Act (especially the provisions relating to the registration of trade marks in respect of textile goods at Bombay, have since been amended by Act XXXII of 1941. The main provisions of the Trade Marks Act will not come into force until such time as a notification appointing a date in that behalf, is issued by the Central Government and the rules necessary for working the Act are framed.

A draft of the said rules has been put out by the Central Government in an Extraordinary Issue of the Gazette of India dated 1st February 1942 and it may be expected that the main provisions of the Trade Marks Act will come into force in the near future.

One important provision of the Act, namely Section 3, which relates to the use of the word 'Registered' in connection with a trade mark, is not yet in force.

ABSORPTION OF GOLD (both coin and bullion) IN INDIA

(In lakhs of Rupees.)
(Figures after 1938-39 are not available as publication of these Statistics has been suspended for the duration of the war.)

Total Fire Premium Income	1 45	1 38	1 52
Total Marine Income	62	52	.95
Total Miscellaneous Premium Income	91	92	.90

There was considerable expansion of insurance business in India during the decade preceding the war. This is shown by the fact that the total business remaining in force with Indian life offices which, at the end of the year 1929 was Rs 82,00,00,000 had, by the end of 1938, grown to Rs 219,00,00,000, or an average increase of Rs 13 7 crores yearly. The total new sums assured by the offices in 1938 amounted to nearly Rs 46,68,00,000, the largest of any of the previous ten years. Again the total income of Indian life companies was Rs 4,92,00,000 in 1929 and Rs 14,13,00,000 in 1938, a figure which exceeded the previous year's income by Rs 2,11,00,000.

DISTRIBUTION OF COMPANIES

The total number of insures registered under the Insurance Act, 1938 (not including those whose certificates of Registration have been cancelled) up to 15th May, 1941 was 295 of which 197 insurers were constituted in India, 96 outside India and 2 had standing contracts with members of the Society of Lloyds.

Of the 197 Indian Insurers 68 had their head offices in the Bombay Presidency, 53 in Bengal, 30 in the Madras Presidency, 20 in the Punjab, 12 in Delhi, 9 in United Provinces, 3 in Central Provinces, 3 in Bihar, 2 in Sind, and 1 each in Assam and Ajmer-Merwara.

Of the 96 non Indian insurers 63 were constituted in the United Kingdom, 21 in the British Dominions and Colonies, 3 in the continent of Europe, 6 in the United States of America, 2 in Japan and 1 in Java.

Most of the Indian Insurers carry on life insurance business only. They are 159 in number and of the remaining 38 Indian Insurers, 18 carry on life business along with other insurance business and 20 carry on insurance business other than life. Of the Indian Insurers 32 are either Mutual Insurance Companies or Co-operative Life Insurance Societies. The oldest existing Indian Mutual Company was established in 1847, and the oldest existing proprietary company was established in 1871.

Besides the Indian Life Officers there are a few pension funds, mostly connected with Government services, which are exempt from the operation of the Act.

As regards non Indian Insurers, most of them carry on insurance business other than life. Out of the total number of 96 non Indian Insurers, 80 carry on insurance business other than life, 6 carry on life business only and 10 carry on life business along with other insurance business. Of the latter 16 insurers, 11 are constituted in the United Kingdom, 4 in the British Dominions and Colonies and 1 in Switzerland.

Of the 197 Indian Insurers registered under the Insurance Act 1938 169 carried on business under the Indian Life Assurance Companies Act 1912. 15 were in existence before the Insurance Act came into force but had been either exempted from the Indian Life Assurance Companies Act or were not required to comply with the provisions of that Act and 13 commenced insurance business after their registration under the Insurance Act.

Of the 48 Indian Insurers who were carrying on business under the Indian Life Assurance Companies Act but did not register under the Insurance Act, some have gone into liquidation, some have transferred or are seeking to transfer their business to registered insurers, and one was pending registration.

In addition the cases of some insurers constituted in an Indian State was under consideration pending agreement with that State under section 116 of the Act.

DIVIDING INSURANCE BUSINESS

A few Indian insurers still transact life insurance business on the dividing plan under which the benefit secured by a policy is not fixed but depends either wholly or partly on the results of a distribution of certain sums amongst policies becoming claims within certain time limits, or the premiums payable by a policy-holder depend wholly or partly on the number of policies becoming claims within certain time-limits. The defects of dividing insurance business are many. Most of the insurers which transacted dividing insurance business realised that they could not continue this business for a long time. This business has been prohibited under the Insurance Act 1938 and all such business according to the Act had to cease by the 1st July, 1942.

PROVIDENT INSURANCE SOCIETIES

There were at the commencement of the Insurance Act, 1938, 505 societies registered under the Provident Insurance Societies Act, 1912, mostly transacting dividing insurance business. That type of business had to be stopped from 1st July 1939 by most of the Societies, except in the case of a few which were allowed some time to reorganize their business on actuarial lines as provided by Section 69 of the Act.

Of the 505 societies existing at the commencement of the Insurance Act, 1938, 295 were established in Bengal, 34 in the Bombay Presidency, 57 in the Madras Presidency, 17 in the Punjab and 27 in Sind and the remaining societies were scattered over the other provinces of India.

Inspection of all these societies was commenced from 1st July, 1939, in accordance with the provisions of Section 87 of the Act but as the cycle of inspection therein provided operates over a period of two years it is not yet possible to give a complete report on this subject. A total of 127 have made the initial deposit in terms of section 73 of the Insurance Act. Of this number 69 were from Bengal, 22 from Bombay, 12 from Madras, 9 from the Punjab, 4 each from the C. P. & Berar & Delhi, 2 each from the U. P. & Assam and 1 each from Bihar, N. W. P. Province and Ajmer-Merwara.

LIFE INSURANCE BUSINESS

The total new life insurance business (excluding business on the dividing plan) effected in India during the year 1939 amounted to 300,000 policies insuring a sum of Rs. 16.62 crores and yielding a premium income of Rs. 2.57 crores of which the new business done by Indian insurers amounted to 259,000 policies insuring a sum of Rs. 42.51 crores and having a premium income of Rs. 2.14 crores. The share of the

British insurers in respect of new sums insured was Rs 2 05 crores, of the Dominion and Colonial insurers Rs 1 95 crores, and of the single Swiss insurer Rs 0 11 crore

The average sum insured under the new policies issued by Indian insurers was Rs 1,473 and under those issued by non-Indian insurers Rs 3,716

The total life insurance business effected in India and remaining in force at the end of 1939 amounted to 1,497,000 policies insuring a total sum of Rs 271 80 crores including reversionary bonus additions and having a premium income of Rs 14 26 crores. Of this the share of Indian insurers is represented by 1,331,000 policies insuring a sum of Rs 215 10 crores and having a premium income of Rs 11 13 crores

ANNUITY BUSINESS

Annuity business continues to be slight in India. This class of business for various reasons is not as popular as in the West. The total new annuity business effected during the year 1939 was for the amount of Rs 2,66,000 per annum of which the share of Indian insurers was Rs 50,000 per annum. The total annuity business remaining in force at the end of that year was for the amount of Rs 14,59,000 per annum, of which the amount payable by Indian insurers was Rs 6,47,000 per annum

Some Indian Life Offices have been operating outside India, mostly in Burma, British East Africa, Ceylon, Federated Malay States and Straits Settlements. The total new sums insured by these offices outside India, in 1939 amounted to Rs 3 45 crores yielding a premium income of Rs 19 crores and the total sums insured including reversionary bonus additions remaining in force at the end of 1939 amounted to Rs 17 23 crores having a premium income of Rs 0 93 crores

The total new sums insured by Indian Life Offices in 1939 amounted to nearly Rs 45 96 crores the total sum insured in force at the end

The following table shows the New Business, the Average Sum Insured Per Policy, and the Average Premium per Rs. 1,000 sum insured in respect of each of them —

of the year to Rs 232 42 crores and the total revenue income to Rs 14 83 crores

The following table shows the New Business effected by Indian Life Offices during each year since 1926, the Total Life Assurance Income of Indian Companies and the Life Assurance Funds, since 1926

Year.	Total Life Assurance Income of Indian Companies.	Life Assurance Funds of Indian Companies.
	Rs	Rs
1926	3 32 crores	13 75 crores.

INCOME AND OUTGO

The total income of India Life Offices during 1938 amounted to Rs 14 83 crores. The income consisted of Rs 12 18 lakhs under Premiums, Rs 2 46 lakhs under Interest, Dividends and Rents less income tax and Rs 23 lakhs under Other Receipts. On the Outgo side Claims by Death amounted to Rs 1,96 lakhs, by Survivance to Rs 2,13 lakhs, while Surrenders amounted to Rs 47 lakhs, Annuities and Pensions amounted to Rs 7 lakhs, while expenses of Management totalled Rs 1,04 lakhs, Dividends to Shareholders Rs 10 lakhs, Depreciation transfer to Investment Fluctuation Account, etc, Rs 83 lakhs, miscellaneous Rs 13 lakhs, and increase in Life Fund to Rs 5,10 lakhs.

Effecting, the Total Business remaining in Force, the Average Sum Insured Per Policy, and the Average Premium per Rs. 1,000 sum insured in

Year.	New Business.			Total Business in Force.		
	Sum Insured (in crores)	Average sum insured per policy	Average premium per Rs 1,000 sum insured	Sum insured including bonus additions (in crores)	Average sum insured per policy	Average premium per policy of Rs 1,000 sum insured

LIFE FUNDS AND EXPENSE RATIO

The life insurance funds increased by Rs 5 10 crores and amounted to Rs 56 31 crores at the end of the year. The rate of interest earned on the life funds during the year after deduction of income tax at source was 4 68 per cent.

The net rates of interest realized by the Indian Life Offices in each of the five years 1935 to 1939 are as follows —

Year	1935	1936	1937	1938	1939
Rate of interest per annum	4 93	4 69	4 76	5 15	4 68

The total expenses of management expressed as a percentage of the Premium income during each of the five years 1935 to 1939 are as follows —

Year.	1935	1936	1937	1938	1939
Expense Ratio.	31 0	32 5	32 2	31 7	33-2

If the figures of half a dozen insurers having the largest premium income are excluded, the expense ratio in the case of remaining insurers is found to be as under —

Year.	1935	1936	1937	1938	1939
Expense Ratio.	41 3	43 3	42 2	41 1	41 8

VALUATIONS

There were 181 Life Offices which submitted their accounts and business returns for the year 1939 under the provisions of the Insurance Act.

The results of the latest valuations of 138 of these Life Offices are available. Of the remaining 43 Life Offices none had yet reached the stage of having a valuation.

The results of the valuations showed that the Life Offices concerned had in the aggregate

1,229,000 policies in force on the valuation dates insuring a sum of Rs 204 26 crores including bonus additions and annuities of Rs 13 2 lakhs. The life insurance funds of these Life Offices amounted to Rs 50 41 crores and they received an annual premium income of Rs 10 13 crores.

The valuations disclosed a surplus in the case of 100 Life Offices and a deficit in the case of 38 Life Offices. The total surplus of these Life Offices amounted to Rs 432 2 lakhs of which Rs 381 1 lakhs was allocated to the policy-holders and Rs 28 2 lakhs to the shareholders and the balance was either set aside as an additional reserve or was carried forward unappropriated. The deficit in the case of the remaining Life offices amounted to Rs 34 1 lakhs. Of these, the deficit in the case of 21 was covered by the available paid-up capital. In the case of the remaining 17 Life Offices the deficit was not so covered.

NON-LIFE BUSINESS.

The net Indian premium income of all insurers under insurance business other than life insurance during 1939 was Rs 3,37 lakhs of which the Indian insurers' share was Rs 1,02 lakhs and that of the non-Indian insurers Rs 2,35 lakhs.

The total amount is composed of—Rs 1,52 lakhs from fire, Rs 95 lakhs from marine, and Rs 90 lakhs from miscellaneous insurance business.

The Indian insurers received—Rs 48 lakhs from fire, Rs 18 lakhs from marine, and Rs 36 lakhs from miscellaneous insurance business.

The non-Indian insurers received—Rs 1,05 lakhs from fire, Rs 77 lakhs from marine, and Rs 53 lakhs from miscellaneous insurance business.

The distribution of this income amongst insurers constituted in different countries is shown in the following table —

Insurers constituted in.	Fire.	Marine	Miscellaneous.	Total
		(In lakhs of rupees)		
United Kingdom	73 8	32 6	45 5	1,51 9
Dominions and Colonies	20 0	34 3	7 8	62 1
United States of America	8 5	8 1		16 6
Continent of Europe	1 1			1 1
Japan	0 5	0 3	0 1	0 9
Java	0 7	1 3		2 0
Total	1,04 6	76 6	53 4	2,34 6

From the net figures given above it is not possible to form a correct estimate of the total business effected in India as a considerable portion of Indian business of both Indian and non-Indian insurers is said to be re-insured outside India.

The Indian insurers who transact a substantial amount of fire or marine insurance business also operate outside India. These insurers had a net premium income of Rs 85 lakhs in 1939 from business outside India.

ASSETS OF INDIAN INSURERS.

The following is a summary of the assets of Indian Insurers —

	Rs.	
Mortgages on property	2 04	crores
Loans on policies within their surrender values	6 27	"
Loans on stocks and-shares, etc	0 19	"
Other Loans	0 35	"
Indian Government Securities	36 98	"
Securities of Indian States	0 40	"
British Colonial and Foreign Government Securities	0 80	"
Municipal, Port and Improve- ment Trust Securities, etc	5 02	"
Shares in Indian Companies	4 72	"
Land and house property	4 69	"
Agents' balances, outstanding premiums, outstanding and accrued interest, etc	3 13	"
Deposit, cash and stamps	2 61	"
Miscellaneous	1 34	"
Total	69 14	"

It will be seen that the bulk of the investments are in stock exchange securities which constitute about 70 % of the total assets and amount to Rs 47 28 crores after allowing for an investments fluctuation fund of Rs 1 24 crores provided for in the Balance sheets

INDIAN ASSETS OF NON-INDIAN INSURERS.

The total assets in India of non-Indian insurers amount to Rs 24 92 crores of which Rs 14 77 crores represent the Indian assets of insurers constituted in the United Kingdom and Rs 9 86 crores those of insurers constituted in the Dominions and Colonies. The Indian assets of the American insurers amount to Rs 12 lakhs, those of the Continental insurers to Rs 8 lakhs, of the Japanese to Rs 6 lakhs and of the Javanese to Rs 4 lakhs. Out of this total amount of Rs. 24 92 crores, Rs 21 1 crores represents Indian assets of insurers which carry on life insurance business in India solely or along with other insurance business

Finance.

The gradual evolution of the present financial organisation of India is in many respects a reflection of her constitutional development. In the earliest days of British rule, the Provinces, and especially the older Presidencies, were for all practical purposes independent of the central government and responsible only to the authority sitting in London. After the middle of the nineteenth century the process was reversed, and the Government of India was all-powerful, controlling the Provinces down to the smallest items of their expenditure. This centralisation reached its highest point during the long Viceroyalty of Lord Curzon, who was so jealous of his supreme authority that he sought to deprive the Presidency Governors of their right to correspond direct with the Secretary of State for India. This system was found top-heavy in the days of his successors, and a continuous process of devolution set in. In the matter of finance the measures took the form of long-term "contracts" with the Provincial Governments, and later in the assignment of definite heads of revenue to the Provincial Governments, thus removing the dual authority and responsibility which had clogged progress. A much clearer cut was made when the great reform scheme embodied in the Government of India Act of 1919 was passed. Here, for all practical reasons, Provincial finance was entirely separated from the finances of the Government of India, and with one reservation the Local Governments were made masters in their own financial houses. The reservation arose from the circumstance that the funds of the Government of India did not then permit them to do entirely without contributions from the Provinces. These contributions were fixed in the shape of definite sums, which the Provincial Governments had to find from their own resources and pay to the Government of India in cash. They varied between Province and Province, on a scale which at first sight seemed inequitable, but which had a definite logical basis. The total of these contributions was a little less than ten crores of rupees. This was admittedly a temporary expedient, to last only so long as was necessary for the Government of India to reduce its post-war expenditure and develop its revenues to the point when they would balance without drawing from the Provinces. They were an open sore, each Province claiming that it paid an undue proportion of the total contribution, and that it was starved in consequence. There was no possibility of adjusting these differences, so the contributions were reduced as fast as the finances of the Government of India permitted. They finally disappeared from the Budget in 1928-29.

But this did not end the discussion. Indeed it was only the first phase. The Government of India had taken the growing heads of revenue—those which issue from taxes on income and customs. The Provinces were left with resources either almost static, like land revenue, or actually declining, as with excise where steps are being taken to reduce the consumption of alcoholic liquor in response to the strong Indian sentiment towards prohibition. At the same time the Provinces were con-

fronted with the great growing sources of expenditure, like those on education and sanitation which bulk largely in Provincial budgets.

Federal Finance Committee

The financial organisation was, of course, reviewed as part of the work of the Round Table Conference. A sub-committee of the Federal Structure Committee was appointed under the chairmanship of Lord Peel to examine the question of federal finance and the principles embodied in the sub-committee's report were endorsed by the parent Committee as a suitable basis. A Federal Finance Committee with Lord Eustace Percy as Chairman was appointed at the end of 1931 to subject to the test of figures the suggested classification of revenues by the Peel Committee and to estimate the probable financial position of the Federal and of the Provincial Governments under the proposed scheme. In the course of their report the Federal Finance Committee said that the transfer to the Provinces of taxes on income though defensible in principle would leave the Centre in deficit. Therefore the Peel Committee suggested a method of transferring to each Province a percentage of the share of income tax estimated to be attributable to it. But in view of the incomplete data on which the estimates were made a special review was held to be necessary at the time federation is established in order to fix the initial percentages. A strict allocation on a percentage basis would still leave some Provinces in deficit and so as to right their finances the committee suggested spreading the charge over the other Provinces by giving them back less in income-tax than they were entitled to.

Regarding possible new sources of revenue Federal or Provincial, the Federal Finance Committee reported as follows—

Federal.

Excise on Tobacco.—The present position in regard to this tax appears to be that a substantial revenue may be expected from a system of vend licenses and fees, but that an excise duty imposed in the near future could not be relied on to yield a substantial revenue. There is general agreement that such a duty could not be imposed on the cultivator, and it is doubtful whether a duty on the manufactured product could be successful while manufacture continues to be so largely carried on in small establishments and even as a domestic industry. Vend licenses and fees can obviously be imposed only by the Governments of the Provinces, and the imposition by the Provincial Governments is now being encouraged by the Government of India.

Excise on Matches.—The imposition of an excise duty on matches is already under active consideration, and we feel justified in contemplating the existence of such a duty from the outset of federation. We are advised that the probable net yield of the tax for all-India at a reasonable rate, with due allowance for red and blue matches, would be about 3 crores, of which at least 2.50 crores would be available to the Federal Government. (Here it may be noted that the total number of matches made in India in 1934-35 was 1,250,000,000.)

Other Excises—It is possible that other excise duties may occupy an important place in the fiscal policy of India in the future, but we do not feel warranted in relying upon the introduction of such measures in the early years of federation. (Here it may be noted that an excise duty on sugar made in India was first imposed in the 1934-35 Budget and has continued at varying rates since then)

Monopolies—We have examined the suggestion, made at the Round Table Conference, that federal revenues should be augmented by a few selected monopolies. From the fiscal point of view it is only in very special circumstances that a monopoly, whether of production, manufacture or sale, is to be preferred to an excise duty as a means of raising revenue. Except in so far as the proposals already noticed in regard to tobacco may be regarded as a monopoly, we can suggest no new commodity to which the monopoly method could be applied with advantage. The manufacture of arms and explosives, which has been suggested as a possible monopoly, is already subject to licence. Public utility monopolies stand on rather a different footing, but the only new federal monopoly of this kind that has been suggested to us is broadcasting, the revenue from which must be entirely problematical.

Commercial Stamps—In the Peel Report it was observed that "There is much to be said for federalising Commercial Stamps on the lines of various proposals made in the past," but no definite recommendation was made. We have examined this suggestion, but on the whole we cannot recommend it, at least as an immediate measure.

In proposing that the proceeds of commercial stamps should be assigned to the Units, we have to some extent been influenced by a doubt whether the problems arising from the imposition of federal stamp duties in the States might not be disproportionate to the revenue involved. We do not, however, wish to prejudge the possibility that, as part of the general federation settlement with the States, it might be found desirable to include these duties among the sources of federal revenue. This consideration might well outweigh the reasons which have led us to recommend that commercial stamps should not be made a source of federal revenue.

Corporation Tax—From the financial point of view, it seems clear that, if a corporation tax were imposed on companies registered in the States on the same basis as the present super-tax on companies in British India, the yield at present would be negligible.

Provincial.

Taxation of Tobacco—We have already dealt briefly with this question and have suggested that the taxation of tobacco, otherwise than by excise on production or manufacture, should rest with the Units, but that the Federal Government should be given the right to impose a general federal excise. This distinction is, we think, justified by the fact that *ex hypothesi* the introduction of excise duties on manufacture will be difficult, if not impossible, until manufacture becomes more highly industrialised, and

as that development takes place an excise levied at the factory by one Unit of the Federation would be a tax on consumers in other Units. It will be seen from our later proposals in regard to powers of taxation that the federalisation of tobacco excise would not preclude the Federal Government from assigning the proceeds to the Units, if it so desired. (Here it may be noted that a sales tax on Tobacco has since been imposed by the provinces of Bombay and Madras, in their 1939-40 Budget)

There is, unfortunately, no material which would enable us to estimate the yield of any of these forms of taxation. The provincial taxes will take some time to mature, but eventually they may be expected to form at least a very useful additional source of provincial revenue.

Succession Duties—Bombay is, we believe, the only Provincial Government which has attempted legislation for the imposition of succession duties, and the attempt was unsuccessful. We understand that even that Government would have preferred that legislation should have been undertaken by the Government of India. We propose elsewhere that succession duties should be classed among taxes leviable by the Federal Government for the benefit of the Units, but clearly the facts would not justify reliance on them as a source of revenue in the near future. (Here it may be noted that in 1938 the Government of India deputed a special officer, Sir Alan Lloyd, of the Central Board of Revenue, to conduct an investigation into the possibilities of instituting a system of death duties in India. The upshot of the investigation was that the Government of India decided not to proceed with the proposal to impose death duties, as most provincial Governments were opposed to it.)

Terminal Taxes—We have been asked to weigh the issues which arise from the proposal to introduce terminal taxes generally as an additional source of revenue for the Provinces. We are not prepared to regard terminal taxes as a normal source of revenue.

Taxation of Agricultural Incomes—We have not considered the broad issues of policy involved in the taxation of agricultural incomes, but we have considered, as we were commissioned to do, the more limited question of "the possibility of empowering individual Provinces, if they so desire, to raise, or appropriate the proceeds of a tax on agricultural incomes." In view of the close connection between this subject and land revenue, we agree that the right to impose such taxation should rest with the Provinces. For the same reason, we think that this right should be restricted to the taxation of income originating in the Province concerned. There will presumably be no difficulty in drafting into the constitution a definition of agricultural income which has so long been recognised in Indian income-tax law and practice.

We are not prepared to express a final opinion as to whether agricultural and non-agricultural income should be aggregated for the purpose of determining the right of the assessee to exemption and the rate of taxation to which he is liable on either section of his income, and we doubt whether any provision need be inserted in the

constitution on this point since we are advised that, in practice, it would scarcely be possible for either the Federal or a Provincial Government to take into consideration income not liable to taxation by it, except with the consent and co-operation of the other Government. We are aware of no reliable data for estimating the yield of such taxation.

Niemeyer Report.

A necessary prelude to the introduction of the Constitutional Reforms was an investigation of their safety in the light of the financial situation and prospects of India. The investigation was carried out by Sir Otto Niemeyer whose report was published in April 1936. The Report proposed immediate financial assistance from the beginning of provincial autonomy to certain provinces partly in the form of cash subventions, partly in the form of cancellation of the net debt incurred previous to April 1, 1936, and partly in the form of distribution to the jute growing provinces of a further 12½ per cent of the jute tax.

Annual cash subventions are as follows: To the U. P. Rs 25 lakhs for 5 years only, to Assam Rs 30 lakhs, to Orissa Rs 40 lakhs, to the N-W F Province Rs 100 lakhs (subject to reconsideration after 5 years), and to Sind Rs 105 lakhs to be reduced by stages after 10 years.

The total approximate annual relief in lakhs aimed at by Sir Otto Niemeyer is as follows:—Bengal Rs 75, Bihar Rs 25, C P Rs 15, Assam Rs 45, N-W F Province Rs 110, Orissa Rs 50, Sind Rs 105, and U P Rs 25, extra recurrent cost to the centre Rs 192 lakhs.

Orissa is to get a further non-recurrent grant of Rs 19 lakhs and Sind of Rs 5 lakhs by six equal steps beginning from the sixth year from the introduction of provincial autonomy, but

subject to the proviso to section 133 (2) of the Act. The Centre is to distribute the income tax to the provinces so that finally 50 per cent of the distributable total has been relinquished in the intermediate five years, so long as the portion of the distributable sum remaining with the Centre, together with any contribution from the Railways, aggregates 13 crores.

As regards the provincial share of the proceeds from income-tax, Sir Otto Niemeyer recommended that half of the proceeds should remain with the Centre, while the other half should be distributed among the provinces on the following percentage division:—Madras 15, Bombay 20, Bengal 20, U. P 15, Punjab 8, Bihar 10, C P 5, Assam 2, N-W F Province 1, Orissa 2 and Sind 2.

Sir Otto Niemeyer suggested that the Centre would not be in a position to distribute any part of income-tax proceeds for the first five years from the beginning of provincial autonomy but that it might be in a position to distribute some of the proceeds, though not necessarily the percentage allocated, within the first ten years of provincial autonomy. But this, he said, largely depended on the financial condition of the railways and their ability once again to contribute to general revenues. His remarks on this point were:—

"The position of the railways is frankly disquieting. It is not enough to contemplate that in five years' time the railways may merely cease to be in deficit. Such a result would also tend to prejudice or delay the relief which the provinces are entitled to expect."

"I believe that both the early establishment of effective co-ordination between the various modes of transport and the thorough going overhaul of railway expenditure in itself are vital elements in the whole provincial problem."

RECENT INDIAN FINANCE

India, in common with other countries of the world, felt the full force of the economic blizzard which began in 1930 and attained its maximum the following year. The net result from the Government of India's point of view was the introduction during 1931 of two Budgets, the ordinary Budget in the spring of the year and a supplementary Budget containing fresh taxation proposals in September.

The 1932-33 Budget.—Presenting the 1932-33 budget on March 7, 1932, the Finance Member explained that the circumstances were somewhat unusual. The supplementary budget had been introduced only six months earlier. He did not, therefore, propose to ask the House at the present stage to approve any extensions or modifications of the plan for raising revenue put forward in September 1931.

The 1933-34 Budget.—In introducing the budget, the Finance Member summarised the results for the two previous years. He estimated the general position for 1933-34 to be the same as for the current year, neither better nor worse, and in particular that India would be able to maintain the same purchasing power for commodities imported from abroad.

The 1934-35 Budget.—In order to provide an even balance for 1934-35 it was necessary to find means of improving the position to the extent of Rs 173 lakhs. The Finance Member announced the imposition of an excise duty on sugar, a reduction in the silver import tax from 5 annas per ounce and the abolition of the export duty on raw hides. Announcing that the Government intended to hand over half the jute export duty to the jute producing Provinces, the Finance Member said that the Government of India would recoup their loss by imposing an excise duty on matches.

The 1935-36 Budget.—This Budget was expected to show a surplus of Rs 150 lakh, available for tax reduction. The Silver duty was reduced to 2 annas an ounce. The export duty on raw skins was abolished. The resulting surplus of Rs 1,42 lakhs was disposed of, first, in restoring the emergency cuts in pay, and second, in taking off some of the surcharge on income tax. This surcharge was reduced by one third, the cost was Rs 1,33 lakhs, leaving a nominal surplus of Rs 6 lakh.

The 1936-37 Budget.—The surplus for 1936-37 was estimated at Rs 2,65 lakh.

disposed of in two ways. First, the remaining surcharge on income-tax and super-tax was cut by a half, leaving it at one-twelfth of the original figure, further, income-tax on incomes between Rs 1,000 and Rs 2,000 a year was abolished. Second, a postal concession was made by increasing the weight of the one-anna letter from half to one tola, and adopting a scale of an additional half-anna for every additional tola. The effect of these changes was to reduce the surplus to Rs 7 lakhs.

The 1937-38 Budget—The prospective deficit for 1937-38 (due to trade depression and consequent smaller receipts from customs and income-tax) was Rs 158 lakhs, which would have been Rs 342 lakhs but for an amount available in the Revenue Reserve Fund. The deficit was met by a series of imposts: import and excise duties on silver were raised from two annas to three annas an ounce, while the sugar duties were raised on a graduated scale. Changes were made in the postal rates for parcels, book-patterns and samples, and the existing rates of salt duty, income-tax and super-tax were continued.

The 1938-39 Budget—This Budget was generally regarded as preserving the *status quo*, since no changes in the taxation system were introduced and a surplus of Rs 9 lakhs was anticipated. But there were special features in regard to Defence, for which an extra Rs 80 lakhs was to be expended. A further feature of the 1938-39 Budget was the financing of Provincial Autonomy in its inaugural stages. While the separation of Burma caused a loss of Rs 250 lakhs, payments to the Provinces under the Niemeyer Award amounted to Rs 198 lakhs. To start the Provinces in a sound state the following steps were taken: their existing debts to the Centre were partly cancelled and partly consolidated at a lower rate of interest; additional grants-in-aid were made to deficit provinces; a larger share of the jute excise duty was disbursed and with the improvement in railway revenues, a start was made on the distribution of income tax receipts to the provinces.

The 1939-40 Budget—On the basis of the maintenance of existing taxation and the adoption of the new system of income-tax embodied in the Income-Tax (Amendment) Act of 1939 and the "slab system" of assessment (for details of which see under "Income-Tax"), the position was as follows: Estimated Revenue, Rs 82.15 lakhs, Estimated Expenditure, Rs 82.65 lakhs, Estimated Deficit, Rs 50 lakhs. Both revenue and expenditure were down on the previous year, and the former because of trade recession which would result in lower receipts from customs, and the latter because of economies under interest charges and Defence.

To meet the prospective deficit the Finance Member proposed an increase of 100 per cent in the tariff duty on imported raw cotton, from six pices per lb to one anna per lb. This was estimated to yield Rs 55 lakhs, thus converting the deficit into a small estimated surplus of Rs 5 lakhs. Other changes embodied in the Budget were the new rates of income-tax and super-tax drawn up on the "slab system" and modifications of excise duty on sugar, estimated to yield an

The 1940-41 Budget—A fortunate surplus for the previous financial year (1939-40) of Rs 91 lakhs, but the necessity of finding new revenue to meet a prospective deficit of Rs. 7.16 lakhs in 1940-41 were the basic features of India's first War Budget presented by the Finance Member Sir Jeremy Raisman. That the previous year had ended with a substantial surplus was indeed gratifying, seeing that the country had already been at war for seven months. By applying the surplus of Rs 91 lakhs towards the coming year, the prospective deficit was reduced to Rs 6.25 lakhs.

This short fall Sir Jeremy Raisman proposed to meet in three ways. The first was an Excess Profits Tax, already announced to the country but subsequently altered in its incidence so as to provide for an impost of 50 per cent on all abnormal war profits, above a taxable minimum of Rs 30,000, earned since September 1, 1939, these excess profits to be calculated on the basis of a standard year which might be, at the assessee's option, any financial year between 1935-36 and 1939-40. This was estimated to produce a net accession to revenue of Rs 3.00 lakhs. The second means was a further increase of two annas per gallon in the duty on motor spirit (petrol), estimated to yield Rs. 1.40 lakhs, while the third impost was an increase from two rupees to three rupees in the excise duty on refined sugar with a corresponding increase in the import duty, calculated to yield Rs 1.90 lakhs. The three changes together were expected to produce a deficit of Rs 6.25 lakhs into a small surplus of Rs 5 lakhs.

On the expenditure side, the main feature was naturally the Defence Budget, which provided for an increase of Rs 5.11 lakhs on the previous year's estimate and stood at the sum of Rs 49.29 lakhs. That this figure was not higher was due principally to a settlement reached with the British Government on the division of obligations for defence. Under the settlement India was to be liable only for the normal peace time cost of the Army in India, adjusted in relation to the rise in prices, plus the cost of India's own immediate war measures, plus a lump sum of Rs 1.00 lakhs towards the maintenance of external defence troops overseas. The Finance Member held that this settlement was favourable to India and was conceived by His Majesty's Government in a generous spirit. In terms of figures it worked out as follows: (1) Normal peace Defence Budget, Rs 36.77 lakhs, (2) effect of rise of prices on (1), Rs 25 lakhs, (3) Indian war measures, Rs 3.80 lakhs; (4) Non-effective charges, Rs 8.41 lakhs, Total Rs 49.29 lakhs.

The 1940-41 Supplementary Budget—As was only to be expected, the rapidly mounting expenditure on defence, coupled with the dislocation of trade caused by the war and consequent loss of Customs revenue, led to a deterioration in India's financial position which impelled the Finance Member to introduce a Supplementary Budget in November 1940. He had to meet an increase of at least Rs 14½ crores in defence and nearly Rs 7 crores in Civil expenditure, coupled with a drop of Rs 3 crores in revenue. He therefore supplemented the Finance Act, 1940, by two measures of fresh taxation designed to bring in Rs 6 crores in a full year, leaving the position to

be fully surveyed in the following February. The first measure was a 25 per cent surcharge on all taxes on income including Super-tax and Corporation Tax. The second measure was an increased in postal rates, telegram and telephone charges, designed to bring in Rs 1 crore in a full year.

The 1941-42 Budget—Presenting the Budget for 1941-42, the Finance Member said that while Government's expenditure was expected to rise by Rs 15 crores to a total of Rs 1,26 crores, its revenue was expected to rise by Rs 3 crores to a total of Rs 1,06 crores, leaving a prospective deficit of Rs 20 crores. One-third of this was proposed to be met by fresh taxation and the remainder from Defence Loans. For the previous year 1940-41, instead of the deficit being Rs 13 crores as estimated in November, the deficit was expected to be no more than Rs 8 crores, this was due to an increased contribution from the railways and a surplus over from the year before.

The additional taxation intended to raise a further Rs 6,61 lakhs in order to meet a share of the cost of India's war measures took the following forms. The Excess Profits Tax was raised from 50 per cent to 66½ per cent to yield Rs 250 lakhs, and the Central surcharge on Income-tax and Super-tax from 25 per cent to 33½ per cent to produce a further Rs 100 lakhs. Other proposals were to double the match duty, to raise the import duty on artificial silk yarn and thread from 3 annas to 5 annas per pound, and to levy an excise duty on pneumatic tyres and tubes, to yield together Rs 221 lakhs.

Defence.—The main purpose of these fresh imposts was to strengthen all arms of India's Defence Services, and for this a total expenditure of Rs 84 crores was envisaged in 1941-42. Rs 35 crores of this was for India's own war measures, while His Majesty's Government in Britain were paying separately for all supplies and services rendered to them by India and were also providing free of charge much of the equipment needed for the modernisation of the Army in India. The strength of India's armed forces, already well over half a million, was to be further expanded. New regiments of mechanised cavalry, artillery and infantry were being raised, as also Signal and Sapper and Miner Units. New ships for the Royal Indian Navy were being built and more officers and men to man them were being trained. For the Air Force, aircraft and equipment were being obtained from America and the first "made-in-India" aeroplanes were expected to be manufactured in the current year. Civil expenditure had increased by Rs 2,61 lakhs, mainly on account of schemes connected with the war. The Supply Department's expenditure on placing orders for Indian products for allied Governments, the value of which had already exceeded Rs 82 crores, was expected to be Rs 75 lakhs.

The 1942-43 Budget—Presenting the Budget for 1942-43 Sir Jeremy Raisman, the Finance Member, disclosed a revenue deficit of Rs 17 crores for the year and a prospective deficit on the prevailing basis of taxation of Rs 47 crores for the next year. The revised estimate on defence in 1941-42 was placed at Rs 102 crores. In 1942-43 it was estimated at Rs 1,13 crores. The amount of expenditure on defence services and supplies which the Government of India

expected to recover from His Majesty's Government under the operation of the financial settlement would exceed Rs 400 crores in 1942-43.

Sir Jeremy Raisman proposed to meet the deficit by raising loans to the tune of Rs 35 crores and leaving taxation to cover the balance of Rs 12 crores. The new taxation proposals included (1) the surcharge on income tax and super-tax to be increased from 33½% to roughly 50%, (2) an all-round customs surcharge of 20% to be levied on existing import tariff except on raw cotton, petrol and salt, (3) petrol tax to be increased by 25% and posts and telegraph rates also to be increased. The share of the provinces in the income tax was placed at Rs 7.39 lakhs in the current year and Rs 8.77 lakhs in the following year. Sir Jeremy estimated the total additional revenue from fresh taxation at Rs 12 crores leaving a deficit of Rs 35 crores to be covered by the borrowing programme.

Defence.—Of the gross expenditure on defence likely to be brought to account in India's books during 1942-43, Sir Jeremy revealed that nearly three-quarters, totalling Rs 400 crores, would be met by Whitehill. In addition His Majesty's Government undertook to supply India with large quantities of aeroplanes, vehicles, guns and other equipment without charge, these free supplies already made or expected to be received by the end of the following financial year total roughly an additional Rs 60 crores. India's contribution of Rs 133 crores towards defence thus represents a fraction of the huge outlay, and certainly no country so closely involved in the war as India is today can claim a lighter tax bill.

Redemption of Sterling Debt.

A major financial operation successfully carried out in 1940-41, to the mutual advantage of India and Great Britain, was the redemption and repatriation of the former's sterling debt and its replacement by rupee obligations. The effect of this operation was to reduce the Government's of India's external debt by Rs 120 crores and its interest charges payable in 1941-42 by as much as 50 per cent over the previous year. To enable it to carry out this, the largest single operation of its kind in the history of Indian finance, Government had to exercise its war-time powers of compulsory acquisition of the sterling securities in this country as well as the aid of the British Government in the form of similar orders under its special war-time powers compelling holders resident in the United Kingdom to sell their stocks for delivery to it. It was Government at the market price at the time of the order.

The method whereby this profitable transaction was carried out was simple. Over a period of continued improvement in the country's foreign trade the Reserve Bank had been enabled to purchase large amounts of sterling securities over a ten months of the financial year 1940-41 to the tune of 247 millions. At the end of the year, payments being received in the form of interest on account of recoverable war expenses, the cost of carrying the debt was reduced to Rs 120 crores, the amount of the Government's external debt. For the year 1941-42 the

of having to remit funds to London, the Government of India expected a refund of £26 million. It had further made considerable open market purchases in London, to the extent of £28½ million of its sterling stocks. In these circumstances, the financing of the debt redemption scheme was facilitated, especially by the exercise of compulsory powers of acquisition in both England and India which enabled the authorities to make their purchases at a fair market price without undue speculative influence being brought to bear. In the words of the Finance Member, "The immediate object of the transaction was the replacement of sterling by rupee obligations and the real gain to the country lay in the liquidation of external obligations which might prove an embarrassment in the future ... Another aspect of the operations was the manner in which they assisted His Majesty's Government to finance the prosecution of the war. If India repaid her creditors in London .. the greater part of the sums so disbursed would be re-lent to His Majesty's Government probably in the form of investment in Defence Loans."

In December 1941, the Government of India announced their decision to repatriate some £158 000 000 of their sterling debt. Its effect was virtually to wipe out the whole of the Government of India's funded debt in Britain which before the war totalled about £300,000,000

Earlier in the same year a compulsory repatriation of terminable loans covering six groups of India's stock liquidated nearly one-third of the amount. The total repatriation amounted to £260,000,000.

In his Budget speech for 1942-43 Sir Jeremy Ralsman explained the benefits accruing to India from the repatriation scheme. The cancellation of the huge bloc of sterling liabilities will immeasurably strengthen India's financial structure, and in so far as the operation means the liquidation of all external obligations and their replacement by an internal debt, it represented a real gain. Government's methods of financing the scheme were generally approved by the business community.

The price paid for the latest repatriation was very favourable considering that India's credit is very high and that therefore the value of her securities cannot be very low. The Government of India propose to redeem the 2½% Indian sterling loan at 78 and the 3% loan at 90½. Out of the 158,000,000 to be repatriated it was expected that about 80,000,000 would be redeemed on January 5, 1943 and the balance early in the new year. As regards railway debenture stock and annuities these will in any case disappear by 1956 on the assumption that nothing is done to repatriate some of this debt earlier.

General Statement of the Revenue and Expenditure
[In thousands of Rupees]

	Revised Estimate, 1941-42	Budget Estimate, 1942-43.
	Rs	Rs
REVENUE—

THE LAND REVENUE.

The principle underlying the Land Revenue system in India has operated from time immemorial. It may be roughly formulated thus—the Government is the supreme landlord and the revenue derived from the land is equivalent to rent. On strict theoretical grounds, exception may be taken to this statement of the case. It serves, however, as a substantially correct description of the relation between the Government and the cultivator. The former gives protection and legal security. The latter pays for it according to the value of his holding. The official term for the method by which the Land Revenue is determined is "Settlement." There are two kinds of settlements in India—Permanent and Temporary. Under the former the amount of revenue has been fixed in perpetuity, and is payable by the landlord as distinguished from the actual cultivator. The Permanent Settlement was introduced into India by Lord Cornwallis at the close of the eighteenth century. It had the effect intended of converting a number of large revenue farmers in Bengal into landlords occupying a similar status to that of landowners in Europe. The actual cultivators became the tenants of the landlords. While the latter became solely responsible for the payment of the revenue, the former lost the advantage of holding from the State. This system has prevailed in Bengal since 1795 and in the greater part of Oudh since 1859. It also obtains in certain districts of Madras. Incidentally, the Bengal system was the subject of an exhaustive examination by a Commission under the chairmanship of Sir Francis Floud in 1939-40, which produced a radical report—a minority dissenting—in favour of State purchase of land, thus challenging the Bengal system of land tenure based on the Permanent Settlement.

Elsewhere the system of Temporary Settlements is in operation. At intervals of thirty years, more or less, the land in a given district is subjected to a thorough economic survey, on the basis of the trigonometrical and topographic surveys carried out by the Survey Department of the Government of India. Each village area, wherever the Temporary Settlement is in vogue, has been carefully mapped, property-boundaries accurately delineated, and records of rights made and preserved. Under the Permanent Settlement in Bengal the occupant does not enjoy these advantages. The duty of assessing the revenue of a district is entrusted to Settlement Officers, members of the Indian Civil Service specially delegated for this work. The duties of a Settlement Officer are thus described in Strachey's *India* (revised edition, 1911)—"He has to determine the amount of the Government demand and to make a record of all existing rights and responsibilities in the land. He has a staff of experienced subordinates, almost all of whom are natives of the country, and the settlement of the district assigned to him is a work which formerly required several years of constant work. The establishment of agricultural departments and other reforms have, however, led to much simplification of the Settlement Officer's Proceedings, and to much greater

rapidity in the completion of the Settlements. All the work of the Settlement Officer is liable to the supervision of superior officers, the assessments proposed by him require the sanction of the Government before they become final in binding: and his judicial decisions may be reviewed by the Civil Courts. It is the duty of the Settlement Officer to make a record of every right which may form the subject of future dispute, whether affecting the interests of the State or of the people. The intention is to alter nothing, but to maintain and place on record that which exists."

The Two Tenures.

Under the Temporary Settlement and tenures fall into two classes—*peasant-holdings* and *landlord-holdings*, or *Ryotwari* and *Zemindari* tenures. Broadly speaking, the difference between the two in a fiscal sense is that in *Ryotwari* tracts the *ryot* or cultivator pays the revenue direct; in *Zemindari* tracts the landlord pays on a rental assessment. In the case of the former, however, there are two kinds of *Ryotwari* holdings—those in which each individual occupant holds directly from Government, and those in which the land is held by village communities, the heads of the village being responsible for the payment of revenue on the whole village area. This latter system prevails in the North. In Madras, Bombay, Burma and Assam, *Ryotwari* tenure is on an individual basis, and the Government enters into a separate agreement with every single occupant. The basis of assessment on all classes of holdings is now more favourable to the cultivator than it used to be. Formerly what was believed to be a fair average sum was levied on the anticipated yield of the land during the ensuing period of settlement. Now the actual yield at the time of assessment alone is considered, so that the cultivator gets the whole of the benefit of improvements in his holding subsequently brought about either by his own enterprise or by "unearned increment." The Government, however, may at a new settlement re-classify a holding so as to secure for itself a fair share in an increment that may have resulted from public works in the vicinity, such as canals and railways, or from a general enhancement of values. But the principle that improvements effected by private enterprise shall be exempt from assessment is now accepted by the Government and provided for in definite rules.

Incidence of the Revenue.

The incidence of the revenue charges varies according to the nature of the settlement, the class of tenure, and the character and circumstances of the holding. Under the Permanent Settlement in Bengal Government derive rather less than £3,000,000 from a total rental estimated at £12,000,000. Under Temporary Settlements, 50 per cent. of the rental in the case of *Zemindari* land may be regarded as virtually a maximum demand. In some parts the impost falls as low as 35 and even 25 per cent. and only rarely is the proportion of one half the rental exceeded. In regard to *Ryot-*

war tracts it is impossible to give any figure that would be generally representative of the Government's share. But one-fifth of the gross produce is the extreme limit, below which the incidence of the revenue charge varies greatly. About sixteen years ago, the Government of India were invited in an influential signed memorial to fix one-fifth of the gross produce as the maximum Government demand. In reply to this memorial and other representations the Government of India (Lord Curzon being Viceroy) issued a Resolution in defence of their Land Revenue Policy. In it was stated that "under the existing practice the Government is already taking much less in revenue than it is now invited to exact" and "the average rate is everywhere on the down grade." This Resolution, together with the statements of Provincial Governments on which it was based, was published as a volume; it is still the authoritative exposition of the principles controlling the Land Revenue Policy of the Government of India. In a series of propositions claimed to be established by this Resolution the following points are noted—(1) In *Zemindari* tracts progressive moderation is the keynote of the Government's policy, and the standard of 50 per cent. of the assets is more often departed from on the side of deficiency than excess, (2) in the same areas the State does not hesitate to interfere by legislation to protect the interests of the tenants against oppression at the hands of the landlords, (3) in *Ryotwari* tracts the policy of long-term settlements is being extended, and the proceedings in connection with new settlements simplified and cheapened; (4) local-taxation (of land) as a whole is neither immoderate nor burdensome, (5) over-assessment is not, as alleged, a general or widespread source of poverty, and it cannot fairly be regarded as a contributory cause of famine. At the same time the Government laid down as principles for future guidance—(a) large enhancements of revenue, when they occur, to be imposed progressively and gradually, and not *per saltum*, (b) greater elasticity in revenue collection, suspensions and remissions being allowed according to seasonal variations and the circumstances of the people, (c) a more general resort to reduction of assessments in cases of local deterioration.

Protection of the Tenants.

In regard to the second of the five propositions noted above, various Acts have been passed from time to time to protect the interests of tenants against landlords, and also to give greater security to the latter in possession of their holdings. The Oudh Tenancy Act of 1886 placed important checks on enhancement of rent and eviction, and in 1900 an Act was passed enabling a landowner to entail the whole or a portion of his estate, and to place it beyond the danger of alienation by his heirs. The Punjab Land Alienation Act, passed at the instance of Lord Curzon, embodied the principle that it is the duty of a Government which derives such considerable proportion of its revenue from the land, to interfere in the interests of the cultivating classes. This Act greatly restricted the credit of the cultivator by prohibiting the alienation

of his land in payment of debt. It had the effect of arresting the process by which the Punjab peasantry were becoming the economic serfs of money-lenders. A good deal of legislation affecting land tenure has been passed from time to time in other provinces, and it has been called for more than once in Bengal where the problems arising out of the Permanent Settlement have been examined by a Royal Commission under Sir Francis Plouffe which visited Bengal in 1930-40, and whose proposals are still under consideration.

Government and Cultivator.

While the Government thus interferes between landlord and tenant in the interests of the latter, its own attitude towards the cultivator is one of generosity. Mention has already been made of the great advantage to the agricultural classes generally of the elaborate systems of Land Survey and Records of Rights carried out and maintained by Government. In the Administration Report of Bombay for 1911-12, it is stated—"The Survey Department has cost the State from first to last many lakhs of rupees. But the outlay has been repaid over and over again. The extensions of cultivation which have occurred (by allowing cultivators to abandon unprofitable lands) have thus been profitable to the State no less than to the individual, whereas under a *Zemindari* or *landlord* system the State would have gained nothing however much cultivation had extended throughout the whole of 30 years' leases." On the other hand, the system is of advantage to the State in reducing settlement operations to a minimum of time and procedure. In the collection of revenue the Government consistently pursues a generous policy. In times of distress, suspensions and remissions are freely granted after proper inquiry.

Land revenue is now a provincial head of revenue and is not shown in the All-India accounts. It may be taken roughly at £24 million, as compared with £84 million said to have been raised annually by Aurangzeb from a much smaller Empire.

Since the coming into operation of provincial autonomy in April 1937, there has been a great impetus towards land revenue reform in the provinces, the primary object being to better the lot of the tenant by modifying *Zemindari* rights and usages, and by altering the mode of land revenue assessment. To this end, legislation has been introduced in practically all the autonomous provinces during the years 1937 to 1939, and widespread changes are in progress all over India, made everywhere.

Following strong representation by Dr B. R. Ambedkar, the Marjani leader, the Government in 1941 agreed to suspend the levy of an increased *jahi* or *patwar* in the *malik* or *malik* lands of *Watan* or *Watan* lands. These *malik* lands were created a large class of *malik* lands, popularly called *malik*, the *malik* lands were designated as *malik* lands. These *malik* lands did not carry any *malik* for remuneration—in 1941 the *malik* lands though the principle of *malik* lands is in no way general. As the *malik* lands are in the *malik* lands.

Excellency the Governor, there is a large class of landholders including inamdars, jahagirdars, hereditary district officers and kulkarnis who, while freed from the obligation to serve, retain substantial portion of their emoluments. Government's new policy, now suspended, was actuated by a desire to reduce the number of village servants which it considered excessive.

The literature on the subject is considerable. The following should be consulted by readers.

EXCISE.

The Excise revenue in British India is derived from the manufacture and sale of intoxicating liquors, hemp drugs, toddy and opium. It is a commonplace amongst certain sections of temperance reformers to represent the traffic in intoxicating liquors as one result of British rule. There is, however, abundant evidence to show that in pre-British days the drinking of spirituous liquors was commonly practised and was a source of revenue.

The forms of intoxicating liquor chiefly consumed are country spirit; fermented palm juice; beer made from grain; country brands of rum, brandy, etc., locally manufactured malt beer and imported wine, beer and spirits. Country spirit is the main source of revenue, except in the Madras Presidency, and yields about two-thirds of the total receipts from liquors. It is usually prepared by distillation from the Mhowra flower, molasses and other forms of unrefined sugar, fermented palm juice and rice. In Madras a very large revenue is derived from fresh toddy. The British inherited from the Native Administration either an uncontrolled Out-Still System or in some cases a crude Farming System and the first steps to bring these systems under control were the limitation of the number of shops in the area farmed, and the establishment of an improved Out-Still System under which the combined right of manufacture and sale at a special shop was annually granted. This of course was a kind of control, but it only enabled Government to impose haphazard taxation on the liquor traffic as a whole by means of vend fees. It did not enable Government to graduate the taxation accurately on the still-head duty principle nor to insist upon a standard of purity or a fixed strength of liquor. Moreover for political and other reasons the extent of control could not at first be complete.

There were tribes of aborigines who regarded the privilege of making their own liquor in their private homes as a long established right and who believed that liquor poured as libations to their god should be such as had been made by their own hands. The introduction of an system amongst those peoples had to be worked very cautiously. Gradually as the Administration began to be consolidated the numerous native pot-stills scattered all over the country under the crude arrangements then in force began to be collected into Central Government enclosures called Distilleries, thus enabling Government to perfect its control by narrowing the limits of supervision; and to regularize its taxation by imposing a direct still-head duty on every gallon issued

from the Distillery. Under Distillery arrangements it has also been possible to regulate and supervise thoroughly the manufacture of its liquor and its disposal subsequent to leaving the Distillery by means of a system of transport passes, establishment supervision, improved distribution and vend arrangements.

Various Systems:

The Out-Still System may be taken to include all systems prior in order of development to the imposition of Still-head duty. Briefly stated the stages of development have been—First: farms of large tracts; Second: farms of smaller areas; Third: farms of the combined right to manufacture and sell at particular places without any exclusive privilege over a definite area; Fourth: farms of similar right subject to control of means and times for distilling and the like. The Provincial Governments have had to deal with the subject in different ways suited to local conditions, and so the order of development from the lower forms of systems to the higher has not been always everywhere identical in details. Yet in its essence and main features the Excise Administration in most provinces of British India has progressed on uniform lines the keynote lying in attempts, where it has not been possible to work with the fixed duty system in its simplest forms, to combine the farming and fixed duty systems with the object of securing that every gallon of spirit should bear a certain amount of taxation. The Out-Still System has in its turn been superseded by either the Free-supply system or the District Monopoly system. The Free-supply system is one of free competition among the licensed distillers in respect of manufacture. The right of vend is separately disposed of. The District monopoly system on the other hand is one in which the combined monopoly of manufacture and sale in a district is leased to a farmer subject to a certain amount of minimum still-head duty revenue in the monopoly area being guaranteed to the State during the term of the lease.

Reforms.

The recommendations of the Indian Excise Committee of 1905-06 resulted in numerous reforms in British India, one of them being that the various systems have been or are gradually being superseded by the Contract Distillery System under which the manufacture of spirit for supply to a district is disposed of by tender, the rate of still-head duty and the supply price to be charged are fixed

in the contract and the right of vend is separately disposed of. This is the system that now prevails over the greater portion of British India. The other significant reforms have been the revision of the Provincial Excise Laws and Regulations, and the conditions of manufacture, vend, storage and transport, an improvement in the quality of the spirit, an improved system of disposal of vend licenses, reductions and re-distributions of shops under the guidance and control of Local Advisory Committees and gradual enhancement of taxation with a view to checking consumption.

Excise was made over entirely to the Provincial Governments, and the duties vary from province to province. The governing principle in fixing these rates is the highest duty compatible with the prevention of illicit distillation.

Sap of the date, palmyra, and cocoanut palms called toddy, is used as a drink either fresh or after fermentation. In Madras and Bombay the revenue is obtained from a fixed fee on every tree from which it is intended to draw the liquor and from shop license fees. In Bengal and Burma the sale of shop licenses is the sole form of taxation. Country brands of rum, and so-called brandies and whiskies, are distilled from grape juice, etc. The manufacture is carried out in private distilleries in various parts of India. A number of breweries has been established, mostly in the hills, for the manufacture of a light beer.

PROHIBITION

After the introduction of provincial autonomy in April 1937, it became the avowed policy in principle of all provincial Governments to discourage the consumption of alcoholic beverages, but the Congress administrations which held office in seven provinces until September 1939 went further and, before they resigned, adopted an active policy of enforcing prohibition within a period of years. The measures taken by them varied from province to province, but generally speaking, they took the form of declaring certain areas, either urban or rural, "dry," and within those areas the production, sale and consumption of liquor were banned. Thus in Madras four districts were declared "dry," a special excise regime was set up and active steps were taken to wean the populace from the use of liquor. Early reports indicated that a considerable measure of success had been attained, but later it was officially admitted that enthusiasm for prohibition was waning. In the United Provinces, Bihar, Orissa, the Central Provinces, Sind and Assam similar steps were taken to prevent the people of certain areas from drinking alcohol. In Bengal and the Punjab (where Coalition Governments were in office) on the other hand, there was no actual prohibition but only temperance propaganda.

In Bombay, the Congress scheme went further than elsewhere. The capital city Bombay and the second largest city Ahmedabad were declared "dry," subject to an elaborate system of personal permits for Europeans, Parsis and "confirmed addicts." In Bombay, as in Madras, newspapers and magazines published in the province were forbidden to publish liquor advertisements—a ban which peristed after the Congress

administrations had resigned and the prohibition drive had lost most of its force. In April 1941, however, the Government of Bombay withdrew the ban on newspaper advertisements of liquor. In Bombay, successive judgments of a full bench of the High Court held that both the original Congress legislation and the subsequent "Governor's Act" were *ultra vires* the provincial administration, and refused to allow that administration to appeal to the Federal Court on the question of the validity or otherwise of the prohibition law. The ban on sales of foreign liquor was accordingly withdrawn as from July 2, 1940, and the on country liquor was modified subject to some restrictions.

Difficulties of Enforcement—Even on the limited and "permissive" scale adopted, the enforcement of prohibition had been by no means free from abuses and difficulties. It placed a severe strain on the authorities and numerous cases were reported of evasion and delinquency of the law on an organised basis. In addition to smuggling into the "dry" areas and illicit distillation, a considerable exodus of workers and others entitled to permits used to take place on week end and holiday from the cities to adjacent areas where prohibition was not in force, and much drinking to excess was known to occur. Although Congress and orthodox opinion continued to support prohibition it gave rise to popular resentment among certain classes and communities, as also to grave legal anomalies. Thus in Bombay, after several hundreds of persons had been convicted for breaches of the prohibition rules in the first eight months of their introduction, the validity of the rules was successfully challenged in the courts of law.

Despite the efforts of the Governor of Poona (the Congress Ministry having in the meantime resigned office) to avoid administrative and legal difficulties, the experiment may be said to have failed because it lacked both local support and general approval. The political position of the erstwhile Congress provinces was the cause of what as follows. Governors and the Congress while not committed to prohibition in principle and while reserving the right to make such other changes as might seem fit to them, were reversing the policy of their former masters. On the other hand they did not extend prohibition even in its modified form to new areas, leaving the whole future of prohibition open to be decided by whatever popular regime might later take office. And here it is pertinent to note that the moral issue, the financial issue, and the question of prohibition was far reaching. In the provinces it involved a number of questions, a quarter of the total provincial area was the imposition of new and burdensome taxes, a further complication was raised by the presence of Indian States who either refused to be mixed with British India, and which had not adopted a prohibition policy, and the Government of India had to consider the future of the prohibition experiment in a material.

Drugs—The narcotic products of the plant consumed in India fall under three categories, namely, ganja or the dried leaves of the cultivated female *Cannabis indica*, or the resinous extract known as hashish, and the active drug when collected.

bhang, or the dried leaves of the hemp plant whether male or female cultivated or uncultivated. The main features of the existing system are restricted cultivation under supervision, storage in Bonded Warehouses, payment of a quantitative duty before issue, retail sale under licenses and restriction on private possession. Licenses to retail all forms of hemp drugs are usually sold by auction. The sale of charas has been prohibited in the Bombay Presidency from the 1st April 1922.

Opium—Opium is consumed in all provinces in India. The drug is commonly taken in the form of pills, but in some places, chiefly on social and ceremonial occasions, it is drunk dissolved in water. Opium smoking also prevails in the City of Bombay and other large towns. The general practice is to sell opium from the Government Treasury, or a Central Warehouse, to licensed vendors. The right of retail to the public is sold by annual auction to one or several sanctioned Shops. Further legislation against opium smoking in clubs and dens is now under contemplation.

The revenue from opium is derived mainly from exports of what is called provision opium to foreign countries and from the sale to Provincial Governments of excise opium for internal consumption in India. The entire quantity now exported under the system of direct sale to Foreign and Colonial governments, the system of auction sales in Calcutta to traders for export to foreign countries having been stopped with effect from 7th April 1926. In no case are exports permitted without an import certificate by the Government of the country of import prescribed by the League of Nations.

It was decided to reduce the total of opium exported since the calendar year 1926 to 10 per cent annually in each subsequent year until exports were totally extinguished at the end of 1935.

Excise opium is sold to Provincial Governments for internal consumption in India at a fixed price based on the cost of production. This opium is retailed to licensed vendors at rates fixed by the Provincial Governments and varying from Province to Province.

SALT.

The salt revenue was inherited by the British Government from Native rule, together with a miscellaneous transit dues. These transit dues were abolished and the salt duty consolidated and raised. There are four great sources of supply, rock salt from the Salt Range and Kohat Mines in the Punjab; brine salt from the Sambhar Lake in Rajputana, salt brine condensed on the borders of the lesser Rann of Cutch; and sea salt factories in Bombay, Madras and at the mouth of the Indus.

The Salt Range mines contain an inexhaustible supply. They are worked in chambers excavated in salt strata, some of which are 250 feet long, 45 feet wide and 200 feet high. The Rajputana supply chiefly comes from the Sambhar Lake where brine is extracted and evaporated by solar heat. In the Rann of Cutch the brine is also evaporated by solar heat and the product is known as Baragara salt. Important works for the manufacture of that salt were opened in Dhrangadhra State in 1923. In Bombay and Madras sea water is let into shallow pans on the sea-coast and evaporated by solar heat and the product sold throughout India. In Bengal the damp climate together with the large volume of fresh water from the Ganges and the Brahmaputra into the Bay of Bengal render the manufacture of sea-salt difficult and the bulk of the supply, both for Bengal and Burma, is imported from Liverpool, Germany, Aden, Bombay and Madras.

Broadly, one-half of the indigenous salt is manufactured by Government Agency, and the

remainder under license and excise system. In the Punjab and Rajputana the salt manufactures are under the control of the Northern India Salt Department, a branch of the Commerce and Industry Department. In Madras and Bombay the manufactures are under the supervision of Local Governments. Special treaties with Native States permit of the free movement of salt throughout India, except from the Portuguese territories of Goa and Damaun, on the frontiers of which patrol lines are established to prevent the smuggling of salt into British India.

From 1888-1903 the duty on salt was Rs. 1 per maund of 92 lbs. In 1903, it was reduced to Rs. 2, in 1905 to Rs. 1-8-0; in 1907 to Rs. 1-4-0. In 1916 it was raised to Rs. 1-4-0. The successive reductions in duty have led to a largely increased consumption, the figures rising by 25 per cent between 1903-1908. In 1923 the duty was doubled bringing it again to Rs. 2-8. In 1924 it was reduced to Rs. 1-4-0. The duty remained at Rs. 1-4-0 from March 1924 to 29th September 1931. It was raised to Rs. 1-9-0 with effect from 30th September 1931. Prior to 1st March 1931, the excise duty and import duty on salt were always kept similar, but by the Indian Salt (Additional Import Duty) Act No. 1 of 1931, a temporary additional customs duty of 4½ annas per maund was imposed on foreign salt. In March 1933 the customs duty was reduced by 2 annas. In April 1936 the import duty was reduced to 1½ annas per maund, while the excise duty remained the same.

CUSTOMS.

The import duties have varied from time to time according to the financial condition of the country. Before the Mutiny they were five per cent., in the days of financial stringency which followed they were raised to 10 and in some cases 20 per cent. In 1875 they were reduced to five per cent., but the opinions of

Free Traders, and the agitation of Lancashire manufacturers who felt the competition of Indian Mills, induced a movement which led to the abolition of all customs duties in 1882. This continued fall in exchange compelled the Government of India to look for fresh sources of revenue and in 1894 five per cent. duties were reimposed.

The Customs Schedule was completely recast in the Budget of 1916-17 in order to provide additional revenue to meet the financial disturbance set up by the war.

The Customs Tariff was further raised in the Budget of 1921-22 in order to provide for the big deficit which had then to be faced.

The Central Budget for 1942-43 included among its taxation proposals an all-round customs surcharge of 20% to be levied on existing import tariff except raw cotton, petrol and salt. It was estimated that this would yield an additional revenue of Rs 570 lakhs.

The Senior Collectors were Covenanted Civilians specially chosen for this duty, before the introduction of the Imperial Customs Service in 1906. Since that date, of the five Collectorship

at the principal ports (Calcutta, Bombay, Madras, Rangoon, and Karachi) three are ordinarily reserved for Members of the I C S (i.e., "Covenanted Civilians"). The other two are reserved for members of the Imperial Customs Service.

Assistant Collectors in the Imperial Customs Service are recruited in two ways: (a) from members of the Indian Civil Service—3 vacancies, and (b) by the Secretary of State—19 vacancies. There are in addition a few Gazetted Officers in what is known as the Provincial Customs Service. These posts are in the gift of the Government of India, and are usually filled by promotion from the subordinate (in the Government sense of the word) service. The "subordinate" staff is recruited entirely in India.

INCOME-TAX.

The income-tax was first imposed in India in 1860, in order to meet the financial dislocation caused by the Mutiny. It was levied at the rate of four per cent or a little more than 9d in the pound on all incomes of five hundred rupees and upwards. Many changes have from time to time been made in the system, and the present schedule was consolidated in the Act of 1886. This imposed a tax on all incomes derived from sources other than agriculture which were exempted. On incomes of 2,000 rupees and upwards it fell at the rate of five pies in the rupee, or about 6½d in the pound, on incomes between 500 and 2,000 rupees at the rate of four pies in the rupee or about 5d in the pound. In March 1903 the minimum taxable income was raised from 500 to 1,000 rupees. The income-tax schedule was completely revised, raised, and graduated in the Budget of 1916-17 in the general scale of increased taxation imposed to meet the deficit arising out of war conditions.

Since then the process has been almost continuous and in every financial difficulty the authorities turn to the Income-Tax as a means of raising fresh revenue.

The Supplementary Finance Bill of 1931 imposed surcharges on income-tax and super-tax

to meet the emergency of that year. The surcharges were subsequently scaled down in succeeding years, but were not completely abolished until after the passage of the Income Tax (Amendment) Act of 1939. That Act itself was the sequel to an exhaustive inquiry from 1935 onwards by a committee consisting of Khan Bahadur J. B. Vachha, C.I.E., Commissioner of Income-Tax in Bombay, and Messrs C. W. Ayers and S. P. Chambers of the British Indian Revenue Department. Their report covered a wide field and made numerous recommendations, most of which were incorporated in the Act of 1939, a summary of which is given below. Among other recommendations was that for the adoption of the "slab" system instead of the "step" system, and this was duly done in the India Budget for 1939. After the outbreak of the War in September 1939, the Finance Minister made no changes in the basic rates of income tax in his Budget for 1940-41, but he introduced an Excess Profits Tax which was further increased in the 1941-42 Budget to 66½ per cent. In the same Budget, the surcharge on income tax and super-tax which had been 2½ per cent since November 1940, was increased to 33½ per cent. Details of these changes may be found in the section on "Recent History of Finance."

RATES OF INCOME-TAX.

In the case of every individual, Hindu undivided family, unregistered firm and other association of persons —

(a) *Where the total income does not exceed Rs 2,000—*

	Rate
1. On the first Rs 750 of total income	<i>Nil</i>
2. On the next Rs 1,250 of total income	Six pies in the rupee
Provided that no tax shall be payable on a total income which does not exceed Rs 1,500	

(b) *Where the total income exceeds Rs 2,000—*

	Rate.	Surcharge
1 On the first Rs 1,500 of total income .	<i>Nil</i>	<i>Nil</i>
2 On the next Rs 3,500 of total income .	Nine pies in the rupee	Six pies in the rupee.
3 On the next Rs 5,000 of total income .	One anna and three pies in the rupee	Nine pies in the rupee
4 On the next Rs 5,000 of total income .	Two annas in the rupee	One anna and two pies in the rupee
5. On the balance of total income .	Two annas and six pies in the rupee	One anna and three pies in the rupee

In the case of every company and local authority, and in every case in which under the provisions of the Indian Income-tax Act, 1922, income-Tax is to be charged at the maximum rate—

	Rate	Surcharge
On the whole of total income	Two annas and six pies in the rupee	One anna and three pies in the rupee

RATES OF SUPER-TAX

In the case of every individual, Hindu undivided family, unregistered firm and other association of persons —

	Rate	Surcharge
1. On the first Rs 25,000 of total income	<i>Nil</i>	<i>Nil</i>
2. On the next Rs 10,000 of total income	One anna in the rupee	Six pies in the rupee
3. On the next Rs 20,000 of total income .	Two annas in the rupee	One anna in the rupee
4. On the next Rs 70,000 of total income	Three annas in the rupee	One anna and six pies in the rupee
5. On the next Rs 75,000 of total income .	Four annas in the rupee	Two annas in the rupee
6. On the next Rs 1,50,000 of total income	Five annas in the rupee	Two annas and six pies in the rupee
7. On the next Rs 1,50,000 of total income	Six annas in the rupee	Three annas in the rupee
8. On the balance of total income	Seven annas in the rupee	Three annas and six pies in the rupee

In the case of every local authority—

	Rate.	Surcharge.
On the whole of total income	One anna in the rupee	Six pies in the rupee.

In the case of an association of persons being a co-operative society, other than the Sankatta Saltowners' Society in the Bombay Presidency, for the time being registered under the Co-operative Societies Act, 1912, or under an Act of the Provincial Legislature governing the registration of Co-operative Societies—

	Rate	Surcharge
1. On the first Rs 25,000 of total income	<i>Nil</i>	<i>Nil</i>
2. On the balance of total income	One anna in the rupee	Six pies in the rupee

In the case of every company—

	Rate
On the whole of total income	One anna and six pies in the rupee.

INCOMETAX REFORMS.

As already mentioned, the publication of the Income-Tax Inquiry Report in 1936 was followed by important reforms and far-reaching legislation. Among the reforms was the bringing into force, as from April 1, 1939, of the "slab" system of income-tax assessment, details of which are given in the foregoing table. The post of Income-Tax Officer to the Government of India was created and S P Chambers was appointed to it. He later resigned in the middle of 1940.

The new Income-Tax (Amendment) Act of 1939, which was passed after protracted debate in and much modification by the Central Legislature, was intended to bring up to date the procedure of the Income-Tax Department and to render its methods more efficient. It embodied provisions designed to stop up existing loopholes and prevent evasion of income-tax law, also to adjust categories of income-tax payers so as to mulct the wealthy minority more while giving relief to the small man. The chief operative clause was Clause 4, the provisions of which are —

In respect of foreign income, persons who are not resident in British India pay on income arising or received in British India only. Persons who are resident but not ordinarily resident in British India pay on income arising in British India and on foreign income brought into British India. Persons who are resident and ordinarily resident in British India pay on income arising in British India, on foreign income brought into British India, and also on foreign income not brought into India, with a deduction of Rs 4,500 on the last mentioned class of income. Where foreign income-tax is payable on income arising abroad, one-half of the Indian tax, or one-half of the foreign tax, whichever is the lower, is allowed as a deduction from the tax payable. Where foreign income cannot be brought into India owing to exchange restrictions, the income-tax on that income is not collected until such time as it can be brought in.

As to the definitions of "residence," they are as follows. To be resident, a person must either be in British India for at least half the year or have a house maintained in British India and visit it at least once during the year, or have been in British India for at least 365 days out of the previous four years and visited British India at least once during the year. To be ordinarily resident, a person must have been resident for nine out of the previous ten years and must also have been in British India for 730 days in the previous seven years. A company is deemed to be resident in India if it is controlled in India or if more than half its income arises in British India.

Other important provisions of the Act are those providing for the setting up of an Appellate Tribunal (to start functioning after two years) whose personnel will consist of an equal number of judicial members and accountants members and whose purpose will be to hear appeals by assesseees from the findings of the Assistant Commissioner of Income-Tax, relief to be granted in respect of life insurance premiums, provident fund contributions and superannuation contributions fund with special concessions to Hindu undivided families, the abolition of the previous exemption of leave salary, that is, salary earned in India but payable out of India to assesseees while they are on leave out of the country, a changed system of depreciation allowance from the former prescribed percentage of the original cost of the asset to a prescribed percentage of the "written down value" of the asset, and finally, a most important change, extension of the liability to pay income tax from all persons called upon by an income tax officer to make a return, to all persons whose total income exceeded Rs 2,000 in the previous year. This liability to pay income tax is compulsory upon those whose income exceeded Rs 2,000 in the previous year and failure to do so for and still in a return form without tax, which cause involves a liability which may be as much as one and a half times the tax payable.

HISTORY OF THE COINAGE.

The Indian mints were closed to the unrestricted coinage of silver for the public from the 26th June 1893, and Act VIII of 1893, passed on that date, repealed Sections 19 to 26 of the Indian Coinage Act of 1870, which provided for the coinage at the mints for the public of gold and silver coins of the Government of India. After 1893 no Government rupees were coined until 1897, when, under arrangements made with the Native States of Bhopāl and Kashmir, the currency of those states was replaced by Government rupees. The re-coinage of these rupees proceeded through the two years 1897 and 1898. In 1899 there was no coinage of rupees, but in the following year it seemed that coinage was necessary, and it was begun in February 1900, the Government purchasing the silver required, and paying for mainly with

the gold accumulated in the Paper Currency Reserve. In that and the following year a crore of rupees was coined and over 17 crores of rupees in the year ending the 31st March 1901 including the rupees issued in connection with the conversion of the currencies of Native States. From the profit accruing to Government on the coinage was decided to set up a separate fund called the Gold Reserve Fund as the most effective guarantee against the rare fluctuations of exchange. The profit was invested in sterling securities, interest from which was added to the Gold Reserve. 1906 exchange had been practically stationary for eight years, and it was decided that the coinage profits devoted to the Gold Reserve should be kept in rupees in India, being invested in gold securities in India.

Reserve Fund was then named the Gold Standard Reserve. It was ordered in 1907 that only one-half of the coinage profits should be paid into the reserve, the remainder being used for capital expenditure on railways.

Gold.

Since 1870 there had been no coinage of double mohurs in India and the last coinage of single mohurs before 1918 in which year coinage was resumed, was in the year 1891-92.

A Royal proclamation was issued in 1918 establishing a branch of the Royal Mint at Bombay. Pending the completion of the arrangements at the Branch, Royal Mint, power was taken by legislation to coin in India gold mohurs of the same weight and fineness as the sovereign. Altogether 2,109,703 pieces of these new coins of the nominal value of Rs 3,16,45,545, were struck at the Bombay Mint. The actual coinage of sovereigns was begun in August, 1918, and 1,295,372 sovereigns were coined during the year. This branch of the Royal Mint was closed in April, 1919, owing to difficulties in supplying the necessary staff.

The Indian Currency Act of 1927 established a new ratio of the rupee to gold. It established this ratio at one shilling and six pence by enacting that Government would purchase gold at a price of twenty-one rupees three annas ten pils per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or, at the option of Government, sterling, for immediate delivery in London at the same price after allowing for the normal cost of transport from Bombay to London. A rate of one shilling and five pence forty-nine sixths was notified as Government's selling rate for sterling to meet these obligations. Great Britain and India left the gold standard September 1931 but the buying and selling rates for sterling are still maintained.

With the receipt of large consignments of gold, the Bombay Mint made special arrangements for the refining of gold by the chlorine process and at the end of the year 1919-20 the Refinery Department was capable of refining a daily amount of 6,000 ounces of raw gold.

Silver.

During 1940 the Government of India considered it necessary in view of the rapid absorption of rupee coin for hoarding, to conserve silver resources as far as possible. Despite the fact that Government has large stocks of silver in hand, it was felt to be wasteful to turn out large quantities of rupees, half rupees and quarter rupees of the previous fineness of eleven-twelfths silver and one-twelfth alloy. It was therefore decided that the fineness of one-half silver and one-half alloy should be adopted for all three coins. The new coins bore the date 1940 and were exactly similar in weight and appearance to the old coins, except that the ring was somewhat duller. Incorporated in the new rupee, however was a new security edge device consisting of the insertion of a shallow re-entrant groove in the centre of the milled edge which was considered to be a virtually absolute safeguard against counterfeiting. Coins of the old fineness were no longer minted but continued to be legal tender to the same extent as before.

King Edward VII rupees and eight-anna coins ceased to be legal tender after May 31, 1942. New one-rupee notes were issued through the Reserve Bank of India in July 1941, the issue of these notes does not affect the earlier issue, the Government of India one-rupee notes of the 1935 King George V pattern which continue to be legal tender.

Copper and Bronze.

Copper coinage was introduced into the Bengal Presidency by Act XVII of 1835 and into the Madras and Bombay Presidencies by Act XXII of 1844.

The weight of the copper coins struck under Act XXIII of 1870 remained the same as it was in 1835. It was as follows —

		Grains troy.
Double pice or half-anna	200
Pice or quarter-anna	100
Half-pice or one-eighth of an anna	50
Pie being one-third of a pice or one-twelfth of an anna	33½

The weight and dimensions of bronze coins are as follows —

	Standard weight in grains troy.	Diameter in milli- metres
Pice	75	25.4
Half-pice ..	37½	21.15
Pie	25	17.45

Nickel.

The Act of 1906 also provided for the coinage of a nickel coin. It was directed that the nickel one-anna piece should thenceforth be coined at the Mint and issued. The notification also prescribed the design of the coin, which has a waved edge with twelve scollops, the greatest diameter of the coin being 21 millimetres and its least diameter 19.8 millimetres. The desirability of issuing a half-anna nickel coin was considered by the Government of India in 1909, but after consultation with Local Governments it was decided not to take action in this direction until the people had become thoroughly familiar with the present one-anna coin. The two-anna nickel coin was introduced in 1917-18; and the four-anna and eight-anna nickel coins in 1919. The eight-anna nickel has been withdrawn from circulation.

On account of war activities the demand for small coin greatly increased and in January 1942 Government proposed to mint a half-anna coin which was likely to produce a considerable saving in metal and be of convenience to the public. The new coin is square with rounded corners and three-quarters the weight of the one-anna piece. In order to economise in the use of nickel both the new half-anna piece and the one-anna coin are minted in nickel-brass alloy instead of in the former cupro-nickel alloy.

The Currency System.

I. THE SILVER STANDARD.

Prior to 1893 the Indian currency system was a mono-metallic system, with silver as the standard of value and a circulation of silver rupees and notes based thereon. But with the opening of new and very productive silver mines in the United States of America the supply of silver exceeded the demand and it steadily receded in value. The result was that the gold value of the rupee, which was nominally two shillings, fell continuously until it reached the neighbourhood of a shilling. These disturbances were prejudicial to trade, but they were still more prejudicial to the finances of the Government. The Government of India has to meet every year in London a substantial sum in the form of payment of interest on the debt, the salaries of officials on leave, the pensions of retired officials, as well as large payment for stores required for State enterprises. As the rupee fell in its gold value the number of rupees required to satisfy these payments rose. The total reached a pitch which seriously alarmed the Government, which felt that it might be called upon to raise a sum in rupees which would necessitate a considerable increase in taxation, which should be avoided if possible. It was therefore decided to take measures to raise and fix the gold value of the rupee for the purposes of exchange.

Closing the Mints.—The whole question was examined by a strong committee under the presidency of Lord Herschell, whose report is commonly called the Herschell Report. It was decided in 1893 to close the mints to the unrestricted coinage of silver. This step led, as was intended, to a gradual divergence between the exchange value of the rupee and the gold value of its silver content. Government ceased to add rupees to the circulation. Rupees remained unlimited legal tender and formed the standard of value for all internal transactions. Since Government refused, and no one else had the power to coin rupees, as soon as circumstances led to an increased demand for rupees, the exchange value of the rupee began to rise. By 1898 it had approached the figure of one shilling and four pence. Meantime, in response to the undertaking of Government to give notes or rupees for gold at the rate of fifteen rupees to the pound sterling, gold began to accumulate in the Paper Currency Reserve. These purposes having been attained, a second committee was appointed under the chairmanship of Sir Henry Fowler to consider what further steps should be adopted in the light of these conditions. The report of the Fowler Committee as it was called marked the second stage in Indian currency policy.

II THE NEW STANDARD.

The Fowler Committee rejected the proposal to re-open the Mints to the free coinage of silver. They proposed that the exchange value of the rupee should be fixed at one shilling and fourpence, or fifteen rupees to the sovereign. They further suggested that the British sovereign should be made a legal tender and a current coin in India, that the Indian mints should be thrown open to the unrestricted coinage of gold; so that the rupee and the sovereign should freely circulate side by side in India. The goal which the Committee had in view was a gold standard supported by a gold currency. Now under the condition which compelled the Government of India to give either rupees or rupee notes for gold tendered in India, at the rate of fifteen rupees to the sovereign, it was impossible for the rate of exchange to rise above one shilling and four pence, save by the fraction which covered the cost of shipping gold to India. But if the balance of trade turned against India, it was still possible for the rate of exchange to fall. To meet this the Fowler Committee recommended that the profits on coining rupees should not be absorbed in the general revenues, but should be set aside in a special reserve, to be called the Gold Standard Reserve. Inasmuch as the cost of coining rupees was approximately elevenpence halfpenny, and they were sold to the public at one and four pence, the profits were considerable, they were to have been kept in gold, so as to be freely available when required for the support of exchange.

A 16 pence Rupee.—The Government of India professed to accept all the recommendations of the Fowler Committee, actually only a portion of them was put in practice. The official rate of exchange was fixed at one and fourpence. The sovereign and the half sovereign were declared unlimited legal tender in India. But after a first attempt, when sovereigns soon came back to the treasuries, no effort was made to support the gold standard by an active gold currency. The gold mint was not set up. The Gold Standard Reserve was established but, instead of holding the Reserve in gold, it was invested in British securities. These securities gave rise to conditions which were never contemplated by the Fowler Committee. Reference has been made to the Home Charges of the Government of India, which at the time amounted to about seventeen millions sterling a year. These are met by the sale of what are called Currency Bills. That is to say, the Secretary of State, acting on behalf of the Government of India, sold Bills against gold deposited in the Bank of England in London. These Bills when presented in India were cashed at the Government Treasuries. Now if the Secretary of State sold Council Bills only to meet his actual requirements, it follows that the balance of trade in favour of India over and above this must be liquidated, as it is in other countries, by the importation of bullion or by the creation of credit. It is a fact that owing to the effect of the policy of encouraging an active

circulation to support the gold standard, gold tended to accumulate in India in embarrassing quantities. In 1904 therefore the Secretary of State declared his intention of selling Council Bills on India without limit at the price of one shilling fourpence one-eighth—that is to say gold import point. The effect of this policy was to limit the import of gold to India, for it was generally more convenient to deposit the gold in London and to obtain Council Bills against it, than to ship the gold to India. Nevertheless as the Egyptian cotton crop was very largely financed in sovereigns it was sometimes cheaper and more convenient to ship sovereigns from Egypt, or even from Australia, than to buy Council Bills. Considerable quantities of sovereigns found their way into India and circulated freely, particularly in the Bombay Presidency, the Punjab and parts of the Central Provinces.

Sterling Remittance—This system worked until 1907-08. A partial failure of the rains in India in 1907, and the general financial stringency all over the world which followed the American financial crisis in the autumn, caused the Indian exchange to become weak in November. This was one of the occasions contemplated, in a different form, by the Fowler Committee when it proposed the formation of the Gold Standard Reserve. There had been very heavy coining of rupees in India and the amount in the Reserve was ample. But the Reserve was in securities not in gold, and was therefore not in a liquid form, nor was the time an opportune one for the realisation of securities. Moreover the authorities did not realise that a reserve is for use in times of emergency. It had been assumed that in times of weakness it would be sufficient

for the Secretary of State to stop selling Council Bills, and it would firm up; meantime he would finance himself by drawing on the funds in the Gold Standard Reserve. But it was apparent that the stoppage of the sales of Councils was not enough; there was an insistent demand for the export of gold, or the equivalent of gold. The Government of India refused and exchange fell to one and threepence twenty-three thirty-seconds. Ultimately the authorities had to give way. It was decided to sell in India a certain quantity of sterling bills on London at one and threepence twenty-nine thirtyseconds, representing gold export point, and the equivalent of the export of gold. These were met in London from the funds in the Gold Standard Reserve. Bills to the extent of between eight and nine millions sterling were sold, which regularised the position and the Indian export trade recovered. Thus were gradually evolved the main principles of the Indian currency system. It consisted of silver rupees and rupee notes in India, with the sovereign and half sovereign unlimited legal tender at the rate of fifteen rupees to the sovereign, or one and fourpence. The rate of exchange was prevented from rising above gold import point by the unlimited sale of Council Bills at gold point in London; it was prevented from falling below gold point by the sale of Sterling Bills (commonly called Reverse Councils) at gold export point in India. But it was not the system proposed by the Fowler Committee, for there was no gold mint and only a limited gold circulation; some people invented for it the novel term of the gold exchange standard, a term unknown to the law of India. It was described by one of the most active workers in it as a "limping standard."

III. THE CHAMBERLAIN COMMITTEE

This brings us to the year 1913. There were many critics of the system. Some hankered for a return to the open mints; others objected to the practice of unlimited sales of Council Bills as forcing rupees into circulation in excess of the requirements of the country. But the general advantages of a fixed exchange were so great as to smother the voices of the critics, and the trade and commerce of the country adjusted itself to the one and fourpenny rupee. But there gradually grew up a formidable body of criticism directed against the administrative measures taken by the India Office. These criticisms were chiefly directed at the investment of the Gold Standard Reserve in securities instead of keeping it in gold in India, at a raid on that reserve in order temporarily to relieve the Government of the difficulty of financing its railway expenditure; at the transfer of a solid block of the Paper Currency Reserve from India to London; at the holding of a portion of the Gold Standard Reserve in silver in order to facilitate the coining of rupees; and at the unlimited sales of Council Bills at rates which prevented the free flow of gold to India, thus forcing token rupees into circulation in quantities in excess of the requirements of the country. The cumulative effect of this policy was to transfer from India to London an immense block of India's resources, aggregating over seventy millions, where they were

lent out at low rates of interest to the London bankers, whilst India was starved of money until at one point money was not available for loans even against Government securities and the bank rate was artificially high. All these things were done, it was contended, on the *obiter dicta* of a small Finance Committee of the India Office, from which all Indian influence was excluded, and on which London banking influence was supreme. The India Office for long ignored this criticism, until it was summarised in a series of articles in *The Times*, and public opinion was focussed on the discussion through the action of the India Office in purchasing a big block of silver for coining purposes from Messrs. Montagu & Co., instead of through their recognised and constituted agents, the Bank of England. The Government could no longer afford to stand aloof and yet another Currency Committee was appointed under the chairmanship of Mr Austen Chamberlain. This was known as the Chamberlain Committee.

New Measures.—The conclusions of this Commission were that it was unnecessary to support the Gold Standard by a gold currency; that it was not to the advantage of India to encourage the internal use of gold as currency; that the internal currency should be supported by a thoroughly adequate reserve of gold and sterling, that no limit should be fixed to the

amount of the Gold Standard Reserve, one-half of which should be held in gold, that the silver branch of the Gold Standard Reserve should be abolished; that Reverse Councils should be sold on demand, that the Paper Currency should be made more elastic, and that there should be two Indian representatives out of three on the Finance Committee of the India Office. The Committee dealt conclusively with the accumulation of excessive balances in London, the general tenor of their recommendations being "not guilty, but do not do it again." They gave a

passing commendation to the idea of a State Bank. Sir James Begg, the only Indian banker on the Committee, appended a vigorous minute of dissent, in which he urged that the true line of advance was to discourage the extension of the token currency by providing further facilities for the distribution of gold when increases to the currency became necessary, including the issue of an Indian gold coin of a more convenient denomination than the sovereign or the half sovereign.

IV. CURRENCY AND THE WAR OF 1914-18.

The report was in the hands of the Government of India before the outbreak of the last war. Some immediate steps were taken, like the abolition of the silver branch of the Gold Standard Reserve, but before the Government could deal entirely with the temporising recommendations of the Commission, the war broke out. The early effects of the war were precisely those anticipated. There was a demand for sterling remittance which was met by the sale of Reverse Councils, 68,707,000 being sold up to the end of January 1915. There were withdrawals from the Post Office Savings Banks, and a net sum of Rs. 8 crores was taken away. There was some lack of confidence in the Note issue, and a demand for gold. Notes to the extent of Rs. 10 crores were presented for encashment and the Government were obliged to suspend the issue of gold. But these were transient features and did not demand a moratorium; confidence was soon revived and Exchange and the Note issue continued strong. The difficulties which afterwards arose were from causes completely unanticipated by all students of the Indian currency. They arose from an immense balance of trade in favour of India, caused by the demand for Indian produce for the United Kingdom and the Allies and the decline in the export trade from these countries; a heavy expenditure in India on behalf of the British Government, and a phenomenal rise in the price of silver. If we take the three years 1916-17 to 1918-19 the balance of trade in favour of India was £6 millions a year above the corresponding years of the previous quinquennium. The disbursements in India on behalf of the Government of the United Kingdom and the Allies were by December 1919 £240,000,000. This balance of trade and expenditure for Imperial purposes could not be financed either by the import of the precious metals, owing to the universal embargo on the movement of gold and silver nor by credits in India. It could be financed only by the expansion of the Note issue, against sterling securities in the United Kingdom, chiefly Treasury Bills, and the issue of coined

rupees. But simultaneously there was a reduction in the output of the silver mines of the world coinciding with an increased demand for the metal. The price of silver in 1915 was 27½ pence per standard ounce. In May 1919 it was 58 pence, on the 17th December of that year it was 78 pence. The main difficulties in India were not therefore the prevention of the rupee from falling below the ratio of 15 to one, but to keep it within any limits and to provide a sufficiency to meet the demand.

Rise in Exchange—The measures adopted by the Government of India in these emergencies were to bring exchange under rigid control confining remittance to the finance of articles of national importance. The next step was to raise the rate for the sale of Council Bills, so that silver might be purchased at a price which would allow rupees to be coined without loss. The following table shows how rates were raised from one shilling fourpence to two shilling fourpence—

Date of Introduction.	Minimum Rate for Immediate Telegraphic Transfer
3rd January 1917	1 4½
28th August 1917	1 5
12th April 1918	1 6
13th May 1919	1 8
12th August 1919	1 10
15th September 1919	2 0
22nd November 1919	2 2
12th December 1919	2 4

V. THE 1919 COMMITTEE.

The effect of these measures however was to jettison the currency policy pursued from 1893 to 1915, the main object of which was to stabilise the rupee at one and fourpence. When the war was over, a Committee was appointed in regard to the future of Indian

currency. It sat in 1919 and reported to the end of the year. Its main recommendations are summarised below:—

(i) It is desirable to raise the rate of the rupee and to re-coin the India

(22) The reduction of the fineness or weight of the rupee, the issue of 2 or 3-rupee coins of lower proportional silver content than the present rupee, or the issue of a nickel rupee, are expedients that cannot be recommended.

(23) The maintenance of the convertibility of the note issue is essential, and proposals that do not adequately protect the Indian paper currency from the risk of becoming inconvertible cannot be entertained.

(24) The rise in exchange, in so far as it has checked and mitigated the rise in Indian prices, has been to the advantage of the country as a whole, and it is desirable to secure the continuance of this benefit.

(25) Indian trade is not likely to suffer any permanent injury from the fixing of exchange at a high level.

If, contrary to expectation, a great and rapid fall in world prices were to take place, and if the costs of production in India fail to adjust themselves with equal rapidity to the lower level of prices, then it might be necessary to consider the problem afresh.

(26) The development of Indian industry would not be seriously hampered by a high rate of exchange.

(27) The gain to India of a high rate of exchange for meeting the Home charges is an incidental advantage that must be taken into consideration.

(28) To postpone fixing a stable rate of exchange would be open to serious criticism and entail prolongation of Government control.

(29) The balance of advantage is decidedly on the side of fixing the exchange value of the rupee in terms of gold rather than in terms of sterling.

(30) The stable relation to be established between the rupee and gold should be at the rate of Rs 10 to one sovereign, or, in other words at the rate of one rupee for 11 30,016 grains of fine gold, both for foreign exchange and for internal circulation.

(31) If silver rises for more than a brief period above the parity of 2s. (gold), the situation should be met by all other available means rather than by impairing the convertibility of the note issue. Such measures might be (a) reduction of sale of Council Bills; (b) abstention from purchase of silver; (c) use of gold to meet demands for metallic currency. If it should be absolutely necessary to purchase silver, the Government should be prepared to purchase even at a price such that rupees would be coined at a loss.

(32) Council Drafts are primarily sold not for the convenience of trade but to provide for the Home charges in the wider sense of the term. There is no obligation to sell drafts to meet all trade demands, but, if without inconvenience or with advantage the Secretary of State is in a position to sell drafts in excess of his immediate needs, when a trade demand for them exists, there is no objection to his doing so, subject to due regard being paid to the principles governing the location of the reserves.

Council Drafts should be sold as now by open tender at competitive rates, a minimum rate being fixed from time to time on the basis of the sterling cost of shipping gold to India. At present this rate will vary, but when sterling is again equivalent to gold, it will remain uniform.

The Government of India should be authorised to announce, without previous reference to the Secretary of State on each occasion, their readiness to sell weekly a stated amount of Reverse Councils (including telegraphic transfers) during periods of exchange weakness at a price based on the cost of shipping gold from India to the United Kingdom.

(33) The import and export of gold to and from India should be free from Government control.

(34) The statutory minimum for the metallic portion of the Paper Currency Reserve should be 40 per cent. of the gross circulation.

As regards the fiduciary portion of the reserve, the holding of securities issued by the Government of India should be limited to 20 crores. The balance should be held in securities of other Governments comprised within the British Empire, and of the amount so held not more than 10 crores should have more than one year's maturity and all should be redeemable at a fixed date. The balance of the invested portion above these 30 crores should be held in short-dated securities, with not more than one year's maturity, issued by Government within the British Empire.

The sterling investments and gold in the Paper Currency Reserve should be revalued at 2s. to the rupee. The depreciation which will result from this revaluation, cannot be made good at once, but any savings resulting from the rise in exchange will afford a suitable means of discharging this liability in a limited number of years.

(35) With a view to meeting the seasonal demand for additional currency, provision should be made for the issue of notes up to five crores over and above the normal fiduciary issue as loans to the Presidency Banks on the security of export bills of exchange.

Minority Report.—The main object of the Committee, it will be seen, was to secure a stable rate of exchange, without impairing the convertibility of the Note issue, and without debasing the standard silver rupee in India, or substituting another coin of inferior metallic content, which would be debasement in another form. In order to attain these ends it was imperative to fix a ratio for the rupee in relation to gold which would ensure that the Government was able to purchase silver for coining purposes without more than temporary loss. For reasons given in the report they fixed this point at two shillings gold: all other recommendations are subsidiary thereto. But in this they were not unanimous; an important member of the Committee, Mr Dadiba Dalal, of Bombay, appended a minority report in which he urged the adoption of the following courses:—

(a) The money standard in India should remain unaltered, that is, the standard of the sovereign and gold mohur with rupees related thereto at the ratio of 15 to 1.

(b) Free and unfettered imports and exports by the public of gold bullion and gold coins.

(c) Free and unfettered imports and exports by the public of silver bullion and silver coins.

(d) The existing silver rupees of 165 grains of fine silver at present in circulation to continue full legal tender.

(c) As long as the price of silver in New York is over 92 cents, Government should not manufacture silver rupees containing 165 grams fine silver.

(f) As long as the price of silver is over 92 cents Government should coin 2 rupee silver coins of reduced fineness compared with that of the present silver rupee and the same to be unlimited legal tender.

(g) Government to sell Council Bills by competitive tenders for the amount defined in the Budget as required to be remitted to the Secre-

tary of State. The Budget estimate to show under separate headings the amount of Council Bills drawn for Home Charges, for Capital Outlay and Discharge of Debt. Council Bills to be sold for Government requirements only and not for trade purposes, except for the purpose mentioned in the next succeeding recommendation

(h) "Reverse" drafts on London to be sold only at 1s 32d-32d. The proceeds of "Reverse" drafts to be kept apart from all other Government funds and not to be utilised for any purpose except to meet drafts drawn by the Secretary of State at a rate not below 1s 43-32d. per rupee

VI. THE TWO SHILLING RUPEE

The fundamental recommendation of the Committee was that the rupee should be linked to gold and not to sterling, in view of the decline in the value of sterling, that it should be linked at the rate of two shillings instead of the standard value, one and fourpence. All other recommendations were ancillary to this. But it is very important to bear in mind the twofold problem which confronted the Committee. It would be quite easy to fix any low ratio provided the paper currency were made inconvertible, or the rupee debased to such a point that the Government in providing rupee currency, were independent of the price of silver. But if the convertibility of the rupee were to be maintained, and if the rupee were not to be debased, it was essential that the new ratio should be one at which the Government could reasonably rely on purchasing without loss the silver necessary to meet the heavy demands for rupee in India. For reasons set out in the Report, the Committee came to the conclusion that the Government could reckon on purchasing silver for coining at a little under two shillings gold, and that powerfully influenced them in fixing the new ratio at two shillings gold.

The Report Adopted—The Currency Committee's Report was signed in December 1919, but it was not until February 1920 that action was taken thereon. In the first week of that month a Notification was issued in India accepting the principal recommendations in the Report and notifying that the necessary official action would be taken thereon. This action covered a wide field, but for the sake of clarity in this narrative we shall concentrate on the main issue the changing of the official monetary standard from fifteen rupees to the sovereign to ten rupees to the sovereign and its effect on Indian currency and trade. That may be summarised in a sentence. A policy which was avowedly adopted to secure fixity of exchange produced the greatest fluctuations in the exchanges of any solvent country and widespread disturbance of trade, heavy losses to Government, and brought hundreds of big traders to the verge of bankruptcy.

Financial Confusion—This result was produced by many causes. It has been explained above that the essential features of the Indian currency system are the free sales of Council Bills at gold export point in London to prevent exchange from rising above the official standard and the sale of Reverse Councils in India at gold export point to prevent exchange from falling below the official standard. Now when the

Currency Report was signed the Indian exchanges were practically at two shillings gold. But between the signing of the Report and the taking of official action, there was a sensational fall in the sterling exchanges, as measured in dollars, the dollar-sterling rate, inasmuch as America was the only free gold market, being the dominating factor in the situation. Consequently the Indian exchanges were considerably below the two shillings gold rate when the Notification accepting the Currency Committee's Report was issued. The Indian exchanges were two shillings and fourpence, and weak at that; the gold rate was about two shillings ninepence. There was an immediate and prodigious demand for Reverse Councils, to take advantage of this high rate of exchange, the market rate jumped up to two shillings eight pence.

Effect of the Rise—The effect of a rise in exchange has been well described in the words of the Currency Committee's Report, it is that a rising exchange stimulates imports and impedes exports, the effect of a falling exchange is the reverse.

Now when the official notification of the two shilling rupee was made the Indian export trade was weak. The great consuming markets of Great Britain and America were glutted with Indian produce. The continent of Europe, which was starved of Indian produce and in urgent need of it, had not the wherewithal to pay for it nor the means of commanding credit. The only Indian staples which were in demand were foodstuffs, and as the rains of 1920 failed over a wide area, the Government were not able to lift the embargo on the export for foodstuffs, save to a limited extent in the case of wheat. On the other hand, the import trade was strong. Orders had been placed for machinery and other manufactured goods during the war and after the Armistice for delivery at the discretion of manufacturers. These began to come forward.

Difficulties Accentuated—In accordance with the principles laid down by the Currency Committee these difficulties were accentuated by the action of Government in raising exchange by an administrative act. The weak export trade was almost killed. At the same time the temptation of a high exchange gave powerful stimulus to the import trade and orders were placed for immense quantities of manufactured goods, in which textiles filled an important place. Afterwards other forces intervened which accentuated the difficulties of the situation. There was a severe commercial crisis in Japan and this

checked the export of Indian cotton. Japan is the largest buyer of Indian cotton, and when her merchants not only stopped buying but began to re-sell in the Indian markets, the trade was severely shaken and stocks accumulated at a great rate. Even before the 1920 crop came into the market the stocks in Bombay were double those in the corresponding period of the previous year. The expectations of a revival in the buying power of the Continent which were held in many quarters were disappointed and throughout the year there was a heavy balance of trade against India, which made the stabilisation of exchange at the high ratio attempted a hopeless proposition.

Confession of Failure—Government struggled long against these conditions in the desperate hope that a revival of the export trade would come to their assistance, but they were further handicapped by the variations of the sterling-dollar exchange, which at one time took the rate for Reverse Councils to two shillings tenpence halfpenny. They sold two millions of Reverse Councils a week, then five millions, then dropped down to a steady million. But their policy only aggravated the situation. In addition to arresting the export trade and stimulating the import trade at a time when the precise converse was demanded, their action created an artificial movement for the transfer of capital from India to England. Large war profits accumulated in India since 1914 were hurriedly liquidated and transferred to England. Then the difference between the Reverse Council rate and the market rate, which on some occasions was several pence, induced gigantic speculations. The Exchange Banks set aside all their available resources for the purpose of bidding for Bills, and at once sold their allotments at substantial profits. Considerable groups of speculators pooled their resources and followed the same course. In this way the weekly biddings for the million of Reverse Councils varied from a hundred and 20 millions to a hundred and thirty millions and the money market was completely disorganised. The biddings assumed such proportions that it was necessary to put up fifty lakhs of rupees to obtain the smallest allotment made, five thousand pounds, and Reverse Councils and the large profits thereon came under the entire control of the Banks and the wealthy speculators. Various expedients were tried to remedy the situation but without the slightest effect.

Sterling for Gold—The first definite break from the recommendations of the Currency Committee came at the end of June, when the Government announced that instead of trying to stabilise the rupee at two shillings gold they would aim at stabilising it at two shillings sterling, leaving the gap between sterling and gold to be closed when the dollar-sterling rate became par. The effect of this was to alter the rate at which Reverse Councils were sold from the fluctuating rate involved in the fluctuations of dollar-sterling exchange to a fixed sterling rate, namely, one shilling elevenpence nineteen-thirty seconds. But this had little practical effect. The biddings for Reverse Councils continued on a very big scale and the market rate for exchange was always twopence or threepence below the Reverse Council rate. This practice continued until the end of September, when it was officially declared

that Reverse Councils would be stopped altogether. Exchange immediately slumped to between one and sixpence and one and sevenpence, and it continued to range between these narrow points until the end of the year. The market made its own rate; it made a more stable rate than the efforts of Government to attain an administrative stability.

Other Measures.—Apart from the effort to stabilise exchange, which had such unfortunate results, the policy of Government had certain other effects. During the year all restrictions on the movement of the precious metals were removed, in accordance with the recommendations of the Currency Committee. This included the abandonment of the import duty on silver, always a sore point with Indian bullionists. Legislative action was taken to alter the official ratio of the sovereign from fifteen to one to ten to one; due notice of this intention was given to holders of sovereigns and of the gold mohurs which were coined as an emergency measure in 1918, and they were given the option of tendering them at fifteen rupees. As the gold value of these coins was above fifteen rupees only a limited number was tendered, although there was extensive smuggling of sovereigns into India to take advantage of the premium. Then measures were adopted to give greater elasticity to the Note issue. Under the old law the invested proportion of the Note issue was fixed by statute and it could be altered only by altering the law or by Ordinance. An Act was passed fixing the metallic portion of the Paper Currency Reserve at fifty per cent. of the Note Issue, the invested portion being limited to Rs 20 crores in Indian securities and the balance in British securities of not more than twelve months' currency. The invested portion of the Paper Currency Reserve was revalued at the new rate of exchange, and an undertaking was given that the profits on the Note issue would be devoted to writing off the depreciation, as also would be the interest on the Gold Standard Reserve when the total had reached £40 millions. Further, in order to give greater elasticity to the Note issue, power was taken to issue Rs. 5 crores of emergency currency in the busy season against commercial bills. These measures, save the alteration of the ratio, were generally approved by the commercial public.

Results.—It remains to sum up the results of these measures. In a pregnant sentence in their report the Currency Committee say that whilst a fixed rate of exchange exercises little influence on the course of trade, a rising exchange impedes exports and stimulates imports, a falling exchange exercises a reverse influence. Here we have the key to the failure of the currency policy attempted. At the moment when it was sought suddenly and violently to raise the rate of exchange by the introduction of the new ratio of two shillings gold, the export trade was weak and the import trade in obedience to the delivery of long deferred orders was strong. The very principle enunciated by the Currency Committee wrecked the policy which they recommended. The rising rate of exchange scotched the weak export trade and gave a great stimulus to imports. Unexpected forces, such as the financial crisis in Japan, the lack of buying power on the Continent, and the movement for the transfer of capital from India to England at the

artificially high rate of exchange stimulated these forces, but they had their origin in the attempt by administrative action artificially and violently to raise the rate of exchange. If left alone, the natural fall in exchange would have tended to correct the adverse balance of trade, the official policy exaggerated and intensified it. The effects on Indian business were severe. Exporters found themselves loaded with produce for which there was no foreign demand, importers found themselves loaded up with imported goods, bought in the expectation of the continuance of a high rate of exchange, delivered when it had fallen one and fourpence from the highest point reached. Immense losses were incurred by all importers. The Government sold £55 millions of Reverse Councils before abandoning

their effort to stabilise exchange at the new ratio; the loss on these—that is the difference between the cost of putting the funds down in London and in bringing them back to India—was Rs 35 crores of rupees. Government sold £53 millions of gold, without breaking or seriously affecting the premium on gold. The Secretary of State, in the absence of any demand for Council Bills, was able to finance his expenditure in England only through the lucky chance of heavy expenditure on behalf of the Imperial Government for the forces in Mesopotamia—this expenditure being made in India and set off by payments in London. The only advantages were a considerable contraction of the Note issue and the silver token currency.

VII. COMMISSION OF 1925-26.

These unfortunate experiments induced a period of great caution in dealing with Indian currency. The currency quacks having had their way, and proved their ignorance, went out of the field, and the wholesome policy of leaving Exchange alone, to find its natural level, followed. Left alone Exchange established itself round about the old ratio of fifteen to one, that is one shilling and fourpence to the rupee. Meantime great improvements were made in the organisation of Indian credit. The three Presidency Banks were merged in the Imperial Bank of India, a State Bank in all but name, and the Bank entered into a contract with Government to open a hundred new branches in the first five years of its existence. The Bank mobilised and strengthened and widened Indian credit. The metallic backing of the Paper Currency was strengthened and the fiduciary portion of the Reserve brought within negligible proportions. Greater elasticity was established in the currency by the power to issue emergency currency up to Rs 12 crores against commercial paper endorsed by the Imperial Bank when there is a tightness of money, and the practice of also issuing emergency currency against sterling in England. The Government of India now purchases sterling in India to meet its Home Charges when the conditions are favourable, instead of relying entirely on the sales of Council Bills in London. A notable feature in Exchange history was the rise of Exchange, of its own strength, above the one and fourpenny figure. Towards the close of 1924 it gradually rose to one shilling and sixpence and stayed there.

At this figure Exchange was maintained by Government, though the state of trade might have led to a higher figure. But as the wholly artificial ratio of the two shilling rupee remained on the statute book, the demand for an authoritative inquiry to fix the ratio of the rupee to gold or sterling was insistent, and a Committee was appointed in the autumn of 1925. Of this Commander Hilton Young was chairman, with Sir Henry Strakosch as the chief gold expert. The personnel of the Committee was strongly criticised in India, on the ground that the Indian membership was inadequate, and that the individuals selected were not authoritative, a resolution was passed in the

Assembly hostile to the whole body. Nevertheless the Committee arrived in India in November 1925 and took evidence in Delhi, Bombay and Calcutta. It sailed for England in February 1926, and resumed its hearings in London, and reported on July 1st, 1926.

The main recommendations of this Commission are summarised in the actual report in the following terms, and they are textually reproduced in order that they may be above question—

(i) The ordinary medium of circulation should remain the currency note and the silver rupee and the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold, but gold should not circulate as money.

(ii) The necessity of unity of policy in the control of currency and credit for the achievement of monetary stability involves the establishment of a Central Banking system.

(iii) The Central Banking functions should be entrusted to a new organisation, referred to as the Reserve Bank.

(iv) Detailed recommendations are made as to the constitution and functions and capacities of the Bank.

(v) The outlines of a proposed charter are recommended to give effect to the recommendations which concern the Reserve Bank.

(vi) Subject to the payment of limited dividends and the building up of suitable reserve funds, the balance of the profits of the Reserve Bank should be paid over to the Government.

(vii) The Bank should be given the sole right of note issue for a period of (say) 25 years. Not later than five years from the date of the charter becoming operative, Government notes should cease to be legal tender except at Government Treasuries.

(viii) The notes of the Bank should be full legal tender, and should be guaranteed by Government. The form and material of the note should be subject to the approval of the Governor-General in Council. A suggestion is made as to the form of the note.

(xx) An obligation should be imposed by statute on the Bank to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required.

(x) The conditions which are to govern the sale of gold by the Bank should be so framed as to free it in normal circumstances from the task of supplying gold for non-monetary purposes. The method by which this may be secured is suggested.

(xi) The legal tender quality of the sovereign and the half-sovereign should be removed.

(xii) Government should offer "on tap" savings certificates redeemable in 3 or 5 years in legal tender money or gold at the option of the holder.

(xiii) The paper currency should cease to be convertible by law into silver coin. It should, however, be the duty of the Bank to maintain the free interchangeability of the different forms of legal tender currency, and of the Government to supply coin to the Bank on demand.

(xiv) One-rupee notes should be re-introduced and should be full legal tender.

(xv) Notes other than the one-rupee note should be legally convertible into legal tender money, i.e., into notes of smaller denomination or silver rupees at the option of the currency authority.

(xvi) No change should be made in the legal tender character of the silver rupee.

(xvii) The Paper Currency and Gold Standard Reserves should be amalgamated, and the proportions and composition of the combined Reserve should be fixed by statute.

(xviii) The proportional reserve system should be adopted. Gold and gold securities should form not less than 40 per cent of the Reserve, subject to a possible temporary reduction, with the consent of Government, on payment of a tax. The currency authority should strive to work to a reserve ratio of 50 to 60 per cent. The gold holding should be raised to 20 per cent of the Reserve as soon as possible and to 25 per cent within ten years. During this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape. Of the gold holding at least one-half should be held in India.

(xix) The silver holding in the Reserve should be very substantially reduced during a transitional period of ten years.

(xx) The balance of the Reserve should be held in self-liquidating trade bills and Government of India securities. The "created" securities should be replaced by marketable securities within ten years.

(xxi) A figure of Rs 50 crores has been fixed as the liability in respect of the contractibility in the rupee circulation. Recommendations are made to secure that an amount equal to one-fifth of the face value of any increase or decrease in the number of silver rupees in

issue shall be added to or subtracted from this liability, and the balance of profit or loss shall accrue to or be borne by the Government revenues.

(xxii) The Issue Department of the Reserve Bank should be kept wholly distinct from its Banking Department.

(xxiii) The Reserve Bank should be entrusted with all the remittance operations of the Government. The Secretary of State should furnish in advance periodical information as to his requirements. The Bank should be left free, at its discretion, to employ such method or methods of remittance as it may find conducive to smooth working.

(xxiv) During the transition period the Government should publish a weekly return of remittances made. A trial should be made of the system of purchase by public tender in India.

(xxv) The cash balances of the Government (including any balances of the Government of India and of the Secretary of State outside India), as well as the banking reserves in India of all banks operating in India, should be centralised in the hands of the Reserve Bank. Section 23 of the Government of India Act should be amended accordingly.

(xxvi) The transfer of Reserve assets should take place not later than 1st January 1929, and the Bank's obligation to buy and sell gold should come into operation not later than 1st January 1931.

(xxvii) During the transition period the currency authority (i.e., the Government until the transfer of Reserve assets and the Bank thereafter) should be under an obligation to buy gold and to sell gold or gold exchange at its option at the gold points of the exchange. This obligation should be embodied in statutory form, of which the outline is suggested.

(xxviii) Stabilisation of the rupee should be effected forthwith at a rate corresponding to an exchange rate of 1s 6d.

(xxix) The stamp duty on bills of exchange and cheques should be abolished. Bill forms, in the English language and the vernacular in parallel, should be on sale at post-offices.

(xxx) Measures should be taken to promote the development of banking in India.

(xxxi) Every effort should be made to remedy the deficiencies in the existing body of statistical data.

A Minute of Dissent—Whilst all the members of the Commission signed the report, one of their numbers, Sir Purshotamdas Thakurdas, did so subject to a minute of dissent. In the first part of this Minute Sir Purshotamdas subjected the long correspondence between the Government of India and the India Office on currency policy to a detailed analysis. The conclusions to which he came were that throughout the Government of India had striven for a system following the Fowler Report—a gold standard based on a gold currency, and that the efforts were emasculated by successive Secretaries of State, who had in view some which was often called the Gold

Exchange Standard, but which was in effect no standard at all. On the question of the Gold Standard, he stressed the importance of the free movement of gold in India, but subject to this condition accepted the Gold Bullion Standard recommended by his colleagues. As for the proposed Reserve Bank, Sir Purshotamdas, whilst recognising that the scheme proposed might be the ideal, to be attained in process of time, thought that the best immediate course was to develop the Imperial Bank into a central bank for India. The chief point of difference with his colleagues was however the ratio

Dealing with the ratio of the rupee to gold Sir Purshotamdas said that in September 1924 the rate was approximately one and fourpence gold. At that time the Government was pressed to stabilise at the then ratio, and thus legally to restore the long current legal standard of money payments. This it declined to do, and by limiting the supply of currency, the ratio was raised to one and sixpence gold by April 1925. He declined therefore to attach any importance to a ratio reached by such measures. Proceeding to analyse the course of prices and wages, he combated the conclusion of his colleagues that prices had adjusted themselves in a preponderant degree to one shilling and sixpence. For these reasons he recommended that the rupee should be stabilised at the rate which was current for nearly twenty years, namely one and fourpence. His conclusions were summarised in the following terms —

"I look upon the question of the ratio in this Report as being no less important than the question of the standard to be adopted for the Indian Currency System. I am convinced that if the absolute necessity of the free inflow of gold, which I have emphasised, is recognised, and steps taken to ensure it, the gold bullion standard proposed will be the correct one, and the likelihood of its breaking down under the strain of any convulsions in the future will be as remote as it can reasonably be. But I have very grave apprehensions that if the recommendation of my colleagues to stabilise the rupee at 1s 6d. is accepted and acted upon, India will be faced during the next few years with a disturbance in her economic organisation, the magnitude of which is difficult to estimate, but the consequences of which may not only hamper her economic development but may even prove disastrous. Such a disturbance and its consequences my colleagues do not foresee to-day. But the possibility of their occurring cannot be ignored. Until adjustment is complete, agriculture threatens to become unattractive and less remunerative than it is to-day, and industries will have to undergo a painful process of adjustment, unnatural, unwarranted and avoidable—an adjustment which will be much to their cost, and affect not only their stability and their progress, but in certain cases, their very existence. And should Nature have in store for India a couple of lean years after the four good harvests that we have had, during the period of forced adjustment to a rate of 1s 6d., the steps that the Currency Authority will have to take to maintain exchange at this rate may deplete

the gold resources of the country to an extent that may seriously shake the confidence of the people in the currency system recommended."

A Survey—The official summary of the Report, and the summary of the minute of dissent, given above, do not however convey an idea of the far-reaching proposals embodied therein. These can be appreciated only if they are examined in close relation to the currency system of India in its various phases since 1899. This was done in an article contributed to *The Bankers' Magazine* by Sir Stanley Reed, which was recognised to be a fair presentation of the position. The main features thereof are reproduced below. There is here some re-treading of the path laid out in the introductory section, but this is unavoidable, if the full bearing of the measures proposed by the Commission are to be appreciated. After describing the standard in force Sir Stanley Reed asked —

"What was the standard thus established? It is generally described in London as the Gold Exchange Standard. That status was never claimed for it by its principal protagonist, the late Sir Lionel Abrahams, who described it as a 'lumping standard'. The Royal Commission declares that 'in truth in so far as it amounted to a definite standard at all, it was a standard of sterling exchange'. Later they show that 'the automatic working of the exchange standard is thus not adequately provided for in India, and never has been. The fundamental basis of such a standard is provision for the expansion and contraction of the volume of currency. Under the Indian system, contraction is not, and never has been, automatic'."

"However, the standard lumped along until the third year of the war. The exchange value of the rupee was stable, prices adjusted themselves to the ratio, Indian trade and industry developed. From the narrow standpoint of profit and loss, the investment of the reserves, instead of keeping them in gold, resulted in a considerable gain to the finances estimated in 1925 at £17,962,466. But it had three great disadvantages: It did not inspire public confidence, it placed the Indian currency at the mercy of the silver market which was on occasion deliberately cornered against it, and it left the control of currency by the Government divorced from the control of credit by the Presidency Banks, afterwards amalgamated in the Imperial Bank of India. On this the Commission make a very suggestive comment 'when allowance has been made for all misunderstandings and misapprehensions, the fact remains that a large measure of distrust in the present system is justified by its imperfections'."

"There is, I think, an inadequate appreciation of the influence on the Indian currency and exchange of the war, and the action taken thereafter. The first break in the permanent ratio of one shilling and fourpence did not occur until 1917, when the full effect of dependence on the silver market was revealed. Faced by the unprecedented rise in the price of silver the Government of India had either to raise the price of Council Drafts or else abandon the

convertibility of the Note Issue Wisely, it took the former alternative; the price of Council Drafts followed the price of silver. The effect of this would have been transitory, but for the attempt in 1920, on the advice of the Babington Smith Committee, to stabilise the rupee at a new ratio of two shillings gold when all gold prices were crashing. It is easy to be wise after the event, but if the Government had followed silver down, as it followed silver up, there is no room to doubt that the rupee would have returned to its 'permanent' ratio with no more disturbance than was inevitable under war conditions. However, this was not done. The vain effort to stabilise the new ratio was abandoned in September, 1920, and the two shilling rupee has since been a legal fiction. Left free from administrative action, the rupee fell below one shilling and threepence sterling and one shilling gold in 1921. Since under the influence of good harvests, it has climbed upwards, and has been in the neighbourhood of one shilling and sixpence gold for the past twelve months. But it is not always realised in London that under these vicissitudes the Indian standard has legally perished. In the words of the report, 'The stability of the gold value of the rupee is thus based upon nothing more substantial than a policy of the Government, and at present that policy can be found defined in no notification or undertaking by the Government. It has to be implied from the acts of the Government in relation to the currency, and those acts are subject to no statutory regulation or control.'

"The responsibility remitted to the Commission was not therefore the mere stabilisation of the rupee, but the establishment of a standard which would command reasoned confidence in India, to link the rupee to that standard, and to provide for its statutory control, automatic working and stability, to bring the control of currency and of credit under a single authority and to free the Indian currency and exchange system from the dominance of the silver market. In short, it was to establish the rule of law in place of the practice of administrative discretion.

Scheme for Gold Currency—"In the course of their inquiries in India the Commission had placed before them a scheme for the immediate establishment of a gold bullion standard, and its early conversion into the gold standard supported by the gold currency which a large body of Indian opinion has insistently demanded. The scheme was presented by the officials of the Finance Department, but it is known to be the work of the Finance Member, Sir Basil Blackett, whose work in India is of the greatest value.

"The essential features of this Scheme were the undertaking of a statutory obligation by Government to buy and sell gold bullion in 400 oz bars; as soon as sufficient gold was available to put a gold coin in circulation; after a period tentatively fixed at five years to undertake to give gold coin in exchange for notes and rupees, and after a further period, also tentatively fixed at five years, make the silver rupee legal tender only for sums up to a small fixed amount. The scheme involved the

disposal of 200 crores of silver rupees, or 687 million fine ounces, in ten years, the acquisition in all of £103 millions of gold, and the establishment of credits in London or New York. The cost was estimated at one and two-thirds crores of rupees per annum during the first five years and thereafter from two-thirds of a crore to 1 12 crores.

"This scheme is subjected by the Commission to a detailed examination, and rejected on grounds which are convincing. The main grounds for this decision are that the estimates of the amount and time of the gold demand are uncertain, and the absorption by India of this £103 millions of gold, in addition to the normal absorption for the arts, hoards, etc., would powerfully react on the supplies of credit, the rates of interest, and gold prices, throughout the world. The reaction on the silver market from the dethronement of the rupee and realisation of this large quantity of silver bullion would be even more marked, with severely prejudicial effects on the silver hoards of the people of India and the exchanges with China, where India still does a large business. Moreover, the capacity to raise the required credits is doubtful, and the cost is placed by the India Office at Rs 3 crores a year.

"The evidence of the highest financial authorities in London and New York established beyond doubt that it is not in the interests of India to precipitate any currency reform that would violently disturb the gold and silver markets, however desirable that reform might be in itself. Also, that whilst London, working in close harmony with New York, would strain every nerve to supply India with the funds she might require for her own development, it could hardly be expected to provide credits for a scheme which would upset the gold and silver markets. But whilst on these grounds the Commission were not able to endorse Sir Basil Blackett's scheme, there is no doubt that they were profoundly influenced by it in their own recommendations. The ultimate evolution of a policy which promises a cure for India's currency ills is therefore in large measure due to the courage and resolution with which the Finance Authorities in that country faced them.

A Gold Bullion Standard—"The currency system recommended by the Commission is a gold bullion standard. They propose that an obligation shall be imposed by statute on the currency authority to buy and sell gold without limit at rates determined with reference to a fixed gold parity of the rupee, but in quantities of not less than 400 fine ounces, no limitation being imposed as to the purpose for which the gold is required. The essence of this proposal is "that the ordinary medium of circulation in India should remain as at present the currency note and the silver rupee, and that the stability of the currency in terms of gold should be secured by making the currency directly convertible into gold for all purposes, but that gold should not circulate as money. It must not circulate at first, and it need not circulate ever." In breaking adrift from any idea of a sterling exchange, or gold exchange standard, the Commission were powerfully influenced by two factors—the necessity of safeguarding the

Indian system from the price of silver rising above the melting point of the rupee and the desirability of establishing confidence by giving the country not only a real, but conspicuously visible link between the currency and gold.

"This reasoning is eminently sound, and the scheme in its broad outlines should command the unhesitating support not only of India, but of all interested in Indian trade. India will have nothing to do with any exchange standard, its experience has been too painful. Proposals to that end would be rejected by the legislature and prolong the currency controversies it is desired to close. The gold bullion standard satisfies all the country's real needs. True, it will not give it the gold mint and the gold currency which have long been demanded, it involves the demonetization of the sovereign to which a sentimental influence attaches. But whilst it does not do these things, it keeps the door open. No-one contends that a gold standard and a gold currency are immediately practicable. The most rapid progress thereto is embodied in Sir Basil Blackett's scheme, which is full of uncertainties and risks. But when the gold reserves are strengthened to the requisite point, the proposals leave India perfectly free to decide, through her legislature, where a gold currency is worth the expense.

"We must, however, face the obligation which a gold bullion standard imposes on the currency authority in India, indeed the Commission do not attempt to burke it. 'The obligation is to convert the currency, not merely into foreign exchange, but into metallic gold, and it is an obligation that is not, as formerly, conditional and circumscribed, but absolute and unlimited. Nevertheless, . . . it has been undertaken by every other country that has adopted an effective gold standard, and we have satisfied ourselves that the present resources in the form of reserves at the disposal of the Government of India are adequate to enable the currency authority safely to undertake the obligation, with the measures of fortification, and at the time, which we specify.' It is important, therefore, to examine the reserves and the procedure thereat.

"The reserves held for the purpose of maintaining the value of the token currency are twofold—the Paper Currency Reserve and the Gold Standard Reserve. Their constitution on April 30, 1926 (the date taken by the Commission), was as follows—

Paper Currency Reserve

	Rs	Crores
Silver coin	77	0
Silver bullion	7	7
Gold coin and bullion	22	3
Rupee securities	57	1
Sterling securities	21	0
	185	1

(The gold coin and bullion and the sterling securities are converted at the legal fiction ratio of two shillings per rupee.)

"The Gold Standard Reserve amounts at present to £40,000,000 invested in Gold and in British Treasury Bills and other sterling securities.

"In theory the two reserves fulfil entirely different functions. The Paper Currency Reserve is the backing for the Note Issue. The Gold Standard Reserve, accumulated from the profits on coining, is designed to maintain the external value of the rupee. In practice their action is closely interlocked, and the first line of defence in the event of a demand for remittance from India is the gold in the paper currency reserve. This invisible line of demarcation will disappear if the Commission's proposals are adopted. The Commission are justified in recommending that the two shall be amalgamated. Their further proposals are that the proportions and composition of the combined Reserve should be fixed by statute, that gold and gold securities should form not less than 40 per cent of the whole, with 50 to 60 per cent as the ideal, and that the holding of gold, which now stands at about 12·8 per cent, should be raised to 20 per cent as soon as possible, and to 25 per cent in ten years. Generally, they are of opinion that during this period no favourable opportunity of fortifying the gold holding in the Reserve should be allowed to escape.

"The proposal to bring the combined Reserve under statutory control is wise; an arguable case could be made out for the thesis that the currency difficulties of India have arisen in the main from the decision of Lord Curzon's Government not to invest the official acceptance of the Fowler Report with legislative authority. The strengthening of the gold reserves is in entire accord with Indian needs.

The Ratio.—"The majority of the Commission, Sir Purnohotamdas Thakordas being the only dissident, recommend that the rupee be stabilised in relation to gold at a rate corresponding to an exchange rate of one shilling and sixpence to the rupee. Round this point controversy in India will be concentrated; it is worth while to refresh our memories of the history of the ratio. The Fowler Committee recommended that the rupee should be permanently stabilised at one shilling and fourpence, the Secretary of State for India accepted their recommendations without qualification. The rupee was substantially steady at this point until August 1917.

"One principle advanced in Sir Dadiba Dalal's prophetic minority report in 1919, that the legal standard of money payments should be, and usually is, regarded as less open to repeal or modification than any other legislative Act, will command general acceptance. But when Sir Dadiba went on to suggest that the Government of India might have avoided this measure by larger borrowings in India and encouraging investment abroad he was on ground where no one in touch with Indian conditions can follow him. In the circumstances of the day the Government had no alternative to raising the rate of exchange save in declaring the rupee inconvertible, which during the war would have been disastrous. I must reiterate the belief that the real mischief was done not when the rate of exchange was raised to meet the rise in silver, but when it was not lowered as silver fell, the attempt to stabilise the

at the two shilling rate caused the Government of India large losses, and inflicted a terrible blow on trade; after it was abandoned in September, 1920, the rupee fell below one shilling and threepence sterling and one shilling gold. Thereafter, under the influence of a succession of abundant harvests, it recovered. In 1923, it was one shilling and fourpence sterling, in October, 1924 one and sixpence sterling and one and four gold. With the rise in the pound to gold parity, the rupee reached one and sixpence gold in June, 1925, and has remained there.

"It is not, I think, open to doubt that if the vain attempt to stabilise the rupee at two shillings had not been made in 1920, or if advantage had been taken of its return to one and four, the permanent standard might have been re-established without undue disturbance. Sir Purshotamdas Thakordas asserts in his minute of dissent that 'the Executive had made up their minds to work up to a one shilling and sixpence ratio long before this Commission was appointed to examine the question. Indeed, they have presented to us the issue in this regard as a *fait accompli*, achieved by them, not having hesitated by manipulation to keep up the rate even while we were in session. I cannot conceive of any parallel to such a procedure in any country'.

"It is to my mind a great misfortune that the opportunity of restoring the permanent ratio of one and four was not seized when it offered. Not because there is any special sanctity in a ratio as such but because there is a sanctity in the legal standard of money payments. If this had been done the Commission's scheme would have received practically unanimous support in India, as it is a violent controversy will rage round this secondary issue, obscuring the great merit of the Commission's basic recommendation on a true gold standard, statutory in its composition and automatic in action, with the coalescence of the currency and credit authorities. However, we have to deal with facts as we find them. The majority of the commission base their recommendation on the 'conviction, which has been formed and cumulatively reinforced during the progress of our inquiry, that at the present exchange rate of about one shilling and sixpence, prices in India have already attained a substantial measure of adjustment with those in the world at large, and as a corollary, that any change in the rate would mean a difficult period of readjustment, involving widespread economic disturbance, which it is most desirable in the interests of the people to avoid, and which would in the end be followed by no countervailing advantage'. Sir Purshotamdas Thakordas, in a closely-reasoned minute of dissent, supported by a wealth of figures, avers—and to my mind with conclusive force that the adjustments are far from complete, and cannot be completed in regard to wages without disastrous labour disputes. Both sides admit that their conclusions are weakened by the unreliability of the Indian index figures.

"The truth, I suggest, lies between these two contentions. There have been very substantial adjustments to one shilling and sixpence; no ratio could be operative for over a year without inducing this result. But it is clear that the adjustments, especially in regard to wages in

Western India, are not complete. In the matter of the indebtedness of the agricultural classes of India—seventy per cent of the whole population there has been no adjustment, not in relation to the land revenue they pay to Government. The ratio therefore cannot be determined as a question of academic principle, but is a matter of expediency.

"Here, it seems to me, the decisive factor is the economic consequence of a return to one shilling and fourpence. There is no half-way house, the rate must be either the *de facto* one of one and sixpence, or the old permanent ratio of one and fourpence. The change would be immediate not a matter of weeks or months but of hours or minutes. There would be an immediate rise in prices of twelve and a half per cent., with a consequent reduction of real wages by that proportion, there would be convulsive disturbance of the foreign trade, there would be violent speculation. I omit all calculation of the effect of the lower rate on the finances of the Government of India, because this is an influence which has been over-valued in the past, it is infinitesimal in comparison with the industrial and commercial interests involved. No one who realises the sensitiveness of the Indian market, and the proneness to speculation, can contemplate these violent disturbances without a feeling akin to dismay. The balance of advantage lies with stabilisation at one and six, the controversy which must ensue is part of the price to be paid for the neglect to re-establish the permanent ratio when it was practicable.

The Note Issue—"Before the war there was a considerable and growing circulation of sovereigns. On the outbreak of hostilities these disappeared as currency, the actual currency of India is a token, the silver rupees and another token, the note convertible into rupees. Ever since the breakaway from the accepted gold standard this obligation has imposed serious difficulties on the currency. It drove it into the very heavy coming which followed recovery from the famine of 1899-1900; it compelled heavy purchases of silver, which invariably rose in prices as the Government came into the market, and it placed the Indian currency system, as occurred during the war, at the mercy of the silver market. The maintenance of the convertibility of the note into silver rupees of the present fineness is only possible so long as silver does not rise above 48s. an ounce. The removal of this anomalous provision, the Commission say, is an essential step in Indian currency reform which must be taken sooner or later. 'No opportunity for the termination of this obligatory convertibility is likely to be so favourable at the present when, by making the notes convertible into gold bars for all purposes, a more solid right of convertibility is attached to them than they have ever had since silver ceased to be a reliable standard of value.' Both propositions can be accepted in their entirety.

"The rise in the volume of the paper currency is one of the most remarkable features in Indian financial history. It developed from no change in the status of the note itself, it was always convertible on demand; but from increased facilities for the encashment of notes, beginning with the introduction of universal notes of small de-

nomination and steadily progressing as experience was gained. We can therefore endorse the conclusion of the Commission that the best way to foster the use of currency notes is to establish confidence in their practical convertibility, 'and this confidence has been secured not so much by a legal obligation to encash them at currency offices as by making rupees readily available to the public at centres where there is a demand for them'

"The Commission therefore propose that whilst the legal obligation to convert into rupees all the notes in circulation shall remain, this obligation should not attach to the new notes to be issued by the Central Bank, and coincidentally the one-rupee note, which had acquired great popularity before it was discontinued on the ground of economy, shall be re-issued. The legal obligation on the Central Bank will be to give legal tender money, either notes of smaller denominations or silver rupees, at its option, but it will be the duty of the Bank to supply rupees freely in such quantities as may be required for circulation, and of the Government to furnish the Bank with such coin. The currency position is such that the change in the legal status of the note will be unfelt. India is suffering from a surfeit of rupees, the total volume of which is estimated at approximately Rs 400 crores. There are Rs 85 crores of silver coin and bullion in reserve. The whole tendency will be in the direction of a return of rupees to the reserve rather than to an appetite therefor. Not only will there exist the fullest capacity to supply rupees on demand, but there will be a positive inducement to the currency authority to encourage a demand for rupees in order to get rid of its redundant stock. It is clear that the present opportunity of freeing the currency authority from the dependence on the silver market which has hampered India for so many years is exceptionally favourable, and should be seized without hesitation."

The reception of the Report followed very closely the lines indicated as probable in the article in *The Bankers' Magazine* which we have quoted extensively above. There was a considerable protest, strongest in Western India but shared in other parts of the country, against the proposal to stabilise the rupee at one shilling and sixpence and a demand for a reversion to one and fourpence. There was, particularly in Bombay, a reluctance to agree to the establishment of the Reserve Bank, coupled with the desire that the Imperial Bank of India should be re-moulded in order to make it the Central Bank, with the functions proposed to be remitted to the Reserve Bank. These voices were so loud that they overbore the consideration of the basic recommendations of the Report, a true gold standard, and the establishment of an organisation which would link currency with credit.

In August 1926 the Government published the text of a Bill designed to fix the ratio at one and six, and to support it by the sale of bullion on the lines laid down in the Report. At the request of a large body of opinion in the Legislative

Assembly, which urged that there had not been time to study the Report and that the papers were not available, the discussion of this measure was postponed until the 1927 session. On November 18th the Government of India issued a notification to the following effect —

"After considering the report of the Royal Commission on Indian Currency and Finance, the Secretary of State for India in Council in agreement with the Government of India, is prepared to accept as a whole the recommendations of the Commission, subject to such further consideration of details as may prove to be necessary. The necessary legislation to give effect to these recommendations will be introduced in the Indian Legislature during the forthcoming session "

The New Ratio — So far from closing the discussion, this notification intensified it. Feeling ran high on the subject of the ratio, considerable interests in the country being convinced that one shilling and sixpence was a higher rate than the manufacturing and agricultural industries could bear without prolonged and disastrous readjustment. These found strong expression when the Bill to give effect to the new rate was brought before the Legislative Assembly in February-March 1927. The Indian Currency Bill was, however, accepted by the Assembly by a small majority, and adopted by the Council of State. It established the ratio of one shilling and sixpence by enacting that the Government would purchase gold at a price of twenty-one rupees three annas ten ples per tola of fine gold in the form of bars containing not less than forty tolas and would sell gold or, at the option of Government, sterling for immediate delivery in London at the same price after allowing for the normal cost or transport from Bombay to London. A rate of one shilling five pence forty-nine sixty-fourths was notified as Government's selling rate for sterling to meet these obligations.

Exchange has since remained stable at the one and sixpenny rate. World trade depression in the slump of 1930 made it increasingly difficult for the Government of India to maintain the statutory ratio, but their difficulties were solved when Great Britain went off the Gold standard in September 1931, and the rupee was linked to sterling. Since then, large exports of commercial and hoarded gold from India have served to keep the exchange ratio stable, despite much agitation for a reversion to the 1s 4d ratio by interested parties. Generally speaking, the tendency in the last ten years has been for the rupee to be worth more than 1s 6d, and thus Government have found no difficulty in maintaining a stable exchange. Since the outbreak of the war in September 1939, official restrictions on exchange operations have perforce increased and caused some inconvenience to businessmen. But the rupee continues to maintain its strength and there is little doubt that, left to itself, it would appreciate in terms of foreign currencies rather than depreciate.

THE RESERVE BANK.

The following Act of the Indian Legislature received the assent of the Governor-General on March 6, 1934, and is known as the Reserve Bank of India Act, 1934.—

Whereas it is expedient to constitute a Reserve Bank for India to regulate the issue of bank notes and the keeping of reserves with a view to securing monetary stability in British India and generally to operate the currency and credit system of the country to its advantage;

And whereas in the present disorganisation of the monetary systems of the world it is not possible to determine what will be suitable as a permanent basis for the Indian monetary system,

But whereas it is expedient to make temporary provision on the basis of the existing monetary system, and to leave the question of the monetary standard best suited to India to be considered when the international monetary position has become sufficiently clear and stable to make it possible to frame permanent measures;

It is hereby enacted as follows:—

(1) A Bank to be called the Reserve Bank of India shall be constituted for the purposes of taking over the management of the currency from the Governor-General in Council and of carrying on the business of banking in accordance with the provisions of this Act

(2) The Bank shall be a body corporate by the name of the Reserve Bank of India, having perpetual succession and a common seal, and shall by the said name sue and be sued

Share Capital—(1) The original share capital of the Bank shall be five crores of rupees divided into shares of one hundred rupees each, which shall be fully paid up

(2) Separate registers of shareholders shall be maintained at Bombay, Calcutta, Delhi, Madras and Rangoon, and a separate issue of shares shall be made in each of the areas served by those registers, as defined in the First Schedule, and shares shall be transferable from one register to another

(3) A shareholder shall be qualified to be registered as such in any area in which he is ordinarily resident or has his principal place of business in India, but no person shall be registered as a shareholder in more than one register, and no person who is not—

(a) domiciled in India and either an Indian subject of His Majesty, or a subject of a State in India, or

(b) a British subject ordinarily resident in India and domiciled in the United Kingdom or in any part of His Majesty's Dominions the government of which does not discriminate in any way against Indian subjects of His Majesty, or

(c) a company registered under the Indian Companies Act, 1913, or a society registered under the Co-operative Societies Act, 1912, or any other law for the time being in force in British India relating to co-operative societies

or a scheduled bank, or a corporation or company incorporated by or under an Act of Parliament or any law for the time being in force in any part of His Majesty's Dominions the government of which does not discriminate in any way against Indian subjects of His Majesty, and having a branch in British India, shall be registered as a shareholder or be entitled to payment of any dividend on any share, and no person, who, having been duly registered as a shareholder, ceases to be qualified to be so registered, shall be able to exercise any of the rights of a shareholder otherwise than for the purpose of the sale of his shares.

(4) The Governor-General in Council shall, by notification in the Gazette of India, specify the parts of His Majesty's Dominions which shall be deemed for the purposes of clauses (b) and (c) of sub-section (3) to be the Parts of His Majesty's Dominions in which no discrimination against Indian subjects of His Majesty exists.

(5) The nominal value of the shares originally assigned to the various registers shall be as follows, namely:—

(a) to the Bombay register—one hundred and forty lakhs of rupees;

(b) to the Calcutta register—one hundred and forty-five lakhs of rupees;

(c) to the Delhi register—one hundred and fifteen lakhs of rupees;

(d) to the Madras register—seventy lakhs of rupees,

(e) to the Rangoon register—thirty lakhs of rupees

Provided that if at the first allotment the total nominal value of the shares on the Delhi register for which applications are received is less than one hundred and fifteen lakhs of rupees, the Central Board shall, before proceeding to any allotment, transfer any shares not applied for up to a maximum nominal value of thirty-five lakhs of rupees from that register in two equal portions to the Bombay and the Calcutta register. -

A Committee consisting of two elected members of the Assembly and one elected member of the Council of State to be elected by non-official members of the respective Houses shall be associated with the Central Board for the purpose of making public issue of shares and looking after the first allotment of shares

(6) In allotting the shares assigned to a register, the Central Board shall, in the first instance allot five shares to each qualified applicant who has applied for five or more shares, and, if the number of such applicants is greater than one-fifth of the total number of shares assigned to the register, shall determine by lot the applicants to whom the shares shall be allotted.

(7) If the number of such applicants is less than one-fifth of the number of shares assigned to the register, the Central Board shall allot the remaining shares firstly, up to the limit of one-

half of such remaining shares, to those applicants who have applied for less than five shares, and thereafter as to the balance to the various applicants in such manner as it may deem fair and equitable, having regard to the desirability of distributing the shares and the voting rights attached to them as widely as possible

(8) Notwithstanding anything contained in sub-sections (6) and (7), the Central Board shall reserve for and allot to Government shares of the nominal value of two lakhs and twenty thousand rupees to be held by Government for disposal at par to Directors seeking to obtain the minimum share qualification required under sub-section (2) of section 11.

(9) If, after all applications have been met in accordance with the provisions of sub-sections (6), (7) and (8), any shares remain unallotted, they shall, notwithstanding anything contained in this section, be allotted to and taken up by Government, and shall be sold by the Governor-General in Council as soon as may be, at not less than par, to residents of the areas served by the register concerned

(10) The Governor-General in Council shall have no right to exercise any vote under this Act by reason of any shares allotted to him under sub-section (8) or under sub-section (9)

(11) A Director shall not dispose of any shares obtained from Government under the provisions of sub-section (8) otherwise than by re-sale to Government at par, and Government shall be entitled to re-purchase at par all such shares held by any Director on his ceasing from any cause to hold office as Director.

Increase and reduction of share capital—(1) The share capital of the Bank may be increased or reduced on the recommendation of the Central Board, with the previous sanction of the Governor-General in Council and with the approval of the Central Legislature, to such extent and in such manner as may be determined by the Bank in general meeting

(2) The additional shares so created shall be of the nominal value of one hundred rupees each and shall be assigned to the various registers in the same proportions as the shares constituting the original share capital

(3) Such additional shares shall be fully paid up, and the price at which they may be issued shall be fixed by the Central Board with the previous sanction of the Governor-General in Council

(4) The provisions of section 4 relating to the manner of allotment of the shares constituting the original share capital shall apply to the allotment of such additional shares, and existing shareholders shall not enjoy any preferential right to the allotment of such additional shares

The Bank shall, as soon as may be, establish offices in Bombay, Calcutta, Delhi, Madras and Rangoon and a branch in London, and may establish branches or agencies in any other place in India or, with the previous sanction of the Governor-General in Council, elsewhere

The general superintendence and direction of the affairs and business of the Bank shall be entrusted to a Central Board of Directors which

may exercise all powers and do all acts and things which may be exercised or done by the Bank and are not by this Act expressly directed or required to be done by the Bank in general meeting

(1) The Central Board shall consist of the following Directors namely—

(a) a Governor and two Deputy Governors, to be appointed by the Governor-General in Council after consideration of the recommendations made by the Board in that behalf

(b) four Directors to be nominated by the Governor-General in Council

(c) eight Directors to be elected on behalf of the shareholders on the various registers, in the manner provided in section 9 and in the following numbers, namely—

- (i) for the Bombay register—two Directors,
- (ii) for the Calcutta register—two Directors,
- (iii) for the Delhi register—two Directors,
- (iv) for the Madras register—one Director,
- (v) for the Rangoon register—one Director,

(d) one government official to be nominated by the Governor-General in Council

(2) The Governor and Deputy Governors shall devote their whole time to the affairs of the Bank, and shall receive such salaries and allowances as may be determined by the Central Board, with the approval of the Governor-General in Council

(3) A Deputy Governor and the Director nominated under clause (d) of sub-section (1) may attend any meeting of the Central Board and take part in its deliberations but shall not be entitled to vote

Provided that when the Governor is absent a Deputy Governor authorized by him in this behalf in writing may vote for him

(4) The Governor and a Deputy Governor shall hold office for such term not exceeding five years as the Governor-General in Council may fix when appointing them, and shall be eligible for re-appointment

A Director nominated under clause (b) or elected under clause (c) of sub-section (1) shall hold office for five years, or thereafter until his successor shall have been duly nominated or elected, and, subject to the provisions of section 10, shall be eligible for re-nomination or re-election

A Director nominated under clause (d) of sub-section (1) shall hold office during the pleasure of the Governor-General in Council

(5) No act or proceeding of the Board shall be questioned on the ground merely of the existence of any vacancy in, or any defect in the constitution of the Board

Local Boards—(1) Local Board shall be constituted for each of the five areas specified in the First Schedule, and shall consist of—

- (a) five members elected from amongst themselves by the shareholders who are registered on the registers for that area and are qualified to vote, and

unless, within two months of the date of his appointment, nomination or election, he ceases to be such member, and, if any Director or member of a Local Board is elected or nominated as a member of any such Legislature, he shall cease to be a Director or member of the Local Board as from the date of such election or nomination, as the case may be

(6) A Director may resign his office to the Governor-General in Council, and a member of a Local Board may resign his office to the Central Board, and on the acceptance of the resignation the office shall become vacant

(1) If the Governor or a Deputy Governor by infirmity or otherwise is rendered incapable of executing his duties or is absent on leave or otherwise in circumstances not involving the vacation of his appointment, the Governor-General in Council may, after consideration of the recommendations made by the Central Board in this behalf, appoint another person to officiate for him, and such person may, notwithstanding anything contained in clause (d) of sub-section (1) of section 10, be an officer of the Bank

(2) If an elected Director is for any reason unable to attend a particular meeting of the Central Board, the elected members of the Local Board of the area which he represents may elect one of their number to take his place, and for the purposes of that meeting the substitute so elected shall have all the powers of the absent Director.

(3) Where any casual vacancy in the office of any member of a Local Board occurs otherwise than by the occurrence of a vacancy in the office of a Director elected by the Local Board, the Central Board may nominate thereto any qualified person recommended by the elected members of the Local Board

(4) Where any casual vacancy occurs in the office of a Director other than the vacancies provided for in sub-section (1), the vacancy shall be filled, in the case of a nominated Director by nomination, and in the case of an elected Director by election held in the manner provided in section 9 for the election of Directors

Provided that before such election is made the resulting vacancy, if any, in the Local Board and any vacancy in the office of an elected member of such Board which may have been filled by a member nominated under sub-section (3) shall be filled by election held as near as may be in the manner provided in section 9 for the election of members of a Local Board

(5) A person nominated or elected under this section to fill a casual vacancy shall be subject to the proviso contained in sub-section (4), hold office for the unexpired portion of the term of his predecessor

(1) Meetings of the Central Board shall be convened by the Governor at least six times in each year and at least once in each quarter

(2) Any three Directors may require the Governor to convene a meeting of the Central Board at any time and the Governor shall forthwith convene a meeting accordingly

(3) The Governor, or in his absence the Deputy Governor authorized by the Governor under the proviso to sub-section (1) of section 8 to vote

for him, shall preside at meetings of the Central Board, and, in the event of an equality of votes, shall have a second or casting vote

General Meetings—(1) A general meeting (hereinafter in this Act referred to as the annual general meeting) shall be held annually at a place where there is an office of the Bank at least six weeks from the date on which the annual accounts of the Bank are closed, and a special meeting may be convened by the Central Board at any other time

Provided that the annual general meeting shall not be held on two consecutive occasions at any one place

(2) The shareholders present at a general meeting shall be entitled to discuss the annual accounts, the report of the Central Board on the working of the Bank throughout the year and the auditors' report on the annual balance sheet and accounts

(3) Every shareholder shall be entitled to attend at any general meeting and each shareholder who has been registered on any register, for a period of not less than six months ending with the date of the meeting, as holding five or more shares shall have one vote and on a poll he shall have one vote for each five shares, but not more than a maximum of ten votes and such vote may be exercised by proxy appointed on each of the shares for that purpose, such proxy being held by a shareholder entitled to vote at the meeting and not being an officer or employee of the Bank

(1) The following provisions shall apply to the first constitution of the Central Board, notwithstanding anything contained in section 8, the Central Board as constituted in accordance therewith shall be deemed to be duly constituted in accordance with this Act

(2) The first Governor and the first Deputy Governor or Deputy Governors shall be appointed by the Governor-General in Council on his own initiative, and shall receive such salaries and allowances as he may determine

(3) The first eight Directors shall be appointed by shareholders on the various reserves and shall be nominated by the Governor-General in Council from the areas served respectively, and the Directors so nominated shall hold office until their successors are duly elected as provided in sub-section (4)

(4) On the expiry of each year, or of twelve months after the termination of the term of office of any Director, the Director shall be re-elected under sub-section (3) two Directors shall be elected in the manner provided in section 9 for the election of Directors so nominated have been elected by the Central Board, and the Directors so elected shall hold office until their successors are duly elected as provided in sub-section (4)

As soon as may be after the commencement of this Act, the Central Board shall be constituted by the Governor-General in Council, and may, in order to constitute the Local Boards, elect such persons as it may think fit to be members of such Local Boards, and such persons shall be treated as if they were shareholders of the Bank

members of such Local Boards shall hold office up to the date fixed under sub-section (8) of section 9 but shall not exercise any right under sub-section (7) of that section.

Business—The Bank shall be authorized to carry on and transact the several kinds of business hereinafter specified, namely—

(1) the accepting of money on deposit without interest from, and the collection of money for, the Secretary of State in Council, the Governor-General in Council, Local Governments, States in India, local authorities, banks and any other persons;

(2) (a) the purchase, sale and rediscount of bills of exchange and promissory notes, drawn on and payable in India and arising out of *bona fide* commercial or trade transactions bearing two or more good signatures, one of which shall be that of a scheduled bank, and maturing within ninety days from the date of such purchase or rediscount, exclusive of days of grace;

(b) the purchase, sale and rediscount of bills of exchange and promissory notes, drawn and payable in India and bearing two or more good signatures, one of which shall be that of a scheduled bank, or a provincial co-operative bank, and drawn or issued for the purpose of financing seasonal agricultural operations or the marketing of crops, and maturing within nine months from the date of such purchase or rediscount, exclusive of days of grace,

(c) the purchase, sale and rediscount of bills of exchange and promissory notes drawn and payable in India and bearing the signature of a scheduled bank, and issued or drawn for the purpose of holding or trading in securities of the Government of India or a Local Government, or such securities of States in India as may be specified in this behalf by the Governor-General in Council on the recommendation of the Central Board, and maturing within ninety days from the date of such purchase or rediscount, exclusive of days of grace;

(3) (a) the purchase from and sale to scheduled banks of sterling in amounts of not less than the equivalent of one lakh of rupees,

(b) the purchase, sale and rediscount of bills of exchange (including treasury bills) drawn in or on any place in the United Kingdom and maturing within ninety days from the date of purchase, provided that no such purchase, sale or rediscount shall be made in India except with a scheduled bank, and

(c) the keeping of balances with banks in the United Kingdom,

(4) the making to States in India, local authorities, scheduled banks and provincial co-operative banks of loans and advances, repayable on demand or on the expiry of fixed periods not exceeding ninety days, against the security of—

(a) stocks, funds and securities (other than immovable property) in which a trustee is authorized to invest trust money by any Act of Parliament or by any law for the time being in force in British India;

(b) gold or silver or documents of title to the same;

(c) such bills of exchange and promissory notes as are eligible for purchase or rediscount by the Bank;

(d) promissory notes of any scheduled bank or a provincial co-operative bank, supported by documents of title to goods which have been transferred, assigned, or pledged to any such bank as security for a cash credit or overdraft granted for *bona fide* commercial or trade transactions, or for the purpose of financing seasonal agricultural operations or the marketing of crops;

(5) the making to the Governor-General in Council and to such Local Governments as may have the custody and management of their own provincial revenues of advances repayable in each case not later than three months from the date of the making of the advance,

(6) the issue of demand drafts made payable at its own offices or agencies and the making, issue and circulation of bank post bills;

(7) the purchase and sale of Government securities of the United Kingdom maturing within ten years from the date of such purchase,

(8) the purchase and sale of securities of the Government of India or of a Local Government of any maturity or of such securities of a local authority in British India or of such States in India as may be specified in this behalf by the Governor-General in Council on the recommendation of the Central Board

Provided that securities fully guaranteed as to principal and interest by the Government of India, a Local Government, a local authority or a State in India shall be deemed for the purposes of this clause to be securities of such Government, authority or State;

Provided further that the amount of such securities held at any time in the Banking Department shall be so regulated that—

(a) the total value of such securities shall not exceed the aggregate amount of the share capital of the Bank, the Reserve Fund and three-fifths of the liabilities of the Banking Department in respect of deposits,

(b) the value of such securities maturing after one year shall not exceed the aggregate amount of the share capital of the Bank, the Reserve Fund and two-fifths of the liabilities of the Banking Department in respect of deposits; and

(c) the value of such securities maturing after ten years shall not exceed the aggregate amount of the share capital of the Bank and the Reserve Fund and one-fifth of the liabilities of the Banking Department in respect of deposits;

(9) The custody of monies, securities and other articles of value, and the collection of the proceeds, whether principal, interest or dividends, of any such securities,

(10) the sale and realisation of all property, whether movable or immovable, which may in any way come into the possession of the Bank in satisfaction, or part satisfaction, of any of its claims,

(11) the acting as agent for the Secretary of State in Council, the Governor-General in Council for any Local Government or local authority of State in India in the transaction of any of the following kinds of business, namely:—

- (a) the purchase and sale of gold or silver;
- (b) the purchase, sale, transfer and custody of bills of exchange, securities or shares in any company;
- (c) the collection of the proceeds, whether principal, interest or dividends, of any securities or shares;
- (d) the remittance of such proceeds, at the risk of the principal, by bills of exchange payable either in India or elsewhere;
- (e) the management of public debt;

(12) the purchase and sale of gold coin and bullion;

(13) the opening of an account with or the making of an agency agreement with, and the acting as agent or correspondent of a bank, which is the principal currency authority of any country under the law for the time being in force in that country or any international bank formed by such banks, and the investing of the funds of the Bank in the shares of any such international bank;

(14) the borrowing of money for a period not exceeding one month for the purposes of the business of the Bank, and the giving of security for money so borrowed

Provided that no money shall be borrowed under this clause from any person in India other than a schedule bank, or from any person outside India other than a bank which is the principal currency authority of any country under the law for the time being in force in that country

Provided further that the total amount of such borrowings from persons in India shall not at any time exceed the amount of the share capital of the Bank;

(15) the making and issue of bank notes subject to the provision of this Act; and

(16) generally, the doing of all such matters and things as may be incidental to or consequential upon the exercise of its powers or the discharge of its duties under this Act

When, in the opinion of the Central Board or, where the powers and functions of the Central Board under this section have been delegated to a committee of the Central Board or to the Governor, in the opinion of such committee or of the Governor as the case may be, a special occasion has arisen making it necessary or expedient that action should be taken under this section for the purpose of regulating credit in the interests of Indian trade, commerce, industry and agriculture, the Bank may, notwithstanding any limitation contained in sub-clauses (a) and (b) of clause (2) or sub-clause (a) or (b) of clause (3) or clause (4) of section 17.—

(1) purchase, sell or discount any of the bills of exchange or promissory notes specified in sub-clause (a) or (b) of clause (2) or sub-clause (a) or (b) of clause (3) of that section though such bill

or promissory note does not bear the signature of a scheduled bank or a provincial co-operative bank, or

(2) purchase or sell sterling in amounts of not less than the equivalent of one lakh of rupees, or

(3) make loans or advances repayable on demand or on the expiry of fixed periods not exceeding ninety days against the various forms of security specified in clause (4) of that section

Provided that a committee of the Board or the Governor shall not, save in cases of special urgency, authorized action under this section without prior consultation with the Central Board and that in all cases action so authorized shall be reported to the members of the Central Board forthwith

Forbidden Business—Save as otherwise provided in sections 17, 18 and 45, the Bank may not

(1) engage in trade or otherwise have a direct interest in any commercial, industrial or other undertaking, except such interest as it may in any way acquire in the course of the satisfaction of any of its claims, provided that all such interests shall be disposed of at the earliest possible moment;

(2) purchase its own shares or the share of any other bank or of any company, or grant loans upon the security of any such shares;

(3) advance money on mortgage of, or otherwise on the security of, immovable property, or documents of title relating thereto, or become the owner of immovable property, except so far as is necessary for its own business premises and residences for its officers and servants

(4) make loans or advances;

(5) draw or accept bills payable otherwise than on demand;

(6) allow interest on deposits or current accounts

Central Banking Functions

The Bank shall undertake to accept bills for account of the Secretary of State in Council and the Governor General in Council on behalf of Local Governments as may have the authority and management of their own provincial revenues and such States in India as may be approved of and notified by the Governor General in Council in the exercise of his power to make payments up to the amount of the credit of their accounts respectively, and to carry out their exchange, remittance and other banking operations, including the management of the public debt

(1) The Governor General in Council and such Local Governments as may have the custody and management of their own provincial revenues shall entrust the Bank, on such conditions as may be agreed upon, with all the money, remittance, exchange and banking transactions in India and, in particular, shall deposit free of interest all the moneys with the Bank

Provided that nothing in this section shall prevent the Governor General or any Local Government

money transactions at places where the Bank has no branches or agencies, and the Governor-General in Council and Local Governments may hold at such places such balances as they may require.

(2) The Governor-General in Council and each Local Government shall entrust the Bank on such conditions as may be agreed upon, with the management of the public debt and with the issue of any new loans.

(3) In the event of any failure to reach agreement on the conditions referred to in this section the Governor-General in Council shall decide what the conditions shall be.

(4) Any agreement made under this section to which the Governor-General in Council or any Local Government is a party shall be laid, as soon as may be after it is made, before the Central Legislature and in the case of a Local Government before its local Legislature also.

Bank Notes.—(1) The Bank shall have the sole right to issue bank notes in British India, and may, for a period which shall be fixed by the Governor-General in Council on the recommendation of the Central Board, issue currency notes of the Government of India supplied to it by the Governor-General in Council, and the provisions of this Act applicable to bank notes shall, unless a contrary intention appears, apply to all currency notes of the Government of India issued either by the Governor-General in Council or by the Bank in like manner as if such currency notes were bank notes, and references in this Act to bank notes shall be construed accordingly.

(2) On and from the date on which this Chapter comes into force the Governor-General in Council shall not issue any currency notes.

Issue Department.—(1) The issue of bank notes shall be conducted by the Bank in an Issue Department which shall be separated and kept wholly distinct from the Banking Department, and the assets of the Issue Department shall not be subject to any liability other than the liabilities of the Issue Department as hereinafter defined in section 34.

(2) The Issue Department shall not issue bank notes to the Banking Department or to any other person except in exchange for other bank notes or for such coin, bullion or securities as are permitted by this Act to form part of the Reserve.

Bank notes shall be of the denominational values of five rupees, ten rupees, fifty rupees, one hundred rupees, five hundred rupees, one thousand rupees and ten thousand rupees, unless otherwise directed by the Governor-General in Council on the recommendation of the Central Board.

The design, form and material of bank notes shall be such as may be approved by the Governor-General in Council after consideration of the recommendations made by the Central Board.

(1) Subject to the provisions of sub-section (2), every bank note shall be legal tender at any place in British India in payment or on account for the amount expressed therein, and shall be guaranteed by the Governor-General in Council.

(2) On recommendation of the Central Board the Governor-General in Council may, by notification in the Gazette of India, declare that with effect from such date as may be specified in the notification, any series of bank notes of any denomination shall cease to be legal tender save at an office or agency of the Bank.

The Bank shall not re-issue bank notes which are torn, defaced or excessively soiled.

Notwithstanding anything contained in any enactment or rule of law to the contrary, no person shall of right be entitled to recover from the Governor-General in Council or the Bank the value of any lost, stolen, mutilated or imperfect currency note of the Government of India or bank note.

Provided that the Bank may, with the previous sanction of the Governor-General in Council, prescribe the circumstances in and the conditions and limitations subject to which the value of such currency notes or bank notes may be refunded as of grace and the rules made under this proviso shall be laid on the table of both Houses of the Central Legislature.

The Bank shall not be liable to the payment of any stamp duty under the Indian Stamp Act, 1899, in respect of bank notes issued by it.

(1) If in the opinion of the Governor-General in Council the Bank fails to carry out any of the obligations imposed on it by or under this Act, he may, by notification in the Gazette of India, declare the Central Board to be superseded, and thereafter the general superintendence and direction of the affairs of the Bank shall be entrusted to such agency as the Governor-General in Council may determine, and such agency may exercise the powers and do all acts and things which may be exercised or done by the Central Board under this Act.

(2) When action is taken under this section the Governor-General in Council shall cause a full report of the circumstances leading to such action and of the action taken to be laid before the Central Legislature at the earliest possible opportunity and in any case within three months from the issue of the notification superseding the Board.

No person in British India other than the Bank or, as expressly authorized by this Act, the Governor-General in Council shall draw, accept, make or issue any bill of exchange, hundi, promissory note or engagement for the payment of money payable to bearer on demand or borrow, owe or take up any sum or sums of money on the bills, hundis or notes payable to bearer on demand of any such person.

Provided that cheques or drafts, including hundis, payable to bearer on demand or otherwise may be drawn on a person's account with a banker, shroff or agent.

(1) Any person contravening the provisions of section 31 shall be punishable with fine which may extend to the amount of the bill, hundi, note or engagement in respect whereof the offence is committed.

(2) No prosecution under this section shall be instituted except on complaint made by the Bank.

Assets of the Issue Department.

(1) The assets of the Issue Department shall consist of gold coin, gold bullion, sterling securities, rupee coin and rupee securities to such aggregate amount as is not less than the total of the liabilities of the Issue Department as hereinafter defined.

(2) Of the total amount of the assets, not less than two-fifths shall consist of gold coin, gold bullion or sterling securities.

Provided that the amount of gold coin and gold bullion shall not at any time be less than forty crores of rupees in value.

(3) The remainder of the assets shall be held in rupee coin, Government of India rupee securities of any maturity and such bills of exchange and promissory notes payable in British India as are eligible for purchase by the Bank under sub-clause (a) or sub-clause (b) of clause (2) of section 17 or under clause (1) of section 18.

Provided that the amount held in Government of India rupee securities shall not at any time exceed one-fourth of the total amount of the assets or fifty crores of rupees, whichever amount is greater, or, with the previous sanction of the Governor General in Council, such amount plus a sum of ten crores of rupees.

(4) For the purposes of this section, gold coin and gold bullion shall be valued at 847512 grains of fine gold per rupee, rupee coin shall be valued at its face value, and securities shall be valued at the market rate for the time being obtaining.

(5) Of the gold coin and gold bullion held as assets, not less than seventeen-twentieths shall be held in British India, and all gold coin and gold bullion held as assets shall be held in the custody of the Bank or its agencies.

Provided that gold belonging to the Bank which is in any other bank or in any mint or treasury or in transit may be reckoned as part of the assets.

(6) For the purposes of this section, the sterling securities which may be held as part of the assets shall be securities of any of the following kinds payable in the currency of the United Kingdom, namely—

(a) balances at the credit of the Issue Department with the Bank of England,

(b) bills of exchange bearing two or more good signatures and drawn on and payable at any place in the United Kingdom and having a maturity not exceeding ninety days,

(c) government securities of the United Kingdom maturing within five years.

Provided that, for a period of two years from the date on which this Chapter comes into force, any of such last mentioned securities may be securities maturing after five years, and the Bank may, at any time before the expiry of that period, dispose of such securities notwithstanding any thing contained in section 17.

Liabilities of the Issue Department.—(1) The liabilities of the Issue Department shall be an amount equal to the total of the

amount of the currency notes of the Government of India and bank notes for the time being in circulation.

(2) For the purposes of this section any currency note of the Government of India or bank note which has not been presented for payment within forty years from the 1st day of April following the date of its issue shall be deemed not to be in circulation, and the value thereof shall, notwithstanding anything contained in sub-section (2) of section 2, be paid by the Issue Department to the Governor General in Council or the Banking Department, as the case may be, but any such note, if subsequently presented for payment, shall be paid by the Banking Department, and any such payment in the case of a currency note of the Government of India shall be debited to the Governor General in Council.

On the date on which this Chapter comes into force the Issue Department shall take over from the Governor General in Council the liability for all the currency notes of the Government of India for the time being in circulation and the Governor General in Council shall transfer to the Issue Department gold coin, gold bullion, sterling securities, rupee coin and rupee securities to such aggregate amount as is equal to the total of the amount of the liability so transferred. The coin, bullion and securities shall be transferred in such proportion as to comply with the requirement of section 15.

Provided that the total amount of the gold coin, gold bullion and sterling securities so transferred shall not be less than one-half of the whole amount transferred, and that the amount of rupee coin so transferred shall not exceed fifty crores of rupees.

Provided further that the whole of the gold coin and gold bullion held by the Governor General in Council in the gold and silver reserves, and the paper currency reserve at the time of transfer shall be so transferred.

(1) After the close of any financial year in which the minimum amount of rupee securities held in the assets, as shown in any of the accounts of the Issue Department at the close of that year, prescribed under sub-section (1) of section 15, is greater than fifty crores of rupees, or if of the total amount of the rupee securities in that account, whichever may be the case, the Bank may deliver to the Governor General in Council rupee coin up to the amount of the excess but not without his sanction, and the value of such rupee coin shall be in the form of bank notes or securities.

Provided that if the Bank at the close of any financial year has in its assets an amount of gold coin, gold bullion or sterling securities in the assets exceeding one-half of the total amount of the assets, not exceeding twenty crores of rupees, the Bank may deliver to the Governor General in Council gold coin, gold bullion or securities as may be held in its assets at the close of that year, not exceeding twenty crores of rupees.

(2) After the close of any financial year in which the total amount of the assets held in the assets, as shown in any of the accounts of the Issue Department at the close of that year, prescribed under sub-section (1) of section 15, is greater than fifty crores of rupees, or if of the total amount of the rupee securities in that account, whichever may be the case, the Bank may deliver to the Governor General in Council rupee coin up to the amount of the excess but not without his sanction, and the value of such rupee coin shall be in the form of bank notes or securities.

the greater the Governor-General in Council shall deliver to the Bank rupee coin up to the amount of such deficiency, but not without its consent exceeding five crores of rupees, against payment of legal tender value.

(1) Notwithstanding anything contained in the foregoing provisions, the Bank may, with the previous sanction of the Governor-General in Council, for periods not exceeding thirty days in the first instance, which may, with the like sanction, be extended from time to time by periods not exceeding fifteen days, hold as assets gold coin, gold bullion or sterling securities of less aggregate amount than that required by sub-section (2) of section 33 and, whilst the holding is so reduced, the proviso to that sub-section shall cease to be operative

Provided that the gold coin and gold bullion held as such assets shall not be reduced below the amount specified in the proviso to sub-section (2) of section 33 so long as any sterling securities remain held as such assets

(2) In respect of any period during which the holding of gold coin, gold bullion and sterling securities is reduced under sub-section (1), the Bank shall pay to the Governor-General in Council a tax upon the amount by which such holding is reduced below the minimum "prescribed by sub-section (2) of section 33, and such tax shall be payable at the bank rate for the time being in force, with an addition of one per cent per annum when such holding exceeds thirty-two and a half per cent of the total amount of the assets and of a further one and a half per cent per annum in respect of every further decrease, of two and a half per cent or part of such decrease

Provided that the tax shall not in any event be payable at a rate less than six per cent. per annum.

The Governor-General in Council shall undertake not to re-issue any rupee coin delivered under section 36 nor to put into circulation any rupees, except through the Bank and as provided in that section, and the Bank shall undertake not to dispose of rupee coin otherwise than for the purposes of circulation or by delivery to the Governor-General in Council under that section

(1) The Bank shall issue rupee coin on demand in exchange for bank notes and currency notes of the Government of India, and shall issue currency notes or bank notes on demand in exchange for coin which is legal tender under the Indian Coinage Act, 1906.

(2) The Bank shall, in exchange for currency notes or bank notes of five rupees or upwards, supply currency notes or bank notes of lower value or other coins which are legal tender under the Indian Coinage Act, 1906, in such quantities as may, in the opinion of the Bank, be required for circulation, and the Governor-General in Council shall supply such coins to the Bank on demand. If the Governor-General in Council at any time fails to supply such coins, the Bank shall be released from its obligations to supply them to the public.

Obligation to sell sterling.—The Bank shall sell to any person who makes a demand in that behalf at its office in Bombay, Calcutta,

Delhi, Madras or Rangoon and pays the purchase price in legal tender currency, sterling for immediate delivery in London, at a rate not below one shilling and five pence and forty nine sixths of a penny for a rupee

Provided that no person shall be entitled to demand to buy an amount of sterling less than ten thousand pounds.

Obligation to buy sterling.—The Bank shall buy, from any person who makes a demand in that behalf at its office in Bombay, Calcutta, Delhi, Madras or Rangoon, sterling for immediate delivery in London, at a rate not higher than one shilling and six pence and three-sixteenths of a penny for a rupee

Provided that no person shall be entitled to demand to sell an amount of sterling less than ten thousand pounds

Provided further that no person shall be entitled to receive payment unless the Bank is satisfied that payment of the sterling in London has been made.

Cash reserves of scheduled banks.—(1) Every bank included in the Second Schedule shall maintain with the Bank a balance the amount of which shall not at the close of business on any day be less than five per cent. of the demand liabilities and two per cent of the time liabilities of such bank in India as shown in the return referred to in sub-section (2).

Explanation.—For the purposes of this section liabilities shall not include the paid-up capital or the reserves, or any credit balance in the profits and loss account of the bank of the amount of any loan taken from the Reserve Bank

(2) Every scheduled bank shall send to the Governor-General in Council and to the Bank a return signed by two responsible officers of such bank showing—

(a) the amounts of its demand and time liabilities, respectively, in India,

(b) the total amount held in India in currency notes of the Government of India and bank notes,

(c) the amounts held in India in rupee coin and subsidiary coin, respectively,

(d) the amounts of advances made and of bills discounted in India, respectively and

(e) the balance held at the Bank, at the close of business on each Friday or if Friday is a public holiday under the Negotiable Instruments Act, 1881, at the close of business on the preceding working day, and such return shall be sent not later than two working days after the date to which it relates.

Provided that where the Bank is satisfied that the furnishing of a weekly return under this sub-section is impracticable in the case of any scheduled bank by reason of the geographical position of the bank and its branches, the Bank may require such bank to furnish in lieu of a weekly return a monthly return to be dispatched not later than fourteen days after the end of the month to which it relates giving the details specified in this sub-section in respect of such bank at the close of business for the month.

(3) If at the close of business on any day before the day fixed for the next return, the balance held at the Bank by any scheduled bank is below the minimum prescribed in sub-section (1), such scheduled bank shall be liable to pay to the Bank in respect of each such day penal interest at a rate three per cent above the bank rate on the amount by which the balance with the Bank falls short of the prescribed minimum, and if on the day fixed for the next return such balance is still below the prescribed minimum as disclosed by this return, the rates of penal interest shall be increased to a rate five per cent above the bank rate in respect of that day and each subsequent day on which the balance held at the Bank at the close of business on that day is below the prescribed minimum.

(4) Any scheduled bank failing to comply with the provisions of sub-section (2) shall be liable to pay to the Governor-General in Council or to the Bank, as the case may be, or to each, a penalty of one hundred rupees for each day during which the failure continues.

(5) The penalties imposed by sub-sections (3) and (4) shall be payable on demand made by the Bank, and, in the event of a refusal by the defaulting bank to pay on such demand, may be levied by a direction of the principal Civil Court having jurisdiction in the area where an office of the defaulting bank is situated, such direction to be made only upon application made in this behalf to the Court by the Governor-General in Council in the case of a failure to make a return under sub-section (2) to the Governor-General in Council, or by the Bank with the previous sanction of the Governor-General in Council in other cases.

(6) The Governor-General in Council shall, by notification in the Gazette of India, direct the inclusion in the Second Schedule of any bank not already so included which carries on the business of banking in British India and which—

(a) has a paid-up capital and reserves of an aggregate value of not less than five lakhs of rupees, and

(b) is a company as defined in clause (2) of section 2 of the Indian Companies Act, 1913, or a corporation or a company incorporated by or under any law in force in any place outside British India,

and shall by a like notification direct the exclusion from that Schedule of any scheduled bank the aggregate value of whose paid up capital and reserve becomes at any time less than five lakhs of rupees, or which goes into liquidation or otherwise ceases to carry on banking business.

The Bank shall compile and shall cause to be published each week a consolidated statement showing the aggregate of the amounts under each clause of sub-section (2) of section 42 exhibited in the returns received from scheduled banks under that section.

The Bank may require any provincial co-operative bank with which it has any transactions under section 17 to furnish the return referred to in sub-section (2) of section 42 and if it does so, the provisions of sub-section-

(4) and (5) of section 42 shall apply so far as may be to such co-operative bank as if it were a scheduled bank.

Agreement with the Imperial Bank—
(1) The Bank shall enter into an agreement with the Imperial Bank of India which shall be subject to the approval of the Governor-General in Council, and shall be expressed to come into force on the date on which this Chapter comes into force and to remain in force for fifteen years and thereafter until terminated after five years' notice on either side, and shall further contain the provisions set forth in the Third Schedule.

Provided that the agreement shall be conditional on the maintenance of a sound financial position by the Imperial Bank and that if, in the opinion of the Central Board, the Imperial Bank has failed either to fulfil the conditions of the Agreement or to maintain a sound financial position, the Central Board shall make a recommendation to the Governor-General in Council, and the Governor-General in Council, after making such further enquiry as he thinks fit, may issue instructions to the Imperial Bank with reference either to the agreement or to any matter which in his opinion involves the security of the Government monies or the interests of the Issue Department in the custody of the Imperial Bank, and in the event of the Imperial Bank disregarding such instructions may declare the agreement to be terminated.

(2) The agreement referred to in sub-section (1) shall, as soon as may be after it is made, be laid before the Central Legislative Assembly.

General Provisions

The Governor-General in Council shall transfer to the Bank rupees securable of the value of five crores of rupees to be allocated by the Bank to the Reserve Fund.

After making provision for bad debts, depreciation in assets, central and local staff and superannuation funds, and for other contingencies as are usually provided for by bankers, and after payment out of the annual profits of a cumulative dividend at such rate not exceeding five per cent on the share capital as the Governor-General in Council may fix at the time of the dividend, a portion of the surplus shall be set aside to the payment of an additional dividend to the shareholders calculated on the scale of dividend in the Fourth Schedule or the dividend, if the surplus shall be paid to the shareholders as directed in Council.

Provided that if at any time the Reserve Fund is less than the share capital or less than fifty lakhs of rupees of the surplus, the whole of the surplus if less than that amount shall be allocated to the Reserve Fund.

(1) Notwithstanding anything contained in the Indian Income Tax Act 1918 or any other enactment for the time being in force relating to income tax or super-tax, the Bank shall be liable to pay income tax or super-tax on any of its income, profits or gains.

Provided that nothing in this section shall affect the liability of any shareholder or member of income tax or super-tax.

(2) For the purposes of section 18 of the Indian Income-tax Act, 1922, and of any other relevant provision of that Act relating to the levy and refund of income-tax any dividend paid under section 47 of this Act shall be deemed to be "Interest on Securities"

The Bank shall make public from time to time the standard rate at which it is prepared to buy or re-discount bills of exchange or other commercial paper eligible for purchase under this Act

(1) Not less than two auditors shall be elected and their remuneration fixed at the annual general meeting. The auditors may be shareholders, but no Director or other officer of the Bank shall be eligible during his continuance in office. Any auditor shall be eligible for re-election on quitting office

(2) The first auditors of the Bank may be appointed by the Central Board before the first annual general meeting and, if so appointed, shall hold office only until that meeting. All auditors elected under this section shall severally be, and continue to act as, auditors until the first annual general meeting after their respective elections

Provided that any casual vacancy in the office of any auditor elected under this section may be filled by the Central Board.

Without prejudice to anything contained in section 50, the Governor-General in Council may at any time appoint the Auditor General or such auditors as he thinks fit to examine and report upon the accounts of the Bank

Every auditor shall be supplied with a copy of the annual balance-sheet, and it shall be his duty to examine the same, together with the accounts and vouchers relating thereto; and every auditor shall have a list delivered to him of all books kept by the Bank, and shall at all reasonable times have access to the books, accounts and other documents of the Bank, and may, at the expense of the Bank if appointed by it or at the expense of the Governor-General in Council if appointed by him, employ accountants or other persons to assist him in investigating such accounts, and may, in relation to such accounts, examine any Director or officer of the Bank

(2) The auditors shall make a report to the shareholders or to the Governor-General in Council, as the case may be, upon the annual balance-sheet and accounts, and in every such report they shall state whether, in their opinion, the balance-sheet is a full and fair balance-sheet containing all necessary particulars and properly drawn up so as to exhibit a true and correct view of the state of the Bank's affairs, and, in case they have called for any explanation or information from the Central Board, whether it has been given and whether it is satisfactory. Any such report made to the shareholders shall be read together with the report of the Central Board, at the annual general meeting

Returns—(1) The Bank shall prepare and transmit to the Governor-General in Council a weekly account of the Issue Department and of the Banking Department in the form set out in the Fifth Schedule or in such other form

as the Governor-General in Council may, by notification in the Gazette of India, prescribe. The Governor-General in Council shall cause these accounts to be published weekly in the Gazette of India.

(2) The Bank shall also, within two months from the date on which the annual accounts of the Bank are closed, transmit to the Governor-General in Council a copy of the annual accounts signed by the Governor, the Deputy Governors and the Chief Accounting Officer of the Bank, and certified by the auditors, together with a report by the Central Board on the working of the Bank throughout the year, and the Governor-General in Council shall cause such accounts and report to be published in the Gazette of India.

(3) The Bank shall also, within two months from the date on which the annual accounts of the Bank are closed, transmit to the Governor-General in Council a statement showing the name, address and occupation of, and the number of shares held by, each shareholder of the Bank

Agricultural Credit Department—The Bank shall create a special Agricultural Credit Department the functions of which shall be—

(a) to maintain an expert staff to study all questions of agricultural credit and be available for consultation by the Governor-General in Council, Local Governments, provincial co-operative banks, and other banking organisations.

(b) to co-ordinate the operations of the Bank in connection with agricultural credit and its relations with provincial co-operative banks and any other banks or organisations engaged in the business of agricultural credit.

(1) the Bank shall, at the earliest practicable date and in any case within three years from the date on which this Chapter comes into force, make to the Governor-General in Council a report, with proposals, if it thinks fit, for legislation, on the following matters, namely—

(a) the extension of the provisions of this Act relating to scheduled banks to persons and firms, not being scheduled banks, engaged in British India in the business of banking, and

(b) the improvement of the machinery for dealing with agricultural finance and methods for effecting a closer connection between agricultural enterprise and the operations of the Bank

(2) When the Bank is of opinion that the international monetary position has become sufficiently clear and stable to make it possible to determine what will be suitable as a permanent basis for the Indian monetary system and to frame permanent measures for a monetary standard it shall report its views to the Governor-General in Council

(1) The Local Board of any area may at any time require any shareholder who is registered on the register for that area to furnish to the Local Board within a specified time, not being less than thirty days, a declaration, in such form as the Central Board may by regulations prescribe, giving particulars of all shares on the said register of which he is the owner.

by the Reserve Bank of India at its offices, branches and agencies in India at the bullion value of such coins calculated at the rate of 8 47512 grains troy of fine gold per rupee."

The Indian Paper Currency Act, 1923, the Indian Paper Currency (Amendment) Act, 1923, the Indian Paper Currency (Amendment) Act, 1925, and the Currency Act, 1927 are hereby repealed.

In sub-section (3) of section 11 of the Indian Companies Act, 1913, after the word "Royal" the words "Reserve Bank" shall be inserted.

The Reserve Bank began work with the opening of the financial year 1935-36. The Bank made a net profit of Rs 53,42,100 for the year ended December 31, 1936

REPORT FOR YEAR ENDED JUNE 30th, 1941.

The report of the Central Board of the Reserve Bank of India for the year ended June 30, 1941, states that after payment of expenses of administration and provision for sundry liabilities and contingencies the net profit amounts to Rs 2,79,26,447-3-3. Of this amount, the sum of Rs 17,50,000 will be utilised for payment to shareholders of a dividend at the rate of 3½% per annum being the cumulative rate fixed by the Central Government in accordance with section 47 of the Reserve Bank of India Act, 1934, leaving a surplus of Rs 2,61,76,447-3-3 for payment to the Central Government in accordance with the said section. The increased profits are due to an increase in the Bank's assets, corresponding to an increase in its note issue liabilities as a result of expansion of currency, and to the fact that some of them were held in the form of securities yielding a higher rate of interest.

The total number of shareholders declined from 56,057 to 53,468 during the year. The effects of the amendment of the Reserve Bank of India Act referred to in the last report, limiting the maximum holding of shares acquired after March 26, 1940, were more than offset by the continued tendency of the shares to become concentrated in fewer hands, so that the average number of shares held by each shareholder rose further from 8.9 to 9.4 during the period.

With the occupation of a large part of Europe by Germany it became necessary to prohibit the import into India of Bank of England notes in order to prevent the enemy disposing of their large holdings of notes captured in the occupied countries. The Government of India therefore issued a notification on August 22, 1940, prohibiting the import into India, except from Burma, of Bank of England notes. Although this prohibition was a Customs measure, the Exchange Control Department collaborated by imposing severe restrictions on the purchase of Bank of England notes by banks in India.

On November 2, 1940, the Government of India added a new rule, 90 (B) to the Defence of India Rules forbidding the taking out of British India except to Burma of any money except with the approval of the Reserve Bank

of India or under the authority of an authorised dealer in foreign exchange. Although strict regulations had always been enforced in India since the outbreak of war regarding the sale of foreign exchange by banks, no restrictions had been placed on the taking out of India by travellers of money in the form of currency notes either Indian or foreign and the new rule was intended to make good this omission.

In terms of the Defence of India Rules 92 and 94, the Government of India took over, in December 1940, the U.S. dollar holdings of all residents in British India and the rupee equivalent of their dollar holdings was paid out by the Reserve Bank at the rate of Rs 330 per 100 dollars which was approximately the Exchange Banks' buying rate for T.T.s on New York. Similarly on March 10, 1941, Government took over the holdings of residents in New York on the previous business day combined with the rupee dollar rate of Rs 330 per 100 dollars.

Owing to the war developments in June, 1940, certain scheduled banks approached the Reserve Bank for financial assistance at the beginning of the year and were granted loans aggregating Rs 11.46 lakhs against Government securities. The total number of offices of scheduled and Burma scheduled banks in India and Burma including head offices, branches, pay offices, etc., increased from 1,322 last year to 1,404 during the year under review showing an increase of 82 offices. Ninety new offices were opened during the year of which 18 offices belonged to the five banks included in the schedule during the year while eight of the existing offices were closed.

From October 1, 1940, the Reserve Bank of India has introduced a simplified scheme of remittance facilities with the concurrence of the Central and Provincial Governments. Under this scheme the general rates for remittances have been reduced and extended facilities have been provided, remittance facilities throughout the country have also been standardised and the accounting procedure involved simplified. The issue of currency telegraphic transfers, supply bills and remittance transfer receipts has been discontinued and has been replaced by telegraphic transfers, Bank drafts, and Reserve Bank of India Government drafts. For the purpose of the scheme all Government treasuries and sub-treasuries in India and Burma having currency chest facilities, at places where the Reserve Bank is not represented, are regarded as the Treasury Agencies of the Reserve Bank for the issue and payment of telegraphic transfer and drafts subject to certain limits on drawings. The scheme also offers concession rates to non-scheduled banks and indigenous bankers included in an approved list to be prepared by the Bank in consultation with the Provincial Governments. As on June 30, 1941, there were 37 non-scheduled banks and 3 indigenous bankers on the approved list.

The trend of commodity prices reflected the repercussions of the war on Indian economy. The prices of the principal export commodities fell rather precipitately during May and June 1940 following the intensification of the war and in some cases they touched their pre-war levels and thereafter improved only fractionally. On the other hand, the prices of manufactured goods showed an upward tendency owing to the fall in imports. The decline started towards the close of the previous year in the raw jute prices continued almost uninterruptedly until February 1941 during which the price of jute ready firsts declined from Rs 66-8 to Rs 32. The decision of the Bengal Government to restrict the acreage in 1941 to one-third of that in 1940, the agreement between the Government and the industry to make purchases at fixed rates and the receipt of large orders from His Majesty's Government had a steadying effect on the raw jute prices in the last month of 1940-41 when the rate recovered to Rs 37. Owing to the loss of the European markets and the uncertainty about the Japanese, raw cotton was oppressed by selling pressure during the first half of the year but following the receipt of further large orders from Government for cotton piecegoods, it closed with an optimistic note. Between April and July, Broach M G F G declined from Rs 321 to Rs 155 per candy and wound up the year at Rs 235. Oilseeds served as a glut on the market following the fall of France which was a heavy buyer until then and the prices of groundnuts and linseed declined by 31 and 13 per cent respectively. The recovery made in September following the agreement with the British Government for their purchases at certain specified prices proved short-lived and the prices closed at around the lowest for the year. Rice continued to be in heavy demand mostly for storing and the

prices continued to be on-upgrade in sympathy with the Rangoon market which was well supported by the Japanese buyers. The quotation for Ballam No 1 rose from Rs 4-12 to Rs 5-2 per maund during the year under review. The 18% decline in the sugar prices during the year reflected the difficulty of the sugar industry caused mainly by over-production especially in the United Provinces while the nearly 30% gain in tea prices indicated the large purchases of that commodity by the United Kingdom. Broadly speaking, the general trading conditions during the year under review were far from satisfactory for the majority of agricultural products.

Balance of Trade.—India's foreign trade received a set back in 1940-41 owing to the extension of the war, the loss of certain overseas markets, shipping difficulties and the regulation of trade by the Government of India in order to fit it in the country's war economy. Yet, the turnover was substantially more than that in 1938-39, the immediately preceeding pre-war year. As compared with 1938-40, both imports and exports shrank by Rs 8,21 lakhs and Rs 1,706 lakhs representing a drop of 5.0 and 3.3% respectively. Consequently, the favourable balance of trade was reduced from Rs 48,29 lakhs to Rs 42,13 lakhs. These figures do not, however, correctly indicate the balance of payments since they do not take into account the large and increasing purchases by His Majesty's Government which are paid for in sterling. Like the last year, it was only during one month, March 1941, that India's exports were less than her imports and consequently, the balance of trade was unfavourable to her.

The following table shows in detail the items entering into the balance of trade —

(In lakhs of Rupees)

	India excluding Burma.		
	1938-39	1939-40	1940-41
Exports of Indian merchandise (private)	+ 1,02,79	+ 2,03,92	+ 1,80,86
Re-exports of foreign merchandise (private)	+ 6,42	+ 9,05	+ 11,81
Imports of foreign merchandise (private) (a)	— 1,51,83	— 1,64,75	— 1,56,51
Balance of trade in merchandise	+ 17,38	+ 48,82	+ 42,13
Gold (private)	+ 13,06	+ 34,67	+ 11,47
Silver (private)	+ 1,75	+ 4,74	+ 1,02
Currency notes (private)	+ 58	+ 34	(b)
Indian transactions in treasure (private)	+ 11,89	+ 30,27	+ 10,17
Gold balance of trade	+ 29,31	+ 78,60	+ 52,70
Gold accumulated on account of purchasers abroad	+ 10,10*	+ 1,36	
Purchases of sterling by the Reserve Bank of India	— 32,64	— 94,77	
Sales of sterling by the Reserve Bank of India			
Transfer of Government securities	— 8	— 2,11	(b)
International drafts on India in respect of Government of India securities	— 28	— 20	
Transfer of contingencies of funds	— 37,00	— 90,89	

NOTE — The sign + means net exports and the sign — net imports

* Figures relate to the period October 1938 to March, 1939

(a) Exclusive of the value of railway materials imported direct by State Railways working under company management, which was not paid for in the ordinary way and was not, therefore taken into account in arriving at the balance of trade

(b) Publication suspended

IMPORTS—contd

Coal	7,14	1,96	1,11	0 01
All other articles	11,05,43	12,88,90	13,68,59	8 09
Total value of imports	1,52,26 71	1,63,27,24	1,56,79,40	99 83

Cotton manufactures (Rs. 11,36 lakhs).—Imports of cotton yarn and manufactures were valued at Rs 11,36 lakhs during 1940-41 as compared with Rs 14,05 lakhs in the preceding year and showed a further decline of Rs 269 lakhs or 19 per cent. The shipments from the United Kingdom were very few and were mostly restricted to certain specialities while Japan was more busy in capturing the neighbouring markets served until then by the countries engaged in war. The fall in imports gave a splendid opportunity to the indigenous cotton textile industry to extend its activity.

Imports of cotton yarn dropped from Rs 3,52 lakhs to Rs 2,18 lakhs representing a fall of 38 per cent over the previous year's imports. The decline in imports was mainly on account of reduced arrivals from the United Kingdom (China and Japan).

The falling imports of cotton piecegoods gained momentum during the year under review and were the lowest on record. As compared with the imports in 1939-40, cotton piecegoods imported from abroad in 1940-41 shrank by 23 per cent and totalled 447 million yards as compared with 579 million yards in 1939-40. The re-exports also increased from 17 million yards in 1939-40 to 41 million yards in the following year. The shrinkage was not, however, represented to the same extent in the valuation of the imports owing to the rise in the value of the article during the year under review. Imports in value showed a decline of only 15 per

cent from Rs 9,65 lakhs to Rs 8,17 lakhs. The decrease was distributed over all the three main descriptions of piecegoods but the fall in white was more pronounced than in grey and coloured goods. The United Kingdom sustained heavy losses in each of the three main classes but the loss of Japan was chiefly confined to white and grey goods.

The following table gives the movement of imports of piecegoods according to varieties—

	(In lakhs of Rupees)		
	1938-39	1939-40	1940-41
Grey	3,07	2,83	2,33
White	3,30	2,84	2,05
Coloured, etc	3,90	3,08	3,70

Wool, raw and manufactured (Rs. 4,29 lakhs).—There was a sharp increase in the imports of wool and woollens which were valued at Rs 4,29 lakhs in 1940-41 as compared with Rs 2,16 lakhs in the preceding year. Almost whole of the increase was attributable to the heavy imports of raw wool for consumption in Indian mills the resources of which were fully mobilised to meet the growing demand for clothing India's ever increasing army. Imports of raw wool shot up from Rs 75 lakhs to Rs 279 lakhs representing a gain of as much as 272 per cent over the preceding year's. Australia was the main supplier of raw wool. On the other hand, woollen manufactures recorded a modest gain of about six per cent from 111 lakhs to Rs 150 lakhs. Yarn and knitting wool recorded further drop during the year.

The imports of woollen piecegoods showed an increase from Rs 35 lakhs to Rs 57 lakhs in value but the quantity worked out on the basis of the average declared value showed only a slight gain. Arrivals of shawls and lohis from abroad dropped further from Rs 4 lakhs in 1939-40 to Rs 3 lakhs in 1940-41 as compared with Rs 14 lakhs in 1938-39 and were mostly from Japan which enjoyed the virtual monopoly of this trade in the absence of Germany which was at one time India's main supplier of these varieties.

Artificial Silk (Rs. 5.44 lakhs).—The total value of the imports of artificial silk and manufactures sought a fresh higher level of Rs 5.44 lakhs in 1940-41 as compared with Rs 4.59 lakhs in 1939-40, and Rs 2.24 lakhs in 1938-39. The rapid expansion of the artificial silk weaving industry in India needed increased supplies of artificial silk yarn from abroad in order to feed itself in the absence of the indigenous production. As a result, the imports of artificial silk yarn moved up in value from Rs 2.12 lakhs in 1939-40 to Rs 2.65 lakhs in the year under review. It may be mentioned that the imports of art silk yarn during 1938-39 were valued at Rs 96 lakhs only. Following the entry of Italy into the war, Japan was the sole supplier of the yarn and could, therefore, dictate her own terms. Imports of piecegoods made entirely of artificial silk also rose from Rs 2.11 lakhs to Rs 2.45 lakhs and were mainly from Japan.

Silk, raw and manufactured (Rs. 1.72 lakhs).—For the third year in succession, imports of silk, raw and manufactured, recorded a fall. The total value of the imports under this category was Rs 1.72 lakhs in 1940-41 as against Rs 1.82 lakhs in the preceding year. Arrivals of raw silk from abroad were valued at Rs 76 lakhs during 1940-41 representing a gain of Rs 13 lakhs over those for 1939-40. Since the price level of raw silk was about 20 per cent more than the average declared value for the imported material in the preceding year, it can be safely presumed that the quantity imported was 15 per cent below that in 1939-40. As usual, China continued to be the principal source of supply. Similarly, though imports of silk yarn showed a gain of Rs 8 lakhs and amounted to Rs 32 lakhs, the quantity imported is likely to be less than of that in the preceding year. On the other hand, the year under review brought further evidence of the fact that imported silk piecegoods are not being favoured by India. Despite the increase in the price of silk piecegoods, the imports dropped from Rs 54 lakhs to Rs 41 lakhs.

Iron and Steel (Rs. 6.81 lakhs).—The iron and steel industry made a striking progress throughout the world during the period following the outbreak of the war owing to the heavy munitions production. India became the second largest producer of iron and steel in the Empire, excelled only by the United Kingdom. The notable achievements of the Indian industry during the year were the production of steel by new process and the erection of plants for making wheel tyres and axles. The industry also planned for erecting a hoop and sheet plant and a tube making plant in addition to increasing production in numerous other directions. The country also became one of the main sources of

shell steel to the eastern war theatre. Owing to the war conditions, the Government of India decided to extend the protection, which was due to expire on March 31, 1941, for the duration of the war.

In the absence of the production data for the whole year, which has been discontinued by the Government of India for the war period, the conclusions will have to be based on the figures published for the first five months of the year 1940-41. Even those figures, which are bound to be the lowest for the year, make an impressive reading. Thus, the output of pig iron rose from 708,400 tons to 789,000 tons, a gain of 10 per cent, during the five months ended August 31, 1940. The output of steel ingots was still more striking having gone up from 404,700 tons to 506,800 tons representing an increase of as much as 25 per cent. The turning out of finished steel, which excludes the production of some of the re-rolling mills using either imported or Tata's semis, also expanded from 414,000 tons to 491,000 tons during the same period.

Imports of manufactured iron and steel excluding pig iron and old iron and steel into British India declined further from 255,000 tons in 1939-40 to 182,700 tons in the year under review. In value, however, they recorded a gain of Rs 75 lakhs, the total value of the imported commodity for the year being Rs 681 lakhs. Imports recorded substantial fall during the last two months of the year following the decision of the Government of India to institute stricter control over imports of various types of iron and steel towards the end of December in order to ensure that unreasonable demands for steel involving the waste of the dollar exchange are not made. The order, which saw the end of the quota system and the beginning of the licensing system, was necessitated by the inability of the United Kingdom to accept further orders and the consequential increase in the demand on the American steel industry.

With the exception of sheets and plates, there was an all round decline in imports under the various classes. The position about supplies of hoops was particularly desperate during the first half of the year but eased during the following six months owing to the imports from the U S A. The fall in the imports of pillars, girders and bridge-work was almost precipitate. India was able to get goods under this category amounting to Rs 3,83,000 only as compared with Rs 16 lakhs in 1939-40 and Rs 31 lakhs in 1938-39. Steel bars, which constituted the single major item next to sheets and plates also showed a rather heavy fall from Rs 42 lakhs to Rs 25 lakhs. Sheets and plates showed a gain of nearly 33 per cent. Besides, a number of minor items recorded handsome gains.

The following table shows the values of the principal descriptions of iron and steel imported into British India during the last three years.—

	Value Rs (lakhs)		
	1938-39	1939-40	1940-41
Steel Bars	44	42	25
Beams, channels, pillars, girders, and bridge-work	31	16	4
Cast pipes and fittings	9	9	5
Sheets and plates ..	1,60	96	1,21

Machinery and millwork (Rs. 11.84 lakhs).—The decline noticed under this head during 1939-40 became more pronounced during the year under review during which the imports of machinery and millwork including belting for machinery dropped further by Rs 3.53 lakhs to Rs 11.84 lakhs. The decline took place under almost all the major heads. It is probable that on account of the pre-occupation of the United Kingdom with the production of war materials and conservation of the dollar exchange and shipping space, it may not have been possible for India to import the machinery to the extent needed. Another conclusion drawn from reduced imports was that the expansion of the indigenous industries was more through the utilisation of the existing industrial capacity of the country to its maximum extent and less by the installation of new plant and machinery. It was also interesting to find that a good beginning was made during the year in the direction of starting production of certain types of machinery in the country.

During the year, Japan stepped into the place of the United Kingdom and other European countries as supplier of machinery to India while the United States were also able to participate in the trade consistent with the restrictions on the dollar exchange.

The following table shows the details of the important type of machinery imported into British India during the last three years —

	1938-39 Rs (lakhs)	1939-40 Rs (lakhs)	1940-41 Rs (lakhs)
Prime movers	1.87	1.69	.85
Electric machinery	3.72	2.36	1.71
Cotton machinery	2.67	1.96	1.37
Textile machinery	.71	.56	.61
Agricultural machinery	.14	.19	.21
Boiler	1.40	.85	.30
Engines	.09	.50	.60
Engines including			
for power	.15	.21	.24
for transport	.61	.71	.41
Engines for	.23	.17	.16

Engines for transport and machinery	.44	.29	.15
Engines for	.28	.15	.31
Engines for	.11	.21	.18
Engines for mill	.7	.6	.5
Spinning and knitting			
for power	.57	.73	.51
Presses and lithograph			
for power	.19	.18	.5
Engines for machinery	.19	.53	.62

Vehicles (Rs. 6.82 lakhs).—Imports of vehicles showed only a fractional decline of Rs 3 lakhs during the year. They covered motor cars, carriages and wagons and aircraft and parts. In recent years the United Kingdom and the United States of America were the largest suppliers of motor vehicles to India, the former concentrating more on motor cars than on heavier motor vehicles. Owing to tremendous expansion of military demand in the United Kingdom imports of motor cars from that country into India fell substantially during the year under review. The total number of motor

cars imported into British India declined from 9,972 valued at Rs 2.07 lakhs in 1939-40 to 4,950 valued at Rs 1.15 lakhs in 1940-41.

Hardware (Rs. 2.06 lakhs).—The imports of hardware contracted further by 9 per cent during 1940-41 from Rs 2.27 lakhs to Rs 2.06 lakhs. The declining tendency, which was seen during the latter half of 1939-40 was accentuated by the intensification of the war in the first five months of the year under review. The loss was attributable to reduced imports of builders' hardware, domestic hardware, enamelled ironware, metal lamps, stoves and gas mantles. Of the total imports, the United Kingdom, Japan and the U.S.A. accounted for Rs 80 lakhs, Rs 37 lakhs and Rs 48 lakhs respectively.

Mineral Oils (Rs. 18.98 lakhs).—No reliable statistics relating to production or consumption of mineral oils are available from any country but it can be safely assumed that despite the increasing prices, consumption of petroleum which is so vital in modern mechanised warfare sought a fresh higher level. In Burma, which supplied the bulk of India's requirements, the production of kerosene and motor spirits including aviation petrol, as far as could be judged from the press reports, was considerably stimulated by the war demand. Even in India where mineral production is very modest, every effort was made to increase it. The production figures issued by the Government of India for the first five months of 1940-41, which were out-classed during the subsequent period, reveal that the production of kerosene totalled 156 lakhs gallons as against 73 lakhs gallons in the same period in 1939-40, while that of petroleum jumped from 51 lakhs gallons to 82 lakhs gallons.

The total imports of mineral oils of all kinds into British India declined from 403 million gallons to 146 million gallons but they rose in value from Rs 17.15 lakhs to Rs 18.98 lakhs. Of this, kerosene was alone with Rs 7.97 lakhs as against Rs 7.51 lakhs in 1939-40. Burma was the main source of these supplies. Imports of petroleum and kerosene dropped respectively from 86 million gallons and 193 million gallons to 73 million gallons and 172 million gallons respectively. The imports were mainly affected during the first five months of the year which marked the intensification of the war and the resultant shipping difficulties and uncertainty.

Owing to India's dependence on foreign supplies, the need for building up the stock of petroleum came to the forefront during the year. A conference of the interests concerned in the question was convened by the Government of India in January 1942 and paved the way for the introduction of the petrol rationing scheme in the following year.

Chemicals (Rs. 5.56 lakhs).—Prices of chemicals recorded further advance during 1940-41 and consequently, though the total imports of chemicals into British India advanced in value from Rs 1.52 lakhs to Rs 5.56 lakhs, a gain of 23 per cent over the 1939-40 figure, it may be safely assumed that the same rise was not reflected in the quantity. On the other hand, imports of sulphate of ammonia for which the quantitative figures are published declined from

79,922 tons to 32,146 tons during the year under review. Every attempt was made during the year to get supplies of chemicals from abroad in order to build up stocks. The bulk of imports which were hitherto imported from the United Kingdom and other soft currency countries were ordered during the year from the difficult currency countries. Japan assumed growing importance as a supplier of chemicals. The Government of India, brought chemicals under the import control list with effect from January 1941.

A feature of the year was the expansion of the indigenous industry. Many essential chemicals, the lack of which had hitherto been one of the main handicaps to India's industrial expansion, were produced during the year. The production of sulphate of ammonia during the first five months of the year under review increased from 7,874 tons to 10,891, while that of sulphuric acid expanded from 235,242 cwt to 292,955 cwt during the same period.

Drugs and medicines (Rs 2.19 lakhs).—Owing partly to the strenuous efforts made by the Government of India to stimulate the domestic production and partly to the difficulties in getting supplies from abroad the imports of drugs and medicines dropped by Rs 42 lakhs from Rs 2.61 lakhs to Rs 2.19 lakhs in 1940-41. Over 150 items under this group were withdrawn from the import list. Though no details have been published about the various classes of drugs and medicines that are being imported, it would be reasonable to conclude from the available data that imports of proprietary and patent medicines amounting to Rs 89 lakhs in 1939-40 declined by about 25 per cent in the year under review, while the official policy to build up stocks of quinine salts must have resulted in increased imports under that head. Japan continued to enjoy the sole monopoly for cinchona.

Paper and Pasteboards (Rs 3.94 lakhs).—Imports of paper and pasteboards rose in value from Rs 3.46 lakhs in 1939-40 to Rs 3.94 lakhs in 1940-41 but declined in quantity from 2,700,000 cwt in 1939-40 to 2,100,000 cwt in 1940-41. The imports of paper only during the year totalled 1,800,000 cwt in 1940-41 as compared with 2,200,000 cwt in 1939-40. In value however, they increased from Rs 2.90 lakhs to Rs 3.29 lakhs. Following the cutting off of the Scandinavian countries and Germany, which were the virtual suppliers of paper and pasteboards to India prior to the war, the whole trade was remarkably diverted to the North America involving expenditure at the rate of Rs 100 lakhs a year. In order to avoid the strain on dollar exchange, the Government of India brought paper under the import control list with effect from January. The full effects of this decision were, however, witnessed only in the following year.

The indigenous paper industry received considerable stimulus from the reduced supplies from abroad and was able to make rapid progress during the year. As a result, the aggregate production amounted to 1,753,000 cwt in 1940-41 as compared with 1,416,000 cwt in 1939-40.

Liquors (Rs 2.00 lakhs).—Considerable difficulty was experienced during 1940-41 in obtaining supplies of liquors from abroad. As a result, the total imports of all categories of liquors declined from Rs 2.19 lakhs in 1939-40 to Rs 2.00 lakhs in 1940-41 in value and from 4.3 million gallons to 4 million gallons in quantity. The reduction in supplies from the United Kingdom was partially made up by increased exports of liquors from Australia. Nearly three-fourths of the total quantity of imported liquors consisted of ale, beer and porter which was able to maintain its ground. It was valued at Rs 75 lakhs as against Rs 67 lakhs in the preceding year. On the other hand, imports of spirits and wines dropped by about 20 and 23 per cent respectively. Spirits of the value of Rs 75 lakhs were imported into British India during 1940-41 as against Rs 94 lakhs in 1939-40, while imports of wines dropped from Rs 13 lakhs to Rs 10 lakhs.

Sugar (Rs 36 lakhs).—The area under sugarcane in India in 1940-41 went up from 3,640,000 acres to 4,559,000 acres, while the production in terms of *gur* was estimated to be 5,720,000 tons as against 4,602,000 tons in the previous year. The total number of sugar factories manufacturing sugar direct from cane during the cane crushing season, 1940-41, was estimated to be 148 as against 145 actually in operation in the preceding year. The year 1940-41 was a period of serious crisis for the Indian sugar industry, particularly in the United Provinces and Bihar. There were wide fluctuations in prices of sugar and the conditions remained unsettled. In March 1940, it became very clear that the industry would suffer from over-production. The Indian Sugar Syndicate controlling 80 per cent of the total sugar produced in the country boldly reduced in June the price of sugar manufactured by factories in the United Provinces and Bihar by Rs 2-8 per maund in order to reduce stocks in factories and to stimulate consumption in the country. A further reduction of as 14 per maund was made in August with the result that the indigenous sugar was considerably cheaper than the Java sugar.

It was, therefore, no wonder that imports of sugar into British India during the year were negligible being only 19,700 tons valued at Rs 36 lakhs as compared with 255,100 tons valued at Rs 3.32 lakhs in 1939-40, while those into Kathiawar States totalled 13,000 tons valued at Rs 22 lakhs as against 76,900 tons valued at Rs 94 lakhs in 1939-40. A substantial portion of the imports in 1940-41 was meant to be re-exported. It may be mentioned that in response to the representations made by the Government of India expressing apprehensions about increased imports, the Government of India had decided to restrict imports of Java sugar to 35,000 tons in 1940-41.

Salt (Rs 48 lakhs).—Imports of foreign salt chiefly for consumption in Bengal declined from Rs 62 lakhs to Rs 48 lakhs in value and from 314,000 tons to 207,000 tons in quantity but were considerably above the average pre-war annual imports. The decline was attributable to the heavy purchases made in the preceding year by the trade for stock building and the increase in Indian output from 1,498,000 tons to 1,611,000 tons.

Other articles.—The following table shows the course of trade in some of the other articles of importance in imports —

	1938-39 Rs (lakhs)	1939-40 Rs (lakhs)	1940-41 Rs (lakhs)
Rice not in the husk	11,37	17,85	12,91
Cotton, raw and waste	8,51	8,05	9,47
Spices	2,63	2,55	2,19
Dyeing and tanning substances	3 14	3,61	5,30
Glass and glassware	1,25	1,02	86
Tobacco	1,05	1,17	1,34
Paints and colours	67	81	79
Cement	10	7	5
Coal and Coke	8	3	1

The increase in cotton imports from 468,500 bales valued at Rs 8,05 lakhs to 499,200 bales worth Rs 9 47 lakhs was on account of the heavy mill demand for finer cotton used in manufacturing superior cloth. The imports from Egypt during the first quarter were so heavy that the Government of India had to cancel the general permission for importing raw cotton from Egypt and the Anglo-Egyptian Sudan. Imports from Kenya also improved greatly during the year.

Imports of dyes were particularly heavy during the April-November period being substantially in excess of those for the corresponding periods in pre-war years. Since the bulk of these imports had come from difficult currency countries including the United States which accounted for annual shipments of Rs 200 lakhs, the Government of India decided towards the end of December to control the imports of coal tar dyes in order to conserve dollar exchange. The effect of the order was felt only during the following year.

The drop in the imports of glass and glassware was partially attributable to the rapid expansion of the indigenous industry. According to the official estimates, the production of the Indian glass industry was about Rs 200 lakhs and the 101 glass factories operating in the country were able to meet 50 per cent of the country's requirements during the year under review.

Similarly, the supply of imported paints and colours showed a small fall. Intense research facilitated the growth of an indigenous industry and about a dozen paint factories operated with indigenous raw materials during the year.

III.—EXPORTS OF MERCHANDISE

The export trade of British India during 1940-41 amounted to Rs 1,86,81 lakhs as compared with Rs 2,03,02 lakhs in the preceding year and Rs 1,62,70 lakhs in 1938-39. This was certainly a remarkable performance since the extension of the war in Europe had meant a loss of the overseas markets taking annually about 22 per cent of the value of the exports of India's principal commodities and accounting for 18 per cent of the total export trade of the country. The full effects of the loss of these markets could not be reflected in the value of the export trade during the year under review because other countries, notably the Empire countries, ordered more Indian goods than usual and the commodity prices were generally higher than those prevailing in the preceding year.

The shipments of raw materials and produce and articles mainly unmanufactured received a sharp check from Rs 85,99 lakhs to Rs 61,88 lakhs and were even below the value of exports amounting to Rs 73,29 lakhs during the immediate pre-war year, 1938-39. This heavy loss was partially recouped by increased exports of items grouped under food, drink and tobacco and of manufactured goods. The offtake of the former by foreign countries expanded from Rs 39,65 lakhs in 1939-40 to Rs 41,66 lakhs in the year under review while exports of manufactured goods broke all the previous records and totalled Rs 81 24 lakhs as compared with Rs 76,01 lakhs in the preceding year and Rs 47,61 lakhs during 1938-39. The only emphasised India's growing importance as a manufacturing country. An idea of this position can be gauged from the fact that Indian manufactured 400 new articles during the year under review while the range and output of many of her existing industries expanded considerably. Rapid intensification of India's own defence preparations and the role she was called upon to play as the "arsenal" of the Empire countries east of Suez in terms of her

undertaking at the Eastern Group Conference emphasised that importance.

Wartime problem of getting freight, the system of giving priorities to the shipments of essential goods and the restrictions on exports of goods to certain countries guided the course of the Indian export trade during 1940-41. In spite of the fall in the taking of Indian goods by the United Kingdom by Rs 7,50 lakhs, the export trade with the Empire countries showed a gain of Rs 2,60 lakhs and was valued at Rs 1,16,60 lakhs representing 62 4 per cent of the total export trade. On the other hand, exports to foreign countries dropped from Rs 89,80 lakhs in 1939-40 to Rs 70,24 lakhs in 1940-41. The loss was shared between Germany (Rs 2,80 lakhs), Netherlands (Rs 2,22 lakhs), Belgium (Rs 2,87 lakhs), France (Rs 3,56 lakhs), Spain (Rs 35 lakhs), Italy (Rs 1,04 lakhs), French Indo-China (Rs 64 lakhs) and Japan (Rs 4,09 lakhs) and would have been considerably more but for the increased offtake by the Allies including the United States of America on the import list of which India ranked seventh in order of importance during the year.

The question of finding alternate markets for those lost by the war engaged the attention of the Government of India throughout the year. With that end in view, Government set up in May 1940 the Export Advisory Council to advise them on matters connected with the country's export trade. It was followed by the despatch of the Meek-Gregory Mission to the North and South America in July. Almost simultaneously, the Indian Trade Commissioners in Alexandria and Mombasa were asked to survey the prospects of India's trade with the North and East Africa. The Government of India also appointed Indian Trade Commissioners for Australia and New Zealand and for Canada and South America.

The following table shows the comparative importance of the principal articles exported from British India —

EXPORTS.*(In thousands of Rupees)*

	1938-39	1939-40	1940-41	percentage on total exports of merchandise in 1940-41
Jute, raw	13,39,67	19,83,33	7,84,60	4 20

Jute and Jute Manufactures (Rs. 53,23 lakhs).—Owing to the loss of continental markets, the export trade in raw jute and jute manufactures received a sharp setback during 1940-41. The combined exports declined in quantity by 29 per cent from 1,651,000 tons to 1,172,179 tons in 1940-41, while in value they dropped by 22 per cent from Rs. 68,42 lakhs to Rs. 53,26 lakhs. The fall is comparatively less in value because the manufactured goods showed a comparatively smaller recession in prices as compared with the heavy decline in raw jute prices. The consumption of raw jute by Indian mills declined from 1,288,000 tons to 989,000 tons.

Exports of raw jute sharply declined in quantity from 570,000 tons in 1939-40 to 243,000 tons during the year under review, a drop of 57 per cent. These exports were the lowest for over a decade. They were valued at Rs. 7,85 lakhs as compared with Rs. 19,83 lakhs in the preced-

ing year representing a fall of as much as 60 per cent. The closing of the markets including France, Italy, Belgium, Spain, Germany, Austria and Hungary taking about 345,000 tons valued at over Rs. 700 lakhs and the shipping difficulties accounted for the heavy shrinkage in the export trade of raw jute all round.

The frenzied speculation seen in 1939-40 had taken the prices of raw jute to such high levels that substitutes were brought in and consequently, the demand for raw jute, the cheapness of which had conferred on it the world monopoly, fell off. By April, the Indian Trade Commissioner for New York was in a position to report that even the American market, which was the largest customer of India in jute, would be lost. As a result, the raw jute prices started on their downward journey and the quotation for first grade jute declined from Rs. 66-8 per bale in April to Rs. 32 in October.

The scheme contemplated by the Government of Bengal for regulating the jute acreage was not enforced during the season, and induced by high prices, the 1940-41 season saw an estimated production of 12,558,000 bales covering an area of 4,344,000 acres as against 9,750,000 bales grown on 3,161,000 acres. This record production was an additional depressing factor in the assessment of the jute outlook. But in August, the Jute Control Act was brought into force whereby the acreage under cultivation for the next season was reduced by nearly one-third of the area cultivated during the season under review. This action, coupled with the receipt of the report of the Meek-Gregory Mission and the revision of the minimum rates for jute as agreed at the conference convened in December improved the prospects and the raw jute quotation for first grade improved from Rs 32 in October to Rs 37 in March.

Shipments of jute manufactures declined from 1,083,000 tons valued at Rs 48.72 lakhs in 1939-40 to 925,000 tons valued at Rs 45.38 lakhs in 1940-41 representing a fall of 14.6 per cent in quantity and 6.8 per cent in value. The extent of fall in value was not so heavy as that in quantity because the market for jute manufactures had not contracted to the same degree as that for raw jute and the countries which used to import raw jute and manufacture it had by then ceased to compete with the Indian manufacturer. Consequently, the average prices for jute manufactures during the year under review were better than those prevailing in the preceding year.

The decline was solely shared by gunny bags the exports of which shrank from Rs 25.45 lakhs in 1939-40 to Rs 20.32 lakhs in the following year and in quantity from 1,211 million to 678 million. The loss in trade was partially compensated by the increased shipments of gunny cloth which were valued at Rs 24.18 lakhs during the year under review as compared with Rs 22.11 lakhs in the preceding year. These figures do not take into account the huge purchases made by His Majesty's Government during the year. Sacking bags accounted for 394 million valued at Rs 15.89 lakhs and hessian gunny bags, 284 million valued at Rs 4.42 lakhs. Two-thirds of the fall was due to reduced takings by the United Kingdom. The total quantity of gunny cloth exported declined from 1,561 million yards in 1939-40 to 1,546 million yards in 1940-41 with an increase in value from Rs 22.11 lakhs to Rs 24.16 lakhs. Hessian gunny cloth represented 1,500 million yards in 1940-41 as against 1,515 million yards in 1939-40.

The industry experienced an unsteady period during 1940-41 but was able to keep its head above waters owing to its well knit organisation. From the beginning of 1940, there was a deliberate reduction in the production of jute manufactures in order to curtail stocks in hand with the result that the industry's monthly output was brought down from 125,000 tons in January to 70,000 tons in September. The mills, which were working on the basis of 60 hours a week, were asked in April to cut down the number of working hours to 54 and in August to 45 hours. In the following month, the Association recommended to its member mills to close down for one week in a month. As a

result, the total output of the jute industry declined from 1,277,000 tons to 1,099,000 tons.

Cotton, Raw, (Rs. 23.56 lakhs).—The high hopes that the war would bring prosperity to the Indian cotton grower and that the prices of raw cotton would once again see the levels touched in the last Great War were completely shattered during the year under review. After touching Rs 257 in the first week of May, 1940, the Broch M G F G steadily declined to Rs 155 during the following two months as the result of the war developments in Europe and then went up, with occasional setbacks, to Rs 242 at the end of March, 1941.

The main reason was the obscure export outlook. The loss of valuable overseas markets and the difficulty in obtaining freight resulted in a sharp fall in exports of raw cotton from 2,947,900 bales valued at Rs 30.11 lakhs in 1939-40 to 2,168,000 bales valued at Rs 23.50 lakhs in 1940-41 representing a fall of 26 per cent in quantity and 22 per cent in value. Japan was responsible for taking 705,000 bales as compared with 1,056,000 bales in 1939-40 and 1,211,000 bales in 1938-39. China was able to absorb 754,000 bales as against 681,000 bales in preceding year and 193,000 bales in 1938-39. Exports to the United Kingdom during 1940-41 were estimated at 291,000 bales being also less than those amounting to 472,000 bales in 1939-40. The U S A was able to take about 123,000 bales mainly consisting of Bengals and Comras during the year. The Indian Mills were, however, able to absorb 3,334,000 bales in 1940-41 being 294,000 bales more than those in 1939-40.

India is the second largest producer of cotton in the world and her production during 1940-41, was estimated at 5,785,000 bales covering an area of 22,902,000 acres as compared with 4,909,000 bales grown on 21,580,000 acres in 1939-40. Owing to the increased activity in the Indian cotton mills, the total mill consumption of Indian cotton in India during 1940-41 amounted to 3,297,400 bales as compared with 3,030,900 bales in the preceding year and broke all its previous record.

Cotton Manufactures (Rs. 16.49 lakhs).—After a period of almost unrelieved depression since 1923, the Indian cotton textile industry enjoyed a year of prosperity during the period under review. The mills were able to increase their production from 4,012 million yards in 1939-40 to 4,270 million yards representing a fresh record in the history of the industry. This was due to greater demand for bazar, military authorities and from overseas.

Special opportunities were offered to India by the war to play a great part in meeting the cloth needs of many Commonwealth and Allied countries whose previous sources of supplies dried during the year. The cutting off of German and Italian supplies of piecegoods to India's most important pre-war markets had probably very little effect on India's export trade in the first six months of the war since neither Germany nor Italy did a very large trade in cotton goods with Middle and Far Eastern countries. The collapse of Holland, Belgium and France changed the outlook considerably for the year under review and new opportunities for the expansion of trade between India and the

Free French, Belgian and the Dutch Colonial Possessions in Africa and the Far East where opened up for India subject, of course, to the overcoming of shipping and exchange difficulties. It was also evident that the British Dominions and Colonies east and south of Gibraltar became more interested than formerly in Indian cotton manufactures as a result of the war.

The increase was distributed over all categories. Shipments of cotton twist and yarn expanded in value from Rs 1,79 lakhs to Rs 4,09 lakhs, while exports of cotton piecegoods were up by Rs 4,53 lakhs to Rs 10,64 lakhs in value and by 168 7 million yards to 390 1 million yards in quantity. Grey goods advanced by 46 million yards to 126 million yards, bleached goods, by 41 million yards to 54 million yards and coloured goods, by 82 million yards to 210 million yards. Of the total exports of piecegoods, 122 million yards or 81 per cent went to Burma as compared with 110 million yards or 50 per cent in the previous year. Exports to Ceylon and the Straits Settlements advanced from 23 million yards each to 31 million yards and 34 million yards respectively. Exports to Egypt also improved from two million yards to seven million yards. Shipments to Nigeria advanced by about 17 million yards to 22 million yards and those to the East African ports from 14 million yards to 78 million yards. Exports to the Anglo-Egyptian Sudan and Mauritius and Dependencies, on the other hand, remained fairly steady and together amounted to seven million yards. There were, however, increased shipments to Arabia, the Bahrain Islands, the Federated Malay States, Iraq, Aden, Thailand and the U S A.

Exports of cotton twist and yarn improved from 37 million lbs to 78 million lbs in quantity and from Rs 1,79 lakhs to Rs 4,09 lakhs in value. Shipments to Burma continued to advance and totalled 44 million lbs as against 15 million lbs in 1939-40. Shipments to Hong-kong also improved from five million lbs to nine million lbs and those to Egypt from 0 6 million lbs to 1 7 million lbs.

Tea (Rs. 27,75 lakhs).—The production of tea in India totalled 463 5 million lbs in 1940 being 11 million lbs more than that in the preceding season and was the highest ever since it started its upward trend in 1936. Out of this, 349 million lbs were shipped abroad during the year under review as against 359 million lbs in the preceding year. Though the volume showed a small fall, the value of those shipments went up from Rs 26,31 lakhs to Rs 27,73 lakhs owing to the rise in the price of tea during the latter part of the year under review. The total quantity shipped during the year represented 75 per cent of the total production as compared with 79 per cent in the preceding year.

The 90 per cent of tea available for export from India was sold to the British Ministry of Food at a price based on the average of three years before the war with the addition of a small allowance to meet increased cost of production. The allocation between the tea estates of the quantity covered by the contract was based on their export quotas under the International Restriction Scheme. This arrangement worked out in India through the Tea Controller. In addition, a few consignments were also sent

directly to the U S A which received its chief supplies from the United Kingdom.

Food grains and flour (Rs. 5,92 lakhs).—The total exports under this group amounted to Rs 5,92 lakhs as compared with Rs 5,09 lakhs representing a gain of 16 per cent but were considerably below the figures for 1938-39 and 1937-38 during which India was able to ship goods worth Rs 7,74 lakhs and Rs 9,49 lakhs respectively. Though the value gained the drop in quantity was 12 per cent from 458,000 tons to 409,000. The loss in trade under this group would have been more but for the heavy overseas demand for Indian wheat and wheat flour. India, which had shipped hardly 8,000 tons of wheat in 1939-40, was able to sell 45,000 tons to the overseas countries during the year with the result that the value of her export trade in wheat increased spectacularly from a modest sum of Rs 10 lakhs in 1939-40 to Rs. 50 lakhs during 1940-41. Similarly, the offtake of wheat flour by foreign countries was valued at Rs 92 lakhs in the year under review as against Rs 68 lakhs in the preceding year.

Exports of rice were valued at Rs 3,37 lakhs as against Rs 3,22 lakhs a year ago and formed the bulk of the exports under this group. Of these, hardly Rs 2 lakhs represented the value of rice in the husk. Shipments of rice not in the husk declined by 2,000 tons to 251,000 tons but their value increased from Rs 3,19 lakhs in 1939-40 to Rs 3,35 lakhs in the following year. On the other hand, exports of jowar and bajra received a sharp setback and were valued at Rs 1,59,000 in 1940-41 as compared with Rs 25,66,000 in 1938-39 and Rs 7,45,000 in 1939-40. Thus Indian jowar and bajra have practically lost ground. Exports of gram also continued their downward trend and amounted to Rs 6,93,000 despite the rise in prices as compared with Rs 18 lakhs in 1938-39 and Rs 7 lakhs in 1939-40.

Oilseeds (Rs. 10,05 lakhs).—Indian oilseeds lost further ground in the overseas trade during 1940-41. Exports during the year totalled 703,000 tons valued at Rs 9,99 lakhs as compared with 850,000 tons worth Rs 11,84 lakhs representing a fall of 17 per cent in volume and 16 per cent in value. Supplies were almost the same as last year but the war brought about a dislocation in Europe's oilcrushing industry and the loss of the continental markets normally taking seeds worth about Rs 6,00 lakhs a year.

Throughout the year, the Indian oilseeds trade was at the mercy of the British Ministry of Food which was the virtual customer for the exportable surplus and was able to quote its own price. The year started under very good auspices and in order to ensure supplies to the Allies, the Government of India issued orders in the very first week of the year banning exports of linseed, castor seeds and rapeseeds to neutral countries. The collapse of France, which was the most important customer of Indian oilseeds, gave a rude shock to the trade in India and even the decision of the British Ministry of Food to take over the outstanding contracts of France could not stop the downward trend of the oilseeds prices. In September, the Government of India came to an agreement with the British Ministry of Food on the purchases of Indian linseed and groundnuts. It helped for a time to

steady the market but could not relieve the anxiety of the merchants and with the movement of crops, the prices once again assumed a downward trend. Since the agreement proved beneficial only to the shippers, the Government of India revised the arrangements with the British Ministry of Food under which the purchase prices remained unchanged but the shippers were asked to give rebate representing the disparity between the purchase price of the Ministry and the price at which shippers purchased the seeds in the Indian market. That rebate was credited to a separated fund subsequently utilised for reducing the acreage under oilseeds, particularly groundnuts.

The Indian linseed crop of the season 1939-40, which was mostly marketed in the year under review, was estimated at 466,000 tons as compared with 442,000 tons in the preceding year. The Argentine crop of 1939-40 was smaller by 28 per cent than the preceding one, the official estimate of the outturn being 998,000 tons. The exports were 238,000 tons valued at Rs 3,69 lakhs as compared with 219,000 tons valued at Rs 3,18 lakhs in 1939-40. The Ministry of Food was virtually the sole overseas buyer of Indian linseed though a few consignments were sent to Australia and other Empire countries.

The production of groundnuts in 1940-41 was estimated at 3,473,000 tons of nuts in shell as against 3,165,000 tons in the preceding season. The war developments gave a heavy blow to the export trade during the year since France, Germany, Belgium and Netherlands taking between them something like 450,000 tons a year were overrun by the enemy. The United Kingdom, therefore, continued to be the main buyer. Consequently, the total shipments of groundnuts valued at Rs 4,06 lakhs were down by 41 per cent over those during 1939-40 when they were valued at Rs 7,19 lakhs. The quantity fell from 519,000 tons to 339,000 tons. The outlook for export trade was darkened by the loss of markets and shipping difficulties and towards the end of the year, the Government of India convened a conference of the interests concerned in order to discuss the proposal for reducing the next season's acreage by at least 33 per cent.

On the other hand, the war stimulated the demand for castor and rapeseeds exports of which used to be very modest during the pre-war period. The production of castor seed in 1940-41 was officially estimated at 101,000 tons being only 1,000 tons more than that in the preceding season, while exports were 67,000 tons valued at Rs 1,19 lakhs as compared with 40,000 tons worth Rs 71 lakhs in 1939-40 and Rs 10 lakhs in 1938-39. Similarly, exports of rape seed advanced in value by 42 per cent from Rs 33 lakhs in 1939-40 to Rs 47 lakhs in 1940-41 as compared with a modest amount of Rs 16 lakhs in 1938-39, the immediate pre-war year. The expansion in quantity was from 22,000 tons to 55,000 tons. Exports of Sesamum rose slightly in quantity from 3,500 tons in 1939-40 to 3,900 tons in 1940-41 but the value remained fairly steady at Rs 7 lakhs.

Hides and Skins (Rs. 8,47 lakhs).—Exports of raw hides and skins received a further setback of 16 per cent during 1940-41 when they totalled 26,000 tons as compared with 31,800 tons in the preceding year and of 25 per cent in value from

Rs 4,08 lakhs to Rs 3,08-lakhs. Of the total quantity shipped during the year under review, raw hides represented 27 per cent of the trade. Exports of raw hides totalled 7,200 tons valued at Rs 61 lakhs in 1940-41 as against 11,800 tons valued at Rs 79 lakhs in 1939-40 showing a drop of about 40 per cent in volume and 20 per cent in value. The export trade in raw cow hides declined heavily from 10,148 tons to 5,776 tons, but that in raw buffalo hides was up by 238 tons and totalled 1,510 tons during the year under review. There was a small recession in the exports of raw skins during the year, the exports amounting to 19,393 tons as compared with 19,656 tons in 1939-40 but the sharp recession in prices resulted in a heavy drop in value from Rs 3,29 lakhs to Rs 2,47 lakhs. Of the raw skins, the raw goat skins showed a modest gain from 18,881 tons to 19,002 tons but the shipments of raw sheep skins dropped by nearly half to 391 tons.

Exports of hides and skins, tanned and dressed, totalled 21,773 tons valued at Rs 5,33 lakhs as against 31,963 tons valued at Rs 6,08 lakhs a year ago. The drop was as much as 32 per cent in volume and 23 per cent in value and was attributable to the shrinkage in shipments of both hides and skins. India was able to send only 19,173 tons of dressed hides valued at Rs 4,23 lakhs during the year under review whereas the takings of the overseas countries had amounted to 25,871 tons worth Rs 4,32 lakhs in the preceding year. It will be seen that while the volume declined by as much as 20 per cent the loss in value was only 2 per cent. This was attributable to the further rise in prices of tanned hides during the year under review. On the other hand exports of tanned skins declined by 57 per cent in quantity and 59 per cent in value and totalled 2,604 tons valued at Rs 1,10 lakhs in 1940-41 and 6,092 tons valued at Rs 2,66 lakhs in 1939-40.

Raw Wool (Rs. 1,64 lakhs).—The year 1940-41 saw a sharp setback to India's export trade in raw wool which amounted to Rs. 1,64 lakhs as against Rs. 3,23 lakhs in the preceding year and Rs 2,99 lakhs in 1938-39. The drop in quantity was from 52.8 million lbs in 1939-40 to 30.8 million lbs in 1940-41. The United Kingdom was by far the most important customer of Indian wool. Following the negotiations between the Government of India and the Wool Controller of His Majesty's Government, and agreement for purchasing raw wool from India during the war period was reached in June 1940. The agreement stipulated an increase of 12 per cent in the price level then prevailing and later based the purchase price at 30 per cent more than the pre-war rates plus the increase in freight and other charges. Exports of raw wool to the United Kingdom declined from 33.3 million lbs in 1939-40 to 26.5 million lbs in 1940-41.

The Indian carpet wools continued to be popular in the United States because compared with other carpet wools, they shrink less, have a fairly long staple and unusually good colours and are, therefore, desirable for manufacturing better grade carpets. But the demand could not be fully satisfied owing to shipping difficulties and the restrictions on trade. From October 1940, however, a limited quantity was allowed to be shipped to the United States on a quota basis under the licensing system and a

supplementary quota for the year was later given and shipments to the U S A were reduced from 18.8 million lbs to 4.3 million lbs.

Metals and Ores (Rs. 7.13 lakhs).—Exports of metals and ores during the year under review were valued at Rs. 7.13 lakhs as compared with Rs. 6.45 lakhs in 1939-40 representing an increase of 10.8 per cent almost entirely attributable to the increase in prices. The bulk of exports consisted of pig iron and iron and steel manufactures. The shipments of metallic ores and scrap iron were valued at Rs. 1.83 lakhs as against Rs. 2.28 lakhs in 1939-40. Of these, exports of manganese amounted to Rs. 1.47 lakhs in 1940-41 as against Rs. 1.82 lakhs in the preceding year. The drop in manganese exports was due to the loss of the valuable overseas markets like France, restrictions on exports to certain countries and the war time shipping difficulties. The depression in the trade was so heavy that some of the manganese mining companies suspended their production during the year. There was good demand from the United States for Indian manganese and mica which assisted the defence preparations in that country. The mica mining industry was considerably expanded during the year and the Government of India purchased mica for shipping to the United States.

Exports of iron and steel and manufactures thereof recorded a spectacular advance from Rs. 3.99 lakhs to Rs. 5.05 lakhs being 27 per cent more in value than that in the preceding year. There was greater demand for Indian pig iron whose exports totalled 600,000 tons as compared with 569,000 tons in 1939-40. Arrangements were completed towards the end of September 1940 for supplying 800,000 tons of

pig iron to the United Kingdom at the rate of 50,000 tons a month. Owing to the introduction of licensing system and the suspension of British fresh licences after October, exports of scrap iron and steel to Japan contracted considerably.

Iron manufactures like angle, bolt and rod, bars and channels and iron and steel manufactures like cast pipes and fittings, steel and plates, tubes, pipes and fittings, wrought and other manufactures of iron or steel all recorded increases in value. India met the demand from the Middle East, Iraq, Kenya and Uganda to a certain extent and though the total exports were slightly below the preceding year's, signs were in evidence that India was gradually developing her export markets in the neighbourhood in this sphere as well. The total exports amounted to 101,000 tons as against 106,000 tons in the preceding year. The decline could be traced to the shipping difficulties and the need for conserving supplies at home.

Lac (Rs. 2.25 lakhs).—Like all other trade in India, the shellac trade, during the year 1940-41, was subject to large fluctuations and many other handicaps which are inevitable in time of war. The production of lac for the year under review was 1,233,375 maunds, the lowest for over five years, as compared with 1,394,000 maunds in the previous year. Exports totalled 808,877 maunds valued at Rs. 2.25 lakhs in 1940-41 as against 1,033,982 maunds worth Rs. 1.01 lakhs in 1939-40. There was lesser export demand from the United States of America which caused a substantial rise in the prices. The important feature of the year under review was the constant demand for "spot" goods by the shippers whenever sufficient freights could be secured.

Other Articles.—The following is a summary of the course of trade in the more important of the remaining articles of export.

	1938-39	1939-40	1940-41
	Rs. (lakhs)	Rs. (lakhs)	Rs. (lakhs)
Tobacco	2.76	2.53	2.68
Fruits and vegetables	2.27	2.37	2.44
Oilcakes	3.01	2.03	5.1
Coal	1.32	1.80	1.85

Fibre for brushes and brooms	16	13	11
Haberdashery and millinery	4	6	10
Bones for manufacturing purposes	24	23	12

Exports of Merchandise.

It will be seen that the export trade in oil-seeds, like that in oilseeds, suffered heavily during the year under review owing to the loss of continental markets. On the other hand, the oil-crushing industry was considerably developed in the country to meet the growing demand both at home and abroad. The shipments of oils expanded considerably during the year and were headed by groundnut oil, the exports of which showed an impressive increase of Rs 77 lakhs from Rs 52 lakhs in 1939-40 to Rs 1,29 lakhs in the following year. The essential oil industry also progressed well and the export of lemon grass oil showed handsome improvement.

Under the group spices, cardamoms figured prominently and the shrinkage in their exports accounted for the drop in the value of exports of this group. Exports of cardamoms dropped from Rs 31 lakhs in 1939-40 to Rs 8 lakhs during the year under review.

The demand for rubber, both raw and manufactured, expanded during the year and though the country's production did not represent even

one-hundredth of the world production, the war conditions helped India to build up a good export market during the year.

There was heavy depression in the coffee trade. Exports of coffee declined by two-thirds from Rs 73 lakhs in 1939-40 to Rs 24 lakhs in the following year. The Government of India, therefore, issued an Ordinance in December 1940 to assist the coffee industry by regulating exports abroad and sales inside India. The Indian Coffee Market Expansion Board was set up during the year.

Among dyes and colours, myrabolans and turmeric played a vital part. The exports of myrabolans declined in value by Rs 14 lakhs and amounted to Rs 28 lakhs as compared with Rs 42 lakhs in the preceding year, while the value of shipments of turmeric dropped from Rs 19 lakhs to Rs 13 lakhs.

Out of Rs 78 lakhs worth of provision and oilman's stores exported during the year under review, ghee accounted for Rs 31 lakhs.

Motor Vehicles in British India and The Indian States.

The number of motor vehicles on Indian roads, which had increased steadily until on January 1, 1939, there were 177,188 vehicles in British India and the Indian States, has since declined. The actual figure of motor vehicles in operation throughout the country on March 31, 1940, was 174,077.

This decline is undoubtedly the result of war-time conditions. Since the outbreak of war the motor import trade has been seriously affected, shipments from the United Kingdom being held up, while deliveries of vehicles from the United States of America are affected by dollar exchange difficulties. Furthermore, the price of petrol has risen appreciably since the outbreak of war and this has doubtless driven a number of older vehicles off the roads.

The total number of vehicles in British India on March 31, 1940, was 141,577 out of which 89,253 were private cars, 5,535 taxis, 23,851 buses, 14,336 lorries and 8,602 motorcycles.

The general decline in the number of motor vehicles in operation was not, however, distributed evenly throughout the provinces. Thus,

while in Bombay the number declined from 31,736 to 27,880, in Bengal it rose from 28,375 to 29,760. This province had the largest number of vehicles in operation. Madras, which had the third largest number, remained practically stationary with a total of 21,585. The United Provinces fell sharply from 17,119 to 14,603 while the Punjab rose from 12,950 to 13,372.

Motor Vehicles in Indian States.

Complete figures showing the number of motor vehicles in Indian States are not available. The States vary in size from 19 sq miles, to States like Hyderabad with an area of 82,698 sq miles (as large as Italy). Hyderabad State still heads the list of motor vehicles, but its total dropped sharply from 8,232 to 5,739. Travancore, on the other hand, rose from 3,900 to 5,307. It must be emphasised that these figures are unofficial and not necessarily complete.

The following tables show the number of motor vehicles of all classes in operation in the different provinces of British India and in the Indian States as on March 31, 1940 —

	Cars	Taxis	Buses	Lorries	M/Cycles	Total
Assam	3,110	172	814	(a)1,390	192	5,478

** In addition 2,071 vehicles, not re-registered during the year are believed to be in use

Index Numbers of Prices.

Index Numbers of wholesale prices in India during the years 1861-1931 are available in the publication "Index Numbers of Indian Prices, 1861-1931" issued Director-General of Commercial Intelligence and Statistics, Calcutta which contains (1) the unweighted index numbers of 28 articles of export, (2) the unweighted index numbers of 11 articles of import, (3) the general unweighted index numbers for 39 articles of export and import and (4) the weighted index numbers of 100 articles. The last of the four series is a continuation of the series first compiled and published by F. J. Atkinson in the Journal of Royal Statistical Society in March 1897. The index figures subsequent to 1931 are available in the addenda to the Index Numbers of Indian Prices 1861-1931 published from time to time. The compilation of all these series was discontinued in August 1941.

The following table contains these index numbers since the year 1925.—

(Price in 1873=100)

Year	Exported articles 28 (unweighted)	Imported articles 11 (unweighted)	General Index No for all (39) articles (unweighted)	Weighted Index No. (100 articles)
1925	233	211	227	265
1926	225	195	216	260
1927	209	185	202	258
1928	212	171	201	261
1929	216	170	203	254
1930	177	157	171	213
1931	125	134	127	157
1932	120	139	126	149
1933	118	128	121	139
1934	117	122	119	136

1939	133	137	134	157
1940	158*	188*	164*	Not available
1941 (Seven-monthly average)	Not available	Not available	181*	"

* Provisional

In addition to the above series of wholesale prices for the whole of India, the Director-General of Commercial Intelligence and Statistics, Calcutta, publishes a wholesale price index number for Calcutta. The Governments of Bombay, Sind, the United Provinces and Madras also compile and publish similar wholesale prices index numbers for Bombay, Karachi, Cawnpore and Madras respectively.

The following table gives these index numbers since 1925 —

Wholesale price index numbers for Calcutta, Bombay, Karachi, Cawnpore and Madras

Year	Calcutta (July 1914=100)	Bombay (July 1914=100)	Karachi (July 1914=100)	Cawnpore (1913=100)	Madras (Week ended 21st August 1939=100)
1925	150	163	151		
1926	148	149	140		
1927	148	147	137		
1928	145	146	137		
1929	141	145	133		
1930	116	126	108		
1931	96	109	95		
1932	91	109	99		
1933	87	98	97		
1934	89	95	96		
1935	91	99	99		
1936	91	96	102		
1937	102	106	108	117	
1938	95	101	104	92	
1939	108	109	108	85	
1940	120	118	116	101	
1941	139	137	120	100	119
				104	137

About the end of the year 1929 there began a sharp decline in wholesale prices which continued during 1930 and 1931. This downward trend, although somewhat checked in 1932, continued during 1933 and 1934 when the prices reached their lowest level. The prices, however, showed some improvement during the next two years and registered a sharp rise during 1937. The prices registered a perceptible fall in the following year but they soon recovered and registered a further rise in Calcutta and Bombay during 1939.

With the outbreak of the war the wholesale prices began to soar up. This tendency continued till December, 1939, but thereafter there was a gradual fall till June, 1940, when they again showed a partial recovery till the middle of 1941. From June onwards, the prices rose very rapidly and reached their highest level since 1930. As compared to the previous year the prices during 1941 were higher by 19 points each at Bombay and Calcutta and by four points at Karachi.

The various Provincial Governments publish in their respective *Gazettes* fortnightly and monthly statements of retail and wholesale prices of certain important commodities. In addition to these, however, some of the Provincial Governments also publish working class cost of living index numbers. Such index numbers are being published regularly every month for the following centres for Bombay, Ahmedabad, and Sholapur by the Labour Office of the Government of Bombay; for Nagpur and Jubbulpore by the Department of Industries, Central Provinces and Berar, for six centres in Bihar by the Department of Industries, Bihar; for Madras, by the office of the Director of Industries and Commerce, Madras; for Lahore, Sukkot, Ludhiana, Rohtak, and Multan by the office of the Director of Industries, Punjab; and for Cuttack, by the Government of Orissa. In addition to these series, working class cost of living index number for Jalgaon in the Bombay Province and cost of living index numbers for low paid employees at 121 places in Madras Province and for low paid government servants at three places in the United Provinces are at present being compiled.

The working class cost of living index number for Bombay, which was originally compiled on a pre-war base, was revised during 1937, the base adopted for the new series being July 1933 to June 1934=100. The revised index number stood at 121 in December 1941, the average for 1941 being 122. The Ahmedabad cost of living index number, with base August 1926 to July 1927=100, stood at 99 in December 1941 while the Sholapur cost of living index number, with base February 1927 to January 1928=100, stood at 99 in December 1941. The Nagpur cost of living index number, on base January 1927=100, was 87 in December 1941 while the Jubbulpore Index on the same base was 80. The Madras cost of living index number, with base July 1935 to June 1936=100, was 121 in

December 1941. The Lahore cost of living index number, with 1931-35 prices equated to 100, was 160 in October 1941. The cost of living index numbers for Sialkot, Ludhiana, Rohtak, and Multan, with 1931-35 prices equated to 100, were 157, 159, 146 and 158 respectively for October 1941.

The catastrophic fall in retail prices which commenced at the end of 1929 continued during 1930 and 1931. In 1932 prices ruled at a slightly lower level than in 1931. In 1933 and 1934 the downward tendency of prices continued. This downward tendency was somewhat checked during 1935 and 1936. The prices showed a definite rise in 1937, remained more or less steady during 1938-39 and registered an appreciable rise in 1940 and 1941.

The inadequacy as also the general unreliability of Indian price statistics has been the subject of comment by many committees and commissions of enquiry including the Indian Economic Enquiry Committee of 1925, the Royal Commission on Indian Labour and also by Messrs Bowley and Robertson who were invited by the Government of India to advise them on the question of obtaining more accurate and detailed statistics. The eleventh Industries Conference held at Mysore in December 1939 and the first Conference of the Labour Ministers held at New Delhi in January 1940 recommended that the Central Government should undertake the legislation to facilitate the collection of statistics relating to industries. In pursuance of this recommendation, the Government of India introduced in the Legislative Assembly in February 1942 a bill on the subject which has since been passed by the Central Legislature and received the assent of the Governor-General. This Act which is called the Industrial Statistics Act, 1942, empowers the provincial Governments to arrange for the collection of statistics relating to prices of commodities as also certain other matters like wages, employment, industrial disputes, etc.

In view of the inadequacy of the existing retail price data, especially from the point of view of compiling cost of living index number, the Court of Enquiry constituted in August, 1940, under the Trade Disputes Act 1920 under the Chairmanship of the Hon'ble Sir B. N. Rau to investigate the question of dearness allowance for the railway employees recommended that the Central Government should take up the work of preparation and maintenance of cost of living index figures for three distinct classes of areas in India, viz city, urban and rural. This recommendation led the Government of India to consider the formulation of a centrally controlled scheme for the preparation and maintenance of cost of living index numbers for important places in British India and a tentative scheme has been outlined. The scope of the scheme is understood to have been limited at present to the preparation of figures for industrial labour (excluding plantation labour) as the necessity of such figures arises mainly in connection with disputes concerning industrial labour.

Bombay Stamp Duties.

Acknowledgment of Debt ex. Rs 20 ..	Rs a	0 1

Entry in any High Court of an Advocate or Vakil 500

In the case of an Attorney 500

Instrument—Apprenticeship 10

Divorce 6

Other than Will, recording an adoption or conferring or purporting to confer Authority to adopt 20

Lease—Where rent is fixed and no premium is paid for less than 1 year, same duty as Bond for whole amount; not more than 3 years, same as Bond for average annual rent reserved; over 3 years, same as Conveyance for consideration equal to amount or value of the average annual rent reserved; for indefinite term, same as Conveyance for a consideration equal to the amount or value of the average annual rent which would be paid or delivered for the first ten years if the lease continued so long; in perpetuity, same as Conveyance for consideration equal to one-fifth of rents paid in respect of first 50 years. Where there is premium and no rent, same as Conveyance for amount of premium; premium with rent, same as Conveyance on amount of premium in addition to the duty which would have been payable on the lease if no fine or premium or advance had been paid and delivered. For the Cities of Bombay, Ahmedabad, Poona, Sholapur, Surat and other Urban areas, the following scale has been made applicable by Bombay Act IV of 1939 —

(b) (i) Where the lease is granted for money advanced and where no rent is reserved

The same duty as is leviable on a conveyance [No 23, as it stood before its amendment by the Bombay Finance (Amendment) Act, 1932] for a consideration equal to the amount of such advance as set forth in the lease

(b) (u) Where the lease is granted for a fine or premium and where no rent is reserved

The same duty as is leviable on a conveyance [No 23] under the Bombay Finance (Amendment) Act, 1932, for a consideration equal to the amount of such fine or premium as set forth in the lease

(c) (i) Where the lease is granted for money advanced in addition to rent reserved

Same duty as is leviable on a conveyance [No 23, as it stood before its amendment by the Bombay Finance (Amendment) Act, 1932] for a consideration equal to the amount of advance as set forth in the lease, in addition to the duty which would have been payable on such lease if no advance had been paid or delivered

Provided that, in any case when an agreement to lease is stamped with the *ad valorem* stamp required for a lease, and a lease in pursuance of such agreement is subsequently executed, the duty on such lease shall not exceed eight annas

(c) (u) Where the lease is granted for a fine or premium in addition to rent reserved

The same duty as is leviable on a conveyance (No 23) under the Bombay Finance (Amendment) Act, 1932, for a consideration equal to the amount of such fine or premium as set forth in the lease, in addition to the duty which would have been payable on such lease if no fine or premium had been paid or delivered

Provided that, in any case when an agreement to lease is stamped with the *ad valorem* stamp required for a lease, and a lease in pursuance of such agreement is subsequently executed, the duty on such lease shall not exceed eight annas

of Stamp Act of 1899 covering goods merchandise, personal effects, crops and other property against loss or damage, or liable to the same duty as Policies of Fire Insurance.

Power of Attorney—

For the sole purpose of procuring the registration of one or more documents in relation to a single transaction or for admitting execution of one or more such documents 1 0

When required in suits or proceedings under the Presidency Small Causes Courts Act, 1882 1 0

Authorising 1 person or more to act in a single transaction other than that mentioned above 2 0

Authorising not more than 5 persons to act jointly and severally in more than 1 transaction, or generally .. 10 0

Authorising more than 5 but not more than 10 persons to act 20 0

When given for consideration and authorising the Attorney to sell any immovable property—The same duty as a Conveyance for the amount of the consideration

In any other case, for each person authorised 2 0

Promissory Notes—

(a) When payable on demand—

(i) When the amount or value does not exceed Rs. 250 0 1

(ii) When the amount or value exceeds Rs. 250 but does not exceed Rs. 1,000 0 2

(iii) In any other case 0 4

(b) When payable otherwise than on demand—The same duty as a Bill of exchange for the same amount payable otherwise than on demand.

Protest of Bill or Note 2 0

Protest by the Master of a Ship 2 0

Proxy 0 2

Receipt for value exc. Rs. 20 0 1

Reconveyance of mortgaged property—

(a) If the consideration for which the property was mortgaged does not exceed Rs. 1,000—the same duty as a bond for the amount of such consideration as set forth in the Reconveyance

(b) In any other case 10 0

Release—that is to say, any instrument whereby a person renounces a claim upon another person or against any specified property—

(a) If the amount or value of the claim does not exceed Rs. 1,000—The same duty as a Bond for such amount or value as set forth in the Release

(b) In any other case 10 0

Respondentia Bond—The same duty as a Bond for the amount of the loan secured

Security Bond—(a) When the amount secured does not exceed Rs. 1,000—The same duty as a Bond for the amount secured (b) In any other case 10 0

Settlement—The same duty as a Bond (but in its application to the cities

of Bombay, Ahmedabad, Poona, Sholapur, Surat, and other urban areas the same duty as a conveyance if the property set apart is immoveable and the purpose is one other than charitable or religious) for the sum equal to the amount or value of the property—settled. Provided that—where an instrument of settlement contains any provision for the revocation of settlement, the amount or value of the property settled shall, for the purposes of duty, be determined as if no such provision were contained in the instrument

Revocation of Settlement—The same duty as a Bond (but in its application to the cities of Bombay, Ahmedabad, and Poona the same duty as a conveyance if the property set apart is immoveable and the purpose is one other than charitable or religious) for a sum equal to the amount or value of the property concerned as set forth in the instrument of revocation but not exceeding ten rupees.

Share-warrant to bearer issued under the Indian Companies Act—One and a half times the duty payable on a conveyance for a consideration equal to the nominal amount of the shares specified in the warrant.

Shipping Order 0 1

Surrender of Lease—When duty with which lease is chargeable does not exceed Rs. 5—The duty with which such Lease is chargeable.

In any other case 5 0

Transfers of Shares—12 annas for every Rs. 100 or part thereof of the value of the shares

Transfer of debentures, being marketable securities whether the debenture is liable to duty or not, except debentures provided for by section 8—12 annas for every Rs. 100 or part thereof of the face amount of the debenture

Transfer of any Interest secured by a Bond, Mortgage-deed, or Policy of Insurance—If duty on such does not exceed Rs. 10—The duty with which such Bond, &c., is chargeable.

In any other case 10 0

—of any property under the Administrator General's Act, 1874, Section 31. 10 0

—of any trust property without consideration from one trustee to another trustee or from a trustee to a beneficiary—Five rupees or such smaller amount as may be chargeable for transfer of shares.

Transfer of Lease by way of assignment and not by way of under-lease—The same duty as a conveyance for a consideration equal to the amount of the consideration for the transfer.

Trust, Declaration of—Same duty as a Bond for a sum equal to the amount or value of the property concerned, but not exceeding 15 0

Revocation of—Ditto, but not exceeding 10 0

Warrant or Goods 0 8

The Indian National Congress.

For a complete history of the movement represented by the Indian National Congress the reader is referred to earlier editions of the *Indian Year Book*. The Congress was founded in 1885 by Mr Allan Octavian Hume, a retired member of the Indian Civil Service, and it held its first session in Bombay at Christmas of that year, the fundamental principles of the Congress were laid down to be—

Firstly, the fusion into one national whole of all the different and discordant elements that constitute the population of India;

Secondly, the gradual regeneration, along all lines, mental, moral, social and political of the nation thus evolved, and

Thirdly, the consolidation of union between England and India by securing the modification of such of the conditions as may be unjust or injurious to the latter country

With these objects in view the Congress pursued an uneventful career until 1907. It undoubtedly exercised a great influence in inducing a spirit of national unity amongst the diverse peoples of India, in focussing the chief political grievances, and in providing a training ground for Indian politicians. But in 1907 the extremists, chiefly of the Deccan and the Central Provinces, who had for some time chafed under the control of the older generation, succeeded in wrecking the Surat session of the Congress and produced a split which had long been seen to be imminent. The senior members of the Congress therefore re-crystallised its creed in definite terms. They laid down that—

"The objects of the Indian National Congress are the attainment by the people of India of a system of Government similar to that enjoyed by the self-governing members of the British Empire, and a participation by them in the rights and responsibilities of the Empire on equal terms with those members. These objects are to be achieved by constitutional means by bringing about a steady reform of the existing system of administration and by promoting national unity, fostering public spirit and developing and organising the intellectual, moral, economic and industrial resources of the country."

For some years following 1907 efforts were made to heal the split and these were without avail until 1916 when a re-united Congress met at Lucknow under the presidency of Babu Ambika Charan Muzumdar of Faridpur in Bengal. But the union then effected was purely superficial; the difference between the moderates and the extremists was fundamental, the extremists captured the machinery of the Congress and from the period of the special session held at Calcutta in September 1920 the Congress passed entirely under the domination of Mr Gandhi and his lieutenants. In 1927 the Congress actually adopted independence as the goal of India. In the following two years the Congress made what the extremists left described as a climb-down, while the Liberals moved to yards the left, with the result that for a time there appeared

to be a commonness of purpose between the Liberals and Congressmen. At its 1928 session the Congress, while adhering to Independence, agreed to accept Dominion Status, if granted, before the end of 1929. Things were tending towards a satisfactory settlement when in the latter half of 1929 the Congress insisted on the immediate grant of Dominion Status or an assurance that Dominion Status would be the basis of discussion at the Round Table Conference to be convened in England between representatives of England, British India and the Indian States. Here was the parting of the ways. The Liberals went their way and the Congress its own. In fulfilment of the "ultimatum" issued at its previous session, the Congress, at its 1929 session, declared for complete independence or "Purna Swaraj." Throughout the year 1930 the Congress was engaged in a defiance of the law of the land which, it was hoped, would help India, to attain complete independence. Early next year the Congress actually suspended civil disobedience by virtue of an agreement arrived at with the Government, but the fulfilment of the terms of this agreement gave rise to trouble and another agreement was concluded.

As a result of this Mr Gandhi, on behalf of the Congress, went to London to take part in the Round Table Conference. While he was away things took a turn for the worse in the country, and matters reached a crisis with the birth of the New Year. In 1932 the Government bent all its efforts to making it impossible for the Congress to carry on its subversive activities and succeeded fully in its object. Congress was crushed and all forms of Congress work throughout the country were successfully prevented. In fact as well as in law Congress ceased to exist. In the middle of 1934 the civil disobedience movement, which had rendered the Congress illegal, was withdrawn. In the autumn of that year Mr Gandhi retired from the Congress and politics, although he remains in practice the virtual dictator of Congress policy. During the next four or five years, the Congress was a constitutional organisation and was actually in charge of His Majesty's Government for more than two years in eight provinces under the 1935 constitution. (See past issues of the *Indian Year Book* for a history of the non-co-operation and the civil disobedience movements, and for the parliamentary phase of Congress activities.)

This parliamentary phase proved to be short lived. Shortly after the declaration of the present war the Congress withdrew its Ministers in the majority of the provinces. Attempts were made in the succeeding eleven months not only to get back to office in the provinces but also to acquire a share of power at the centre but these were fruitless. Eventually the Congress gave supreme command of the organisation and its members to Mr Gandhi and launched another campaign of civil disobedience—this time on the issue that Government should have the right to levy taxes for the purpose of fighting the war against India's war effort. The Congressmen answered Mr Gandhi's call and uttered anti-war slogans and engaged in the latest civil disobedience movement.

but restricted to individuals carefully chosen by Mr Gandhi himself. Even so, close upon 25,000 representative Congress leaders are said to have taken part in the campaign.

Late in the year 1941 the satyagrahi prisoners were released by Government whereupon the movement was suspended. A few months later the Congress was presented with an opportunity to return to parliamentary work, in the shape of the scheme drafted by the British War Cabinet, but this was not availed of. The Congress thus reverted to another period of barrenness, with this difference that during this period it did not indulge in any anti-government or anti-war activity, rather did it protest that its demand for the creation of a National Government was not met and thereby it was prevented from prosecuting the defence of India vigorously.

Indian States Subjects.—In 1938 and 1939 Mr Gandhi took a great deal of interest in the affairs of the States subjects and supported their demand for civil liberties, the reign of law and responsible government under the aegis of their respective rulers. At first, the States people were told that they should keep their movements apart from that of the Congress in British India and that they should rely more on their own strength than on the help of the Congress. This led to intense political activity in most of the States and an unprecedented awakening among the comparatively backward people of the States. In several States the movement took the form of direct action disobedience of laws refusal to pay taxes, etc., exactly on the lines of the civil disobedience movement in British India.

This led to numerous complications. In the first place, the people of the States were not qualified by tradition or training to conduct the fight

for more political rights, so that in many a State the movement collapsed through the weakness of the instruments. In the second place, the States people not having been grounded in the discipline of British Indian populations, the campaigns in more than one State led to outbreaks of violence and had therefore to be suspended. These movements also led to unexpected and undesirable consequences beyond the boundaries of the States. The Princes naturally grew hostile to the Congress and became suspicious of Congress leaders in particular and British Indian politicians in general. Undoubtedly this development in the States further diminished the prospect of an early inauguration of the federal scheme, as the Rulers of States became apprehensive of their future in a federation in which the British Indian and Congress influence would certainly be considerable. Indirectly speaking, the Princes began to think in terms of devising measures which would protect them in any future arrangements for the governance of India as a whole.

On the credit side, it must be admitted that this new activity aroused a great deal of consciousness among the people of the States which cannot fail to add to their political education and widen their outlook. Either in response to their subjects' clamour or with a view to anticipating their demands some Rulers liberalised their administrations. The Viceroy, too, advised the Princes gradually to associate their subjects in the conduct of the affairs of their States. All these were to the good, but the movements in the States were much ahead of their time. At all events the soil had not been properly prepared.

CONGRESS MINISTRIES.

After the general elections under the 1935 constitution the Congress hesitated for a while but eventually decided to shoulder the responsibility for the administration. The leaders of the Congress Parties in the provincial legislatures assumed office with confidence and discharged their duties with skill and ability. Almost everyone of the new Ministries had an initial handicap in the shape of financial stringency, but by means of economy and retrenchment they managed to produce budgets which were, generally speaking, applauded. In the field of law and order, they behaved with exemplary firmness and put down every attempt to disturb public peace and tranquillity. This was particularly so in Bombay and the United Provinces, where within a few weeks of assuming office the Ministries were faced with a serious labour situation. The Madras Ministry was called upon to tackle the activities of some extremist Congressmen who went about preaching violence and they met the situation with commendable promptitude and firmness. Similarly, in Bihar the Ministry was faced with attack from two camps. The zemindars threatened *satyagraha* owing to certain land tenure reform measures proposed by Government, while the peasants showed fight on the ground that the remedy proposed was not adequate. It was a delicate situation, but the Government, aided by right-wing leaders, tidied over the difficulty by carrying the zemindars

and peasants with them, although the peasant leaders, who were extremist Congressmen continued to give trouble to the Ministry.

It is not possible in a short survey to recount the activities of all the Governments run by Congressmen. Broadly speaking, most of them undertook beneficent measures calculated to help the under-dog, although in an attempt to do so and in pursuance of a policy of prohibition some Congress Ministries levied taxation, which bore unduly heavily on trade and industry, especially on those who provide the capital for the economic regeneration of the country. A few Governments sought to increase their revenue by levying a tax on agricultural incomes. Most of them undertook more or less drastic measures to reduce and remove the burden of debt on the agricultural population. Prohibition of alcoholic liquor and drugs in small areas an experiment preliminary to the proclamation of total prohibition throughout the province was introduced in most of the Congress provinces. The Bihar and the United Provinces Governments took concerted measures to rationalise the sugar industry from top to bottom and tried to ensure for the grower of sugar-cane a minimum economic price for his produce. Attempts were made to reform education, local self-government and several branches of public activity.

Barring a few cases here and there, the Services, both in the Secretariats and in the districts, co-operated willingly with their new masters. The Governors too acted in conformity with the spirit of the assurance given by His Excellency the Viceroy, except for a crisis which occurred early in 1938 in Bihar and the United Provinces (see later). On the whole provincial autonomy was worked by the Congress and the representatives of the British Governments with a great deal of cordiality and efficiency.

Communa Peace Efforts—During the years 1938-40 several attempts were made by Mr. Gandhi and the Congress leaders to bring about an agreement between the Congress and the all-India Muslim League. The failure of the negotiations embittered the already strained relationship between the Hindu and Muslim communities. Numerous communal disturbances occurred in the Congress governed provinces. Most of them could be traced to complaints against Congress Governments, the Muslims contended that the Congress Governments were unjust to them while the Hindus protested that they were sacrificed in an attempt to placate the Muslims. The Governments themselves were in a very unenviable position. If they took action against those who spread malicious propaganda they were accused of invading civil liberties, while if they allowed the propagandists to do what they liked life and property were placed in serious jeopardy.

On the political plane spokesmen of the Muslim League complained that the interests of that community were not adequately looked after and more than one individual and committee toured the country and collected data in this behalf and published them as so many charge sheets against the Congress Governments. To these the Governments concerned issued lengthy replies purporting to substantiate their claim that they were more than just and generous to the minority community.

On the communal plane, the Muslim League's charge against the Congress ministries and the latter's downright repudiation thereof produced a state of affairs which did not conduce to public peace. There was many a disturbance between the Hindus and Muslims in several parts of the country. The strained relationship led to riot which in their turn worsened public feeling. Thus the vicious circle went on thoroughly vitiating the atmosphere.

Not even the resignation of the Congress ministries which occurred towards the end of October 1939 helped the situation. It was thought for the time that the removal of the objects of Muslim League attack would put an end to the League campaign. But subsequent events showed that far from producing this result the controversy increased in intensity. Out of office, the Congress appeared to have become more exposed to the League attack—it was, in any rate, less in a position to defend itself against the League charges.

The withdrawal of the Congress ministries was hailed by the Muslim League as God's gift and Mr. Jinnah announced a day of thanksgiving in celebration of the "deliverance" of the Muslims from the "tyranny" of the Congress.

The "Deliverance Day" further accentuated the feeling against the Congress who, as Jinnah men, however, stoutly denied the charge.

Such was the virulence of the campaign against the Congress that all past efforts to bring about a reconciliation and working arrangement between the Congress and the League had perforce to be abandoned. The Muslim League under Mr. Jinnah struck a new path, and arguing that the Muslim minorities could not be safe under a system of government in which the Hindu majority would be perpetual, the League proceeded to demand the establishment of separate autonomous Muslim States. (For details see chapter headed Muslim League.)

Congress and the War—Shortly after the declaration of war Mr. Gandhi made a public statement, in his individual capacity, immediately after an interview with the Viceroy. Therein he revealed that he had told His Excellency that his sympathies were with England and France from the purely humanitarian standpoint and that he could not contemplate the destruction of London. "I am not just now thinking of India's deliverance," he said, "It will come, but what will it be worth if England and France fall or if they come out victorious over Germany ruined and humbled?"

This statement created quite a favourable impression in India as well as in Britain but the Congress Working Committee which met about a week later chose to make India's support to Britain in war conditional on a declaration by Britain that the latter's policy towards this country involved the recognition of Indian independence. The resolution said:

"As a first step to discontinue the policy from the policy of the British Government the Committee called upon the Government of India of the Central Legislative Assembly to refrain from attending the next Imperial Conference if the British Government have decided to treat a belligerent country, present or future, as a part of the Government of India Act, 1935, and taken other steps which affect the Indian people in such circumstances and limit the powers of the Provincial Governments."

"This has been done with the consent of the Indian people who have shown in such matters have been guided by the British Government. The Working Committee will make the present situation a basis for further developments."

The Congress Working Committee, in its entire disapproval of the League's policy of non-cooperation with the British Government, was not prepared to take any step which would lead to a rupture of the Hindu-Muslim unity. It was, however, not prepared to accept the League's demand for separate autonomous Muslim States. The Working Committee, in its resolution, stated that the Congress would not support the League's demand for separate autonomous Muslim States unless it was accompanied by a declaration of Indian independence.

sembly machinery had been unequivocally rejected by the Muslim League Working Committee (See last year's issue)

Orient Club Speech—The next stage in the political negotiations was a speech made by the Viceroy in January 1940 known as the Orient Club Speech declaring that Dominion Status was the goal of British policy in India to be attained with the minimum delay after the conclusion of the war.

Outlining the intentions of His Majesty's Government towards India, the Viceroy said "Their objective for India is full Dominion Status—Dominion Status, too, of the Statute of Westminster variety, that so far as the intermediate period is concerned (and it is their desire to make that intermediate period the shortest practicable), they are ready to consider the reopening of the scheme of the Act of 1935 so soon as practicable after the war with the aid of Indian opinion, that they are prepared in the meantime, subject to such local adjustments between the leaders of the great communities as may be necessary, to ensure harmonious working, and as an immediate earnest of their intention, to expand the Executive Council of the Governor-General by the inclusion of a small number of political leaders, and that they are ready and anxious to give all the help they can to overcome the difficulties that confront us and that confront India today. (For fuller report see last year's issue.)

On the basis of the Bombay speech quoted above, Mr. Gandhi again met the Viceroy. But the interview led to nothing, as it earlier meeting.

In a statement on the future of this late effort, Mr. Gandhi said he saw no prospect of a peaceful and honourable settlement with Britain accepted the position that the press had come when India must be allowed to determine her own constitution and future.

"There exists a deep gulf," he said, between the position in India in the Viceroy's Council which contemplates and desires the independence of India's destiny by the people themselves and the position taken up by the Government."

Ramgarh Congress, 1940. The resolution of the Congress was that it would not support the British war effort until India was free. This was a significant statement of Indian nationalism.

(The above information was obtained from
the following sources)

[illegible]

"The Congress is further of opinion that while it will always be ready, as it ever has been, to make every effort to secure communal harmony no permanent solution is possible except through a Constituent Assembly, where the rights of all recognised minorities will be fully protected by agreement, as far as possible, between the elected representatives of various majority and minority groups, or by arbitration if agreement is not reached on any point. Any alternative will lack finality. India's constitution must be based on independence, democracy and national unity, and the Congress repudiate attempts to divide India or to split up her nationhood. The Congress has always aimed at a constitution where the fullest freedom and opportunities of development are guaranteed to the group and the individual, and social injustice yields place to a juster social order.

"The Congress cannot admit the right of the rulers of Indian States, or of foreign vested interests to come in the way of Indian freedom. Sovereignty in India must rest with the people, whether in the States or the provinces, and all other interests must be subordinated to their vital interests. The Congress holds that the difficulty raised in regard to the States is of British creation and it will not be satisfactorily solved unless the declaration of the freedom of India from foreign rule is unequivocally made. Foreign interests if they are not in conflict with the interests of the Indian people, will be protected." (For full text of the resolution see last year's issue)

The Congress in 1940-41.—The weeks that followed the Ramgarh session of the Congress was a period of intensive preparation for a direct action movement under the guidance of Mr. Gandhi side by side with expressions of hope by Mr. Gandhi and other Congress leaders that such a struggle might be avoided. Mr. Gandhi's notion of preparation was as usual on the constructive plane, that is hand-spinning, removal of untouchability and promotion of Hindu-Muslim unity.

As for communal unity Mr. Gandhi stoutly resisted the Muslim League demand for Pakistan but declared that, although, as a man of non-violence he could not forcibly resist the proposed partition if the Muslims of India really insisted upon it he could never be a willing party to the proposed division of the country. He wrote:

"My whole soul rebels against the idea that Hinduism and Islam represent two antagonistic cultures and doctrines. To assent to such a doctrine is for me denial of God. For I believe with my whole soul that the God of the Quran is also the God of the Gita, and that we are all no matter by what name designated, children of the same God. I must rebel against the idea that millions of Indians who were Hindus the other day changed their nationality on adopting Islam as their religion.

A few weeks later the war took a sudden turn for the worse. The Government in Great Britain was reconstituted under Mr. Churchill with Mr. L. S. Amery at the head of the India Office in place of Lord Zetland.

The invasion of the Low Countries, the capitulation of Belgium and the collapse of France produced in India a new feeling in favour

of Britain. "We have undoubtedly our grievance against England, we know that she has not behaved fairly and squarely by India," said Babu Rajendra Prasad; "at the same time I realise that England is any day better than the Totalitarian States." The same feeling must have induced Mr. Gandhi to affirm that he had no desire to embarrass Britain but that he wanted the Congress, through civil disobedience, merely to deny Britain the moral influence which Congress co-operation would give.

Pandit Nehru, too, proclaimed that England's difficulty is not India's opportunity," while Mr. Gandhi remarked "If the British Government will not *suo moto* declare India as a free country, having the right to determine her own status and constitution, I am of opinion that we should wait till the heat of the battle in the heart of the Allied countries subsides and the future is clearer than it is. We do not seek our independence out of Britain's ruin."

There was clear evidence of a desire on the part of many Congress leaders actively to help in the war in spite of Mr. Gandhi's known convictions on the subject.

A Big Jump.—By now the feeling had grown among Indians that the war had come closer to this country and that the danger of external aggression and internal disorder were not remote possibilities. This realisation caused a revolution in the minds of most Congressmen who had not the courage to adhere steadfastly to Mr. Gandhi and his non-violence in any eventuality. The Congress Working Committee virtually abandoned Mr. Gandhi and offered to co-operate in the war effort provided a fully representative National Government was formed at the centre. Apart from the ideological separation from Mr. Gandhi, this offer constituted a big jump for the Congress—from non-participation in any war to active help in the prosecution of this war.

The grounds for this change in Congress policy was prepared in June 1940 when, after prolonged deliberations, the central executive of the Congress issued a lengthy statement (see last year's issue) in the course of which it was stated:

"While the Working Committee hold that the Congress must continue to adhere strictly to the principle of non-violence in their struggle for independence, the committee cannot ignore the present imperfections and failings in this respect of the human elements they have to deal with and the possible dangers in a period of transition and dynamic chance until the Congress has acquired non-violent control over the people in adequate measure and the people have imbibed sufficiently the lesson of organised non-violence.

"The committee have deliberated over the problem that has thus arisen and have come to the conclusion that they are unable to go to the full length with Gandhi, but they recognise that he should be free to pursue his great ideal in his own way and, therefore, absolve him from responsibility for the programme and activities which the Congress has to pursue under the conditions at present prevailing in India and the world in regard to external aggression and internal disorder.

"Many of the problems which the Working Committee have considered in this connection are not of the present, though they may be of the near future. The committee wish to make it clear that the methods and basic policy of non violence in the national struggle for freedom continue with full force and are not affected in the least by the inability to extend it to the region of national defence."

Poona Offer—It was only natural that the June statement of the Congress should be followed by something more specific, and this was done in the following month at Delhi. Confirmed by the All-India Congress Committee at Poona, it has since come to be known as the Poona Offer. It meant a violent ideological break with Mr Gandhi.

The following is the text of the resolution. "The Working Committee have noted the serious happenings which have called forth fresh appeals to bring about a solution of the deadlock in the Indian political situation, and in view of the desirability of clarifying the Congress position they have earnestly examined the whole situation once again in the light of the latest developments in world affairs."

"The Working Committee are more than ever convinced that the acknowledgment by Great Britain of the complete independence of India is the only solution of the problems facing both India and Britain and are, therefore, of opinion that such an unequivocal declaration should be immediately made and that as an immediate step in giving effect to it a provisional National Government should be constituted at the Centre, which, though formed as a transitory measure, should be such as to command the confidence of all the elected elements in the Central Legislature, and secure the closest co-operation of the responsible Governments in the provinces."

"The Working Committee are of opinion that unless the aforesaid declaration is made and a National Government accordingly formed at the Centre without delay all efforts at organising the material and moral resources of the country for defence cannot in any sense be voluntary or as from a free country and will therefore be ineffective. The Working Committee declare that if these measures are adopted, it will enable the Congress to throw in its full weight in the efforts for the effective organisation of the defence of the country."

August Offer—Then came the famous statement by the Viceroy known as the British Government's August offer. The following is the full text of the Viceroy's statement—

"India's anxiety at this moment of critical importance in the world struggle against tyranny and aggression to contribute to the full to the common cause and to the triumph of our common ideals is manifest. She has already made a mighty contribution. She is anxious to make a greater contribution still. His Majesty's Government are deeply concerned that that unity of national purpose in India which would enable her to do so should be achieved at an early moment is possible. They feel that some further statement of their intentions may help to promote that unity. In that hope they have authorised me to make the present statement."

"Last October His Majesty's Government again made it clear that Dominion Status was their objective for India. They added that they were ready to authorise the expansion of the Governor-General's Council to include a certain number of representatives of political parties and they proposed the establishment of a Consultative Committee. In order to facilitate harmonious co-operation it was obvious that some measure of agreement in the Provinces between major parties was a desirable prerequisite to their joint collaboration at the Centre. Such an agreement was unfortunately not reached and in the circumstances no progress was then possible."

"During the earlier part of this year I continued my efforts to bring the political parties together. In this last few weeks I again entered into conversations with prominent political personages in British India and the Chancellor of the Chamber of Princes, the results of which have been reported to His Majesty's Government. His Majesty's Government have seen also the resolutions passed by the Congress Working Committee, the Muslim League and the Hindu Mahasabha."

"It is clear that the earlier differences which had prevented the achievement of national unity remain unbridled. Deeply as His Majesty's Government regret this they do not feel that they should any longer pursue of these differences postpone the expansion of the Governor-General's Council, and the establishment of a body which will more closely reflect Indian public opinion with the conduct of the war by the Central Government."

"They (His Majesty's Government) have authorised me accordingly to invite a certain number of representative Indians to join the Executive Council."

"They have authorised me further to establish a War Advisory Council which would meet at regular intervals and which would contain representatives of the Indian States and of the interests in the national life of India."

The conversation which I have just mentioned makes it clear, however, that there is still in certain quarters a doubt as to the intentions of His Majesty's Government as to the constitutional future of India and that there is doubt too as to whether the future of the Dominion whether political or administrative is sufficiently safeguarded in relation to any constitutional change by the measures already given. There are two main points which have emerged. On those two points His Majesty's Government now declare their intentions to be clear."

"The first is as to the position of the Indian States in relation to a future Dominion of India. It has already been stated that the Government have declared that they will not examine the position of the States in relation to the future of the Dominion and that they will not base it."

"His Majesty's Government are of the opinion that full weight should be given to the views of the Indian States in relation to the future of the Dominion and that they will not base it."

"It goes without saying that they could not contemplate the transfer of their present responsibilities for the peace and welfare of India to any system of Government whose authority is directly denied by large and powerful elements in India's national life. Nor could they be parties to the coercion of such elements into submission to such a Government."

"The second point of general interest is the machinery for building, within the British Commonwealth of Nations, a new constitutional scheme when the time comes. There has been very strong insistence that the framing of that scheme should be primarily the responsibility of Indians themselves and should originate from Indian conceptions of the social economic and political structure of Indian life. His Majesty's Government are in sympathy with that desire and wish to see it given the fullest practical expression, subject to the due fulfilment of the obligations which Great Britain's long connection with India has imposed upon her, and for which His Majesty's Government cannot divest themselves of responsibility."

"It is clear that a moment when the Commonwealth is engaged in a struggle for existence is not one in which fundamental constitution issues can be decisively resolved."

"But His Majesty's Government authorise me to declare that they will most readily assent to the setting up, after the conclusion of the war, with the least possible delay, of a body representative of the principal elements in India's national life in order to devise the framework of the new Constitution, and they will lend every aid in their power to hasten decision on all relevant matters to the utmost degree."

Meanwhile they will welcome and promote in any way possible every sincere and practical step that may be taken by representative Indians themselves to reach a basis of friendly agreement first on the form which the post-war representative body should take, and the methods by which it should arrive at its conclusions, and secondly upon the principles and outlines of the constitution itself."

"They trust however that for the period of the war (with the Central Government reconstituted and strengthened in the manner I have described and with the help of the War Advisory Council) all parties, communities and interests will combine and co-operate in making a notable Indian contribution to the victory of the world cause which is at stake. Moreover they hope that in this process new bonds of union and understanding will emerge and thus pave the way towards the attainment by India of that free and equal partnership in the British Commonwealth which remains the proclaimed and accepted goal of the Imperial Crown and of the British Parliament."

Congress Rejection—The Congress, however, rejected the Viceroy's offer and decided that the proposals contained in the Viceroy's statement and the Secretary of State's speech in the Commons are wholly opposed not only to the principle of democracy proclaimed by the British Government in their war aims but also to the best interests of India, and therefore the Congress cannot be a party to accepting these proposals or advising the country to accept them."

In order to meet the League objections to the Congress idea of a National Government Mr C. Rajagopalachariar made what has come to be known as a "sporting offer." He said: "In answer to Mr Amery's difficulty as to the minorities, I may make a sporting offer that if His Majesty's Government agree to a Provisional National Government being formed at once, I will undertake to persuade my colleagues in the Congress to agree to the Muslim League being invited to nominate the Prime Minister and to let him form a National Government as he would consider best. If there is sincerity in the difficulty felt by His Majesty's Government it should be met by what I offer." Nothing, however, came out of this "sporting offer."

Bombay Decision—When this "last gesture" was ignored, the Congress meekly returned to Mr Gandhi and his non-violence. This was in a sense the outcome of the deliberations of the All-India Congress Committee held in Bombay in the middle of September 1940. The A. I. C. C. passed a resolution confirming the August resolution of the Working Committee rejecting the Viceroy's offer and requesting Mr Gandhi to take over the leadership of the Congress. The following is the text of the resolution—

The A. I. C. C. resolution, the full text of which was given in last year's issue of the *Indian Year Book*, affirmed belief in the policy and practice of non-violence not only in the struggle for Swaraj, but also in so far as this may be possible of application, in free India.

By now it had become clear that the only course open to the Congress and Mr Gandhi was to launch a campaign of direct action. No one seemed, however, to know what form this campaign should take. Mr Gandhi had disapproved of civil disobedience of the 1930 and 1932 type. His reasons were that any mass campaign was bound to embarrass Britain in the midst of her life and death struggle and that agitation for further political rights all over the country would inevitably raise complications with the Muslim League and might conceivably lead to an accentuation of the existing Hindu-Muslim discord.

As had happened many a time before, Mr Gandhi found a formula overcoming all these difficulties. He sidetracked the communal complication by announcing that the issue on which the campaign would be launched would have nothing to do with the future constitution. He said he would fight solely for the right of Indians to preach against the war and India's participation in it. As for avoiding embarrassment to Great Britain, he declared that there would be no mass campaign, that he himself would not court arrest and that there would be a quiet form of civil disobedience by individual Congress leaders to be chosen by him personally.

In accordance with his statement before the A. I. C. C. in Bombay, Mr Gandhi sought an interview with the Viceroy which, however, proved fruitless.

Civil Disobedience—About a fortnight after this, Mr Gandhi unfolded his plan of individual civil disobedience restricted to a limited number of satyagrahis, which was approved by the Congress Working Committee. "This will perhaps be the last civil disobedience which I will conduct," said Mr Gandhi on

October 15, 1940 "Naturally, I would want it to be as flawless as it can be. I have striven to produce the highest quality irrespective of quantity." Mr. Gandhi added that it was a peremptory obligation binding on every Congressman that there should be no civil disobedience but what was laid down by him. He repeated that, unlike previous occasions, he did not wish to offer civil resistance himself, for the very good reason that his imprisonment was likely to cause greater embarrassment to the authorities than anything else the Congress could do. He wanted to remain outside also in order to cope with any contingency that might arise.

Mr. Gandhi chose as his first satyagrahi Mr. Vinoba Bhave who had been doing village uplift work. The satyagrahi for the time being was to be confined to Mr. Bhave. According to plan, Mr. Vinoba Bhave set out on a marching tour from village to village preaching non-participation in war on grounds of non-violence. He enjoyed freedom for a couple of days but was arrested on the third day and sentenced to imprisonment for doing an act prejudicial under the Defence of India Ordinance.

It soon became known that Pandit Jawaharlal Nehru was to be the second satyagrahi but before he could formally defy the law he was arrested in respect of certain speeches made by him weeks earlier, and sentenced to four years imprisonment.

Then followed a series of arrests of persons chosen by Mr. Gandhi. They included most of the members of the Congress Working Committee, most of the Premiers and Ministers of the former Congress Governments and a large number of members of the Central Legislature and other prominent Congressmen all over the country.

The procedure in the early stages was for the selected Congressmen to intimate to the authorities that they would break the law at a given place and time.

Mr. C. Rajagopalachari improved upon this by breaking the law through the post. He wrote to Government officials and non-officials taking part in the war effort urging them to desist from helping in the war.

A further stage was reached when Mr. Gandhi's satyagrahis did not deliver speeches against the war but merely shouted anti-war slogans. All the persons who took part in this anti-war campaign were arrested under the Defence of India Rules and sentenced to varying terms of imprisonment or detained without trial on the ground that their freedom to speak and move about was prejudicial to the successful prosecution of the war.

In Bengal and more particularly in the Frontier Province, however, satyagrahis were not arrested.

The Congress organisations in most areas were converted into satyagrahi committees. In provinces where the Congress was not in power the members of the Legislature returned to the Congress field were asked to withdraw from the Assembly and the Punjab.

The first batch of satyagrahis consisted of prominent all-India personalities. Persons of persons who have been described as the

the second rank, such as provincial and district leaders. Later, Congress members of local bodies, such as municipalities and district boards, were asked to resign. It was announced that after this the turn of the vast mass of primary members would come.

Early in 1941 Mr. Gandhi in a public statement said that as far as he was concerned the Poona Offer of the Congress would remain lapsed as long as the war lasted. "I believe there can be no settlement with the Congress' short of complete independence during the pendency of the war for the simple reason that the Congress cannot count itself to active help in the war with men and money," he said.

Subsequently Mr. Gandhi modified his statement about the Congress not at all free to co-operate in the war effort and said that the interpretation of the Congress' attitude was that of an individual. "I have no authority from the Congress to interpret or vary the Congress resolutions. That is essentially the function of the President, the Working Committee and finally the AICC. The only authority I have is to conduct the campaign of civil disobedience, but when the time for a settlement comes it will be for the Working Committee to decide what the terms shall be. My contribution will be confined to advising the Committee. The latter may reject the interpretation I have given it, on the AICC may even alter the resolutions it has passed."

This statement was interpreted at the time as willingness on the part of Mr. Gandhi to let the Congress do what it liked irrespective of its own personal conviction with regard to non-violence and India's attitude to the war.

The British reaction to the demand of the Non Party Leaders Conference held in India in the spring of 1941 produced an undoubted impression on India's political circles. Mr. Gandhi was particularly affected by the statements of Mr. Amery. He is known to have stated publicly that he was then mindful of the fact that Mr. Amery's British distaste has exceeded that of Mr. Amery absolutely did it come to the point of making me more than ever convinced in my opinion that the Congress policy of non-violence was the only policy of non-violence that could be followed. Mr. Amery had rendered his own contribution to the anti-war campaign in the form of a speech in the House of Commons in which he had denounced the Congress with having done nothing for the war effort. Mr. Amery's speech was a masterpiece of the British war propaganda. Mr. Amery's speech was a masterpiece of the British war propaganda. Mr. Amery's speech was a masterpiece of the British war propaganda.

Expansion Scheme - The expansion scheme was a plan to increase the number of members of the Congress Working Committee. It was a plan to increase the number of members of the Congress Working Committee. It was a plan to increase the number of members of the Congress Working Committee.

They had to be whole-time workers and had to keep a diary of the day's work, which should be submitted to the respective Provincial Congress Committees every fortnight. This diary would ultimately be forwarded to Mr Gandhi himself by the Provincial Congress Committee for scrutiny, and the selection of candidates for satyagraha would depend on the approval of the diary.

Criticism of Movement—That the movement proved insipid even to Congressmen was apparent from frequent complaints from among the ranks of Congressmen themselves. But Mr Gandhi was unmoved. He said "The present civil disobedience is not only not designed to embarrass authority but care is being taken as far as possible to avoid all embarrassment. The merit, as also the strength, of the struggle consists in reducing embarrassment to the minimum whilst the British are engaged in a deadly life and death war. Moreover since our struggle is going to be indefinitely prolonged—I give no less than five years—there need be no hurry to fill the jails. Mere filling of jails can bring us no nearer our freedom than we are now. Virtues in the people learning through restricted civil disobedience the necessity of discipline, suffering and self sacrifice. Every true example of satyagraha acts as a leaven working in the mass mind. The result was that many crept in who had done no constructive work.

As days rolled by the criticism against the campaign increased in volume. A well-known Congress leader of the Punjab complained, for example, that "I am deeply disappointed with the inactivity and inertia that dominates the policy of the Congress at the present moment. There are two things that vitally affect our interests, namely, internal security and resistance to any foreign invasion." He resigned from the Congress and offered his services to the British Government in the prosecution of the war.

Mr. Gandhi's Defence—But Mr Gandhi repeatedly expressed the opinion that he was quite satisfied with the pace of the movement and that those who had come out of jail should offer satyagraha again and again as long as the movement lasted except those who were unable to do so for reasons of health.

In a historic document headed "Our Struggle" he wrote that complaints had reached him that there was a marked deterioration in enthusiasm that fewer people were coming forward to offer satyagraha that those who were discharged from jails were not seeking imprisonment again. Answering these complaints Mr Gandhi said that enthusiasm which was fresh was useless in a non-violent action. That fewer people were coming forward was only quite natural as civil disobedience was individual and restricted to representatives of the people who were limited in number. Mr Gandhi had no doubt that if the qualifications for offering satyagraha were relaxed he would be overwhelmed by applications which would then mean mass action but the atmosphere for such mass action was not ripe nor was it warranted. Furthermore apart from such mass action meaning naked embarrassment to Government and therefore a clear betrayal of non-violence, it would, at the present stage of communal disunity, be an invitation to civil war

and Congress did not wish to precipitate such a state of affairs.

By causing embarrassment at this stage the authorities would resent it bitterly and were likely to act madly. Of course it would be different if Congress had resorted to armed rebellion. Then, the saying "their difficulty becomes our opportunity" would apply. It was obvious that the exactly opposite rule should apply when an opposite method was adopted. It was worse than suicide to resort to violence to cause embarrassment under cover of non-violence.

Answering a criticism that to be logical Mr Gandhi should give up civil disobedience altogether he said that it would be folly to do so. Civil disobedience was itself completely non-violent action. It was a duty in the face of violence without parallel. Civil disobedience in the present case meant assertion of the right to speak against participation in this war.

Mr Gandhi maintained that things in the Congress programme went according to plan. Civil disobedience was restricted to selected individuals and would be further restricted to those who re-offer civil disobedience as often as necessary. It did not matter if the number was reduced to ten or two. The two would represent the whole Congress in the absence of a Parliamentary programme. Mr Gandhi said that there were only two things for the Congress to do at present namely, to carry on the thirty-fold constructive programme and some select few to offer civil disobedience in addition. The constructive programme was to be worked by all Congressmen.

Release of Satyagraha Prisoners—The general feeling of political inaction everywhere by the satyagraha movement, the reluctance of the public at the absence of any action from the Government, the conviction that the country's war effort was being adversely affected even slightly, by the continuance of disobedience, and the insistent demands of non-cooperation led the Government to relax the policy towards the end of 1941. The Government of India announced that "considering the determination of all responsible officials to support the war effort until victory is achieved, and the fact that the number of civil disobedience prisoners who are now in jail is small, the Government have decided to release all prisoners on a formal or symbolic discharge." Accordingly the bulk of the prisoners were released.

From the state of mind of the people, President Pandit Nehru said that the release of the prisoners was a step towards the encouragement of active participation in the war effort of India and the people of India. He said that if Indians were given the opportunity to do so, and if steps were taken to help them to do so, Indian freedom would be achieved. He said that the Government were not going to make it possible for the people to do so, but that they would give them the opportunity to do so. He said that the Government were not going to make it possible for the people to do so, but that they would give them the opportunity to do so. He said that the Government were not going to make it possible for the people to do so, but that they would give them the opportunity to do so.

Mr Gandhi, on the other hand, remained unmoved and said that the release of prisoners did not evoke a single responsive or appreciative chord in him. He added "From my student days onward, I have been and still claim to be, a friend of the British people. But my friendship cannot blind me to the fact that British representatives hold India as a bond-slave. All the freedom that India enjoys is the freedom of a slave and not the freedom of an equal, which is otherwise known as Complete Independence. If the Government of India are confident of the determination of all responsible opinion in India to support the war effort the logical conclusion would be to keep the Civil Disobedience prisoners in their custody because they produce a jarring note. The only meaning I can attach to the release therefore, is that they expect that the prisoners will have changed their opinions in their self-invited solitude. I am hoping that the Government will be soon disillusioned. Civil disobedience was not taken up without the most careful consideration. It was certainly not taken up out of any vindictiveness. It was taken up, and I hope will be continued in order to make good the claim of the Congress to let the British people and the world know that there is, at the very least, a large body of public opinion represented by the Congress which is utterly opposed to participation in the war not because it wishes any disaster to the British arms or victory to the Nazi or Fascist arms, but because it sees no deliverance from blood guiltiness either for the victor or for the vanquished and certainly no deliverance for India out of this war.

"The Congress which seeks and claims to represent the dumb millions has for the past twenty years accepted non violence as its unbroken policy to achieve India's independence. To stop Civil Disobedience symbolic though it may be for the time being will be to deny its policy at a crucial moment. The Government claim that in spite of the Congress efforts they are able to get all the men and money from India. Therefore the Congress opposition in their estimate can only be a moral effort and a moral demonstration. I for one am entirely satisfied with it because I am convinced that from that moral demonstration will arise when the moment comes a demonstration which will result in the attainment of India's independence not the attendance of this party or that. The Congress struggle covers every single unit in India.

Now that the Congress President is expected to be out it will be for him to consider whether and when to call the Congress Working Committee or the A I C C. These two bodies will determine the future policy of the Congress. I am but a humble instrument of service in conducting the Civil Disobedience.

And the two bodies did make a change not withstanding Mr Gandhi.

Bardoli Decision.—The Congress Working Committee met at Bardoli and made an important change in Congress policy. Civil disobedience was suspended. Mr Gandhi was again dethroned and the door was left open for negotiations with the British Government for a political settlement.

Resolutions were passed reiterating their attitude towards the war as set forth in their

statement issued on September 14, 1939, wherein they condemned the Nazi and Fascist aggression and expressed their willingness to help the cause of freedom and democracy, provided the objectives of the war were clearly stated and acted upon insofar as was possible at present. If freedom and democracy were those objectives, then they must necessarily include the ending of imperialism and the recognition of the independence of India.

The Working Committee held that subsequent pronouncements made on behalf of the British Government and their reactionary and oppressive policy made it clear that Government were determined to maintain and intensify their imperialist hold and exploitation of the Indian people. The Congress was, therefore, compelled in order to defend the honour and elementary rights of the Indian people and the integrity of the nationalist movement, to request Mr Gandhi to guide the Congress in the action that should be taken. Mr Gandhi, desirous of avoiding embarrassment to his opponent, as far as possible, especially during the perils and dangers of war, limited the satyagraha movement which he started to selected individuals who conformed to certain tests that have been laid down. That satyagraha had proceeded for over 14 months.

Whilst there was no change in Britain's policy towards India the Working Committee must, nevertheless, take into full consideration the new world situation that had arisen through the development of the war into a world conflict and its approach to India. The sympathies of the Congress must inevitably lie with the peoples who were the subjects of aggression and who were fighting for their freedom, but only a free and independent India could be in a position to undertake the defence of the country on a national basis and be of help in the furtherance of the larger causes that were emerging from the storm of war.

The Committee declared that the whole background in India was one of hostility and of distrust of the British Government and not even the most far-reaching promises could alter this background, nor could a subject India offer voluntary or willing help to an arrogant imperialism which was indistinguishable from Fascist authoritarianism. The Committee was therefore of the opinion that the resolution of the A I C C passed in Bombay on September 16, 1940, held good and still defined the Congress policy.

Another resolution passed by the Working Committee stated "The Working Committee have received the following letter from Mr Gandhi and recognise the validity of the point he has raised and therefore relieve him of the responsibility laid upon him by the Bardoli resolution referred to by Mr Gandhi; but the Committee assure him that the policy of non violence adopted under his guidance for the attainment of 'swaraj', and which has proved so successful in leading to mass awakening and otherwise will be adhered to by the Congress."

"The Working Committee further assure him that it would like to extend its scope as far as possible even in a free India. The Committee hope that Congressmen will render him full assistance in the prosecution of his mission, including the offering of civil disobedience."

During such times, the Government should be prepared to take such steps as may be necessary to ensure that the public interest is protected. The Government should also be prepared to take such steps as may be necessary to ensure that the public interest is protected.

A-I C. C. Meeting—The A-I C. C. (Committee) met at Windsor, Ontario, fifteen months after the last proceedings and adopted the Lardner resolution. The minutes of the statement on past records and their supporters did not dispute the resolution of Lardner.

Maulana Abul Kalam Azad the Congress President, addressing the meeting said: "There will be no change in the attitude of the Congress towards the war and participation in the war as long as the attitude of the British Government remained unchanged. The British Government has done nothing which would inspire us to reconsider our position. Unifying the difference between Mahatma Gandhi and some members of the Working Committee in India, he left the Congress President said that while they were prepared to help in the war effort provided that independence was guaranteed, Mahatma's war would on no account, participate in any way purely on grounds of non-violence. Some members of the Working Committee and he felt that if India's political independence was secured through participation in war they had no conscientious objection to participate in the war."

Pandit Tiwarihari Das said that the Congress had neglected the last twenty years for the freedom of India. He said that the Congress could not be expected to give up that policy. He said that the British may find it difficult to give up the policy of Japanese or German domination.

Mr Rupnopalchuri second time do not

Complete support for the ban on violence was voiced by Mr Gandhi in the course of his 10-hour speech. He said while he felt that violence was imminent, he had placed his faith before the Congress in a political solution. He tried non-violence in South Africa to solve a political problem. Non-violence was a weapon in the hands of the Congress. It was a weapon that can be rolled upon at any time and discarded at any time and discarded at any time. He found that it is a good weapon to use in any situation and demands that that weapon should be retained.

[illegible][illegible]

War Developments If Japan's entry into the war brought the war nearer to India and encouraged a more realistic approach on the part of Indian leaders to the defence of their country and to political affairs the early plans of Japan in Malaya, the Netherlands East Indies and Burma impelled the British authorities to consider whether the time had not arrived for settling the political problems in India if only to promote unity of purpose and co-ordinate the endeavour in this country in order effectively to meet Japanese invasion of India. It is also widely believed in India that Russia, China and the United States of America brought their influence to bear upon the British authorities in this behalf.

Cripps Visit—Within three weeks after my return from India I had the opportunity of seeing Sir Stafford Cripps at his residence in London. He was very friendly and gave me a most interesting account of his recent visit to India. He said that he had been very much impressed by the progress made in India since the war.

[illegible]

This was, of course, subject to the fulfilment of our obligations for the protection of minorities, including the depressed classes and our treaty obligations to the Indian States and to a settlement of certain lesser matters arising out of our long association with the fortunes of Indian sub-continent

"However, in order to clothe these general declarations with precision and to convince all classes races and creeds in India of our sincere resolve, the War Cabinet have agreed unitedly upon conclusions for the present and future action, which, if accepted by India as a whole, would avoid alternative dangers either that the resistance of a powerful minority might impose an indefinite veto upon the wishes of the majority or that a majority decision might be taken which would be resisted to a point destructive of internal harmony and fatal to the setting up of a new constitution

We had thought of setting forth immediately the terms of this attempt by a constructive contribution to aid India in the realisation of full self-Government. We are, however, apprehensive that to make a public announcement at such a moment as this might do more harm than good. We must first assure ourselves that our scheme would win a reasonable and practical measure of acceptance and thus promote concentration of all thoughts and energies upon the defence of the native soil

"We should ill serve the common cause if we made a declaration which would be rejected by the essential elements in the Indian world and which would provoke fierce constitutional and communal disputes at a moment when the enemy is at the gate of India

"Accordingly we propose to send a member of the War Cabinet to India to satisfy himself on the spot by personal consultation that the conclusions upon which we are agreed and which we believe represent a just and final solution will achieve their purpose

The Lord Privy Seal and the Leader of the House, Sir Stafford Cripps, has volunteered to undertake this task. He carries with him the full confidence of His Majesty's Government and he will strive in their name to procure the necessary unanimous consent not only from the Hindu majority but also from those great minorities amongst which the Moslems are most numerous and on many grounds prominent

"The Lord Privy Seal will at the same time consult with the Viceroy and the Commander-in-Chief on the military situation bearing always in mind the paramount responsibility of His Majesty's Government by every means in their power to shield the people of India from the perils which now beset them. We must remember that India has a great part to play in the world struggle for freedom and that her helping hand must be extended in loyal comradeship to the valiant Chinese people who have fought alone so long. We must remember also that India is one of the bases from which the strongest counter blows must be struck at the advance of tyranny and aggression

War Cabinet's Offer.—Sir Stafford Cripps flew to India in a few days and held consultations with representatives of the Congress, the Muslim League, the Hindu Mahasabha, the Princes'

Chamber, and a number of other political and sectional organisations. Here is the text of the offer which he brought to India in the name of the British Cabinet

"His Majesty's Government having considered the anxieties expressed in this country and in India as to the fulfilment of promises made in regard to the future of India have decided to lay down in precise and clear terms the steps which they propose shall be taken for the earliest possible realisation of self-government in India. The object is the creation of a new Indian Union which shall constitute a Dominion associated with the United Kingdom and other Dominions by a common allegiance to the Crown but equal to them in every respect, in no way subordinate in any aspect of its domestic or external affairs

"His Majesty's Government therefore make the following Declaration—

(a) Immediately upon cessation of hostilities steps shall be taken to set up in India in manner described hereafter an elected body charged with the task of framing a new Constitution for India

(b) Provision shall be made as set out below, for participation of Indian States in the Constitution-making body

(c) His Majesty's Government undertake to accept and implement forthwith the Constitution so framed subject only to—

(i) The right of any Province of British India that is not prepared to accept the new Constitution to retain its present constitutional position, provision being made for its subsequent accession if it so decides

With such non-acceding Provinces, should they so desire His Majesty's Government will be prepared to agree upon a new Constitution giving them the same full status as the Indian Union and arrived at by a procedure analogous to that here laid down

(ii) The signing of a Treaty which shall be negotiated between His Majesty's Government and the Constitution-making body. This Treaty will cover all necessary matter arising out of the complete transfer of responsibility from British to Indian hands, it will make provision in accordance with undertakings given by His Majesty's Government, for the protection of racial and religious minorities, but will not impose any restriction on the power of the Indian Union to decide in future its relationship to other Member States of the British Commonwealth

Whether or not an Indian State elects to adhere to the Constitution it will be necessary to negotiate a revision of its Treaty arrangements so far as this may be required in the new situation

(d) The Constitution-making body shall be composed as follows unless the leaders of Indian opinion in the principal communities agree upon some other form before the end of hostilities—

Immediately upon the result being known of Provincial Elections which will be necessary at the end of hostilities, the entire membership of the Lower Houses of Provincial Legislatures shall as a single electoral college proceed to the election of the Constitution-making body by the system of proportional representation. This new body shall be in number about 1/10th of the number of the electoral college.

Indian States shall be invited to appoint representatives in the same proportion to their total population as in the case of representatives of British India as a whole and with the same powers as British Indian members.

(e) During the critical period which now faces India and until the new Constitution can be framed His Majesty's Government must inevitably bear the responsibility for and retain the control and direction of the defence of India as part of their world war effort, but the task of organising to the full the military moral and material resources of India must be the responsibility of the Government of India with the co-operation of the people of India. His Majesty's Government desire and invite the immediate and effective participation of the leaders of the principal sections of the Indian people in the councils of their country, of the Commonwealth and of the United Nations. Thus they will be enabled to give their active and constructive help in the discharge of a task which is vital and essential for the future freedom of India.

In announcing the scheme, Sir Stafford made it clear that it was only a proposal submitted to the leaders of Indian opinion by the War Cabinet and that its publication was not the publication of a declaration by His Majesty's Government but only a declaration which they would be prepared to make if it met with sufficiently general and favourable acceptance from the various sections of Indian people.

Immediate Reactions.—Mr. Gandhi described the offer as a post-dated cheque, the Hindu Mahasabha condemned it as contemplating the "balkanisation of India", the Liberal leaders protested against the proposed splitting up of the country as a "travesty of self-determination". Congress leaders themselves were critical of the provision regarding the right of provinces to secede but laid more emphasis on the provision for the immediate transfer of power in Indian hands. Pandit Nehru said for example "This emotional conception of the unity of India is something which I am not going to give up. It is something for which I am going to fight if it is necessary to fight for it. I am going to fight if the new idea means disruption of India. I do not know what the future will bring but in the present I will not, so far as I can, permit or encourage a wrong conception in the people's mind. This country, with its mountain fastnesses and southern seas is one country. It is going to be one in freedom as it has been one in subjection and the Indian States' people must play a big part in that united India."

Congress Rejection.—After protracted negotiations in which representatives of the principal Indian organisations met in addition to Sir Stafford the Commander in Chief and Col. Louis Johnson the personal representative in India of President Roosevelt the Congress rejected the scheme. The Hindu Mahasabha had already rejected it (see chapter on Hindu Mahasabha) and the Muslim League followed suit (see chapter on Muslim League), while other organisations expressed disapproval in more or less strong language (see chapter on the Indian National Liberal Federation).

The Congress Working Committee, which held what was perhaps the longest session in its history, passed the following resolution:

"The Working Committee have given their full and earnest consideration to the proposals made by the British War Cabinet in regard to India and the elucidation thereof by Sir Stafford Cripps.

"These proposals which have been made at the very last hour because of the compulsion of events have to be considered not only in relation to India's demand for independence but more especially in the present grave war crisis with a view to meeting effectively the perils and dangers that confront India and envelop the world.

"The Congress has repeatedly stated ever since the commencement of the war in September 1939, that the people of India would line themselves with the progressive forces of the world and assume full responsibility to take the new problems and shoulder the new burdens that had arisen and it asked for the necessary conditions to enable them to do so to be created.

"An essential condition was the freedom of India for only the realisation of present freedom could light the flame which would illumine millions of hearts and move them to action.

"At the last meeting of the All India Congress Committee after the commencement of the war in the Pacific it was stated that 'Only a free and independent India can be in a position to undertake the defence of the country on a national basis and be of help in the furtherance of the larger causes that are emerging from the storm of war.'

"The British War Cabinet's new proposals relate principally to the future upon the cessation of hostilities.

"The Committee, while recognising that self-determination for the people of India is accepted in principle in that uncertain future, feared that this is fettered and circumscribed and certain provisions have been introduced which gravely imperil the development of a free and united nation and the establishment of a democratic state.

Even the constitutionally provided self-determination is vitiated by the introduction of representative elements.

"The people of India have as yet not demanded full independence and the Government has repeatedly declared that it will not grant independence for the whole of India until the people have expressed their desire for it and the requirements of the present crisis.

The Committee is of the opinion that the independence movement in India is not yet ripe for the accomplishment of a free and united India such that full freedom can be granted.

The Committee is of the opinion that the people of India have not yet expressed their desire for full independence and the Government has repeatedly declared that it will not grant independence for the whole of India until the people have expressed their desire for it and the requirements of the present crisis.

While the requirements of the present crisis are being met, the Committee is of the opinion that the people of India have not yet expressed their desire for full independence and the Government has repeatedly declared that it will not grant independence for the whole of India until the people have expressed their desire for it and the requirements of the present crisis.

"Such States may in many ways become barriers to the growth of Indian freedom, enclaves where foreign authority still prevails and where the possibility of maintaining foreign armed forces has been stated to be a likely contingency, and a perpetual menace to the freedom of the people of the States as well as the rest of India

The acceptance beforehand of the novel principle of non-accession for a province is also a severe blow to the conception of Indian unity and an apple of discord likely to generate growing trouble in the provinces, and which may well lead to further difficulties in the way of the Indian States merging themselves in the Indian Union

"The Congress has been wedded to Indian freedom and unity and any break in that unity especially in the modern world when people's minds inevitably think in terms of ever larger federations would be injurious to all concerned and exceedingly painful to contemplate

"Nevertheless the Committee cannot think in terms of compelling the people in any territorial unit to remain in an Indian Union against their declared and established will

"While recognising this principle the Committee feel that every effort should be made to create conditions which would help the different units in developing a common and co-operative national life

"The acceptance of the principle inevitably involves that no changes should be made which result in fresh problems being created and competition being exercised on other substantial groups within that area

Each territorial unit should have the fullest possible autonomy within the Union consistently with a strong national life

"The proposal now made on the part of the British War Cabinet encourages and will lead to attempts at separation at the very inception of a union and thus create friction just when the utmost co-operation and goodwill are most needed

"This proposal has been presumably made to meet a communal demand but it will have other consequences also and lead politically to reactionary and obscurantist groups among different communities to create trouble and divert public attention from the vital issues before the country

"Any proposal concerning the future of India must demand attention and scrutiny, but in today's grave crisis it is the present that counts and even proposals for the future are important in so far as they affect the present

"The Committee have necessarily attached the greatest importance to this aspect of the question, and on this ultimately depends what advice they should give to those who look to them for guidance

"For this present the British War Cabinet's proposals are vague and altogether incomplete, and it would appear that no vital changes in the present structure are contemplated

"It has been made clear that the defence of India will in any event remain under British control

"At any time defence is a vital subject during war time it is all important and covers almost every sphere of life and administration To take away defence from the sphere of responsibility at this stage is to reduce that responsibility to a farce and a nullity and to make it perfectly clear that India is not going to be free in any way and her Government is not going to function as a free and independent Government during the pendency of the war

"The Committee would repeat that an essential and fundamental prerequisite for the assumption of responsibility by the Indian people in the present is their realisation as a fact that they are free and are in charge of maintaining and defending their freedom

"What is most wanted is the enthusiastic response of the people which cannot be evoked without the fullest trust in them and the devolution of responsibility on them in the matter of defence

"It is only thus that even at this grave eleventh hour it may be possible to galvanise the people of India to rise to the height of the occasion

"It is manifest that the present Government of India, as well as its provincial agencies are lacking in competence, and are incapable of shouldering the burden of India's defence It is only the people of India through their popular representatives who may shoulder this burden worthily But that can only be done by present freedom and full responsibility being cast upon them

"The Committee therefore is unable to accept the proposals put forward on behalf of the British War Cabinet"

Causes of Failure.—The following extract from correspondence between Sir Stafford and the Congress President Maulana Abul Kalam Azad, throw light on the causes of the failure of the negotiations —

Sir Stafford wrote — "My Dear Maulana Sahib, — I have, as I promised when I last saw you consulted His Majesty's Government as to what further step could be taken in order to meet the criticism of your Working Committee that under Clause (e) of the Draft Declaration the Defence of India would not fall to be administered by a representative Indian Although it is impossible to make any change in the existing constitution during the period of hostilities, His Majesty's Government are anxious to give representative Indians the maximum possible participation in the Government during that period in accordance with the principle laid down in Clause (e) of the Draft Declaration

"His Majesty's Government are anxious to do their utmost to meet the wishes of the Indian people, and to demonstrate their complete trust in the co-operative effort of the two peoples, British and Indian, which they hope may reinforce the defence of India I am therefore authorised to propose to you as a way out of the present difficulties that

(a) The Commander-in-Chief should retain his seat in the Viceroy's Executive Council as a 'Member' and should retain his full control over all the war activities of the armed force in India

In a very limited field. Apart from this consideration it was obvious that the whole purpose of your proposals and our talks centered on the urgency of the problems created by the threat of the invasion of India. The chief function of a National Government must be to try to organize Defiance both in law and in the widest popular basis and to create a psychology of resistance to an invader. Only a National Government could do that and lead a Government on whom this responsibility is laid. Popular resistance must have a National background and both the soldiers and the civilians must feel that they are fighting for the recovery of freedom under National leadership.

We pointed this out to you. They became one net of justifications for war and fighting, but of effective participation on the foot on the soil of India. On a national level, a National Government would control the Defence Minister and the Commander in Chief would control the armed force and I would have full latitude in the civilian part of my work connected with the war. An Indian National Government should have normally full control in this way. We made it clear that the Commander in Chief in India would have control of the armed forces and the conduct of military and other matters connected therewith.

With a view to maintaining a steady course we were prepared to accept certain limitations on the normal powers of the Executive. We had no desire to upset in the middle of the war the present military or administrative arrangements. We accepted also that the high strategy of the war should be controlled by the War Cabinet in London which was then an Indian member. The immediate object before us was to make the British Empire more effective to strengthen its position on the popular will and to reduce its military delay and influence from the home front. The question of our internal affairs was a secondary and operational one. On the subject of permanent importance to the Empire and to the world, we had to take the line of least resistance. But we were not to be taken in by any difficulty and to let ourselves be misled by any propaganda. It was our duty to maintain the unity of the Empire and to stand by the principles of the League of Nations.

"We do not intend to
 depart from the
 determination we have
 made to continue the
 war against Germany
 with special effort
 to win a new
 peace for Europe
 and for the world
 which will be
 based on the
 principles of
 justice and
 peace."

"In the course of our talks many matters were cleared up unfortunately to our disadvantage. You had referred both privately and in the course of public statements to a National Government and a 'Cabinet' consisting of 'Ministers'. These words have a certain significance and we had imagined that the new Government would function with full powers as a Cabinet, with the Viceroy acting as a constitutional head. But the new picture that you placed before us was really not very different from the old, the difference being one of degree and not of kind. The new Government could neither be called except vaguely and inaccurately, nor could it function as a National Government. It would just be the Viceroy and his Executive Council with the Viceroy having all his old powers.

"We did not ask for any legal changes, but we did ask for definite assurances and conventions which would indicate that the new Government would function as a Free Government the members of which act as members of the Cabinet in a constitutional Government. In regard to the conduct of the war and connected activities the Commander-in-Chief would have freedom, and he would also act as War Minister.

"We were informed that nothing can be said at this stage, even vaguely and generally, about the conventions that should govern the new Government and the Viceroy. This was a matter in the Viceroy's sole discretion and, at a later stage, it could be discussed directly with the Viceroy. Ultimately there was always the possibility of the members of the Executive Council resigning or threatening to resign, if they disagreed with the Viceroy. That sanction or remedy is of course always open but it is curious that we should base our approach to a new Government on the probability of conflict and resignation at the very outset.

"The picture, therefore placed before us is not essentially different from the old one. The whole object which we, and I believe, you, have in view—that is to create a new psychological approach to the people, to make them feel that their own National Government had come, that they were defending their newly-won freedom—would be completely frustrated when they saw this old picture again, with even the old labels on.

"The continuation of the India Office, which has been a symbol of evil to us, would confirm this picture. It has almost been taken for granted for some time past that the India Office would soon disappear as it was an anachronism. But now we are told that even this undesirable relic of a past age is going to continue.

"The picture of the Government which was so like the old in all essential features, is such that we cannot fit into it. Normally, we would have had little difficulty in disposing of this matter for it is so far removed from all that we have striven for, but in the circumstances of to-day we were prepared to give full consideration to every proposal, which might lead to an effective organization of the Defence of India. The peril that faces India affects us more than it can possibly affect any foreigner, and we are anxious and eager to do our utmost to face it and overcome it. But we cannot undertake responsibilities when we are not given the freedom and power to shoulder them effectively and when an old environment continues, which hampers the national effort.

"While we cannot accept the proposals you have made we want to inform you that we are yet prepared to assume responsibility, provided a truly National Government is formed. We are prepared to put aside for the present all questions about the future, though, as we have indicated, we hold definite views about it. But in the present, the National Government must be Cabinet Government with full power and must not merely be a continuation of the Viceroy's Executive Council. In regard to defence we have already stated what, in our opinion, the position should be at present. We feel that such an arrangement is the very minimum that is essential for the functioning of a National Government and for making the popular appeal, which is urgently needed.

"We would point out to you that the suggestions we have put forward are not ours only but may be considered to be the unanimous demand of the Indian people. On these matters there is no difference of opinion among various groups and parties, and the difference is as between the Indian people as a whole and the British Government. Such differences as exist in India relate to constitutional changes in the future. We are agreeable to the postponement of this issue so that the largest possible measure of unity might be achieved in the present crisis for the defence of India. It would be a tragedy that even when there is this unanimity of opinion in India, the British Government should prevent a free National Government from functioning, and from serving the cause of India as well as the larger causes for which millions are suffering and dying to-day."

Congress Blamed—The last letter of the series was from Sir Stafford Cripps. It ran: "My dear Maulana Sahib,—I was extremely sorry to receive from you your letter expressing the rejection by Congress Working Committee of His Majesty's Government's draft declaration. I need not go into the question of the division of duties between the Defence Minister and the Commander-in-Chief as War Member with which you deal at length. This division allotted to the Defence Minister all functions outside those actually connected with the General Headquarters, Navy Headquarters and Air Headquarters which are under the Commander-in-Chief as head of the fighting forces in India.

"Nothing further could have been done by way of giving responsibility for Defence Services to representative Indian members without jeopardizing the immediate defence of India under the Commander-in-Chief. This defence is, as you know, a paramount duty and responsibility of His Majesty's Government, while unity of command is essential in the interests of the allied help to India.

"The real substance of your refusal to take part in a National Government is that the form of Government suggested is not such as would enable you to rally the Indian people as you desire.

"You make two suggestions. First, that the constitution might now be changed. In this respect I would point out that you made this suggestion for the first time last night nearly three weeks after you had received the proposals, and I would further remark that every other

There has been a progressive deterioration in the British Government's attitude as our negotiations proceeded. What we were told in our very first talk with your new deputy or explained our. You told us then that there would be a National Government which

We are convinced that if the British Government did not pursue a policy of non-interference, disruption, all of us, to whatever party or group we belonged, would be able to come together and find a common line of action. I am very happily even in the case of England, the British Government is unable to give up its welfare policy. We are dissenting to the conclusion that it attaches more importance to holding on to its rule in India for a short time and promoting discord and dissension than to that end in view that in the long run it will be harmful to the interests of the British Empire. To avoid this, we do want consideration of the safety and the safety of India, and it is to be decided.

Leaders' Assurances—Sir, I have been told that the Government are not going to do anything to help the people of the North. I am sure that the people of the North are not going to be helped by the Government. I am sure that the people of the North are not going to be helped by the Government. I am sure that the people of the North are not going to be helped by the Government.

"The A I C C is convinced that India will attain her freedom through her own strength and will retain it likewise. The present crisis as well as the experience of the negotiations with Sir Stafford Cripps make it impossible for the Congress to consider any schemes or proposals which retain even in a partial measure British control and authority in India. Not only the interests of India but also Britain's safety and world peace and freedom demand that Britain must abandon her hold on India. It is on the basis of independence alone that India can deal with Britain or other nations.

"The Committee repudiates the idea that freedom can come to India through interference or invasion by any foreign nation whatever the professions of that nation may be. In case an invasion takes place, it must be resisted. Such resistance can only take the form of non-violent non-cooperation as the British Government has prevented the organisation of national defence by the people in any other way. The Committee would, therefore, expect the people of India to offer complete non-violent non-cooperation to the invading forces and not to render any assistance to them. We may not bend the knee to the aggressor nor obey any of his orders. We may not look to him for favours nor fall to his bribes. If he wishes to take possession of our homes and our fields, we will refuse to give them up even if

we have to die in the effort to resist them. In places where the British and the invading forces are fighting our non-cooperation will be fruitless and unnecessary. Not to put any obstacle in the way of British forces will often be the only way of demonstrating our non-cooperation with the invader. Judging from their attitude the British Government do not need any help from us beyond our non-interference.

"The success of such a policy of non-cooperation and non-violent resistance to the invader will largely depend on the intensive working out of the Congress constructive programme and more especially the programme of self-sufficiency and self-protection in all parts of the country."

The Madras resolution acknowledging the Muslim League's claim to separation was defeated by 120 votes against 15 while a counter resolution, moved by Pundit Vigat Narain, opposing any proposal to dis-integrate India, was carried by 92 votes to 17. The latter resolution ran:

"The A I C C is of opinion that any proposal to dis-integrate India by giving liberty to any component State or territorial unit to secede from the Indian Union or Federation will be highly detrimental to the best interests of the people of the different States and Provinces and the country as a whole and the Congress therefore cannot agree to any such proposal."

The first beginnings—Following the partition of Bengal in 1905, the foundations of the Muslim League were laid in Dacca in the next year. The first activities of the infant Muslim League gave rise to a fear in the minds of the Hindus of Bengal who in the following year held a provincial conference of the community. The conference passed a resolution viewing with apprehension "the decrease in the normal growth of the Bengal Hindu population" and appointed a committee to inquire into its causes.

Almost simultaneously, there was founded in the Punjab a provincial Hindu Sabha with the object of "watching and safeguarding the interests of the entire Hindu community in all respects." Four years later, at the time of the introduction of the Minto-Morley Reforms, the Punjab Hindu Sabha sent a memorial drawing attention to the "differential treatment in the distribution of Government patronage" and "the disadvantageous position in which the Hindus would be placed in the matter of representation under the proposed Reforms scheme." The conference also contended that "the principle which had been accepted in providing for the separate and special representation of one particular community puts educational qualifications at a discount and introduces a new factor of political importance which, by giving rise to invidious and unjustifiable distinctions based purely on denominational considerations, will tend to accentuate social feelings and militate against the good results that the people of Hindustan expect from the schemes of Reforms."

"Nor has any case been made out for any special concession to the Mahomedan community on the score of their alleged historical or political importance. The Government of the country in almost every case was acquired by the British from the Hindus. The vast majority of the Mahomedans in the country are descendants of Hindu converts. Hindustani Mahomedans have never been rulers of the country. Even at the present moment a great majority of the Native States of Hindustan are ruled by Hindu Chiefs and Princes."

A number of meetings of the Punjab Provincial Sabha were held in Upper Indian towns in the succeeding years. The foundations of the All-India organisation were, however, laid at Allahabad in 1910 when it was decided to form an All-India Hindu Mahasabha. A few years later, an organisation came into being under the title of "Akhil Bharatiya Hindu Mahasabha." The first few sessions of this body were held on the occasions of certain annual Hindu fairs but it did not take many years for the Hindu organisation to become a regular political institution.

It suffered an eclipse in 1919-20 as a result of the Congress ascendancy to power under Mr. Gandhi who conducted the non-cooperation and Khilafat movements. The first effects of the Khilafat movement on Hindu-Muslim relationship was the Moplah disturbances in which the fanatical Moplahs perpetrated numerous atrocities on the Hindu inhabitants of Malabar. This was followed in the next few months by riots in Multan, Saharanpur and Kohat in all of which the Hindus were the sufferers. The

gave rise to a feeling among the Hindus that they should organise themselves for self-protection.

Dawn of Renaissance—This period has been described by Hindu leaders as the dawn of Hindu renaissance. It was at this time that the twin movements of *Suddhi* (reconversion into Hinduism) and *Sanyatan* (Hindu unity drive) were born. An outstanding event occurred in 1922 when 450,000 Mahomedan Rajputs were reconverted to Hinduism.

In 1923 was held the Benares session of the Hindu Mahasabha which was a pronounced success. The rules of the Mahasabha were amended at this session. After this date provincial and branch Hindu Sabhas were organised and Hindu conferences took place in different parts of the country. Swami Shraddhanand, Lalaji Lajpatrai and Pandit Madan Mohan Malaviya took active interest in the work of the Mahasabha.

The Hindu reconversion movement gave rise to a counter-movement on the part of the Muslims, one of whose leaders published a book outlining the quickest and most comprehensive ways of converting *Kaffirs* to Islam.

The war of conversion went on for a few years. Much bad blood was generated which manifested itself in a number of Hindu-Muslim riots. Swami Shraddhanand was murdered about this time. The murder of one or two advocates of the Hindu cause also took place in 1926-27.

Meanwhile, the political aspect of the Mahasabha's work had also begun. At the session of the Mahasabha held at Delhi in 1925-26 it was resolved that at the forthcoming elections to the legislatures Congress candidates who might be considered harmful to the interests of the Hindus should be opposed and Hindu Mahasabha nominees set up against them; otherwise the Hindu Mahasabha should not oppose the Congress. The years that followed marked the termination of this friendly relationship between the Congress and the Mahasabha. With the advent of Mohl Parmanand and Dr. B. S. Moonje the Mahasabha acquired somewhat of an aggressive and militant character. Prior to this time, while the Hindu leaders were keen on defending the rights of the Hindu community, they still dreamed of a united nation. Socialists they wanted to make the Hindu community very strong and united; but, politically, they sought to keep the Hindu Mahasabha as an adjunct to the Congress.

They followed the Simon Commission, the Round Table Conference and the Communal Award. The announcement of the Communal Award and the attitude adopted by the Congress towards it, namely, of rejection, led the Hindu leaders to draw a further line between the Congress and the Mahasabha. The latter's leader concluded a statement to the effect that the country could not be united as long as the Congress was so weakly divided. The Hindu

Earlier Demands—In 1927 the Hindu Mahasabha made a list of demands which were presented to the Government. These included the following:—

The 1918 session at Delhi demanded responsible self government for India as a unit in the Empire and expressed opposition to the introduction of creed and colour considerations in the matter of representation on legislative councils, etc. While deprecating the attempts to extend separation and excessive communal representation in local bodies the session demanded that if any special consideration was shown to a non Hindu community where it was in a minority the same consideration should also be shown to the Hindus where the latter were in a minority.

In 1925 the Mahasabha, which met at Calcutta resolved "As it is essential to have one nation for peace and happiness and for the establishment and maintenance of *Swaraj* in the country and also as communal representation in regard to national institutions and the services has been harmful and detrimental to the creation of a united nation the Hindu Mahasabha strongly protests against the introduction of such a system the Mahasabha also appeals to its non Hindu brethren to give up such anti national demands and help the Hindus in establishing national solidarity and oneness."

In the next year the Mahasabha expressed the opinion that "as the principle of communal representation and separate electorates far from bringing the different communities together has proved a serious hindrance to the growth of national feeling and to the smooth working of Governmental, district, provincial and national bodies and institutions it is the duty of Hindu and non Hindu brethren of opinion to make a united stand against the various principles."

In 1928 the Mahasabha reaffirmed its conviction that communal representation was fundamentally opposed to nationalism and laid down the following essential propositions for consideration in any future constitution of the country "That there shall be uniformity of franchise for all communities in each province and that elections to all elective bodies shall be by universal suffrage."

Further it stated "on communal considerations in any of the elective bodies and educational institutions in any province were to demand reservation of such reservation may be insisted only in the legislatures for a short and definite period in the representation of different communities held in uniform such as adult franchise voting franchise and taxation the franchise system in India and when the distribution of seats on their own merits necessary shall be made on the basis of general principle of fair representation and administrative application with regard to administrative financial and social considerations but the non Hindu community shall have no right of giving a majority of seats to any communal body."

N.W.F.P. and other areas should be treated as Districts step by step and no special rights secured with a view to administrative purposes of a regular system of administration both judicial and executive so as to have no ground for refusing them the full benefit of the future reformed constitution of the Government of India. There shall be no communal representation in the Public Services which must be open

to all communities on the basis of merit and competency ascertained through open competitive tests."

Round Table Conference—While the Round Table Conference was in session, the Mahasabha met at Akola in 1931 and resolved *inter alia* "The Hindu Mahasabha warns the Government that the people of Hindustan are in no mood to be satisfied with anything less than immediate full Dominion Status and full responsible government. This conference, while being emphatically of the opinion that Hindustan is quite capable of taking over immediately full responsibility for its own Government, puts on record its desire that the Round Table Conference may prove a success and that peace and friendship may be established between England and Hindustan. In case a certain transitory period as regards the defence of the country and imperial foreign policy be still considered needed, such period should not exceed ten years when those special reservations should automatically cease to operate, that even during such a period of transition there should be a minister or ministers in charge of the reserved subjects and the ministers shall be appointed by the Viceroy from among the elected members of the Central Legislature that recruitment of officers holding King's Commissions in the Indian Army, Navy and Air Force should be made in India from the Indian Army, Navy and Air Force, irrespective of considerations of caste or creed or of the so called martial and non-martial classes, subject always to the requisite standard of efficiency, provided that it shall be open to the Government of India to provide for recruitment in England to fill up such of the vacancies as may not be filled in India that all arrangements should be made for the intensive military training of Indian boys by establishing military gymnasia and rifle training of boys in the indigenous arts of self defence such as 'lathi' play, sword-play, etc., and encouraging boys to join University Training Corps and young men to join the Territorial Force."

Communal Award—The session held in 1932 at Delhi was of particular importance to the Hindu community in that it condemned the Communal Award on the following grounds "That it maintains and extends the scope of separate communal electorates against all canons of democratic, responsible and representative Government which the British Government are pledged to establish in Hindustan, that it betrays the Prime Minister's own declaration in the House of Commons on January 10, 1931, emphatically condemning communal electorates and weightages in representation as they leave no room for national political organisations or parties that it flouts the unanimous opinion of the vast Hindu community, of the Sikhs, of the depressed classes and also of the women of India in favour of joint electorates that it practically ignores separate communal electorates on an important sections of the population of India by forcing separate communal electorates on unwilling Hindu minorities in the Punjab and Bengal that it even extends separate electorates to women against their agreed demands to the contrary that in the name of protection of minority it has only granted protection to Muslims whether they form majority or minority while not only no protection has been granted to

Hindu minorities but they have been even deprived of a part of their representation, which they are entitled to on the basis of their proportion in population, that it provides for differential treatment of minorities favouring Muslim and European minorities in that (i) it adds an artificial and arbitrary weightage to the representation of Muslim minorities (ii) it reduces the representation of the Hindu minorities of Bengal and Punjab below what they are entitled to on the basis of their proportion to the population, (iii) it denies to the Sikhs the weightage in representation which it grants to Muslim minorities under similar conditions, (iv) it grants to European and Anglo-Indian minorities a weightage of representation which is grossly out of proportion to their strength in population and (v) it reduces the representation of the Hindu minorities of Bengal and the Punjab to what is flagrantly out of proportion to their contributions to taxation and to the culture, charitable benefactions and general progress of their respective provinces." The resolution continued "It destroys the communal equipose of the Lucknow Pact which was an agreed solution of the Communal problem and which was endorsed even by the Simon Commission in the absence of any other agreed solution that the communal decision is not an award of an arbitrator to which the parties concerned are committed but it is the decision of the British Government that the contention that an agreed Indian solution of the communal problem is not forthcoming is unwarrantable inasmuch as the problem was, at its origin, the creation of the Government itself its solution has been obstructed by conditions created by Government such as the publication of the Government of India's despatch on Simon Commission practically conceding in advance almost all the demands of the Muslims and by the exclusion of nationalist Muslims from the Round Table Conference. Therefore, as circumstances favourable to an agreed solution do not exist, the Hindu Mahasabha, in accordance with its previous resolutions recommends that the communal problem of Hindustan be settled, on an all-India basis, on the lines of the International Communal Award as embodied in Minorities' Guarantee Treaties to which His Majesty's Government and the Government of India are already committed as parties and signatories and which now form part of the public law of Europe and of the world guaranteeing to minorities full protection, linguistic, cultural, educational and religious but not through separate communal electorate."

The Hindu Mahasabha invites all other communities to stand for this International Communal Award formulated by the highest Arbitral Body of the world as their agreed solution of the communal problem that in case the Communal Award is not suitably modified within reasonable time the Hindu Mahasabha calls upon the Hindus to take all steps necessary both in legislatures and outside for frustrating the objects of the Anglo-Muslim alliance on which it is based, and directs the Working Committee to prepare a programme of work to give effect to it."

The next year's session discussed an appeal to the League of Nations in respect of the Indian minority problem.

The sessions of 1935 and 1936 condemned the Reforms scheme especially as "it sacrificed the interests of the Hindu community to those of the other communities" but decided to contest the elections to be held under the 1935 Constitution "with a view to protecting and upholding the Hindu interests."

In 1937 the Mahasabha resolved that in spite of the defects of the constitution, "the Hindus should utilise whatever powers are provided for under the Act in the interest of the evolution of Hindustan as a united nation" and urged upon Government to expedite the introduction of Federation.

The Mahasabha took strong exception to the Congress attitude of neither accept-nor-reject towards the Communal Award and as a protest against it Pandit Madan Mohan Malaviya and Mr M S Aney, who till then wielded considerable influence on Congress policies started a new party called the "Congress Nationalist Party" within the Congress, determined to oppose the Congress attitude towards the Award.

During 1934-35 a number of conferences were held to oppose the Communal Award.

Congress-Mahasabha Cleavage—Then occurred another change in the Hindu Mahasabha. Mr V D Savarkar entered the lists with a virile programme for the regeneration of the Hindu community. The cleavage between the Congress and the Hindu Mahasabha was further accentuated. Mr Savarkar's attitude of hostility towards Congress may be illustrated by the following words: "The Hindu Sangathanists had to face the apathy on the part of crores of the unawakened masses of their co-religionists on the one hand and on the other the treacherous attitude of the pseudo-nationalist Hindus who are friends of every other community in the world but their own and who are ever ready to betray even the just interests of the Hindus and to placate the Muslims even in the most anti-national demands on their part—just to prove that the Indian patriotism of these pseudo-nationalists like Cezer's wife was above suspicion. Thus, unaided and betrayed at home, the brave band of the Hindu Sangathanist leaders and missionaries had to face outside the organised opposition of the Christian missionaries on the one hand and the fanatical riots, hoodlums, assaults and assassinations by the Muslim fanatics on the other while the British Government out of its political hostility to the Hindu, was sworn never to take the side of the Hindu whenever Hindu interests clashed with the interests of the traditional 'favoured wife' of the British."

Shri Parmar said "the best way to bring about Hindu-Muslim unity is to strengthen the communities. Let the Hindus cease to be Hindus but the Mohammedans still be Mohammedans for all truths to come. The nation of Hindum on the part of the Hindus does not mean the nation of Islam on the part of the followers of the latter. The Hindu Sangathanists bring about a desired unity only by preserving the communal strength. It is not to be to the interest of the Hindus to give effect to the abolition of all religious distinctions for political purposes."

Hindus have, perhaps, felt that the Congress, the bestower of the priceless gift of liberty, must have been right in pawning Hindu independence, culture and prosperity in exchange for an elusive Moslem support. In fact the emotion that has accompanied Congress activity in the last twenty years has destroyed in the Hindus the love of their heritage. They have been too willing to offer themselves as sacrifices at the altar of a Goddess which was surreptitiously given back Hindu offerings to Muslims.... If the Congress had not engineered the theory that liberty can only follow Hindu-Muslim unity, liberty today would not be hampered and confined as it is."

Referring to the latest phase of the Hindu-Muslim relationship, Bhai Parmanand said, "The situation has got only two solutions. One is the partition of the country into two, and the other to allow a Muslim state to grow within the State. That is sure to take us to a period of trial of strength, and in that case the Hindu Mahasabha alone and not the Congress can offer the right solution. I am convinced that if the Congress had not thought of Hindu-Muslim unity, if Mr. Gandhi had not made his ill-fated pact with the All Brothers, it could have made a significant contribution to the achievement of freedom. It would then not have nurtured an enemy to its ideals within its own territories."

Dr. Moonje remarks that "during the last 8 years the Congress has developed a tendency that may aptly be called a pro-Muslim mentality at the cost of Hindu interests with the ultimate object of placating and winning them over to merge in the Congress. The Muslim scheme of emancipation is essentially and fundamentally based on the essentially communal ambition of winning a domineering position for Islam in this hoary land of the Hindus. The Muslims have no idea of patriotism, or nationalism, if shorn of Muslim communalism, nor do they care for Swaraj in India, if Swaraj does not offer to them a domineering status in the administration of the country. Their one point, on which they have concentrated, for the present, all their energy and intellect and staked everything that counts in life, is how to 'win' a position for Islam in India, even if it be at the cost of others. Does this, in any sense, mean the need for minority protection? What is the cure for such a mentality? It has now reached its culminating point, it is no mere bluff. It has now begun to demand division of India into Muslim India and Hindu India." Dr. Moonje claims that "in any country it is always the right of the majority community to establish Swaraj and to create its own nationalism, to maintain internal law and order and to defend the swaraj from external aggression."

Since 1937, Mr. Savarkar has been Hindu-India's No. 1. In 1937 the Mahasabha declared as its goal the attainment of complete independence by all legitimate and peaceful means.

An example of the militant character of the Mahasabha in later years may be found in a resolution passed in 1938 at Nagpur which urged upon the provincial Hindu Sabhas the need of opening *akhadas* (gymnasias) for improving the physique of Hindus and of starting rifle clubs.

The 1939 session in Calcutta resolved to form volunteer corps, under the name of 'Hindu

Militia'. It also expressed the view that "the Muslims have been made much of both by the Congress and the Government and have been given concessions at the expense of the Hindus, constitutional and administrative, much more than what are their due in their proportion to the population."

Attitude to War—On the question of war it was resolved "In view of the statement made by His Majesty's Government that it has declared the war with a desire to safeguard the vital principles of freedom and democracy as against the rule of force and in view of the fact that nowhere is there greater necessity for the application of these principles than in India, the All-India Hindu Mahasabha declares As the task of defending India from any military attack is the common concern of England and India and as India is unfortunately not in a position today to carry out that responsibility unaided, there is ample room for whole-hearted co-operation between India and England and that, in order to make such co-operation effective, His Majesty's Government should immediately take steps (1) to introduce responsible government at the centre, (2) to redress the grievous wrong done to the Hindus by the Communal Award both at the Centre and in the Provinces, particularly in Bengal and the Punjab where the Hindus have been reduced to the position of a fixed statutory minority contrary to all principles of democracy, with their representation in the legislatures reduced far below what they are entitled to even on the basis of their population strength, (3) in order to inspire the people of India to feel that the Indian Army is the national army of the people of India and not an army of occupation of the British, to remove all artificial distinctions between the so-called "listed" and "non-listed" classes or "martial" and "non-martial" races, and to accomplish the complete Indianisation of the Indian Army as early as possible, (4) to modify the Indian Arms Act, so as to bring it on a par with what prevails in England; (5) to expand on an extensive scale the Indian Territorial Force and the University Training Corps, to establish such military organisations in provinces where they are not in existence at present, and to increase substantially the admission of cadets at the Indian Military Academy; and (6) to make adequate arrangements for the training of the people in all branches of the defence forces so as to make it ready for all emergencies."

As far as the future constitution of India is concerned, the session resolved that "the All-India Hindu Mahasabha reaffirms complete independence as the goal of India's political aspirations and urges that a constitution based upon the Dominion Status as defined in the Statute of Westminster be immediately conferred on India" and that "the Mahasabha emphatically protests against the recent pronouncement of the Viceroy and the Secretary of State to the effect that the further constitutional progress of India must depend upon a solution of its communal and minority problems, since they flagrantly violate the fundamental principles of a democratic constitution resting ultimately upon the vote of the political party commanding a majority and not subjected to the veto of the minorities."

In the Limelight—The declaration of war in September 1939, followed as it was by numerous efforts by His Excellency the Viceroy to get leaders of Indian opinion together to an understanding on the political and constitutional issues with a view to unifying and intensifying India's war effort, brought the Hindu Mahasabha very much into the limelight. It was in 1939-40 that the Mahasabha secured for the first time official recognition at the hands of the Government of India, a fact which was appreciated by the annual session of the Mahasabha in 1940. When His Excellency the Viceroy summoned leaders of different communities and interests for consultation on the political question, the Hindu Mahasabha insisted that it alone had the right to speak in the name of the Hindu community. The resolution passed by the Mahasabha welcomed "the recognition by the Viceroy and the Secretary of State that the political situation in the country cannot be satisfactorily solved without the co-operation of the Hindu Mahasabha, which is the most outstanding body representing the Hindu community's interests".

In the middle of 1940 when the Viceroy was considering the best method of associating representative Indian opinion with the governance of India by means of an expanded Central Executive Council, the Hindu Mahasabha strongly advocated the claims of the Hindu community for adequate representation thereon, and stoutly resisted the claims of Mr Jinnah that the Muslim League should have a majority in the Central Executive Council if the Congress abstained from participation.

The Working Committee of the Hindu Mahasabha resolved in September 1940—"In view of the opportunities that the present war offers for the general militarisation of the Hindus and for the organisation of the defence of India on sound up-to-date modern lines, so that India may be converted into a self-contained defence unit, the Hindu Mahasabha is prepared whole-heartedly to work out the schemes of the extension of the Viceroy's Executive Council and the War Advisory Council, but on honourable terms of equity and justice as stated below—
'In view of the declaration made by the Muslim League of its 'determination, firm resolve and faith' that the partition of India is the only solution of a future constitution for India, the Hindu Mahasabha urges upon the Viceroy to make a clear and definite declaration that Government have not approved or accepted any such proposal or scheme,

'That in view of the reported understanding between the Viceroy and the Muslim League that the League would be given two seats on the proposed extended Executive Council and five seats on the proposed War Advisory Council, the Mahasabha claims a representation of six seats in the extended Executive Council and 15 seats on the War Advisory Council on the population basis,

'That out of the six seats on the extended Executive Council, one be given to Sikhs and one to Scheduled Castes and the rest to be given to the nominees of the Mahasabha,

The Working Committee considers the demand of the Muslim League for 50 per cent representation on the proposed Executive

Council and elsewhere as undemocratic, unconstitutional, unreasonable and preposterous, and urges upon the Viceroy to give an assurance to the Mahasabha that no such demand would be entertained,

'In view of the attitude taken up by the Muslim League and the altered political situation brought about thereby, the Working Committee of the Hindu Mahasabha requests the President, without meaning any disagreement about the personnel of the panel, to withdraw the panel which was submitted by him to the Viceroy on behalf of the Mahasabha, in deference to the wishes of the Viceroy,

'The Working Committee also urges that a sub-committee of the extended Executive Council be formed, with the Viceroy as President, to be in charge of the defence portfolio and that Hindus should be given adequate representation on it,

'The meeting urges that the Viceroy should not commit himself to any distribution of portfolios before the extended Executive Council is constituted. The Committee further urges that the distribution of portfolios when made should be on an equitable basis with due regard to the importance and interests of the Hindus."

Opposition to Pakistan—During 1939-40 the Hindu Mahasabha was considerably exercised over the demands of the Muslim League for the division of the country into Muslim and Hindu India. Anxiety was also expressed over the statements made by the Secretary of State for India on this subject, which were interpreted by the Mahasabha as conceding too much to the Muslims. (For details of these pronouncements by British spokesmen see the chapter on the Muslim League.) The Working Committee of the Mahasabha claimed that India should be granted Dominion Status within a definite time limit and expressed the opinion that the statements made by the Viceroy and Mr I. S. Amery, as highly "unsatisfactory and disappointing" in that they contained no reference to India's right to independence, which was the declared goal of the Mahasabha, and that the reference made to the grant of Dominion Status as an immediate step in constitutional advance was vague and uncertain. The Statement to the effect that the British Government would not agree to hand over the administration of the country to a system of Government which would not be acceptable to large and powerful elements of Indian life, the Committee thought, required clarification as it was capable of the interpretation that if the Muslim League, the Princes or other vested interests opposed the recognition of the legitimate rights of the majority in India the further constitutional advance would be held up, or the rights of the majority would be surrendered to them. This would mean negation of the principle of democracy and an incitement to the minorities to obstruct and revolt.

With regard to the Mahasabha attitude to the war and the offer of the Viceroy to expand the Central Executive Council, the Working Committee declared that the activities of the Mahasabha would be guided by a policy whereby the Hindu interests would be furthered, and that no

elements would be permitted to dominate the public life of this country to the detriment of Hindus. The Mahasabha was determined to fight every inch of ground, both inside and outside Government, to achieve this object, and it would accept any reasonable and honourable offer made by Government only if such acceptance would stimulate and advance the Hindu cause and prevent any encroachment being made on the rights of Hindus. But this acceptance of the offer would not be considered as a bar to the Mahasabha carrying on agitation for the further advancement of the Hindu cause and interests.

While the Hindu Mahasabha kept on urging the Hindus to offer themselves for recruitment in the fighting services, with a view to the steady militarisation of the Hindu community, its leaders carried on a ceaseless agitation against the Muslim League's Pakistan demand and against what they termed as the persistent refusal of the authorities to repudiate it.

Madura Session—It was in this atmosphere that the annual session of the Mahasabha met at Madura in South India in December, 1940. Mr. V. D. Savarkar, who presided, preached the ideal that the Hindus should get themselves "reanimated and re-born" into a martial race.

The main resolution passed by the session *inter alia* stated that the Hindu Mahasabha appreciated the recognition by the Viceroy and the Secretary of State that the political situation in the country could not be satisfactorily solved without the co-operation of the Hindu Mahasabha.

The resolution added that while reiterating faith in the goal of complete independence the Hindu Mahasabha is prepared to accept Dominion Status of the Westminster type as the immediate step.

The resolution also called upon the Government to recruit Hindus for the army and the navy, make military training compulsory for Indians and to promote the establishment of war industries in India. The resolution concluded "In case the Government fails to make a satisfactory response to the demands embodied herein before March 31, 1941, the Mahasabha will start a movement of direct action." A committee was appointed to devise ways and means for starting and conducting the campaign of direct action after the lapse of the period mentioned above.

Nothing happened, however, on the expiry of the ultimatum because, it was gathered the Hindu Mahasabha President received from the Viceroy assurances which were conciliatory in nature. It was reported in April 1941, that the Viceroy had told Mr. Savarkar that there was no formal Pakistan proposal before the Government and that none such was under consideration by the authorities.

No Direct Action—The threat of direct action in the event of the British Government failing to meet the demands of the Hindu Mahasabha came up for discussion at a meeting of the All-India Committee of the Mahasabha

held at Calcutta in the summer of 1941. Dr. B. S. Moonje moved that giving effect to the Madura resolution of the preceding session be postponed. Three amendments were moved, one was withdrawn and the other two rejected. The decision was due mainly to international developments and to internal communal rioting. In the first half of the year Hindu-Muslim disturbances of a grave type broke out in Ahmedabad, Dacca, Bihar and Nellore. As usual, each side condemned the other as the aggressor. Mr. Shyamprasad Mookerjee said for instance, that the recent communal disturbances were unusual. They were not isolated examples of lawlessness, but "a well-organised campaign of oppression of the Hindus and an attempt to terrorise us into accepting Pakistan." He expected a more vigorous drive of communal hatred in the near future and said that, when those attacks came, the Hindus must have the strength and organisation to resist them. He urged the Hindus to concentrate on consolidating themselves in order to ensure the security of their hearths and homes. For similar reasons, Mr. Savarkar said it was in the interests of Hindus to postpone "any foolish jail seeking programme, taking a lesson from the Congress fiasco of their own programme."

The resolution postponing the launching of direct action referred to the correspondence that had passed between Mr. Savarkar and H. F. the Viceroy in pursuance of the Madura resolution, and to the pronouncements made from time to time by the Secretary of State for India in connection with the political situation in India. It noted that the Viceroy had turned down "some of the fantastic communal demands" put forward with regard to the extension of the Viceroy's Executive Council and also that the Secretary of State for India had under pressure of public opinion created by the Hindu Mahasabha, criticised adversely the so-called Pakistan proposal. It also noted that the Government of India had taken action against the Khaksar movement, which the Working Committee of the Mahasabha had urged in 1940. The resolution expressed the opinion that "Hindu interests in Sind, the North-West Frontier Province, Bengal, and the Punjab continued to be systematically assailed."

Recommending the postponement of "direct action," the resolution added that such a decision would not in any manner debar any action that might be required to be taken, with the previous approval of the Working Committee, on important local or provincial issues affecting the civic, religious, cultural or political rights of Hindus. It stressed the need for—

- (1) Hindu 'sangathanists' to organise themselves on a national scale
- (2) A constructive programme
- (3) Creation of Hindu Solidarity and consolidation of all classes of Hindus
- (4) Effective organisation of volunteer corps
- (5) A vigorous campaign for enrolling at least 10,000,000 Hindu Sabha members
- (6) Effective economic relief to Hindus by organising "Buy Hindu" Campaigns and supporting Hindu industries and concerns

The mover criticised "Government's failure to give protection to Hindus in the riot affected areas in different provinces" and argued that if at that stage the Hindu Mahasabha leaders and workers courted arrest, there would be no other persons organisations or associations to look after the interests of Hindus and resist aggression on them

The committee also adopted a resolution condemning the action of the Government of Bengal "in interfering with the census operations in the province" and calling upon the Central Government to intervene immediately

Another resolution expressed strong disapproval "of the application of the Defence of India Rules by Government to suppress legitimate expression of political opinion and activities thereby strengthening the grip of bureaucratic control in India by taking advantage of the war situation, and in particular against the Hindu Sangathanists and Hindu Sabha workers"

The next resolution related to communal harmony. It expressed the opinion that communal amity could be established in the country not by "pandering to the anti national communal demands of minorities, but by recognising equality of civic rights for all communities without distinction"

Communal Rioting—The Working Committee of the Mahasabha which met at Calcutta at the same time passed a strongly worded resolution on the communal rioting. It ran "The Committee views with great concern the communal riots in Dacca Ahmedabad Bombay, Cawnpore Bihar Sharif Bhiwani (Punjab) and other places and while it recognises the imperative need for taking stringent measure by every civilised Government for suppressing the activities of aggressors and rioters, the All India Committee desires to emphasize that recent riots disclose a well organised campaign of oppression of Hindus by anti Hindu elements and that this can be effectively resisted only if the Hindus themselves decide to organise their own defence to the best of their ability and resist attacks in defence of their person and property. The All-India Committee records its opinion that the British Government is either unable or unwilling to protect the rights, properties, lives and honour of the Hindus, that the Government of Bengal failed in its primary duty of keeping law and order and that the Government of India failed in its responsibility regarding maintenance of public peace and tranquillity in the provinces which devolved on it consequent on the proclamation of Emergency by the Governor General on the outbreak of the war

The Committee records further its opinion that the Communal Ministry which has been instituted in the province of Bengal on the basis of communal electorate created by the Communal Award has by its anti Hindu policy an active and open support of the anti national scheme of Partition emboldened the Mohammedans to take up an aggressive attitude towards the Hindus and that outrages committed in the District of Dacca resulting in

organised looting, arson and desilement of temples and images and forcible conversion of Hindus in over 70 villages were results of the wide spread impression among the Muslim hooligans that they would enjoy immunity for the acts of oppression and depredation upon Hindus

"Akhand Hindusthan"—Hindu Mahasabha circles were unanimous in ascribing the outbreak of communal rioting to a design on the part of some Muslim leaders to force the issue on Pakistan. Mr K M Munshi, a well-known Congress leader and former Home Minister of the Government of Bombay left the Congress on the issue of a non violent approach to the communal rioting. He started an Akhand Hindusthan (Undivided India) campaign which was very popular in Hindu circles. Mr Munshi's exit from the Congress was solely on the issue of Mr Gandhi's insistence on remaining non-violent even in the midst of rioting. On this subject, of course the Hindu Mahasabha held diametrically opposite views

In statements and speeches made at the time Mr Munshi said "It is essential that all those who believe in the unity and internal security of undivided India (Akhand Hindusthan) must mobilise and consolidate opinion against the loose talk of dividing India. Several leaders of all communities have already expressed themselves against this attempt to dissect India

There is no possibility at present of adjusting communal rights for no one can foresee the basis of future life. The world, including India and its political parties is in a melting pot. No one knows the shape they will take when this terrible war ends. The Akhand-Hindusthan is the undivided India of Hindus, Muslims, Sikhs, Christians and Europeans and Parsis, of everyone who is born in India or who has his home in India. At the end of the war we all hope to live here as brothers in full freedom to pursue our distinctive growth

Unfortunately we have in Mr Amery, the Secretary of State for India, a gentleman who is anything but helpful. He is not likely to withdraw the veto with which he has invested those who seek the division of this country. His constant emphasis on agreement between political parties before any political advance is made is a flat refusal on the part of Whitehall to help us solve our problems. Unless this veto is therefore, taken away and Britain declines to put a premium on communal intransigence it would be idle to expect that Britain will help us in this matter. But that is no reason why an effort should not be made by us to see the dangers ahead and help ourselves.

"Akhand Hindusthan is not a communal problem not even a social political or religious one. There are some things which are above political rights and religious bonds, of them the right to live, the right to live in security, is the most sacred right. This will simply vanish if the territorial integrity of our land is disrupted. In this sense Akhand Hindusthan is above political expediency and religious differences. It is the prime necessity

' I could not reconcile myself to the principle of abjuring the use of force in matters of self-defence. Apart from this difference, I remain the same unrepentant nationalist that I was before I joined the Congress and since I cannot think of political freedom for this country except on the basis of harmonious adjustment of the claims of all our communities and interests which nationhood implies.

' I am equally convinced that the demand for the vivisection of India is intended to destroy the position and influence of Hindus in this country.

If the Hindus and other nationalist elements like the Sikhs, Christians, nationalist Muslims and others on whose effort Akhand Hindusthan is to march to freedom are over-awed into submitting to India's vivisection or to their reduction to the position of a minority, life will not be worth living in this land.

' The one and only new force which we created in co-operation with other communities was nationalism. But at present it is at the cross-roads. The labour of a century is being threatened by a few fanatical disruptionists who desire to divide India by harnessing religious bigotry to the chariot wheels of politics.

But the greatest stumbling block to resisting the disruption of India is not the fanaticism of the disruptionists but the fear complex of the Hindus. We are afraid of not being accepted as nationalists if we stick to things which make us what we are.

If the country is threatened with disruption we find excuses for not resisting the threat. We huddle and cower into giving up everything which makes life worth living. Nationalism, the one basis on which India has put all her future, will never triumph unless we shed our fear complex unless we cling to our culture and above all unless we stick to our principles.

In the struggle for Akhand Hindusthan there should be no us and we have to enlist all sections of the community in India which may be ready to join us. We should work so that the nation may be so great that we sink our provincial and linguistic differences and achieve irresistible cohesion. Nationalism is not antagonistic to any form of true Hindu just as it is not antagonistic to a Muslim being a true Muslim. I want to leave in peace and harmony with non-Hindus in India to a national freedom for all by the efforts of all. But I refuse to be apologetic of my true religion or culture. Political rights and opportunities are a mere team work in which to live the life is my forte. I have conceived it. It Hindu in his meaning and aim. We shall not suffer any power on earth to take it from the soil of Akhand Hindusthan. India has a new lot for the war which is before her.

Bhagalpur Session. To return to the activities of the Hindu Mahasabha proper. During the latter half of 1941 the Hindu Mahasabha was engaged in a controversy with the Bihar Government over the venue of the next annual session of the Mahasabha. It was decided to hold it at a place called Phagdupur in Bihar. Owing to its proximity to the scene

of serious communal rioting quite recently, the Government of the province suggested that the venue be changed, especially as the dates on which it was proposed to hold the session were too close to a Muslim festival. It was evidently feared by the authorities that the strongly pro-Hindu speeches which were sure to be made at the meeting of the Mahasabha might exacerbate feelings and lead to a serious breach of the peace. This was the subject of a prolonged controversy between the provincial Government and the Mahasabha circles. Letters were also exchanged between the President of the Mahasabha and the Governor-General and the Bihar Governor. At a certain stage a compromise was suggested both in respect of the venue and the date. Nothing availed however, and it was eventually decided by the Hindu Mahasabha to hold the session at the time and place originally fixed. A majority of members who attended a meeting of the Working Committee of the Mahasabha at Delhi in October 1941 felt that an important principle was involved in the controversy and that they should not concede to Government the right to ban Hindu meetings and processions in the interest of peaceful observance of Muslim religious days. This section of opinion also presumed that the Bihar Government would not relax its ban and made the committee take the decision in favour of appointing 'dictators' and fixing up other details to carry on civil resistance to enforce their irrevocable decision to hold the session at Bhagdupur.

The Working Committee also passed a resolution declaring that the blunt statement of Mr. Churchill acquiesced in by America, "will disillusion those Indians—Congressites and others—who fancied at the very outbreak of the war that Britain was out in defence of democracy and freedom all over the world," and vindicated the Hindu Mahasabha view. India the resolution added, must consequently adopt that policy alone which safeguards and promotes her own national interests.

The authorities were, however, determined to uphold law and order and imposed a ban on the meeting. The Mahasabha leaders decided to defy the ban. Hundreds of arrests were made including those of the President, Mr. Savarkar, and the working President, Mr. Shyamprasad Mookerjee, who had recently become a Minister of the Bengal Government. The leaders were released after a few days.

The normal meeting of the session was prevented by the authorities, but an attempt was made to 'hold' the session and pass certain resolutions.

Asserting that the independence of India, indivisibility of India, representation in proportion to the population strength, public services to go by merit alone and the fundamental rights of freedom of worship, language, script etc. guaranteed to all citizens alike, formed some of the basic principles on which the Hindu Mahasabha took its stand, Mr. Savarkar in the course of his presidential address which was to have been delivered at the Bhagalpur session of the All India Hindu Mahasabha said that the Hindu Mahasabha

the concentration of political sovereignty in India and the transfer of the entire administration of India to Indian hands, including Defence, Finance, Foreign Affairs and relations with the Indian States."

Other Resolutions were — "In view of the deplorable unpreparedness of India in matters of defence, the All-India Committee of the Hindu Mahasabha calls upon the Hindu Sabhas throughout India and particularly in Provinces and Districts which are exposed to the dangers of air raids or invasion by foreign powers to organise civil defence parties and to take all possible steps to raise and equip a National Militia for preventing the ravages caused by possible air attacks anti-Hindu hooliganism and internal commotion. The Hindu Mahasabha defence organisations should act in co-operation with the authorities and with the defence parties started by other political organisations. The provincial Governments should bring about proper co-ordination between the civil and A R P services and enlist public sympathy and co-operation and grant fullest recognition to the Mahasabha defence organisations and afford them facilities to organise and equip the Mahasabha volunteer forces. The Committee calls upon the Government to repeal the Arms Act and to provide the members of the defence organisations with arms so that they can form a real National Militia, able to withstand and cope with all possible internal emergencies." This was moved

Mr N C Chatterji and was passed unanimously.

"In view of the fact that the Government has so far failed to organise adequate defence of India the Hindu Mahasabha calls upon the Government to (1) relax the administration of the Arms Act so that every Indian should be able without any difficulty to secure rifles and to learn their use to shoot down invaders as a second line of defence and guerilla warfare in support of the defence to be put up by the Government (2) encourage and provide funds for the organisation of a National Militia so as to enable every able bodied Indian to do his part in the defence of his country (3) establish immediately factories for the manufacture of aeroplanes motor cars and warships and to give help to the industrialisation of the country to bring about self-sufficiency in the matter of weapons for the defence of the country, and (4) provide serviceable and non-serviceable rifle, with ammunition free of charge to schools and colleges as a preliminary for training of educated youths."

"From the speeches made and the statements issued by the prominent Congress leaders the Hindu Mahasabha apprehends that the Congress may accept some anti-democratic and anti-national agreement to placate the Muslims. The Hindu Mahasabha which is the only body to speak on behalf of the Hindus warns the Government that if any such agreement is arrived at behind the back of the Hindu Mahasabha, it will be stoutly resisted by every possible means."

Cripps Scheme opposed.—When the Cripps proposal (see the chapter on The Indian National

Congress) were announced, the Hindu Mahasabha was one of the earliest to reject it on the ground of the unity of India. The statement issued by the Mahasabha ran

"There are several points in the declaration which are more or less satisfactory but according to the statement unfortunately made by Sir Stafford Cripps, the scheme of his Majesty's Government is to be accepted or rejected in toto. As some essential features of the scheme are wholly or partially unacceptable to us, the Hindu Mahasabha has no other alternative but to reject the scheme."

"One of the cardinal points in the scheme which Sir Stafford Cripps has put forward on behalf of the War Cabinet is the right which has been conferred on the provinces of British India to keep out of the Indian Union or Federation. The basic principle of the Hindu Mahasabha is that India is one and indivisible. In religious and cultural aspect there has been recognised the fundamental unity of India by the Hindus throughout the ages, and even unity in political sphere was an accomplished fact in many periods of this country's history. Even during some two centuries of British rule, the political unity of India has been recognised and fostered and this has always been claimed by Britain herself as her finest achievement. Besides, India has been treated as one political and constitutional unit under the Constitution Act of 1935. The right to step out of the Indian Federation will stimulate communal and sectional animosities. The other option given to the non-acceded provinces to set up a rival Pakistan—federating—constitutes in view of such Moslem movements as Pakistan and Pathanistan involving threats of joining hands with Afghanistan and other Moslem nations, a serious menace to Indian security and unity, and this may lead to civil war in the country. The Hindu Mahasabha cannot be true to itself and to the best interests of Hindustan (India) if it is a party to any proposal which involves the political partition of India in any shape or form."

"The Hindu Mahasabha, therefore has fundamental objections to the proposal. The right of non-accession of any province to the 'Indian Union' cannot be justified on the principle of self-determination, and no such right can be imposed by any outside authority. India has already been one unitary state, and the existing provinces are constituted as administrative units. The analogy of sovereign states entering into a federation and surrendering a portion of their sovereignty for certain common purposes cannot apply to Indian provinces."

"According to the scheme of Sir Stafford Cripps a treaty will be a signed between his Majesty's Government and the constituent assembly, and such treaty will implement the undertakings given by his Majesty's Government for the protection of racial and religious minorities. In the framing of this treaty all parties and sections will have an effective say. Such a treaty ought to completely satisfy the minorities. If, however, any minority is not satisfied with the safeguards in the proposed

was added by the conquest of Maharaja Ranjit Singh and retained by the British for administrative convenience. It would be altogether unjust to allow extraneous trans-Jhelum population which only accidentally came into the province to dominate the future of the Punjab proper.

"We give below the figures which abundantly prove our contention —

From the boundary of Delhi to the banks of the Ravi river the population is divided as follows —Muslims,—45,05,000, Sikhs and other non-Muslims—76,46,000

From the Delhi boundary to the banks of the Jhelum river excluding Multan and

Jhang districts —Muslims—82,85,000, Sikhs and other non-Muslims 93,48,000

To this may be added the population of the Sikh states of Patiala, Nabha, Jind, Kapurthala and Faridkot, which is about 26,000,00. Of this the Muslims constitute barely 20 per cent and this reduces the ratio of Muslim population still further.

"We do not wish to labour the point any more. We have lost all hope of receiving any consideration. We shall resist, however, by all possible means separation of the Punjab from the all-India union. We shall never permit our motherland to be at the mercy of those who disown it."

exit into wilderness was partly responsible for this development. When the satyagraha movement was in progress, there was hardly any politics worth the name except the activities of the Liberals and other moderate leaders. Another reason for public attention being directed towards moderate politics was the effort made by the British Government to meet the demands of moderate leaders. It cannot be said that the authorities did anything substantial to enhance the reputation, and strengthen the position, of the sober element in the Indian political world, on the contrary, the point was frequently made that the way in which the Liberals were ignored gave additional impetus to extremism. But such action as was taken was the result of the outspoken representations made by the moderate leaders. They figured in the picture even then then demands were turned down. For instance Mr Amery the Secretary of State for India made a pointed reply to the resolutions of the Non-Party Leaders' Conference held in Bombay in March 1941 (See last year's issue). He referred to practical difficulties in the way of giving effect to the resolutions and said: "The resolution seems to me to have been directed to the wrong address. The time-table of India's constitutional advance depends far more upon Indian agreement than upon ourselves. The same applies to any far-reaching alterations of the present constitutional position."

Expansion of Viceroy's Executive Council—Most the first event of importance in the past official year was the announcement July 21, 1941 of the expansion of the Governor-General's Executive Council and the creation of a National Defence Council to associate Indian opinion with the prosecution of the war. The *communiqué* on the subject ran:

"As a result of the increased pressure of work in connection with the war it has been decided to enlarge the Executive Council of the Governor-General or India in order to permit the separation of portfolios of Law and Supply and Commerce and Labour the division of the present portfolio of Education, Health and Lands into separate portfolios of Education, Health and Lands and Indians Overseas and the creation of portfolios of Information and of Civil Defence."

"His Majesty the King has approved the following appointments to the five new seats on the Council—

Member for Supply—Sir Hormusji P. Mody
M.B.E. M.L.A. (Central)

Member for Information—The Right Honourable Sir Akbar Hydari P.C.

Member for Civil Defence—Dr E. Raghavendra Rao

Member for Labour—Mahik Sir Feroz Khan Noon K.C.I.E.

Member for Indians Overseas—Mr M. S. Aney, M.L.A. (Central)

For the vacancies which will occur when Sir Muhammad Zafrulla Khan and Sir Ganga Shankar Bapu take up the posts to which they have recently been appointed,

His Majesty has approved the appointment of—

Sir Sultan Ahmed to be Law Member, and Mr Nalini Ranjan Sarker, M.L.A., to be member for Education, Health and Lands.

In pursuance of the desire of His Majesty's Government to associate Indian non-official opinion as fully as possible with the prosecution of the war, approval, on the recommendation of the Viceroy, has also been given to the establishment of a National Defence Council, the first meeting of which will take place next month. The Council, the strength of which will be about 30 members will include representatives of Indian States as well as of provinces and of other elements in the national life of British India in its relation to the war effort."

British White Paper.—A White Paper on the subject, presented to Parliament by the Secretary of State explained that though no constitutional change was involved in the announcement and though the enlarged Executive Council would not be responsible to the Legislature, the Viceroy would now have what to all intents and purposes was a War Cabinet, with a marked majority of Indian public men instead of the former European and official majority. "The new members of the Council are as representative of, and as responsive to, public opinion as the refusal of the Indian Congress and the Muslim League to co-operate makes possible."

The changes indicated in the White Paper while making a significant step towards augmenting and consolidating India's war effort, are not in any way concerned with constitutional developments in India. Authoritative quarters recall that in various statements made on behalf of the British Government since the outbreak of the war, it has been made clear that constitutional changes in India are quite impracticable while the British Empire is engaged on a vital struggle for its existence, and that agreement between the major political parties and interests in India is a fundamental condition of consideration of any new constitutional scheme.

The creation of a National Defence Council associates with India's war effort representatives of all influential sections of the community which are ready to co-operate. There are 22 representatives of British India on the Council.

Representatives of Indian States will all of them be Princes, with the possible exception of Hyderabad. The National Defence Council will meet at intervals under the Chairmanship of the Viceroy, and the Council will on each occasion receive a full and confidential statement of the war position and of the position in regard to supply. The Council will also act as liaison between provincial war effort and the war effort of the Centre. The creation of a National Defence Council answers the insistent demand for something of this kind.

"In addition to these measures now taken by the Viceroy to bring Indian public opinion into the closest possible contact with the conduct of India's war effort, the Commander-in-Chief has already announced the setting up of a

Committee of the Central Legislature, over which he will preside for the purpose of enabling members of the legislature to be kept in confidential and intimate touch with defence matters. Further, an Indian has been appointed Additional Defence Secretary to the Government of India."

Explaining the position of the National Defence Council, Mr. Amery said—"It is an advisory body, and the object is to keep the Central Government of India in its war effort in touch with the different Provincial Governments and Indian States with commerce, labour, etc."

Referring to the expanded Executive Council, Mr. Amery said "For many months the Viceroy had conducted negotiations with the Congress and the Muslim League with a view to securing complete co-operation. He has now succeeded in securing the co-operation of many representative men, some of whom are members of the Muslim League and others who have been closely associated with the Congress. The new Members of the Executive Council would share full statutory collective responsibility of the whole Council as well as being responsible for the administration of important departments."

Mr. Amery described those who had joined the Viceroy's Executive Council as a "team of ability and experience, which it would be difficult to rival in India or, indeed, elsewhere." They were, he declared, men with administrative, political and business experience and of personal ability. The Viceroy's War Cabinet would be very much stronger for their inclusion. They would in the fullest sense share in the collective responsibility and statutory responsibility of the Executive Council as well as to direct important departments which had been entrusted to them. The aim, said Mr. Amery, was to increase the efficiency of Government and to make full use of the vast and hitherto insufficiently tapped reservoir of Indian ability and patriotism. These measures, marking a change in the spirit if not the letter of India's constitution, were the earnest of the British Government's desire to transfer to Indian hands steadily an increasing share in India's destiny.

"The National Defence Council will be very far from being a body of Yes-men. At the meeting of the Council, Members would be informed in confidence of affairs which they would discuss with the Viceroy and in turn put forward their own suggestions. After the meeting they would return to their provinces and confer with their representatives. In this way, it was hoped that there would be continual contact between the Viceroy and his Executive, on the one hand and Provincial or State Government, local War Committee or industrial organizations, on the other."

Mr. Amery thought that it ought to prove most helpful in guiding and stimulating Indian war effort. I cannot help hoping that in the course of working together side by side in the common interests of India's safety and India's future, representatives on these bodies of men of every political complexion and community will be drawn closer together.

I hope they will find bonds of mutual understanding and sympathy, which may immensely facilitate the solution of those very difficult inter-communal and inter-party problems which are today the main obstacle to India's attainment of her rightful position as a free and equal member in the British Commonwealth.

Mr. Amery's Explanation.—I further explaining the significance of the expansion of the Executive Council at a later date. Mr. Amery declared that "these measures are an earnest of Britain's desire to transfer to Indian hands a steadily increasing share of the control of India's destiny." It was a matter of general acceptance that India should as soon as was practicable, attain to Dominion Status, "or, as I prefer to describe it to a free and equal partnership in the British Commonwealth." For the undoubtedly key positions, the Viceroy, Lord Linlithgow, had selected men whom he believed to be individually best fitted for the work in hand, declared Mr. Amery. To attempt to make so small a body as an Executive Council representative of all the different elements of India's national life could obviously have been impossible.

The important thing was to find a team of individual competence and willing to share the collective work and responsibility of the Council. In this Mr. Amery ventured to say, the Viceroy had definitely succeeded. The old Executive continued apart from the Viceroy, four European and three Indian members. In the new Executive eight Indian members would be in a majority of two to one. The development marking a change not indeed in the form of the constitution, but in its spirit.

The National Defence Council, except for the presence of one representative of the European commercial community and one for the resident Anglo-Indian community was Indian. This, said Mr. Amery, was essentially a body representative of all elements of the whole national life of India in the full sense of the term.

It was in no sense a collection of Yes-men scraped together to create a facade of Indian support for the Government. It was a body of patriotic Indian who had readily come forward to help their country at a critical moment.

The British Government's action met with a mixed reception in India. As far as the moderate leaders were concerned they seemed inclined to welcome it although it fell short of the demands put forward by the Non Party Leaders' Conference held earlier in the year at Bombay. Another session of this Conference was held at Poona on the morrow of the announcement when a resolution was passed welcoming what was given and reiterating the Bombay demand. The one motive which seemed to actuate the who attended the session was to do what was given and to fight for more. The conference was particularly critical of the Government's important branches of the Indian economy in the hands of British capitalists. It was stated to make a declaration on the future status of the country.

Atlantic Charter.—The next important development concerning Indian politics occurred when Mr Churchill interpreted the famous Atlantic Charter in its application to India. The Atlantic Charter, as many may know, was a joint declaration by the Prime Minister of Great Britain and the President of the United States of America of the peace aims of the two great democracies. It visualised the right of those people who had come under Nazi domination to determine for themselves the kind of government under which they wished to live. For a time this was assumed to apply to India as well, especially in view of the statement by the Deputy Prime Minister of Great Britain, Mr Attlee, that the Atlantic Charter was applicable to all races and to all countries. Mr Churchill broke his two-year-long silence on Indian affairs and said: "The (Atlantic) declaration does not qualify in any way the various statements of policy made from time to time about the development of constitutional government in India. We are pledged by the declaration of August 1940 to help India to obtain free and equal partnership in the British Commonwealth of Nations, subject, of course, to the fulfilment of the obligations arising from our long connection with India and our responsibilities to its many creeds, races and interests."

This statement of Mr Churchill aroused considerable protest from India, from extremists and moderates alike. Sir Tej Bahadur Sapru, in a statement on the subject, said:

"This was the first time that Mr Churchill referred to India in the House and his speech goes to show that the Prime Minister has not changed his views on India."

(1) That at the Atlantic meeting between the President of the United States and the Prime Minister of England they had in mind primarily the extension of the sovereignty, self-government and national life of the states and nations of Europe now under Nazi yoke and the principles which would govern any alterations in territorial boundaries of countries which may have to be made. That is according to Mr Churchill quite a separate problem from the progressive evolution of self-government institutions in regions whose people owe allegiance in the British Crown.

(2) That the declaration of August 1940 by which His Majesty's Government proclaimed that they would help India to obtain free and equal partnership in the British Commonwealth of Nations, subject, of course, to the fulfilment of the obligations arising from their long connection with India and their responsibilities to its many creeds, races and interests, is now going to be treated as the polar star of Great Britain's policy towards India.

It must be clear by now to Mr Amery and Lord Linlithgow that attempts to carry Indian opinion with them in regard to this declaration have been a complete failure. Having failed to carry with them the Congress they have equally potently failed to carry with them the Muslim League on whose support they had built up so much of their hopes.

I have always maintained that while the minorities, whoever they may be, are entitled

to see their rights amply and adequately protected, a policy which rests upon treating one party as a barrier against the other, can at best be a temporary expedient, but is bound to lead to disastrous consequences in the end.

The words used by Mr Churchill, which qualify that pledge, are 'subject, of course, to the fulfilment of the obligations arising from our long connection with India and our responsibilities to its many creeds, races and interests'. In themselves these may seem to be innocuous, but in their application they are susceptible to a great deal of mischief. They undoubtedly refer to the question of the minorities, to Indian States, to problems of defence, and possibly also to the problems of the services and to similar other things. If they do so, why cannot Mr Amery make up his mind to tell us something of what his conception of those obligations is?

It is no use Mr Amery or British statesmen reminding us that they have already stated that they have left it to Indians to frame their own constitution. They know the difficulties which are facing us—difficulties some of which, at any rate, have been aggravated by the unwise and shortsighted policy of the British Government. An assurance of this character, therefore, should not mislead us, and I have never, since it was given, felt that the position was safe. It is for this reason that I have been urging, and do urge, that even now it is not too late for Mr Amery and Lord Linlithgow to impress upon His Majesty's Government that the time has come when this short-sighted policy should be definitely and positively abandoned, and His Majesty's Government should make up their mind to courageously tell us whether we are going to be treated as a dependency in future or whether we are going to be fed upon such pledges circumscribed as they always are by cautious reservations which may mean anything or nothing.

This question was again raised in Parliament when Mr Amery stated "I can only" repeat, in order to remove any possible grounds for misunderstanding that the Prime Minister's statement with reference to the Atlantic Charter expressly made it clear that the Government's previous declaration with regard to the goal of India's attainment of free and equal partnership in the British Commonwealth and with regard to our desire to see the goal attained with the least possible delay after the war under a constitution framed by agreement among the Indians themselves held good and is in no way qualified. The answer to the remainder of the question is in the negative.

Indian Protests.—Sir Tej Bahadur returned to the charge early in the winter of 1941 and, voicing the viewpoint of the Standing Committee of the Non-Party Leaders' Conference, issued a lengthy statement which said:

The Committee has noted with profound disappointment that in his first and unfortunately only reference to India since he became Prime Minister, Mr Churchill used language which has made many people to doubt whether he and his Government do really mean to part with power and whether India will ever attain real self-government.

"It seems to the Committee that so far as Mr Churchill is concerned, the fundamental principles to be applied to India are those contained in the declaration of August, 1940—a declaration which has afforded no satisfaction to any section of Indian opinion, and which, far from easing the tension in India or winning over those sections which had withheld their support from the British Government and strengthening the position of those which have been friendly to the British Government and which would like to remain so, has given rise to grave misgivings and has caused a great deal of resentment. In the opinion of the Committee, the declaration of August, 1940, is not wholly consistent with the noble and generous sentiments contained in the joint declaration quoted above.

"His Majesty's declaration of August 1940 is hedged in by so many conditions, is so incomplete in the enunciation of the aim and so non-committal in regard to its being implemented within any reasonable distance of time, that it can afford no satisfaction whatever to the people of this country.

"The Committee thinks that the whole position in regard to the future of India should have been made clear long ago by using definite, certain and unambiguous language, so that India may feel sure that after the war, in the event of victory, her position shall be the same as that of Britain and the Dominions. In short the Committee is strongly of the opinion that after victory the position of India in regard to her status and powers shall not be that of a dependency but shall be one of perfect equality.

"In the opinion of this committee, the question of the internal constitution of India with proper provisions for the safeguarding of different interests, should not be allowed to stand in the way of making such a declaration of policy regarding the political and constitutional relations of England and India. For this reason the Committee holds, that immediate steps should be taken to secure that India's representatives at the Peace Conference or any other international conference shall be selected by the Government in India and be answerable to it and shall on no account be in the leading strings of the Secretary of State. A change like this can be effected, without amending the Statute, by the adoption of a suitable convention.

The Committee is equally anxious that during the interim period in regard to international matters India should be treated to all intents and purposes on terms of perfect equality, and that her internal constitution should, during the interim period, be so worked in practice as to approximate as far as possible under the existing conditions, to the working of the self-governing Dominions. For this reason the Bombay and the Poona conferences, and this Committee at its previous sittings, have emphasised that all the portfolios including Defence, Finance, Home and Communications, should be put in the hands of Indian members of the Executive Council who would, in the interim period, be responsible to the Crown.

"In the opinion of this Committee these steps are essential for a successful prosecution

of the war, and, therefore, necessary changes should be introduced without delay, so as to hearten the people and make them feel sure of their destiny. The Committee, while it realises that in times like these war preparations must have the foremost place. It nevertheless strongly feels that the fullest measure of help from the public cannot be hoped for, without making the people of this country realise that they shall be, in the full sense of the word, participants in the fruits of victory. In the opinion of this Committee to make the cry of 'win the war first' as the only cry would be very poor statesmanship, indeed, and far from easing the situation, it would widen the estrangement between the people and the Government—a result which must be avoided at all costs.

"For this reason it is pressing the view set forth above and it trusts that the expanded Executive Council of the Viceroy which has now eight Indian members will use its influence and its moral pressure to bring about a desirable change in the policy of Government. The primary responsibility for a satisfactory change in policy must rest with Government, and the Committee has no hesitation in saying that in the recent past those who have been responsible for the conduct of affairs in India or at White Hall have shown neither a correct appreciation of the situation nor done anything striking to appeal to the imagination of the people or to strengthen constructive forces. It trusts that in matters of high policy the principle of collective responsibility will be observed scrupulously and that Indian members of the Executive Council will claim it as a matter of constitutional right.

"While the Committee recognises that there are eight Indian members of the Executive Council, it also notes with regret that the important portfolios of Defence, Finance, Home and Communications have been withheld from Indians. Until and unless such a transfer takes place, it cannot be said that more power has been made over to Indians. The Committee, therefore, urges that as a preparation for full responsible government in future, the entire Viceroy's Executive Council should consist of non-official public men. Similarly it holds very strongly that in the provinces the rule of the Governors, with the aid of the Advisers under Section 93, should be brought to a speedy end, and therefore they appeal both to the people and to Government to change their outlook. It is also strongly of the view that parliamentary institutions, such as they are should be utilised as instruments for the advancement of the freedom of the country and its effective defence. The Committee is convinced that to stimulate war effort a big scale change of policy is necessary."

Views somewhat on similar lines were expressed by the Working Committee of the Indian National Liberal Federation a few days later. It said: "The Working Committee protests against the exclusion of India from the purview of the Atlantic Charter by the Prime Minister of England. His speech is inconsistent with the appeal made to India to regard the war as a struggle for the enlargement of the area of freedom and democracy. The Committee is

convinced that, in order to get the whole-hearted support of Indians, the British Government should bind itself to establish the equality of India with England and the Dominions unconditionally, both in respect of internal government and external relations, within a very brief period of the termination of the war. The committee is further of the opinion that in any international peace conference which may be convened after the war, India should be represented by delegates responsible to the Government of India.

While favouring the expansion of the Executive Council, the committee regrets that no substantial power has been transferred to Indian hands and reiterates the Liberal Party's demand that all portfolios in the Viceroy's Executive Council, including those of defence and finance, should be held by non-official Indians representative of public life in this country.

The committee is of the opinion that it is necessary in the interests of India, and particularly of the provinces under Governors' rule, that both Government and the Congress should revise their attitude and that the political prisoners should be released and the satyagraha movement be called off."

British Opinion—British response to these appeals was reflected in the statements of spokesmen of advanced sections of opinion, the press and parliamentarians. The *London Times*, for instance, wrote "A grave responsibility rests on Government to break this vicious circle of mistrust and provocation by every means compatible with their duty of maintaining public order. The position is too serious or recriminations about errors of the past. If opinion in this country is uneasy over the prolongation of the deadlock opinion in India—notably in some Congress circles—is equally restive at what appears to be the purely negative character of Indian leadership in the face of the crisis of the war. A timely word would do much to rally and encourage those who feel that the moment has come to make a resolute attempt to heal the breach. Government stands pledged to the acceptance of any solution of the constitutional issue which is agreed among themselves by the Indian parties. But the Government cannot remain exclusively on this ground, valid as the reasons are for having taken it nor is it possible to postpone to an indefinite future, problems which the war is making every day more urgent and more actual."

"It may be doubted whether the complexities of constitution-making offer at the present time the most hopeful line of advance. But nothing could be lost and much sympathy might be won by a determined and understanding effort to bring more Indian leaders, including those now or recently in active opposition, into a responsible share in the tasks of Government and in the solution of those problems, military, social and economic which weigh heavily on India at the present time. Direct participation in responsibility, whatever from it may take, is the only true basis of democracy. A policy designed to achieve this end would enhance the British prestige throughout the Empire and the English-speaking world. More important still,

it would discharge the obligation which this country owes to the Indian people and itself."

Mr Amery in a speech at Manchester further explained the British policy towards India and said "We can be proud of Britain's contribution to India. What the Magna Carta won for us in the rights of the individual under the law that we have given to India. We have now set ourselves to achieve in co-operation with Indian statesmanship the far greater miracle of building up in India within the space of a few years that superstructure of responsible freedom which we here took centuries to complete."

"In spite of suspicion, we still retain the underlying goodwill and confidence in India, but above all there is need for goodwill between Indians themselves. There perhaps lies the greatest difficulty and danger before India and one which our own form of democracy with its rivalry for power between parties has tended to accentuate."

The problem of India is not to be solved by catch phrases like 'We are fighting for democracy.' Why not therefore give India what she wants? 'where is the body in existence or to be constituted which can in that sense speak for India or express an agreed demand?'

"There could be no more typical instance of loose thinking than that clamour for what is called the application of the Atlantic Charter to India and the protest against the Prime Minister's explanation that article 8 of the Charter primarily referred to restoration of national life in Europe and, in any case, did not qualify in any way our own declarations as to India's future, with which it is in entire harmony."

"I can well imagine if in answer to a demand for statement of our Indian policy we had answered merely in terms of the Atlantic Charter denision and indignation would have met so vague and unsatisfying a reply. The answer we gave last August is no less far-reaching in its scope and far more satisfying in the procedure envisaged and in the pledge involved."

"It defined as our proclaimed and accepted goal that free and equal partnership in the British Commonwealth which is usually referred to as Dominion Status."

That status, combining all the advantages of unfettered freedom with those of an association of incalculable value both in peace and war, is, I venture to assert, the highest in the world."

Mr Amery declared that the attainment of full Indian self government could not be indefinitely delayed by the veto of some extreme section on some issue of detail. If agreement by the main elements on the main principles of the constitution was reached the detail would not present any insuperable difficulty in India or elsewhere. He did not believe that Indian statesmen had so little constitutional capacity, genuine patriotism or desire to see India governed by Indians that they would prefer to disagree indefinitely rather than evolve some solution reasonably acceptable all round."

The task before Indian statesmanship was immensely difficult, but not hopeless. Beneath

all differences of religion, culture, race and political structure there was an underlying unity, and if some such sort of a unity had not existed it would have had to be invented. The immediate features of the Indian problem were the outcome of underlying difficulties and reluctance to abandon accustomed methods. Only recognition by Indians of those difficulties could solve the present deadlock.

"Meanwhile," added Mr Amery, "there is no immediate solution that we can bring forth as a temporary interim step forward which does not run the risk of prejudicing the ultimate solution. Political status, whether described as Dominion Status or otherwise is not conferred like a decoration but acquired by the power to exercise and defend it, and today that power is more necessary than ever before. In its turn it can only be effectively sustained by the general, physical and intellectual vigour of the national life."

Liberal Federation—The annual session of the National Liberal Federation was held at Madras in Christmas week. Sir Bijoy Prasad Singh Roy presided.

Sir P. S. Sivaswami Aiyer, Chairman of the Reception Committee, said: "The present deadlock cannot be considered to be merely the result of a domestic problem arising from the failure of the two major communities to come together. It is far more largely due to the issue between Britain and ourselves in regard to the unwillingness of the former to transfer real power to the people of India as amply evidenced by the scheme for the expansion of the Executive Council."

Sir Sivaswami advocated closer union with the British Commonwealth and alliance and co-operation with the powers that have combined to overcome the totalitarian powers. He characterised the Congress ideal of independence as visionary and dangerous and the means and methods advocated by them as impracticable and futile.

Proceeding he said: "While I have indicated the course which our party has to follow, our attitude must not be understood as any approval of the policy which has been pursued by the Government. The Government have no doubt repeatedly declared that they will help India to achieve the goal of a free and equal partnership in the British Commonwealth soon after the conclusion of the war. The controversy now between the British Government and ourselves relates to the conditions which the Government have attached to their promise to bring the new relationship into existence. Some of these conditions are of a character which it is not possible for us to fulfill."

The most serious difficulty put forward is the adjustment of the claims of the Muslim community. The Hindu community has never been unwilling to concede any reasonable demands of the Muslim community or to provide safeguards for their just rights. But what is to happen if it is impossible to reach an agreement? The conflict between the claims of the two communities is largely the creation of British policy, and the British Government cannot avoid responsibility for its solution.

The demand of the Muslim community for the division of India into Pakistan and Hindustan is one which no Hindu, or for that matter anyone sincerely interested in the national integrity and welfare of India, can possibly agree to. In any negotiations for the settlement of controversies of this character we often reach a point where it is impossible to come to an agreement. The Hindus consider that the claim of the Mahomedans is one which will end in the vivisection of India and will expose her to external danger and internal anarchy and confusion. Upon this point the Hindus cannot give in under any circumstances.

"The other matters referred to by Mr Amery are comparatively easier to settle. The present deadlock is mainly due to the feelings of suspicion and distrust which have pervaded the relations between the people and the Government and between the different communities *inter se*. These feelings have been encouraged by the attitude and policy of the British Government and the unreasonable intransigence of any particular party must be overcome by the authorities responsible for the situation. One of the devices which have been adopted for creating and keeping alive feelings of hostility is the separate electorate for the Hindus and Muslim which was brought into existence by Lord Minto."

Referring to the expansion of the Executive Council in the Government of India he said: "This expansion has evoked no enthusiasm among the people for two reasons. It has not completely Indianised the Council and has not transferred the most important portfolios like defence, finance, home and communications, to Indian hands. It may perhaps be suggested that they are too important to be transferred to Indians during a time of war. The handsome tribute which the Viceroy paid a few days ago to the capacity, wisdom and spirit of co-operation of the non-official Indian members who have been recently appointed is gratifying and there is no reason to apprehend that if the key position in the ministry were transferred to non-official Indian members, the safety of the country or the efficiency of the administration would be imperilled."

Referring to the future constitution of India, Sir Sivaswami Aiyer said: "Mr Amery thinks that the British form of democracy is unsuitable for India and has been good enough to investigate the whole field of political structures and look for precedents in many directions in the world. The British pattern of a democratic constitution is the one which has worked most satisfactorily and an Englishman may very well pardon us for our desire to follow the British model which has worked so well and with which our study of history has made us familiar."

Referring to some of the gravest defects in the policy of the British administration of India which the war has brought too prominently he said: "We were assured by the military authorities that all necessary steps had been taken for the adequate defence of the British possessions in Burma and Malaya and that the forces in the region were sufficient for them. We are now faced with the fact that the forces in the region are not sufficient for them."

any attack by our enemies. The progress of the Japanese arms in Malaya, the evacuation of Penang and the attack of Hong Kong, said to be the Gibraltar of the East, are some of the latest incidents of the war which show how ill-founded were the boastful assertions of confidence in the sufficiency and preparedness of the British forces in this region, and have affected the prestige of the British power. If the Government had embarked in time upon the production in India of armament and basic industries, we might have been better prepared to avert the disaster which has overtaken the British navy in the East. It is only subsequent to the war that the Government have turned their attention to the remedying of some of these defects, and it is very doubtful whether even at the present time the Government realise the wisdom and urgency of carrying out the industrialisation of India. No serious steps have been taken by the Government of India for the encouragement of ship-building in India on any large or adequate scale, and no one who has read the accounts of the progress recently made by Australia in the matter of ship-building can accept the plea of the Government that their omission to launch a vigorous programme of ship building is due to the difficulty of procuring the supply of the necessary engines or other materials from America as adequate or satisfactory. We in India have a deep-rooted suspicion that the reason why Britain has not encouraged a policy of industrialisation of India is the fear of Indian competition with British industry after the war. The war affords excellent opportunities for the creation of new industries, and especially basic key industries, and it is to be hoped that advantage will be taken of these opportunities. The Government of India under the inspiration of the non-official element of the expanded Executive Council."

Presidential Address.—Sir Bijoy Prasad in his presidential address, said. In view of the chaos of political thought and undisciplined action, the need for a united front for the achievement of our political advancement is great. The group spirit, the partisan bias, class conflict, competing self-interests—all this is clogging the path of our progress. It is unfortunate that in the absence of cohesion amongst the different political parties communal and sectional movements are gaining strength. The energy of the nation is being dissipated over a host of sectional causes. In normal times, we could wait for the slow progress whereby movements gain in strength gradually and make for effective united action. But the present situation is likely to deteriorate beyond redemption if it is left to take its own course. Signs are visible which make it clear that the cause of democracy is in jeopardy. I feel that our political struggle, to be effective and fruitful must move around the orbit of constitutionalism, it must seize every vantage of power for further conquest of the State machinery. In sober realism, the transference of political power to India can only take place through the consent of the British nation. Because, in theory, the Imperial Parliament is the sole Constituent Assembly of the British Empire. All this does not rule out the exerting of political power of the creation of proper sanctions for achieving the desired

political goal. If the political system is to be suited to the new needs and demands of the country, it must be fashioned by Indians themselves. In the circumstances, the Constitution of the country must be adapted to its requirements and should represent the will of the people.

"It is very unfortunate that in a land marked by comprehensive synthesis at every turn of historical process, the theory of a hostile and dual attitude is gaining ground. The Pakistan movement, as propagated by the Muslim League, is a challenge to the fundamental unity running through the whole continent of India, it is a repudiation of the unity of purpose which underlies the external multitudinous ramifications of society, it encourages an attitude towards life where emphasis is placed on differences and incompatibilities in scorn of the impulse of cohesion. Such a scheme leaves society open to the assaults of chaos and anarchy. The Pakistan movement is undemocratic as it perpetuates the two-nation theory in the political economic and social planes. As a political reality, it has little justification. To cut out an Indian province, predominantly Muslim, from the vitalising effect of the Federation of other provinces, or to create conditions for the coalescence of the Muslim-dominated provinces into a Federation as the counterpart of the Indian Federation of the Hindu-dominated provinces is not a step forward in the democratic path of progress, it is an eloquent and passionate preaching of communal ascendancy in defiance of social harmony. Such a scheme contains contradictions which are menacing in the ultimate analysis.

"The mere pledge of Dominion Status does not inspire enthusiasm amongst our countrymen because it is fastened round with three vague conditions. (1) there is no definite time-limit at the end of which the pledge will be redeemed, (2) the transfer of political powers should be consistent with certain historic and other obligations which the British Government have towards India, (3) the right of self-determination will be conceded in the event of agreement amongst Indians themselves. This threefold brake emphasised in the recent declarations of the Viceroy and the Secretary of State for India has rendered the pledge illusory and incapable of being redeemed. The history of British rule in India is strewn with many a broken pledge, and they have honoured such pledges only when the Indian national demand proved inexorable. It is a sad comment on British statesmanship.

The declaration by the British Prime Minister that the Atlantic Charter so far as it relates to "the right of all peoples to choose the form of Government under which they will live" will not be applicable to India has disappointed Indians greatly, and it has deepened their suspicion that Great Britain is not sincere about her war aims and in her declarations that this struggle is for the creation of a new world-order and for the vindication of Democracy.

"One need hardly remind the authorities that unless Indians are definitely assured that they too will have equal opportunity of being liberated when the new democratic world-order

is ushered in on the victory of the Allied powers in the war it is more than human to expect that India will prove enthusiastic in supporting Great Britain in this struggle and would strain her every nerve in contributing to the Allied victory. The psychological effect of the recognition of India's just claim for political emancipation in return for her contribution to this struggle for the vindication of Democracy should be adequately appreciated. Four hundred millions of people of this sub-continent with ancient traditions of culture, heroism and sacrifice cannot be coerced to co-operation merely by the bogey of Nazi aggression. The Liberal Federation has recognised that the present time is not congenial for bargaining, though India's grievances are profound and many, and it specifically asked that the "Central Government should be so reconstructed as to have by convention a fully national character" and "the British Government should not ordinarily interfere with any policy that has the support of such an Executive and the Central Legislature". All this could be done within the limitations of the Constitution Act of 1935.

"The war has already reached our frontiers. To stand by and watch the vandalism of infamous aggressors invites disasters on us. Our grievances against British rule are great and grave, but we have a duty to our own country. We cannot calmly see our country overrun by plunderous hordes. We must resist them, we must co-operate with those who are in the field to resist them. Nazi Germany and Imperial Japan have threatened our peace and security, they are stretching themselves for their own expansion, they are menacing the basis of civilisation in which we are interested. The situation calls forth our willing services and sacrifices for the victory of the Allies in the cause of Indian Democracy. If India falls a victim to the authoritarian powers the clock of our political progress will be definitely put back and she will have to undergo ruthless suppression for an indefinite period of time. It is for the sake of India that Indians should offer their services and resources. This is not the time to bargain on the doctrinal plane, although we should not stop impressing the British Government that for fuller utilisation of the willing co-operation of India the settling of political accounts is urgent. As realists, we cannot remain indifferent to the need for co-operation in war-efforts and to the necessity of political adjustment. There is a visible bond between these two pressing issues.

"In the sphere of politics the transfer of power to Indians is necessary, in the field of economics, primary efforts should be the augmentation of national wealth with equitable distribution amongst all the dynamic factors of production, in social matters, we should rise from the slough of listlessness and make our society more vigorous and responsive. But signs are not wanting that the political objective is being neglected in the scramble for group-supremacy, that economic legislations are directed towards the growth of class antagonism without paying heed to the creation of national wealth, and that social apathy and instability are perpetuated by a false concept of individualism. We must overcome the spirit of brooding

dissatisfaction that prevails in the country. I feel that the time is high for an active rally around the flag of constructive nationalism for the attainment of our objectives. I trust the Federation will keep this in mind."

Resolutions—The session passed the following resolutions:

"The National Liberal Federation of India feels that the war of aggression started by Nazi Germany, supported by Fascist Italy and Imperial Japan has proved to be a great menace to freedom, peace and tranquillity in the world. The Federation is of the opinion that the forces of progress and Justice in this conflict are represented by the Allied Powers such as Great Britain, America, Soviet Russia and China. The Federation feels that the present Far East War situation has brought India into the front line of the conflict and therefore appeals both to the Government and the people to view the situation realistically, and mobilise the resources of the country in men and material, to protect the lives of India's teeming millions from the imminent danger, which threatens the country. At the same time it feels that the unity between the Government and the people required for the necessary effort will not be possible unless a new psychological atmosphere is created by a change in the policy of His Majesty's Government towards India, which is urgently called for."

"The National Liberal Federation of India protests against the Prime Minister's speech excluding India from the scope of the Atlantic Charter and the recent speeches of Mr. Amery and Lord Linlithgow reiterating the determination of His Majesty's Government to make no change in their policy towards India.

"The Federation while regarding the recent expansion of the Viceroy's Executive Council by the appointment of additional Indian members as a step in the right direction, considers it as entirely inadequate to meet the needs of the situation. It is of the opinion that the Central Government should be so reconstructed as to have a fully national character. The Executive Council should consist entirely of non-official Indians who should take charge of all portfolios including those of Defence and Finance. The reconstructed Government should deal with all questions of policy on the basis of joint responsibility, and the British Government should not ordinarily interfere with any policy that has the support of the Indianised Executive and the Central Legislature.

"In regard to all Inter-Imperial and International matters the reconstructed Government should be treated on the same footing as Dominion Governments. The Federation further demands that in order to remove the doubts and apprehensions that have been created as to the genuineness of the intentions of His Majesty's Government regarding the future constitutional status of India it should be immediately declared that India will enjoy the position of equality in regard to both status and functions with England and the Dominions within a period not exceeding two years after the conclusion of the war.

"In the opinion of the Federation the gravity of the international situation demands that

acceptance of the demands put forward above, a matter of urgent importance. It is necessary at this juncture that the Government should take bold and statesmanlike steps to bring about a unity between the people and the Government in the best interest of both India and England."

"The National Liberal Federation of India is emphatically opposed to any idea of dividing India into Pakistan and Hindustan on communal basis. Such a division in the opinion of the Federation is anti-national and inimical to the unity and cohesion of India and entails the danger of disintegrating the national units, resulting in complete disruption of the nation."

"The National Liberal Federation, while agreeable to the safeguarding of the interests of all sections of the people considers that the aim of India's political evolution should be a democracy not based on considerations of race or creed, and therefore, the Federation is definitely opposed to the permanent existence of communal electorates and the present Communal Award at the same time as it would not be practicable to effect this reform immediately owing to existing conditions. It considers that steps should be taken towards the elimination of separate communal electorates by the creation of joint electorates with reserved seats for a definite period."

Appeal to Premier.—A joint statement and appeal to the Prime Minister of Great Britain was made early in the new year by a number of prominent Liberal and other moderate politicians. It said—

"The gravity of the international situation compels some of us, who have spent long years in the public life of India, to make this appeal to you to realise the urgent necessity for transforming the entire spirit and outlook of the administration in India. Detailed discussions of the question of the permanent constitution may well wait for more propitious times until after victory has been achieved in this titanic struggle against the forces which threaten civilisation."

"But some bold stroke of far-sighted statesmanship is called for without delay in India at this hour of growing danger to her safety, to enlist her whole-hearted and active co-operation in intensifying the war effort. Millions of men and women are required for the adoption of effective measures designed to protect the civilian population. The heart of India must be touched, to rouse her on a nation-wide scale to the call for service undistracted by internal and domestic differences."

"It is not possible for you to declare at this juncture that India will no longer be treated as a dependency to be ruled from Whitehall and henceforth her constitutional position and powers will be identical with those of other units in the British Commonwealth. Such a declaration should, we suggest, be accompanied by concrete measures calculated to impress the people that in co-operating with the war effort they are safeguarding their own freedom. These measures are—

(1) The conversion and expansion of the Central Executive Council into a truly national

Government consisting entirely of non-officials of all recognised parties and communities, and in charge of all portfolios, subject only to responsibility to the Crown;

(2) The restoration, in provinces now ruled autocratically by Governors in accordance with Section 93 of the Government of India Act, of popular governments broadly based on the confidence of different classes and communities, failing this, the establishment of non-official Executive Councils responsible to the Crown, as proposed for the Centre;

(3) The recognition of India's right to direct representation through men chosen by the national government in the Imperial War Cabinet (should such a body be set up), in all Allied war councils, wherever established, and at the peace conference, and

(4) Consultation with the national Government, precisely on the same footing and to the same extent as His Majesty's Government consult the Dominion Governments in all matters affecting the Commonwealth as a whole and India in particular.

"These are war measures whose adoption need in no way prejudice the claims or demands of different parties in regard to India's permanent constitution. But knowing intimately the feelings and aspirations of our countrymen as we do, we must express our conviction that nothing less than the inauguration of this policy can resolve the crisis in India. The urgency of immediate action cannot be over-emphasised. We appeal to you in all sincerity but with the greatest emphasis to act, while there is still time for such action, so that India may line up with the other anti-Axis Powers on a footing of absolute equality with them in a common struggle for the freedom of humanity."

"Since this is a matter of great public importance, we propose to make it public after it has reached you."

The signatories are—Mr T. R. Venkatarama Sastri, Mr Srinivasa Sastri, Sir P. S. Sivaswami Aiyar, Sir Jagdish Prasad, Kunwar Sir Maharaj Singh, Mr Jayakar, Sir Chunilal B. Mehta, Sir Rahimtoola Chinnoy, Sir M. V. Joshi, Dr Sachidanand Sinha, Mr Mahomed Yunus, Sir S. Radhakrishnan and Sir Tej Bahadur Sapru.

Since the cable to the Prime Minister was sent, Sir R. P. Paranjpye (Poona) and Mr Jamshedji Nusserwanji (ex-Mayor) Karachi, have signified their willingness to join the representation.

Leaders' Conference.—It took some time for Mr Churchill to reply to this appeal, as he was then in America. Shortly after his return home, he announced the Clippis Mission. Meanwhile another session of the Non-Party Leaders' Conference was held in Delhi in February 1942. Sir Tej Bahadur Sapru said—

"It is stated that the August Declaration anticipated the wisdom of the Atlantic Charter. When we ask if the Charter applied to India, the reply is 'No.' Surely the English people ought to be able to say a simple thing in plain English language. I want England to make up her mind at once that India is no more to

remain as a Dependency. We want to defend ourselves, hence our demand. Mr Churchill alone can answer clearly, bravely and courageously the call of statesmanship. If Mr Churchill should fail, then woe betide India and England."

General Chiang-Kai-Shek's fare well message (See Chapter on Indian National Congress) formed the principal theme of vigorous and enthusiastic speeches.

The speakers, particularly Mr M R Jayakar, underlined the Marshal's expression of hope that the British Government would, without waiting for demands from the Indian people, grant them real power forthwith. The speakers also declared that only a National Government could effectively conduct the war, and that a National Government would have given a greater and better welcome to the Marshal and Madame.

The conference passed a resolution recording its "high appreciation of the honour done to India by the visit of Their Excellencies Generalissimo and Madame Chiang Kai-Shek and its whole-hearted admiration of the heroic struggle for national freedom carried on by the Chinese people under their gallant and inspiring leadership."

Sir C R Reddy moved a resolution urging that the persons selected by the Government of India for representation on the War Cabinet and the Pacific War Council in London "should be non-official Indians commanding the confidence of the public."

On Sri Maharaj Singh's motion the conference passed a resolution expressing the opinion "that in the Provinces the rule of Governors under section 93 of the Government of India Act should forthwith cease and that popular Governments enjoying public confidence should be established."

The main resolution was moved by Mr M R Jayakar. It expressed "profound dissatisfaction" that "all real power in the Central Government is still concentrated in British hands inasmuch as the key portfolios of Defence, Finance, Home and Communications continue to be withheld from Indians." The resolution called for an abandonment at this critical stage of the existing policy of the British Government and urged the immediate adoption of the following measures by His Majesty's Government:

(1) A declaration that India shall no longer be treated as a dependency to be ruled from Whitehall and that henceforth her constitutional position and powers will be identical with those of the other self-governing units of the British Commonwealth.

(2) During the period of the war the Governor General's Executive Council shall be reconstructed as a truly National Government functioning on the basis of joint and collective responsibility and consisting entirely of non-officials enjoying public confidence and in charge of all portfolios subject to responsibility to the Crown and in regard to Defence without prejudice to the position of the Commander in Chief as the executive head of the defence forces.

(3) The British Government should recognize the right of India to direct representation

through persons chosen by the National Government in all allied war councils wherever established and at the peace conference.

(4) The National Government should be consulted in all matters precisely on the same footing and to the same extent as His Majesty's Government consult the Dominions.

Cripps Mission — As if in reply to the Indian Leaders' appeal, Mr Churchill said in Parliament on March 11, 1942:

"The crisis in the affairs of India arising out of the Japanese advance, has made Britain wish to rally all the forces of Indian life to guard their land from the menace of the invader. In August, 1940 a statement was made about the aims and policy which we are pursuing in India. This amounted, in short to a promise that, as soon as possible after the war, India should attain Dominion Status in full freedom and equality with this country and other Dominions under a constitution to be framed by Indians by agreement amongst themselves and acceptable to the main elements in the Indian national life.

"This was of course, subject to the fulfilment of our obligations for the protection of minorities, including the depressed classes, and our treaty obligations to the Indian States and to a settlement of certain lesser matters arising out of our long association with the fortunes of the Indian sub continent.

"However in order to cloth these general declarations with precision and to convince all classes, races and creeds in India of our sincere resolve, the War Cabinet have agreed unitedly upon conclusion for present and future action, which, if accepted by India as a whole, would avoid the alternative dangers either that the resistance of a powerful minority might impose an indefinite veto upon the wishes of the majority or that a majority decision might be taken which would be resisted to a point destructive of internal harmony and fatal to the setting up of a new constitution.

"We had thought of setting forth immediately the terms of this attempt by a constructive contribution to aid India in the realisation of full self government. We are however apprehensive that to make a public announcement at such a moment as this might do more harm than good.

"We must first assure ourselves that our scheme would win a reasonable and practical measure of acceptance and thus promote concentration of all thought and energies upon the defence of their native soil.

We should all serve the common cause if we made a declaration which would be rejected by the essential elements in the Indian world, and which would provoke fierce constitutional and communal disputes at a moment when the enemy is at the gates of India.

Accordingly, the Prime Minister continued, we propose to send a member of the War Cabinet to India to sit in himself on the spot by personal consultation with the Congress upon which we are agreed and which we feel we represent a just and final solution will be their purpose. The Lord Privy Seal said:

of the House Sir Stafford Cripps, has volunteered to undertake this task

"He carries with him the full confidence of His Majesty's Government, and he will strive in their name to procure the necessary measure of assent, not only from the Hindu majority but also from those great minorities amongst which the Muslims are most numerous and on many grounds pre-eminent

"The Lord Privy Seal will at the same time consult with the Viceroy and the Commander-in-Chief on the military situation, bearing always in mind the paramount responsibility of His Majesty's Government by every means in their power to shield the people of India from the perils which now beset them. We must remember that India has a great part to play in the world struggle for freedom and that her helping hand must be extended in loyal comradeship to the valiant Chinese people who have fought alone so long

"We must remember also that India is one of the bases from which the strongest counter-blows must be struck at the advance of tyranny and aggression

'Sir Stafford Cripps will set out as soon as convenient and suitable arrangements can be made. He will command in his task the heartfelt good wishes of all parts of the House, and, meanwhile no words will be spoken or debates held here or in India which would add to the burden he has assumed in his mission or lessen the prospects of good result"

Liberals' Reaction.—Sir Bijoy Prasad Singh Roy, President of the Liberal Federation of India, Sir Chimanlal Setalvad and Mr Naushir Bhurucha, Honorary Secretary of the Federation saw Sir Stafford Cripps on April 2 and communicated to him the following views of the Liberal Federation on the draft declaration (see Chapter on Indian National Congress)

"The Council of the Liberal Federation has very carefully examined the draft declaration brought by Sir Stafford Cripps. It welcomes the proposals to make India a self-governing dominion with the same status and functions as are enjoyed by Great Britain and other members of the Commonwealth. On examination of the different heads of the proposals the Council feels that the provision giving liberty to any province not to accede to the Indian Union is fraught with serious difficulties and dangers. The creation of more than one Federal Union in India, having their own separate armies, may result, in certain conceivable circumstances in a conflict between them. It would almost immediately lead to customs barriers, and complicated questions about ports, railways, existing public debt, etc., would arise. Moreover, the weakness of the military organisation of the one or the other of the different Unions will seriously impair the safety and defence of India as a whole

"The Council further feels that communal feelings would be further exacerbated in the course of carrying out the process of arriving at a decision about accession or non-accession

"All these and other considerations, and the serious dangers and difficulties should be fully

considered before His Majesty's Government finally decide to implement these proposals

"The Council has always been of the view that the interests of different communities should be adequately safeguarded and that the different communities should have proper voice in the governance of the country. But the proposals now made go far beyond the necessities of the case and will seriously affect not only the unity and solidarity of India but her stature and influence in the Commonwealth of Nations

"One of the effects of the proposals is that the question whether a Province accedes to the union or not will in the last resort be determined by a plebiscite unless 60 per cent of the lower house of the legislative vote for accession. The plebiscite vote is to be determined by a bare majority. The Council feels that the decision of such momentous question should not be concluded by a bare majority, but that some minimum percentage, say at least 55 per cent, should be prescribed. The Council also sees no reason why women who are entitled to vote for the elections to the legislatures, and can be, and are members of the legislature, should be denied a vote in the plebiscite

"With regard to the representation of Indian States on the constitution-making body, the Council urges that the people of the States should be given a voice in the selection of the representatives of the States on this body

"On the subject of defence, the representation of India on the War Cabinet and the Pacific War Council is satisfactory so far as it goes. But this should not stand in the way of the appointment of an Indian as a Defence Member. Such an appointment will have a tremendous effect in producing the necessary psychological reaction which will bring the Indian people whole-heartedly in the war effort

"The Council of the Liberal Federation would also urge the British Government to appreciate the fact that totalitarian aggression involves totalitarian defence and that a total war cannot be won unless the Indian nation as a united political entity throws itself into this war heart and soul. Malaya, Singapore and Rangoon serve as grave warning as to how even in modern warfare, technical skill alone, without the spontaneous support of the millions on the 'home front', can achieve little on the military front. It is the considered opinion of the Council that full co-operation of the Indian people will not be secured in the war effort unless an Indian Defence Member is appointed.

"With regard to the question of reconstituting the Executive Council of the Governor-General, the Liberal Federation Council would suggest that the Governor-General's Council should be nationalised, so that by conventions in the near future, the Governor-General may assume the position of a constitutional head of his Government"

Sapru-Jayakar Memorandum.—Sir Tej Bahadur Sapru and Mr M R Jayakar, in a joint memorandum to Sir Stafford Cripps, pressed for the inclusion of an Indian Defence Member in the Governor-General's Executive Council, and among other things asked

that the majority required for any decision by a provincial legislature to adhere or not to adhere to the Union should not be less than 65 per cent of the Indian members of the Lower House present at the meeting at which the decision is taken. The memorandum opposed a plebiscite for the purpose and calls attention to the necessity for the restoration of popular Governments in the provinces.

Sir Tej Bahadur and Mr. Jayalwar said —

"We observe from the draft declaration that excepting clause (e) there is very little in the declaration about the changes to be introduced in the constitution of the Government of India during the period of the war. It may be that instructions have been or may be issued to His Excellency the Viceroy to bring about the necessary changes in the composition and the constitution of the Executive Government. If any such instructions have been issued, we are not aware of them, but we must point out that Indian opinion attaches the greatest importance to the transfer of real power in the Central Government at the present moment, and it is for this reason that we emphasize the necessity of the complete non-officialization of Government without the reservation of any portfolio during the interim period.

"We realize that the transfer of absolute control over defence at the present juncture, when it is necessary that there should be unity of direction and control of military policy, would not be in the best interests of England and India. But we fail to see how this end will fail to be achieved by the appointment of an Indian Defence Member, who, we presume, will be a man possessed of a due sense of responsibility and would be only too willing to accept expert advice and to work in the closest co-operation with the War Cabinet.

"While we appreciate the necessity of unity of policy and control in matters of defence, we think, in common with most of our countrymen, that the appointment of an Indian Member-in-charge of Defence, working in close association and co-operation with the War Cabinet and willing to accept expert advice, will be taken, at this stage, as an unmistakable token of the reality of the transfer of such power and as a symbol of the confidence of His Majesty's Government in the people of this country. We have no doubt that the object of His Majesty's Government is that the people of this country should feel that this is their own war, but we feel that the requisite sense of responsibility for the defence of the country can best be stimulated by an appeal to their sense of pride and self-esteem and by the two countries—England and India—completely identifying themselves with each other in the common cause of defending this country. We strongly hold that it would be a mistake to ignore the strength of the sentiment of the people on this subject.

"We desire to state unequivocally that we are strongly in favour of the Indian people rendering every possible help in the successful prosecution of the war. At the same time, we feel equally clearly that in order to achieve that end, it is necessary that, during the period

of the war, there should be an Indian Defence Member of the Council of the Governor-General. We are fully aware of the arguments to the contrary and we do not wish to overlook or minimize them, but we feel that the arguments in favour of the adoption of this step are over-whelming.

"The adoption of an Indian Defence Member will have a great effect on Indian psychology. It will inspire the people with confidence and materially help in altering the present mentality of the people which in our opinion, is not adequately zealous in the successful prosecution of the war. We do not in the slightest degree desire that there should be any conflict between his powers and those of the Commander-in-Chief in technical matters or in decisions about the movements or disposition of the troops or similar other matters. We think that the presence of such a member will, far from weakening the military position in India, strengthen it, and the political effects of this step will be very wholesome.

"Besides, there are, in our opinion, large and inexhaustible resources of man-power remaining untapped in the youth of the country, which can be mobilized by methods which a Defence Member drawn from the people can alone effectively employ. His approach to this storehouse of strength will be by methods vitally different from those which the British official mind has hitherto employed with such little effect. We venture to suggest that, at this critical time, when the danger is daily approaching, the old world ideas of keeping Indians in the perpetual position of unarmed helplessness and also the feelings of distrust and suspicion which have led to this policy, should be forthwith abandoned and a new era of hope and confidence inaugurated, leading to a joint effort by England and India on terms of mutual reliance, association and truthfulness. It is only such an association that would be productive of the maximum effort of this country, resulting eventually in a victory, based on the self-esteem, honour and willing sacrifice of a proud people.

"On all these grounds, we desire strongly to press the inclusion of an Indian Defence Member in the Executive Council as otherwise, the declaration, whatever its other merits may be, will fail to achieve the object it is intended to serve. It should not, in our opinion be difficult to define the spheres of activity of the Defence Member and of the Commander-in-Chief so as to avoid conflict, nor should it be difficult to secure close co-operation and co-ordination between the two.

"While we recognize the justice of allowing any province of British India the liberty of remaining out of the new constitution and of retaining its present constitutional position, we are not free from considerable doubt and anxiety about the wisdom of the further provision which makes it possible for another Federal Union being established. Such a Federal Union may in certain conceivable circumstances be a rival or hostile union. But apart from this, we cannot favour any step which may have the effect of breaking up the integrity of Hindu country fostered by a long succession of Hindu

and Muslim Emperors and a galaxy of British administrators. We are convinced that the creation of more than one Union, howsoever consistent in theory with the principle of self-determination, will be disastrous to the lasting interests of the country and to its integrity and security.

"In the draft declaration which has been handed over to us we do not find any indication of the precise majority of votes which will be required in a provincial legislature to carry a resolution as to whether the province will or will not adhere to the union. We are, however, of the opinion that in a matter of this momentous character the method of bare majority cannot be adopted and that the majority required for any decision on this question should not be less than 65 per cent of the Indian members of the Lower House at which the resolution is passed. We do not think that a decision in which the Indian population is primarily interested should be allowed to be influenced by the votes of European members to whom the question of remaining in one Federation or another cannot be of the same importance as it is to the Indian members. We are also strongly of the opinion that once this principle of a prescribed majority of votes in a legislature is accepted, it would not only be superfluous but might easily lead to grave social disorder if resort were to be had to the further device of a plebiscite of the adult population of the province. We feel that in the existing circumstances of the country, such a plebiscite, howsoever democratic in theory is bound to lead to serious consequences, gravely disturbing peace and tranquillity not only in the province concerned but in other areas to which the contagion may easily spread, leading to violent communal or religious conflicts. For these reasons we cannot conceal our grave concern as to the wisdom and expediency of provision making it possible for some provinces to combine into a separate union.

"We attach importance to the possibility of the leaders of Indian opinion in the principal communities coming to some mutual agreement

before the cessation of hostilities—an agreement which may secure and safeguard the interests of all minorities by providing for (a) their representation in the legislature, (b) in the Government to be established, and (c) reservation to them of the fullest liberty in matters of conscience, religion and culture. If the contending parties begin to work together in a common cause during the interim period, they will, we hope, learn to appreciate one another's point of view, and a spirit of tolerance and confidence may be generated, conducive to a final settlement which will secure the position of the minorities in the fullest measure without causing a disruption of the well-established integrity of the country.

"If, however, all attempts during the intervening period to secure one Federal Union unhappily fail and the overwhelming wishes of the provinces to have a separate union are indicated through their legislatures, and the evils pointed above of having a separate union are prevented or mitigated, we have no objection to the experiment suggested in the draft declaration being made subject, of course, to what we have stated above.

"Lastly, we desire to call attention to the necessity of the restoration in the provinces of a popular form of Government. There is no reference to this question in the draft declaration, probably because it is intended to leave it for decision by the new Government which is to be established at the Centre. We consider, however, that the rule which at present prevails in so many provinces under Section 93 of the Government of India Act should be brought to an immediate end and then administration restored once more to popular control. If for the successful working of the Provincial Governments it should be necessary to establish coalition Governments, we would indeed welcome such an arrangement.

"On all other points arising out of the draft declaration of Sir Stafford Cripps we do not wish to say anything more than that we are in general agreement with the line adopted by His Majesty's Government."

MUSLIM LEAGUE

The awakening of political consciousness among Muslims in India as a separate entity dates back to 1906 when the All-India Muslim League was formed. It worked up its influence steadily, so that when it was hardly ten years old it became sufficiently important to enter into an agreement—known since as the Lucknow Pact—with the powerful Indian National Congress. The League fell on evil days in the 'twenties, and differences set in among its members. When enhanced powers were conferred on India by the Montford Reforms, Muslims became more and more politically minded and began to aspire for a greater share in the control of the administration of the country and in Government posts. This feeling gave rise to the formation of a new body whose promoters concentrated on aggressive presentation of Muslim demands. With the prospect of still further constitutional reforms at the end of the first ten years of the working of the Montford Scheme, these leaders strove to organise Muslims into an influential body which would safeguard their interests more effectively than the League. The result was the All-Parties Muslim Conference in 1928. The publication of the Communal Award and its inclusion in the White Paper Scheme of Reforms in 1933 helped this process of consolidation. An attempt was made early in 1934 to consolidate the community by healing the split within the Muslim League and, if possible, bringing the League and the Conference together to work as a united body. The latter failed, but the former object was largely successful and the League marched from strength to strength until it emerged as a powerful organisation of the Muslim community on the eve of the first elections to the provincial legislatures under the Government of India Act of 1935. For the first time in the political history of Muslims their representative institution functioned as a vigorous and active all India organisation with results which flattered Mr Jinnah, and his co-workers, although the success of League nominees was not very striking. Doubtless Mr Jinnah, who was the guiding spirit behind this new activity, was handicapped by dissimilar tendencies and reactionary forces in distant provinces beyond the sphere of his direct influence. This was soon rectified by the growing influence of Mr Jinnah and the League among the Muslims.

Mr Jinnah's influence among the Muslims increased rapidly in the years following the advent of the 1935 constitution. The Muslim League grew into a powerful organisation with branches all over the country. At Lucknow in 1937 its creed was lightened up, at Lahore three years later it adopted a resolution demanding the partition of the country into Hindu and Muslim India, and in 1941, the creed was again changed into what amounts to a demand for secession.

Shortly after the 1936 elections, Mr Jinnah explained the position of the League members of provincial legislatures as a as other groups and said "The constitution and policy of the League do not prevent us from co-operation with others. On the contrary, it is part and parcel

of our basic principle that we are free and ready to co-operate with any group or party from the very inception, or inside the legislature, if the basic principles are determined by common consent."

These words engendered a hope that the League might be induced to co-operate with the Congress in its extremist programme and negotiations were started, but it soon became apparent that the two could not come together. The situation was rendered more difficult by the attitude of stiffness adopted by the Congress and its President, Pandit Jawaharlal Nehru. Mr Jinnah refused to convert the League into "an understudy of the Congress" and firmly upheld the position of the Muslim community. The Congress, for its part, found as the result of the elections that it did not have the support of the Muslim community. Very few Congress Muslims were put up as candidates for the elections, and even they failed. The Congress therefore set about roping in the Muslims by an appeal to their economic conscience, explaining that the Congress was out to alleviate the sufferings of the masses, Muslims as well as Hindus, and to uplift the nation as a whole. In this process the League and its leaders came in for a great deal of violent criticism at the hands of the Congress managers. On behalf of the League Mr Jinnah retorted "The Congress have not the monopoly, nor are they the sole custodians of Indian nationalism. As I have always maintained, the Muslim League is prepared to join hands with any progressive party in the fight for the country's freedom, but to achieve this the question of minorities must be settled satisfactorily. Here I am not talking of only Muslims but all minorities. Further, we are not prepared to merge ourselves into any organisation, however great it may be, and however advanced its programme and policy may be unless it is determined by common consent."

Paying little heed to these words of warning, the Congress leaders went their own way. Puffed with the success at the polls, they affected to ignore the claims of League leaders. In what may be described as non-Muslim provinces—that is, those in which the Muslims are in a minority—the Congress formed Ministries without consulting and securing the co-operation of the Muslim League. No doubt attempts were made to arrive at an understanding with the Muslim League, but they failed mainly on account of the Congress demand that wherever such an understanding was reached the Muslim League should cease to be a separate parliamentary body and merge itself into the resultant Congress-League Party. The League, for its part, was willing to co-operate but not on the terms imposed by the Congress. In the result the negotiations failed, and the League remained in the Opposition. Although the bulk of the Muslim representatives returned to the provincial legislatures by the electorate were in opposition to the Congress the latter proceeded to constitute Governments with Muslim Ministers who did not represent Muslim opinion in the legislature. Nowhere in any of the so called Congress provinces did the Muslim Ministers

have the support of the majority or even a decent number of Muslim legislators. Thus these Muslim Ministers in the Congress provinces were the objects of repeated displays of Muslim hostility.

Having failed to reach an agreement with the League and its leaders, the Congress tried to crush the League and its leaders by making a direct approach to the Muslim masses through an economic and national programme. For a time this appeared to succeed, but eventually failed to achieve its object. The League leaders counteracted the Congress propaganda by pointing out to the Muslim masses that their true interests lay in their organisation under the banner of the League which alone could serve them truly. The League's counter-drive succeeded in a large measure aided by allegations that in provinces where the Congress was running the Government the Muslim minorities were not treated well. The widening gulf between the Congress and the League gave an additional stimulus to the consolidation of the Muslim forces under the League which found fruition at the Lucknow session of the League in the autumn of 1937.

Lucknow Session.—The session was unique in several respects. For the first time in the history of the Muslim organisational movement, complete unity was achieved, and every section of Muslim opinion, including those which till then had been opposed to the League or outside it, rallied round the League. There was no discordant note and Muslim political unity was complete. The Muslim League emerged the only strong and influential political organisation of the Muslim community.

The session changed the creed of the League to "the establishment in India of full independence in the form of a federation of free democratic states in which the rights and interests of the Muslims and other minorities are adequately and effectively safeguarded in the constitution" (for details of the proceedings of this session, see *Indian Year Book* 1938-39).

The enthusiasm engendered by the success of the Lucknow session was kept up in succeeding months by an intensive organisation of branch Leagues in every province and district.

The foundations of Muslim solidarity laid at the Lucknow session of the League in the autumn of 1937 proved very strong indeed. The League grew from strength to strength in the two succeeding years and today it is admittedly the most powerful organisation of the community. The League's spokesmen claim that it is the only mouthpiece of the Muslims, and one may be inclined to recognise that claim but for the existence of other organisations in the community with more or less following and influence, not excluding a large number of Muslims who are members of the Congress. There may be two opinions about the claim that the League is the only organisation of the community, but no one can question that it is the most powerful and the most influential.

Congress will show how the Congress withdrew its ministries from the provinces where it had held sway for nearly two and a half years. As a result of this the League came to be on a par with the Congress in that both were now out of office and without the power and influence which went with it. Whereas the Congress lost through the resignation of its ministries such bargaining power as it had while in office, the League acquired some indirect power through the international complications that resulted from the war. Again, whereas the Congress had alienated the sympathies of the Indian Princes by sponsoring and encouraging agitation for responsible government for the States people, the League earned the friendship of the Princely order by condemning such activities and upholding the rights and privileges of the Indian Princes in any revision of the Indian Constitution. In yet another direction the League manoeuvred itself into a comfortable position; whereas, the Congress categorically withheld its co-operation from the war, the League abstained from taking any such attitude and merely insisted on the satisfaction of its claims prior to making up its mind. Even this was only the official attitude of the League as an organisation. Most of its individual members were in favour of wholeheartedly aiding in the prosecution of the war. And the League winked at this.

A fortnight after the declaration of the war, the Working Committee of the League passed a resolution which illustrates the tact and firmness with which the League steered the Muslim ship. The League Committee stated that "if full, effective and honourable co-operation of the Mussalmans is desired by the British Government in the grave crisis which is facing the world today and if it is desired to bring it to a successful termination it must create a sense of security and satisfaction among the Mussalmans and take into their confidence the Muslim League, which is the only organisation that can speak on behalf of Muslim India."

Attack on Congress Ministries.—Side by side with the demand for the redress of Muslim grievances and the assertion that their full and free consent should be obtained before any change in the Constitution was attempted, the League continued its campaign against the Congress ministries, to which a reference has been made in past issues of the *Indian Year Book*. Apart from the "atrocities" which, the League affirmed, had been perpetrated on the Muslim minorities in the provinces administered by the Congress, the League made a fresh point which was soon to become the nucleus of a serious development in Indian politics.

In a resolution passed in September 1939, the Working Committee of the League said: "The developments that have taken place, especially since the inauguration of the provincial constitution based on the so-called democratic parliamentary system of government and the recent experiences of over two years, have established beyond any doubt that it has resulted wholly in a permanent communal majority and the

With the outbreak of the war and the changes

rights and culture are being assailed and annihilated every day under the Congress Governments in various provinces.

"While Muslim India stands against exploitation of the people of India and has repeatedly declared in favour of 'a free India,' it is equally opposed to domination by the Hindu majority over the Mussalmans and other minorities and vassalisation of Muslim India, and is irrevocably opposed to any federal objective which must necessarily result in a majority community rule under the guise of democracy and parliamentary system of government. Such a constitution is totally unsuited to the genius of the peoples of the country, which is not composed of various nationalities and does not constitute a national state."

This attack on provincial autonomy and on majority rule was an altogether new line which was struck almost for the first time by the League. Till then the Muslim demand had always been for effective safeguards for the protection of the Muslim community's religious, cultural and other rights, now the Muslims began to question the very basis of democracy and declared that the western democracy in the sense of rule by majority was unsuitable. This was developed in the summer of 1940 into a demand for the separation of Muslims on the ground that they constituted an integral nation and not a minority in the Indian population.

In the succeeding weeks numerous attempts were made to ascertain the grievances of the Muslims and to find out whether they were justified—in other words, whether the Congress ministries had been guilty of oppressing them or even neglecting them. But all these ended in smoke.

Political Discussions—Meanwhile, discussions on the political field continued and early in October 1939 the Viceroy called into consultation leaders of all sections of opinion in India with a view to ascertaining their wishes in the matter of constitutional reform. On the conclusion of these consultations, the Viceroy issued an exhaustive statement on Britain's War aims 1:8-a-vis India.

It gave the Muslim community the requisite assurance concerning its status in future adjustments. This is evident from the resolution passed by the Working Committee of the League which met in Delhi towards the end of October 1939. The Committee hailed the Viceroy's statement as a new charter of hope for the minorities and as a recognition of the League's right to full say in the future constitutional arrangements. From this resolution one can infer that the League found in the Viceregal declaration an acknowledgment of the League's status as an essential factor in any political development on an all-India basis. (See last year's *Indian Year Book*.)

Lahore Session—To return to the Muslim League. As already stated the idea of Muslims being a nation gathered during 1939-40 in which period a number of schemes for the formation of a Muslim bloc of autonomous states were mooted. For a time they were not regarded seriously; but from the proceedings of the annual session of the League held in April 1940

it became that the Muslim League was serious about this partition business. At Lahore, the Muslim community, as represented by the Muslim League, declared for Muslim independence.

The principal resolution of the session, which was carried unanimously, reiterated that "the scheme of federation embodied in the Government of India Act, 1935, is totally unsuited to and unworkable in the peculiar conditions of this country and is altogether unacceptable to Muslim India."

It further recorded its emphatic view that "while the declaration dated the 18th of October 1939, made by the Viceroy on behalf of His Majesty's Government is reassuring, insofar as it declares that the policy and plan on which the Government of India Act, 1935, is based will be reconsidered in consultation with the various parties interests and communities in India, Muslim India will not be satisfied unless the whole constitutional plan is reconsidered *de novo* and that no revised plan would be acceptable to the Muslims unless it is framed with their approval and consent."

"It is the considered view of this session of the All-India Muslim League that no constitutional plan would be workable in this country or acceptable to the Muslims unless it is designed on the following basic principle, viz., that geographically contiguous units are demarcated into regions which should be so constituted with such territorial readjustments as may be necessary that the areas in which the Muslims are numerically in a majority, as in the north-western and eastern zones of India, should be grouped to constitute independent states in which the constituent unit shall be autonomous and sovereign."

"Adequate, effective and mandatory safeguards should be specifically provided in the constitution for minorities in the units and in the regions for the protection of their religious, cultural, economic, political, administrative and other rights and interests in consultation with them."

This created a stir in the country, among nationalists and Hindus alike and also among some Muslims. True the novelty of the thing caught the Muslim imagination, but even among Muslims there were many who questioned the wisdom of the step suggested in the Lahore resolution. Apart from destroying Indian unity which had been built up after years of strenuous effort, it was argued by many, the Lahore scheme would place the Muslim minorities in Hindu provinces in a very unenviable position.

As for the British Government, Lord Zetland, speaking in Parliament in April 1940, refused to countenance the partition proposal although he was inclined to sympathise with the motives underlying the League demand. Lord Zetland's successor, Mr. Amery, made a number of public utterances, some of which were dealt with in last year's *Indian Year Book* and other in the current issue in the Chapter on the Indian National Liberal Federation and other Moderate Politics.

In India itself the evolution of Muslim League thought in 1940-41 followed the lines laid down

in April 1940 when the Pakistan resolution was adopted at Lahore. Percentages and weightages, proportion of representation and share in services, guarantees and safeguards— notions which had held the political field for decades—were clean swept aside. Mr Jinnah was not thinking in terms of these trifles, outworn gadgets of a democracy held to be unsuitable to the peculiar people and totally inapplicable to the peculiar conditions of India. All these devices presupposed the continuance of Muslims as members of a State, more or less secured and safeguarded, enjoying greater or less share of power, but scarcely likely as a community ever to occupy a dominant position. Mr Jinnah refused to think of an arrangement which would not give the Muslims equal power and authority with the majority community. He would not be party to making the Muslims subordinate to the Hindus. Being a numerical minority they as a community would perforce be the junior partner in any composite State.

As in a composite State the Muslims could not in the nature of democracy expect to be reckoned as equals with the majority community, much less as the dominant force, Mr Jinnah went away from the idea of a composite State and proposed that India should be divided into two spheres—Muslim and Hindu. Each was to be autonomous internally and for purposes of a Central Government with minimum powers the two should collaborate as equals.

The Pakistan ideal began to exercise the Muslim mind. It provided the League and Mr Jinnah with a new plank, gave the Muslim community a new goal, a new vista free from what was described as "the danger of Hindu Raj." Every development affecting the future of India in any way was viewed against the background of Pakistan, how will more power for the future Indian State affect the Muslims? Therefore the League claimed the right to approve or reject every proposal calculated to affect the country and its population. The threat was put forth that any move by the Congress to widen political power in India without the League's approval will meet with the League's resistance.

Muslims and the War—When the war took a turn for the worse in the summer of 1940, Mr Jinnah in a statement explained that, without prejudice to the adjustment of the larger issues at a later date, the Muslims were willing to help the authorities in the successful conduct of the war. "It is up to the British Government to show trust in Muslim leadership and as confident friends seek our whole hearted support. We shall not fail them."

Shortly after the entry of Italy into the war, the Working Committee of the League met in Bombay and expressed its alarm at the growing menace of Nazi aggression and the unprovoked declaration of war by the Italian Government on the Allies. While urging Indians to prepare themselves for the defence of their country, the committee considered that a satisfactory basis of co-operation between the Central Government and the Muslim League and other parties had essentially to be reached. It was pointed out that, in view of the grave danger facing the country, real purpose would not be

served by Muslims merely joining provincial and district war committees. With a view to seeking clarification on the possibility of devising prompt and effective measures for the intensification of war efforts, the President of the League, Mr M. A. Jinnah, has been authorised to enter into communication with the Viceroy.

This attitude towards War Committees was strongly dissented from by a number of members of the Working Committee of the League, including the Prime Ministers of Bengal and the Punjab, who refused to be parties to any act of commission or omission which would detract from Muslim India's active participation in the country's war effort.

Mr Jinnah saw the Viceroy as directed by the League Working Committee, and had a long talk with him. The outcome of these conversations will be better discussed as part of his correspondence with the Viceroy (See last year's *Indian Year Book*).

Meanwhile, the Congress Executive had met at Delhi and passed a resolution demanding the formation of a "National Government" at the Centre, responsible to the Central Legislature. This was, however, opposed by Mr Jinnah who argued that the National Government would mean but a Congress Raj. He declared that the Muslim League was firmly convinced that the only solution was a division of India as laid down by the League at Lahore. "The word 'national' has been flagrantly abused. If the 'National Government' demand is met, it will mean a Hindu majority—a permanent Hindu majority Government—a position which will never be accepted by the Muslims."
